MOTWANE CHICAGO

Professor Yash Pal, Chairman, University Grants Commission, delivering the convocation address at the S.N.D.T. Women's University. Seated on his right are Justice Chittatosh Mookerji, Governor of Maharashtra and Smt. Kamalini Bhansali, Vice-Chancellor of the University.

G. B. Pant University of Agriculture & Technology

PANTNAGAR-263145, U. P.

ADMISSION NOTICE

A competitive entrance examination for selection of candidates for admission to the First Year of the following Academic Programmes will be held on Sunday the 1st May 1988, from 10 a.m. at Agra, Allahabad, Delhi, Hyderabad, Lucknow, Roorkee, Varanasi, Kanpur and Patnagar Centres.

A—Bachelor's Degree Programme		**Minimum Eligibility Qualifications**	**Age**
1.	B.Sc. Ag. and A.H.	Intermediate Agriculture/Science (Biology or Maths) from U.P. Board, Allahabad, or equivalent examination.	22 years on 30.11.88
2.	B.Sc. (Forestry)		
3.	Bachelor of Fisheries Sc.		
4.	B.V.Sc. and A.H.	Intermediate Agriculture/Science with Biology from U.P. Board, or equivalent examination.	(3 years relaxation for SC/ST/BC candidates only)
5.	B.Sc. Home Science (for girls only)	Intermediate Science (Biology or Maths)/Agriculture from U.P. Board, or equivalent examination.	

Candidates appearing in the above Board's examination in 1988 are also eligible to appear in the entrance examination provided their results are positively declared by 5th July 1988, otherwise they will stand disqualified.

B—Master's Programmes in 44 Majors	**Minimum Eligibility Qualifications**
in the areas of : 1. Agriculture 2. Veterinary Sciences 3. Civil/Electrical/Mechanical/ Agricultural Engineering 4. Basic Sciences 5. Food Science, and 6. Home Science	Bachelor's degree in Agriculture/Veterinary Sciences/Civil, Electrical, Mechanical, Agricultural Engineering/Basic Sciences (Physics, Chemistry, Maths, Biology) Home Science, as the case may be with 55% marks in aggregate or an equivalent OGPA from a recognized University with not more than one third division at High School or Intermediate level.

C—Ph.D. Programmes in 29 Majors in	**Minimum Eligibility Qualifications**
the areas of : 1. Agricultural Sciences 2. Veterinary Sciences 3. Agricultural/Civil/Electrical/ Mechanical Engineering 4. Food Science, and 5. Basic Sciences.	Master's degree in Agriculture/Vety. Sciences/Agricultural. Civil, Electrical, Mechanical Engineering/Food Science/Basic Sciences, as the case may be, in First Division from a recognized University with at least second class in Bachelor's degree and not more than one third division at High School or Intermediate level.

For full details, the Information Brochure and Application Form, prescribed separately for Undergraduate, Master's and Ph.D. programmes, can be obtained by sending an 'ACCOUNT PAYEE' Bank Draft for Rs. 10/- in favour of G.B. Pant University of Agriculture & Technology, Pantnagar on State Bank of India. Pantnagar Branch (Code-1133) or United Commercial Bank, Pantnagar, with a self-addressed envelope of 10''x7'' size bearing postage stamps of Rs. 4.00 by Unregistered Parcel, or may be obtained on payment in cash at the Counters set up in the Admission Cell at Pantnagar.

Last Date and Examination Fees : 10th March 1988 with the prescribed Fee of Rs. 100.00 for Undergraduate Programmes, and Rs. 100.00/120.00 (as the case may be) for P.G. Programmes. Applications delivered after 10th March, 1988 but not later than 25th March 1988 must be accompanied with an additional late fee of Rs. 50.00 for Pantnagar centre only.

Health Sciences Universities And Pharmaceutical Education

Harkishan Singh*

In the United States of America during the nineteenth century there was evolved a system through the Morrill Acts of 1962 and 1890, to provide federal aid to certain institutions of higher education. Such institutions were called land-grant colleges or universities as the original law granted public lands to each state for the support of at least one college teaching such branches of learning as are related to agriculture and the mechanic arts. That is how the agricultural universities came up. With the passage of time as the agriculture changed from empiricism to highly developed science and technology, the colleges and universities which were primarily agricultural in scope got to have strong faculties in different of the other sciences. As of today such institutions in America are multi-disciplinary and they are hardly any way different from other universities.

After independence we belatedly borrowed the concept of agricultural universities. The G.B. Pant University of Agriculture and Technology at Pantnagar in Uttar Pradesh was the first to be established. Next, the Punjab Agricultural University, Ludhiana, came into existence. Now there are more than two dozen agricultural universities in our country. The divisions in a typical agricultural university are agriculture, agricultural engineering, veterinary sciences, home sciences, and basic sciences and humanities. As ours is largely an agricultural society, the slogan for having agricultural universities has gone well. As to what new ideas have been born at these universities and to what extent these institutions have been instrumental only in projecting the technologies developed elsewhere, it is for the agricultural scientists to debate. However, the fact remains that good talent in scientific disciplines other than agriculture is not attracted to these institutions and this is not in the interest of healthy development of agricultural sciences. In the future the so-called agricultural universities in our country may have to shape into multi-faculty universities.

Piqued by the establishment of agricultural universities, the proponents of medical sciences started toying with the idea of having separate health sciences universities. The medical lobby in our country is fairly strong and it is easier for them to reach and influence the high-ups than by other professionals. It may not be long that the move to have health sciences universities picks up. The beginning has already been made by the establishment of the first university of health sciences at Vijaywada in Andhra Pradesh. Such 'denominational' universities are again going to be ill-represented by the other scientific disciplines. Nowhere in the world health sciences universities exist.

**Professor, Faculty of Pharmaceutical Sciences, Panjab University, Chandigarh-160014.*

The health sciences universities as they get established in different states, will have all the medical colleges in the respective states and also the dental and nursing colleges affiliated to them. The pharmacy teaching institutions may also be made to come under the banner of these universities.

The move for creating health sciences universities has its ultimate aim to establish separate Medical and Health Education Commission on the lines of the University Grants Commission. The monolith which may thus come up will not augur well what to say for other allied professions but even for the medical education. The latter will get secluded and there will be insufficient interaction with other sciences.

We should also know about what is happening in Ayurvedic education. There too they want to be separate. There is already a Gujarat Ayurved University at Jamnagar and all the Ayurvedic Colleges in the state are affiliated to it. The doors for interaction between our old system of medicine and allopathy are being firmly closed. The modern science will remain bereft of the new developments which are possible using the Ayurveda as the base, and the Ayurveds will continue to be ignorant of the latest advancements.

The bandwagon of health sciences universities is likely to gain momentum. The establishment of Indian Institutes of Technology is the other argument which is given in its support. However, happily the IITs are very strong in scientific disciplines as well. Abroad, institutes of technology are not different from other universities. Excellence in pursuit of new knowledge is the hallmark of their operation. There are no artificial barriers. Think of Massachusetts Institute of *Technology* having a Nobel Laureate in *Medicine* as a faculty member. It is so.

The reasons for establishment of the All India Institute of Medical Sciences, the Postgraduate Institute of Medical Education and Research, and now the possibility of the National Institute of Pharmaceutical Education and Research coming up, are partly the same as for creating IITs. However, the complete divorce of medical education from other technologies, sciences and arts will come in the way of healthy growth of medical sciences in our country, and the national interests will suffer in the long run. Further, the allied fields like pharmaceutical sciences will also get a setback.

The pharmaceutical sciences, no doubt, are partly clinically oriented but as the pharmacy profession has shaped during the last four decades in our country, the degree and the postgraduate courses have got evolved more as technological subjects. Even the Diploma in Pharmacy courses now mostly form part of the polytechnic system of education. The diploma education is regulated by the Pharmacy Council of India. During the years the higher education and research in pharmaceutical sciences have gone along with Engineering and Technology under the All India Council for Technica Education. In the University Grants Commission, pharmaceutical education comes under the Technology Panel; a sister panel of the Engineering Panel. The All India Council for Technical Education is shortly to become a statutory body. The setting up of a separate All India Board of Undergraduate Pharmaceutical Education and All India Board of Postgraduate Studies and Research in Pharmaceutical Sciences under the AICTE is under consideration of the Ministry of Human Resource Development Government of India.

Having come that far in identifying with engineering and technology for very valid compulsions, should the pharmaceutical education now get sucked back into the health sciences and agree to become part of a system where scientific and its industrial orientation and the changed professional needs may not be appreciated? At the engineering and technology forums, pharmaceutical sciences stand on equal footing with other disciplines. The views of pharmaceutical educationists are listened with respect and regard. The patterns have been set for funding of graduate and postgraduate education. Pharmaceutical sciences now form an important and distinct component of engineering and technology.

The pharmacy profession should feel concerned with the coming up of the health sciences universities and possible institution of Medical Health Education Commission. The pros and cons should be carefully examined. The pharmaceutical education and sciences should not be taken unaware. A debate on the issue should be started so that we may evolve a consensus for the stand we may take. □

UNIVERSITIES AND LAW COURTS

C.F.T.R.I., MYSORE

T.K. Tope*

We are happy to announce the launching of this new column, "Universities in Law Courts". Universities have often figured in the courts and it is sheer quantum of the cases that has made the Law Commission toy with the idea of a Central Educational Tribunal. Whether this comes to pass or not is a different matter. The important thing is if there were keen awareness of the legal niceties and formalities, this in itself will cut down the number of cases taken to courts. It is to promote this basic legal literacy about educational matters that this column is being introduced. We hope our readers will like it.

I

Admission to professional colleges has proved to be a fruitful source of litigation. The Supreme Court was required to decide many cases of various types on this point.

The Tamil Nadu Health Department had reserved three seats for eminent sportsmen for admission to M.B.B.S. course. The order of preference was laid down : (1) participation at International level, (2) participation at National level, and (3) participation at State level. The rules, however, did not provide for determination of comparative eminence as between different candidates falling within the same class. The Supreme Court decided that the selection in such cases i.e. as between candidates falling within the same class is to be made on academic merit. For, the order of preference is merely a rule of exclusion. The Court observed :

> "In the absence of any guidelines for purposes of selection, the adjudging of comparative merits, among the eligible candidates falling under the category, eminent sportsmen would necessarily introduce......an element of subjectivity, which would introduce 'arbitrariness' in the selection of candidates because it would be left to the discretion of executive in making the choice. In the absence of any guidelines, there is nothing for selection committee to fall back upon except the marks obtained at the qualifying examination."

Khalid Hussain vs Commr. and Secretary, Govt. T.N. Health Dept., All India Reporter 1987 S.C p. 2074.

Note: The court decided the case as there were no guidelines to determine comparative merits as between two candidates belonging to the same category. It is to be noted that the guidelines, if any, must be objective, otherwise guidelines which are vague and not are purely objective would also be struck down by the court and the selection made on the strength of such guidelines would be bad.

Principles of Natural Justice

The management of a college of the Kanpur University suspended the Principal of the college. However, the order of suspension was stayed by the Vice-Chancellor of the Kanpur University. The Management thereafter held an *ex-parte* inquiry against the Principal and dismissed her from the service under statute 17.06 of the University. The Statute provides for the giving of an opportunity of being heard to the teacher concerned and prescribes a procedure for inquiry. However that was not followed. The order of dismissal was sent to the Vice-Chancellor who after hearing the parties disapproved of the order of dismissal and ordered reinstatement with permission to the Management to impose lesser punishment on the Principal, if deemed necessary. The Management allowed the Principal to function, but put various restraints on her in functionin as the Principal. The Principal moved the High Court against the order of the Management putting restrictions on her functioning. While the matter was pending in the High Court, the Vice-Chancellor reviewed the earlier order of disapproving the dismissal and passed an order approving the order of the management dismissing the Principal from service. The Principal moved the High Court against the order of dismissal. The High Court dismissed the petition on the ground that an alternate remedy i.e. an appeal to the Chancellor is provided in the Statute and the Principal did not resort to this remedy before filing a writ petition. As against this order of the High Court, the

---

Former Member, Law Commission and Vice-Chancellor, University of Bombay (1971-77) [illegible] to the Supreme Court, the latter laid down following principles :

1. The Vice-Chancellor had no power to review the earlier order. "It is a fundamental principle of law that no quasi-judicial authority such as a tribunal or a Vice-Chancellor has power to review earlier order unless the power to review is specifically conferred on the authority." Courts are empowered to review because the power is conferred on the Court. Under the U.P. Universities Act there is no provision for review. Hence a Vice-Chancellor's second order approving the order of dismissal by the Management was an order issued without any authority and hence nullity.

2. Though an alternative remedy was available, the Court laid down that existence of an alternate remedy, is not an absolute bar to the maintainability of a writ petition. When an authority has acted wholly, without jurisdiction, the High Court should not refuse to exercise its jurisdiction under Art 226 on the ground of the existence of alternate remedy.

Note : The Supreme Court judgement does not deal with the violation of the principles of natural justice when the management conducted ex-parte inquiry. However, it must be noted that thought the Management has a right to suspend an employee, it is necessary that such suspension must be immediately followed by an inquiry. Such inquiry must be conducted according to the principles of natural justice. In brief the principles are :

1. The inquiry officer must be impartial, free from bias. He must not be a part of Management even in the remotest sense.

2. The person against whom the inquiry is being conducted must be informed of the charges against him.

3. The person must be given an opportunity to defend himself before the Inquiry Officer. If any action is to be taken by the Management on the report of the Inquiry Officer, the Management should send a copy of the report to the person concerned and also inform him the nature of action that is contemplated.

This procedure was not followed by the Management in this case. Hence the order of dismissal would have been illegal on this ground also. But that was not the point before the Supreme Court.

Note: It is rather strange to note that in this case, the Management was one of the Additional District Magistrates appointed by the Government as the Authorised Controller, under the University Act. In this case, the Supreme Court did not insist upon the resort to this alternate remedy, because the order of the Vice-Chancellor was without jurisdiction and hence a nullity.

Dr. (Smt.) Kuntesh vs Management H.K. Mahavidyalaya, Sitapur, All India Reporter, 1987, S.C.p. 2186

III

Responsibilities of the members of the Unfair Means Committee are explained by the Bombay High Court in *J. B. Parikh vs University of Bombay, AIR 1987 Bom. 332*. The Court also laid down that the Vice-Chancellor before passing an order prohibiting from appearing for examination until a particular date should have heard the aggrieved person. The court referred to following observation of the Supreme Court :

> "The principles of natural justice must be read into the unoccupied interstices of the statute unless there is a clear mandate to the contrary."

Note : With respect to His Lordship, it is submitted that the petitioner in this case had already an opportunity when he appeared before the Unfair Means Committee. Hence, it is rather doubtful whether a second opportunity is necessary. In this case, it was alleged that the behaviour of the members of the Unfair Means Committee was objectionable. Following observations of the Judge are noteworthy.

> "Here, the petition gives a detailed narration of the facts. If that account be true, the manner in which the two members of Inquiry Committee acted, could not have been bettered by the infamous Spanish Inquisition. They had before them a stripling of 17 summers and the petitioner was badgered as would be rodent by canines. As if this was not enough, his legitimate request for documents was not even replied to."

All concerned university authorities should note the above quoted observations for guidance.

IV

Unrecognised Educational Institutions

There has been a mushroom growth of unrecognised and unaffiliated educational institutions all over the country. Such institutions are established by vested interests having influence with the concerned State

Governments. Such institutions create problems for universities. Pressure is often brought on the University authorities to allow students from such institutions to appear for the examinations and to declare their results. The stock arguments in such cases are that the innocent students should not suffer because of mistakes of others. This argument is mischievous. The students are not innocent. Allowing such students to appear for the examination is to encourage fraud and corruption. University authorities must stand against such acts of fraud and corruption.

The Patna High Court decided a case of such educational institutions in *Amarendra Pratap Singh vs Lalit Narain Mithila University* (*All India Reporter 1987 Patna p. 259*).

The Full Bench of the High Court was called upon to decide the following question.

> "Can compassion for an unfortunate student of an unrecognised and unaffiliated educational institution, warrant a mandamus for the declaration of his examination result contrary to the statutory provisions or University Regulations."

The majority said 'No.'. The Court pointed out that 'fraud' vitiates everything.

Note: It is high time that Parliament passes legislation prohibiting starting of an educational institution without the prior permission of the University and any one doing so should be penalised. The punishment should be 10 years imprisonment (minimum) and confiscation of all the properties of all persons connected with the starting of such institutions. Unless such drastic steps are taken this fraud on education cannot be stopped and universities would not be free from political pressures.

It is suggested that Association of Indian Universities should prepare a draft Bill on this issue and forward it to the UGC for consideration and onward transmission to the Ministry of Human Resource Development. For, such a legislation is absolutely necessary, if Higher Education is to be saved from the greed of anti social elements.

V

In a very important judgment, the Supreme Court laid down the extent of the powers of the State legislature to legislate in the matter of higher education. The Andhra Pradesh Assembly passed Commissionerate of Higher Education Act with a view to providing for the constitution of a Commissionerate to advise the Government in matters relating to higher education in the State and to oversee its development with perspective planning etc. Section 11 of the Act contained *inter alia* the power of the Commissionerate to (1) monitor and evaluate the academic programmes in higher education and enforce accountability in the system; (2) establish and develop resource centre for curriculum materials and continuing education of teachers; (3) undertake examination reforms; (4) coordinate the academic activities of various institutions of higher education in the State, etc. Section 13 authorised the Commissionerate to inspect the standard of teaching, examination and research in the universities in the State, etc. This Act was challenged in the Andhra Pradesh High Court. A Full Bench of the High Court upheld the validity of the Act. As against the judgment of the High Court, Osmania University Teachers Association appealed to the Supreme Court. The Supreme Court struck down the entire Act, being beyond the competence of State Legislature. The judgment of the Supreme Court contains a comparative table of the contents of the UGC Act and the Andhra Pradesh Act.

The judgment of the Supreme Court is reported with All India Reporter 1987 SC 2034 and that of the Andhra Pradesh High Court at All India Reporter A.P., p. 214.

It is submitted that the judgment of the Supreme Court is based on the similarities between the UGC Act and the Andhra Act. But besides these similarities, there are certain provisions in the Andhra Act which, it is submitted, would not come under entry 66 of List I. Hence, it is recommended that the Andhra Legislature may pass another Act without any provisions that are likely to come under coordination and determination of excellence in standards of teaching and examination in the universities. It is further recommended that the Association of Indian Universities should arrange a workshop on this very important matter. It may be mentioned in this respect that scheme of new education policy envisages a statutory body in each State under the name State Council of Higher Education. Such a body is necessary if the limited resources available for higher education in each State are to be fruitfully utilized taking into consideration the needs of the State. If even State legislation concerning higher education is to be void because of entry 66 in List I, the accountability of the institutions of higher education to the community would not be possible. □

THE OLYMPIC MOVEMENT

B. S. Grewal*

"The modern Olympic Movement is one of the few truly heroic ventures of our times. It not only enjoys the participation and support of many famous names in many fields, but it also helps create new heroes by providing the motivation to strive for excellence and the opportunity to demonstrate that one has achieved it. It appeals to everyone, penetrating national, racial, and ideological barriers and involving as many countries as the United Nations. The Games have outlived their doubters and gained in popularity for almost a century now, proving that their revival is not just a passing fad.

This movement is heir to one world's oldest and longest-lasting traditions, for the ancient Olympics began before the Golden Age of Greece and continued for more than a millennium without interruption. The various legends about the origin of the Games cannot be substantiated; but it is certain that they were held at Olympia, near the north-western coast of the Peloponnesus, about eight centuries before Christ. The Games were run from early on jointly by Elis and Sparta, but eventually the Eleans had virtually complete control. They conducted the Games with stern fairness, and under them the Olympics gained greatly in importance. Competing just for the glory of achievement, winners came to be respected throughout the Western World. Even noblemen and royalty sought honors at Olympia, running side by side with commoners, all hoping to be awarded the coveted olive wreath. The Games reached their pinnacle during the fourth and fifth centuries B.C. by which time the simple competitions and rites had evolved into a seven-day celebration of great athletic and cultural accomplishments.

The facilities of ancient Olympia were more modest than those of today. The Stadium, where most of the contests were held, was about 190m long and 32m wide. Only judges, competitors, and others directly involved with the competitions were allowed inside the stadium; spectators, who may have numbered in the tens of thousands, vied for good vantage points on the hillsides all around. There were also a hippodrome for chariot races, buildings where the athletes could practice, treasure houses, and religious structures.

In those ancient days, contestants had to be Greek free men and were required to undergo long training. Even the judges were given special instruction for ten months before the Games.

At first there was only one event in the Games a footrace of less than 200 meters. Gradually more and more events were added until, by the 77th Olympiad, the Games took five days with an additional two for religious rites.

By the fourth century of our area, the influence of politicians and the self-seeking wealthy brought corruption to the Games and they were abolished by Theodosius I, emperor of Rome, in A.D. 394.

But the virtues and worthy ideals of the Olympics were not to be lost to us forever. When Pierre de Coubertin, in the latter part of the nineteenth century, sought a means to produce men who were more energetic, upright, and disciplined through pedagogy, he decided that sports were a force that could revitalize liberal education. This led him to the realization that a new understanding of amateurism was needed for the youth of different nations to compete equally in sporting events, and ultimately, to the idea of re-institution the Olympic Games. These modern games were to be true successors of the ancient Olympics, founded on high ideals and morals. To Coubertin owe the re-creation of Olympic philosophy that the practice of amateur sports can balance spiritual values and physical faculties and play an important part in the development of both the individual and humankind in general.

The historic Congress of Paris, held at the Sorbonne in 1894, was attended by 79 delegates representing 49 organizations in France, England, the United States, Greece, Russia, Sweden, Belgium, Italy, and Spain; Hungary, Germany, Bohemia, Holland and Australia sent proxies or letters. The congress was swept by the idea of re-establishing the Olympics and set up the International Olympic Committee. In spite of all the initial difficulties, the first modern Olympic Games were held in Athens in 1896, a landmark in modern history. There have been problems along the

---

**Dean of Students-cum-CSO, Punjabi University, Patiala and Organising Secretary, 48th All India Inter-University Athletic Meet (M & W), Patiala, 10-14 January, 1988.*

way, but the genius of this movement spoke to the heart of modern man; and it has grown to become a powerful force for international understanding and friendship, contributing to harmony and progress that spills over beyond the bounds of amateur sport to benefit all the people of the world.

In London (1908), one of the outstanding developments of this meet was the tremendous improvement shown by all athletes in track and field events, new records deluging the scores. This lack of clearly defined and accepted rules in the various events, however, combined with the existing national hostilities, gave rise to friction among the athletes, resulting in orders to leave the field and in disqualification of the more hot-headed sportsmen. Halfway through the games, on a Sunday, the athletes were invited to St. Paul's Cathedral, where the Bishop of Pennsylvania made a statement which has become the tenet of the Olympics, "In an Olympic event the important thing is not to win, but to participate."

Baron de Coubertin who heard these words was so moved by them that he repeated the phrase at a dinner party given by the government at the end of the Games and he added—"The important thing in life, is not to succeed but to try hard." At the 1932 Olympic Games held in Los Angeles the words of the Bishop were proclaimed on posters in all the team dining halls as well as on the scoreboards, for all to see. The phrase has become the lasting motto of the Modern Olympics.

After a gap of sixty years, a fresh expression based upon the Indian way of life and Philosophy—to distil human strength into speed and skill and to elevate mankind's mind above the weakness of reward and recognition, is the sole purpose of sports was—submitted to the President, International Olympic Committee Lausanne (Switzerland). Mr. Avery Brundage, the then President of the International Olympic Committee, had communicated his comments which read as follows : "This is a very good brief expression of the Olympic philosophy. The 19th Olympiad Mexico, 1968 reproduced it on the title page of their publication No. 60 with a matching Greek mural 2000 years old, published in English, French and Spanish languages. Tehran-74 reproduced this eastern expression of the olympic philosophy in Persian and English languages. Montreal-76 again reproduced it in French and English languages. Delhi-82 Asiad Games published its Hindi translation.

In the course of time sports expressions have grown to be nine in number, the Patriot, New Delhi had published it in its issue dated June 28, 1987 under the heading of Navratnas of Sports which are reproduced as below :

1. Life is a cycle, cycle it as here.
2. Fearless feathered feet flee farther in the firmament.
3. The flame, the pigeons and the oath are the sparking symbols of sports to perpetuate its soulful message of peace and progress.
4. Let us enrich life with ethics, athletics and aesthetics.
5. War and peace are, as you take them Steel and Sports are, as you shape them.
6. Sports strengthen our bodies, socialize our habits, smarten our intellects, silken our minds and sublimate our lives by providing a symphony of smile, success and salvation.
7. We need a saint and a scientist to shape a sportsman.
8. The ultimate goal of sportsmen is to conquer the self.
9. To distil human strength into speed and skill and to elevate mankind's mind above the weakness of reward and recognition, is the sole purpose of sports.

UNIVERSITY OF DELHI
DEPARTMENT OF COMPUTER SCIENCE

ADMISSION NOTIFICATION FOR 'MASTER OF COMPUTER APPLICATIONS'—1988

Applications are invited, on all India basis, for admission to the 3-year Degree Course in Master of Computer Applications (MCA) for the session starting from July 11, 1988 in the Department.

A request for the Eligibility Conditions and the prescribed Application Form for the M.C.A. Admission Test, fixed for SUNDAY, FEBRUARY 21, 1988 and to be conducted only at the Delhi University, Delhi, be addressed to Shri K.S. Krishna, Senior Assistant (In-charge), Department of Computer Science (Room No. 303), Arts Faculty Extension Building, University of Delhi, Delhi-110007 alongwith a **Crossed Bank Draft for Rs. 7/-** payable at Delhi and made out in favour of **the Registrar, University of Delhi**. A request by mail should accompany a self-addressed and postage stamped (Rs. 2/20 p.) 10"x7" envelope.

LAST DATE FOR RECEIPT OF COMPLETED APPLICATIONS IS FRIDAY, FEBRUARY 05, 1988.

PROF. K.D. SHARMA
HEAD

The Situation Must Change

Hon'ble Smt. Kumudben Joshi, Governor of Andhra Pradesh and the Chancellor of the universities in Andhra Pradesh inaugurated the National Conference on Role of Universities in the Implementation of New Education Policy organised in conjunction with the 62nd Annual Meeting of the Association of Indian Universities at Osmania University, Hyderabad on 18 December 1987. In an all embracing Inaugural Address, Smt. Joshi gave the clarion call that "the situation must change". She said, "we can no longer afford to continue a degree oriented education system which prepares people for white collar jobs. The scientific and technological advances made by our Nation, and also the pace of growth and development call for a variety of new disciplines, and the young of this country have to be prepared for the kind of jobs they are required to handle." Excerpts :

When we talk of University Education, it has many national connotations and has to be understood in the wider perspective of a large country like ours, where we have got to rise above the narrow considerations of language, region and religion. What we require, is uniformity, and the whole system should reflect the spirit of unity in diversity. Therefore, we need a **national policy in respect of Higher Education imparted by the Universities**, unlike primary education, which has a regional bearing. It is for this reason that we should keep our universities free from external influences, political interferences and pressures so as to enable them to function as autonomous bodies to safeguard the national interests and not be subservient to narrow considerations. And again it is for this simple reason, that the Governors of the State are made the Chancellors of the universities to keep the high office at the helm of management above any controversy.

Every Governor is an **Umpire of goodwill and neutrality**; you cannot have Cricket **without an umpire, nor play the game without an impartial** observer. It has been my experience with the universities in the State, as Chancellor, that the Vice-Chancellors have been able to provide the required leadership and direction to the entire academic community. But sometimes I feel that the Vice-Chancellors are made to function only as **"glorified administrators"** and are compelled to live in ivory towers. How many of them have the opportunity to go to the affiliated colleges, as frequently as required, and how many of them have established a rapport with the teaching community, and interact with the teachers and students ? **Alas !** many of them are bogged down in their files and problems concerning the day to day administration. Therefore, it is time that we pulled out our Vice-Chancellors from their routine, and may be some of them need a better exposure ! The implementation of the New Education Policy presupposes such an exercise.

You are aware that higher education in our country, like in any other advanced country in the world, has a set of complex and multifarious functions to perform. Apart from being purely 'academic' in nature, it includes the social, economic, psychological, spiritual and moral aspects. Let me make it clear that we are not interested in the quantitative or even the horizontal growth of education. The time has come for us to look at the qualitative and vertical growth towards higher performance, contribution and excellence of education. In fact, the whole policy of education centres round the basic theme of "need-based education", keeping in view the requirements of the country; especially when the Nation is entering the 21st Century. Such an idea cannot, however, be taken as a figurative reference, but as something emotional, where we are concerned about the future of our Nation.

We have come a long way from the days of the colonial pre-Independence times when the system of our education was designed to meet the requirements of the then rulers of the country. It is equally true that in many respects, we continued those systems, and it is only very recently we realised that a change was needed to make education appropriate, and to be able to meet the challenges of a changing socio-economic order in the country. It is with this end in view, emphasis has been laid on greater opportunities for rural people, and other disadvantaged sections of the community and also women. This does not mean that just the expansion of colleges and institutions of higher learning, but a qualitative restructuring of the system itself to suit the needs and requirements of these neglected sections.

Universities today offer not only academic education, but provide opportunities to symbolise the socio-cultural milieu, the **"unity in diversity"— the basic characteristic of this Nation**. It is said that university campuses are increasingly in the news today, not only because of the problems of student unrest, or even drug abuse, the latest threat now invading our campuses; but also because of the crucial role played by them in the myriad aspects of our national life. Our universities do not constitute merely the tall structures and the sprawling campuses; but they symbolise the virtual abode of resourcefulness, and dynamism of the promising young men and women of the country. In fact they represent the basic foundations of life.

One of the fundamental objectives of education, as you all know, is to secure knowledge of the physical world and the social environment in which an individual lives. In other words, this is aimed at making the citizen contribute his mite to the society. Deprived of such knowledge, the growth of individual personality is always retarded, impeding the growth of the society as a whole. Therefore, in a democratic society like ours, education is the only means to overcome the social inhibitions, and enable one to confront the realities in our society today. Fortunately or unfortunately, the expansion of institutions of higher education gives the impression, that we have been able to bring these institutions to the people instead of taking people to to the institutions. With the result, we have today an alarming growth rate of unemployment as well as under-employment.

With the increasing number of graduates every year, it may be necessary for the universities to undertake a survey of the utility of higher education, to find out what has gone wrong with our systems.

The situation must change. We can no longer afford to continue a degree oriented education system which prepares people for white collar jobs. The scientific and technological advances made by our Nation, and also the pace of growth and development call for a variety of new disciplines, and the young of this country have to be prepared for the kind of jobs they are required to handle. We have always to keep in mind the long term as well as the immediate objectives and design or restructure our policies in such a fashion, that we make education an instrument of change in the strict sense.

Let me add that while we are all seized of these problems, equal attention has to be bestowed towards the realisation of the importance of our national values, and character building. There are two important aspects of education. One is the cultural, which helps individual grow from within; and the other, the production aspect, which makes the person productive by imparting the skills required as a means to livelihood. Let me point out here, that we have always viewed the "educatedness" of a person in a very narrow sense equating it with the earning of degrees. A degree which does not contribute to the enrichment of faculties, leading to find better solutions to the problems of life, can be of little use. In the broader sense, education should enable one to acquire the strengh to protect oneself against the many dark forces that surround an individual.

We have often blamed the youth, particularly the educated young men and women for being emotional and problematic. We find today that a section of this youth force suffers from frustration, and is unhappy under many strains and stresses. How are we going to meet this situation on our university campuses which breed the syndromes of unrest, and other maladies of indiscipline, erosion of human and moral values etc. ? The situation calls for a new thinking to bring life into the system, and to see that the stresses and strains are minimised. What we need today as Swamy Vivekananda has always emphasised is "*man-making education*". If we have to make a productive and qualitative citizen, education has to be made relevant to the existing situations and challenges, to be able to respond to the hopes and aspirations of our Nation.

It is all very well to ponder for a while on these idealistic and utopian ideas. But the question stares in our face, for a practical and pragmatic solution. This is where the universities have to design new ways and means to imbibe and inculcate the required discipline among the youth, to make them productive and a responsive youth for tomorrow. Thus you will see that universities have a great responsibility to shoulder. As you all know, any exercises of learning should be backed by certain values, and more particularly in the field of higher education it should be committed to these values.

Student unrest, fall in standards, indiscipline and apathy are no doubt some of the stumbling blocks to the progress of education which appear to be a universal phenomenon. These are however, not insurmountable, provided the universities stimulate and in spite the youth to react to the healthy climate created by them. It is the human element that plays a vital role in this regard. What is required is a whole-hearted involvement of the student community with a sense of commitment and belonging to the values, to make them more productive as also promoting in them a sense of ds-cipline and harmony. When we try to recollect the glory of that personal relationship between the Teacher and the Taught often mentioned in our ancient books, and "Shastras", perhaps what we are now aiming at today, is the expanded meaning and scope of this relationship that is relevant to the university Campus. This enjoins upon the students to respond to the call of right action, right thinking and greater dedication.

Needless to say for me, that the essential ingredients of a qualitative system of education comprise and comprehend high academic standards, and discipline. It should be dedicated to the purpose of education, as an "effective instrument" in making an "individual" out of a man or woman as the case may be. Naturally, this reminds me of the importance of women's education. During my tenure as Governor of the State and Chancellor of as many as 10 universities in this State, I have seen girls putting up the best of academic performance, and in almost every convocation, it has always been a matter of pleasure and pride for me to find young women bagging academic distinctions and awards more prominently. Given the opportunity it only shows, that **women are equally competent to draw the best of advantage from the academic exposure**. In fact, 50 percent of the population in our country comprises of women. Their enlightenment and the harnessing of the "**woman power**" is the best way to achieve human resource development; otherwise a large country like India is sure to miss the resourcefulness of half of its population. This is a very serious problem which will have serious repercussions on the socio-economic milieu of the Nation. Therefore, our universities must expand and extend equal educational opportunities to women and also given them the benefit of personality development.

Let us not forget that this is an important aspect of education which is capable of promoting human dignity character and integrity. What is more important is that, our educational institutions should stand aloft on the foundations of intellectual and academic excellence. To quote Dr. Radhakrishnan, "If the world happens to be in a precarious position.........and if people are afraid of one another it is not because of lack of material accumulations or great intellectual powers. It is because they are lacking in that poise, in that balance, in that judgement, which make them distinguish right from wrong. It is that capacity which constitutes the purpose of education." Equipped thus mentally, a student in a higher seat of learning acquires the power of discrimination between right and wrong enabling him not only to know how to earn a livelihood but how to live worthy of the human calling. Any policy on Education should reflect this spirit. And it is for the national academic-bodies like the Association of Indian Universities to give the lofty ideals a truthful expression and translate precept into practice.

In a particular, the Universities should always keep in mind the fact that if education has to be understood as preparation for life, it is necessary for the universities to emerge as poineering abodes where the human personality is shaped and moulded into responsive and responsible citizenry of tomorrow's world. ☐

Teacher Training Programme

As part of its programme for faculty development, Anna University introduced a teacher training programme for the benefit of BE/B. Tech degree holders belonging to SC and ST. The objective of the programme is to attract fresh and talented graduates belonging to SC/ST communities by providing adequate incentives to fill up the seats reserved at the entry level in the teaching profession. Under this scheme a new category of Teaching/Research Fellow has been introduced to assist the faculty in instruction, training and research. Selected trainees, are given training in pedagogy for a period of three years and also provided an opportunity to qualify for the Master's degree on a part time basis. A stipend of Rs. 1300/- per month is paid during training period. On successful completion of training, the trainees are appointed as lecturers in the University.

The scheme is useful in compensating the vacancy existing in the faculty at the middle and lower levels, especially in emerging areas where shortage of teachers exists throughout the country.

During the year 1987-88, 28 Teaching/Research Fellows and 5 Teacher Trainees have been recruited at the Anna University.

Convocation

The Rubic Cube Puzzle

Professor Yash Pal, Chairman, University Grants Commission, delivered the Convocation Address at Thirtyseventh Annual Convocation of SNDT Women's University, Bombay. In a scintillating address, he characterised our strait approach to disciplines confining them to cubby holes as an antithesis of the very concept of a University "where everything, in principle, exists simultaneously". While advocating interdisciplinarity, Professor Yash Pal advised graduands to not to confine themselves in life to their certified expertise but to 'jump out of it' to discover 'many flowers, many relationships'. Excerpts :

Let me share with you, in a few moments, why I think the scene in our country, in spite of all the cynicism, dust, din and the arguments which happen between teachers and UGC or between students and teachers, there is fantastic promise and fantastic richness in this country. I am surprised when I meet several young people to discover talent and richness which frankly did not exist in my day when I was a student. It is very commonplace these days for people of my age to talk about good old days when students and teachers were more serious and people were more hard working and intelligent. Well, maybe they had some characteristics which were different from those which are now available amongst people. But, there is no question that the variety of expertise and sometimes the depth and sometimes the breadth of it, which is available now in quantities was not available at that time.

Just a couple of days ago, in response to a letter from a friend, Shyam Benegal said would you agree to meet such and such young man who has got his Engineering Degree, but in the process has done a couple of things in Audio-Visuals which look very very striking ? UGC, contrary to what Madam Vice-Chancellor said and as the present Chairman of the UGC, likes to break rules and norms and so we are doing more and more things in the area of education in different ways and so this young man came, has a Bachelor of Technology in Aeronautical Engineering but had done some work and I immediately realised at least meeting him that here is a potential Film Maker of great sensitivity. You may say what do you mean by Film Maker ? Film Maker in the sense for Educational Films, but otherwise tremendous technical abilities and marvellous sensibilities so what do I do then ?

Now I come to the problem. His Degree is Engineering. Maybe he has another Diploma, consider this as an hypothetical person. He doesn't work in a University so my Charter doesn't allow me to support him anyway. Luckily when I asked him he said, "I do not want any support. I am not looking for a job. I want to wander around and get experience and some work". But supposing he wanted a position in a University or in one of our Programmes, I would have to find and manoeuvre and get him a job in the University or get him attached to it and it will have to advertise and all kind of things. But, probably by that time, the fellow will get tired and would leave. Incidentally, this person's genius and expertise, in a sense, is a non-certified expertise. You all got degrees, certificates and certified expertise and Madam Vice-Chancellor said that now you are launched on your career. Do not be launched like a rocket and do not do only what your certified expertise says, but it is quite possible that your genius is much more, much beyond that. As far as this person is concerned, his expertise is entirely in a different area. But, I think that the area enriches what he does, it lies some where else.

The problem is that in the process of certifying people, we categorise them and exclude them from certain institutions and jobs. Somehow the exclusion of people becomes a more important function than inclusion of people, between organisations, institutions and agencies. The mere business of identifying expertise of people in our society is turning out to be an exercise in making compartments and cubby holes in which we can put experts—red, green, blue balls—all separate from each other. They are marvellous people in their own rights and somehow the mixing of these to create a synthesis, is something against which we put too many hurdles. Many people fortutately can jump over these hurdles and that is what makes this country. Why should we put that many hurdles ? Why should we be so insecure in our little boxes that jumping in of somebody with a different colour into our box should threaten us ? It is very much true in our universities and departments, in some way, if it doesn't have an exact paper qualification which is written down as a condition for a job, we refuse to recognise him. While we all know that it is while jumping from one box to the other on the boundaries of the boxes, different disciplines and departments, that is where the real creativity lies. That is where new things come and inventions come and that is where one has to make a mark within the country and outside.

Sure, we have lot of problems in our country as the whole world has problems. But, I think in a sense, ours are of a different magnitude and different quality. And also I have ambitions for this country which are much bigger and different from those of other countries. Let them decide their ambitions; because, we have strengths in so many different areas. I do not want to see my county even if it could, to become another Japan or US or Germany, great as these countries are, because there are aspects, elements of personal fulfilment and norms of relationships amongst people in our society, which we have here and which we do not want to lose. So, we have to create not a pale copy of a presently advanced country, but we have to create something which is us, which is India and which is special and has all the technology, science and the feeling or identity of being here, or having been born here and being related to the warmth and the capacity to laugh, even if we are poor and caring, and it is difficult to describe. But most often we are engaged, scientists, technologists, administrators, managers, business people and even politicians in solving specific problems on one side little by little in our departments and also in universities and many a times we solve them.

But sometimes I wonder whether what we are trying to do is not like trying to solve the puzzle of a rubic cube which has six faces and the game is to turn around, so that each face has only one colour. Now you notice many a times that you turn it quickly and want to get one of the faces red, it is easy and you get it red. But all the other faces are so jumbled up that you cannot really work on them one by one. In fact, you make it very difficult to solve other ones. If you solve one very quickly, you have to find a solution not for six dimensional but multi-dimensional rubic cube in such a way that all the faces come right. Otherwise, while solving one problem we make it more difficult, in fact, impossible to solve the other. Where can this kind of insight occur, in which area, where can it happen in our country ? I think we have really not recognised that this kind of approach cannot occur in a scientific, space, engineering laboratory or social-science or management institute alone. The only place where everything in principle exists simultaneously is a "UNIVERSITY" — Technology, Science, Social Science, Music Languages, Philosophy and all the aspects—exist. The objective was, they exist together so that they influence each other and not just exist in separate compartments next to each other. We have allowed that to happen.

I think the University is a kind of environment where this synthesised inter-mixing occurs, where people should find ways of having the real solutions to our multi dimensional rubic cube. We may get it, but the colours may not be quite complete. But there should be the best of everything in an interacting way so that we really do something which is our own and find our solutions. That is the dream I would like to have for our Universities—being second-to-none, to no laboratories, to no other expertise in every way. It should be coupled to the society completely to the industry, economy, farmers and yet coupled in this multi-dimensional way and working in this way together in order to solve our problems and seek fulfilment so that the role of the University is far bigger. It has to be Central, not only to the building-up of this country, but also hopefully giving a new way to looking at ourselves in this difficult world. That is what I wish, the direction in which, Madam, your University would go and all the other Universities will go to seek individual fulfilment and progress for all the people around us.

Take your certified expertise, your certificates, plan your career, do whatever you think you are starting to do, do not waste it, plan it, make a roadway for yourself but do not feel that you have to stick to that roadway. Jump out of it. Look at the countryside around and the relations of what you are doing; you may end up in doing something. The world is much larger than your expertise. Use your expertise but do not be confined to it. When you go out of it, you will discover many flowers, many relationships. People are much bigger and have many more dimensions than the certification which you get from here. The certification says one thing that if you apply to do something really well, you can do it and many other things in combination. You will get real fulfilment and probably find achievements in areas which you have not even dreamt of. Don't throw away your expertise but mix it with others. That is the 'Future' I wish you. ☐

Solar Energy Convention

The eleventh national solar energy convention and the annual meeting of the Solar Energy Society of India was recently held at the IIT, Delhi. Mr. J.C. Kapur, President of the Society presided. Over 300 participants from R & D institutions, universities, industry, planning and governmental agencies, social welfare and extension agencies from many parts of India attended the convention. After 3 days of extensive discussions on various aspects of renewable energy sources on the theme, 'Energy Options in the Nineties' the following broad conclusions were reached:

(i) The society noted with satisfaction the all round progress and the growing levels of proficiency in technologies and equipments relating to new sources of energy. There was however an urgent need to develop a broad spectrum systems capabilities to meet the diverse energy needs of rural communities and a wide variety of remote applications and energy conservation programmes in industry.

(ii) Although there has been a satisfactory growth both in number and variety of installations yet achievement of full potential for growth cannot be realised unless the availability of critical equipments and technologies are increased substantially. This is of particular importance in high development potential areas such as photovoltaic materials, equipments accessories and systems. There are too many conceptual and consequently operative hurdles to its growth.

(iii) The large scale centralised energy and power projects have long gestation periods, heavy investment, and in the Indian context low operational efficiency. Shift to renewable energy sources would mean more rapid satisfaction of energy needs and higher return on investment.

(iv) One of India's major problem of reaching energy to the remote and backward rural communities cannot be approached without optimising the available renewable energy potential in the areas. Success of such an effort would have far reaching environmental and social implications. Economics of new sources of energy cannot be analysed, in terms of traditional attitudes to development.

(v) There is an urgent need to establish missing links in equipment and technologies in all sun-based energy sources. A three year mission oriented programme should be launched for completion before the end of 1990. Government agencies should undertake such an exercise with the co-operation of the Solar Energy Society, Research and development institutions and industries. This is one of the few vital areas in development where India has the largest market potential in the world and should aim for excellence and parity with the most advanced countries. This would call for all round strengthening of the infrastructural base of the renewable energy industry and research and development effort.

(vi) Without an integrated energy policy, including renewable sources and long term perspective planning, there is a danger of our increasing dependence on oil imports, aggregating damage to environment and major set back to our plans for self reliance before the 21st century and an accelerated, sustained development in all parts of India thereafter.

Renewable sources of energy offer the most potential, energy conservation and developmental options for the nineties.

Inadequate appreciation of the inevitability of the New Sources of Energy in India's future have been responsible for the slow growth of the industry and technology and inadequate political and financial resources for its development. This needs to be seriously reviewed and corrected.

NBE Announces 1988 Exams

The National Board of Examinations (NBE) established by the Ministry of Health and Family Welfare conducts postgraduate examinations in medical subjects. The examinations conducted by the Board aim at a level of postgraduate examinations comparable to that which is recognised internationally as a mark of professional excellence. The emphasis is on evaluating professional ability and practical application of sound theoretical knowledge in the practice of the speciality a candidate is certified in.

The Board conducts Primary and Final Examinations twice every year in February and August. Written examination is held simultaneously in about 20 Centres in India and 6 abroad on the first Monday and Tuesday of February and August of every year. Practical/clinical and viva-voce examinations are held for candidates qualifying in the final examinations. Candidates with approved postgraduate degrees are exempted from Primary Examinations.

The Board awards "Diplomate of National Board (Speciality)" on passing the examination. The Diplomate qualifications awarded by the Board in various disciplines have been recognised by the Government of India as equivalent to postgraduate qualifications and are included in the First Schedule of the Indian Medical Council Act. State and Union Territory Governments, and other recruiting agencies dealing with the medical profession, have been addressed by the Union Health Ministry to consider NBE qualifications at par with other postgraduate qualifications. Holders of NBE qualifications awarded after an examination are eligible to be considered for Specialists posts in any hospital other than a training/teaching institution. They will also be eligible for appointment to the post of Registrar/Tutors/Demonstrators, etc. in teaching Institutions which would be counted as research experience for other teaching posts.

Besides the Medical Council of India recognised institutions, the Board has recognised 80 non-teaching institutions/hospitals including 28 of the Armed Forces after due inspection as centres for training for the Diplomate qualifications of the Board.

Examinations are currently conducted in 39 Medical Specialities and Super Specialities.

The next Board examinations will be held in February 1988. Further enquiries may be addressed to the Assistant Registrar (Examinations), National Board of Examinations, NAMS Building, Ansari Nagar, New Delhi, enclosing a self addressed stamped envelope.

Orientation Programme for Principals

The Centre for Adult/Continuing Education of the Jiwaji University, Gwalior, recently conducted a 3-day orientation programme for college principals. Topics like participatory role of principals and involvement of resource persons from within and outside the university, college/community needs and area development approach programme through adult education, strategy for training programmes at grassroot level and management aspects of adult education programme of UGC were discussed. Role of social workers in adult education and the role of supervisors in its evaluation process were also taken up.

Shri A.K. Vijaya Vargiya, Excise Commission of the State, inaugurated the programme while Dr. S.C. Saxena, Dean of the Centre, presided.

Indo-Soviet Symposium on Organometallic Chemistry

The Department of Chemistry, University of Rajasthan, Jaipur proposes to organize the first Indo-Soviet Symposium on Organometallic Chemistry from March 7-11, 1988. Besides a dozen Soviet Prominent Organometallic Chemists, a number of distinguished scholars from India would be delivering the plenary lectures in the broad areas mutually agreed for discussions like (i) Novel Elemento-organic (organometallic) and Metallo-organic compounds (ii) Elemento-organic intermediates and reagents in organic and inorganic synthesis (iii) Elemento-organic polymers, and (iv) Bio-elemento-organic chemistry.

Further details may be obtained from Prof. R.C. Mehrotra, Department of Chemistry, University of Rajasthan, Jaipur 302004.

Guidance and Counselling Centre

The Rajendra Agricultural University, Pusa (Samastipur) has established a Centre for Guidance and Counselling for the students of the University in order to provide them information regarding job opportunities, vacancies abroad and international organisations, and the possibilities for getting scholarships and awards. It is also intended to enable the students to perform better in competitive tests at the state and national levels. The Centre started functioning from 3rd Dec., 1987, the Foundation Day of the University, it being the birthday of late Dr. Rajendra Prasad.

Computer Centre for St. Ann's College

The Osmania University is reported to have accorded permission to St. Ann's College for Women to establish the Computer Centre and to introduce the B. Sc. (Computer Science) course with a combination of mathematics and physics for girl students. This will be the second computer centre to be run by a private college.

The Centre is proposed to be equipped with a latest terminal system with five terminals and a facility to extend upto 40 terminals, as and when required. To be set up at a cost of about Rs. 3.5 lakh, the Centre would have the latest macro computer facility which provides multi-user and multi-tasking requirements.

habilitating and managing small reservoir-based irrigation systems in Tamil Nadu. The assistance will cover professional staff salaries, Office expenses, Consultants, Workshops and training, and Study tours.

The University will also receive a financial assistance of Rs. 24.50 lakhs from the UGC to strengthen research in superconductivity in the Department of Physics for a period of three years.

Soviet Youth Perform at Kashmir University

A Soviet Youth contingent participated in a cultural programme at University of Kashmir on November 27, 1987 as part of the celebrations of the Festival of USSR in India. The Soviet Youth led by Mr. S.M. Illushen were accorded traditional Kashmiri welcome. Prof. Mushirul Haq, Vice-Chancellor of the University of Kashmir referred to the richness of the culture of the two countries. The programme was jointly performed by Soviet and Kashmiri Youth. Cultural items presented during the show reflected different aspects of the cultures of Kashmir and the USSR. The programme concluded with the university Tarana.

The Soviet Youth also visited University Central Asian Museum. The artifices of the museum greatly impressed the guest team. The artifices of museum reflect the old cultural and trade relations of Kashmir with Soviet Central Asia. Scholars of the Centre for Central Asian Studies had interaction with the guests.

Vice-Chancellor Prof. Mushirul Haq who was 'At home' in honour of the guests, presented gifts to the visitors.

Project Assistance for Anna University

The Ford Foundation has agreed to make a grant of $ 230,000 to Anna University for an experiment in participative approaches to re-

News from Agril. Varsities

VETERINARIANS MEET

The 8th Annual Conference of Indian Association of Veterinary Microbiologists, Immunologists and Specialists in Infectious Diseases and the National Symposium on Mycoplasmosis, Molecular Biology, Vaccinology and Immunology was recently held at Haryana Agricultural University. Inaugurating the symposium, Dr. A.K. Chatterjee, Animal Husbandry Commissioner, Union Ministry of Agriculture urged the veterinary health specialists to develop the required diagnostic tools which was the prime demand for animal surveillance. He pleaded for quicker, efficient and reliable methods of diagnosis. He said that today with single test scientists could diagnose 3 or 4 diseases.

Emphasising the importance of quarantine, he said that the contagious Bovine Pleuro Pneumonia is spread in England, Africa and Asia by shipment. We need to protect our animals against exotic diseases which could be done by effective diagnostic tools.

Mr. Mahender Singh, Vice-Chancellor, HAU in his presidential address said that since animal husbandary forms an important component of our poverty alleviation programmes, the success of these activities taken up under IRDP, NRP and DRDA would depend on animal health assurance. As such, he called the veterinarians "Bhagya Vidhata" (dispenser of destiny) of the downtrodde . He urged upon the specialists to evolve a workable strategy and recommended the possible line of approach for control of important infections of livestock and poultry in the country. He said, 'in spite of the vastness of animal resources, we continued to be poor in productivity.'

Over 150 specialists in veterinary microbiology and immunology from all over the country participated in the three-day seminar.

New Rice Variety

A new rice variety IET 7564 has been found promising by NARP scientists, at Bihar Agricultural College, Sabour for direct seeding in summer in Diara Land. Rice cultivation in summer under transplanted condition is not catching up due to high cost on irrigation but this variety can be sown directly in the main field after rains in early May when land is vacant after the harvest of Rabi crops. This variety matures in 90 days and gives a yield of 2 ton/ha. It is semi-tall and suitable for low fertility conditions. It possesses drought tolerance and develops sufficient foliage to smother weeds.

Agricultural Electronic Equipment

The Kerala Agricultural University (KAU) has started preliminary works for establishing a pilot centre at Vellanikkara for popularising the use of Agricultural electronic equipment among the farmers at a cost of Rs. 50 lakhs. The scheme is fully financed by the Central Department of Electronics, New Delhi. Besides Uttar Pradesh, Kerala is the only state selected for implementing the scheme.

The pilot centre is sanctioned for a period of 5 years from 1987-88. The objective of the scheme is to help the farmers at all stages of cultivation right from seed to storage. Use of electronic equipment in the analysis of soil, milk, water and grain preservation will be popularised. As a part of the scheme, modern electronic equipment for measuring the presence of aflatoxins in cereals, seeds, edible oils and cattle feeds will be imported from United States. A mobile unit will also be established under the pilot centre for the benefit of farmers around Vellanikkara.

INSAT-1B Programme of UGC

Between 16th January to 30th January, 1988 the following schedule of telecast on higher education through INSAT-1B under the auspices of the University Grants Commission will be observed. The programme is of one hour duration every day from 12.45 p.m. to 1.45 p.m. (Repeated from 4 p.m. to 5 p.m.) and will be available on the TV Network throughout the country. For the viewers in Delhi and surrounding areas these programmes can be seen on the second channel.

Pakistan Makes Solar Car

Three students of Karachi's N.E.D. University of Engineering and Technology have produced a solar-powered car "Solar Samba". The single-seater, produced by the students as a study project, was recently sent to Australia where it competed remarkably in the Pentax World Solar Challenge against formidable competitors from the USA, Japan, Germany, Australia, Denmark and Switzerland.

The trio—Atique Shafaat, Sirajul Matin and Baqar Tirmizi, took about twelve months in designing and fabricating the car.

Solar Samba is made of fibreglass. The single-seater is a threewheeler with a three-speed gearbox. Weighing 640 pounds, it has a maximum speed of 40 kilometres per hour.

It has an overall length of 130 inches, a width of 75 inches and height of 52 inches. The ten solar panels installed on the top of the car are approximately 197 square inches in area. The ten solar panels of Samba convert sunlight into electrical energy and feed it to an energy reservoir provided in a battery fitted behind the single seat.

The energy received from the sunlight passes into an electronic control unit installed inside the car. The control unit continuously processes the energy which is either used to provide motive power or goes into storage, depending on whether the car is stationery or in motion. The unit also monitors the amount and distribution of incoming energy.

When the power requirement exceeds the quantity needed for the one horse-power D.C. motor and the available input, the control unit channels energy from storage to motor. This may happen during acceleration or ascent or when some kind of shadow falls over the solar panels blocking sunlight, as in a cloudy weather or during night. Similarly, when the load is light and a surplus energy is available, it goes into storage.

Solar Samba is largely an indigenous product. Except for the solar panels, which were imported from Australia, everything else that went into its making is locally-made. All other parts were fabricated locally in accordance with the specifications designed by the three students.

The Samba costs about 100,000 rupees to make. The cost of materials was around 80,000 rupees, more than half of it, about 59,500 rupees, going into the purchase of the imported solar panels.

Varsities Teams for National Tournaments

Volleyball

Indian Universities Volleyball(M) Team for participation in the next Federation Cup Volleyball Tournament to be held at Dariba Mines (Udaipur) from February 2-9, 1988, will be selected at trials at Rajasthan University, Jaipur on January 15 & 16, 1988. 48 probables selected from Zonal Inter-University Volleyball Championships have been invited to participate in the trials. Selected members of the team will undergo training at Rajasthan University, under the supervision of Mr. B.K. Ojha, Volleyball Coach, till its participation in the Federation Cup.

Walk and Marathon

Athletes for participation in the next National Walk and Marathon Championship scheduled to be held in Delhi on February 27 & 28, 1988 will be selected on the basis of performance in the Inter-University Athletics Meet being organised at Punjabi University, Patiala from February 10-14, 1988.

Wrestling

Indian Universities Wrestling Team will participate in the Senior National Wrestling Championship to be organised at Calcutta from February 10-14, 1988. Best three wrestlers in each weight category of the last Inter-University Wrestling Championship are being invited to attend the Selection Trials at Banaras Hindu University, Varanasi on January 26 & 27, 1988. The selected wrestlers will be provided training at Varanasi under the supervision of wrestling coach of BHU.

SOCIAL FERMENT IN INDIA Alexandra George

This book discusses features of social unrest in India such as, present-day unrest and widespread corruption among politicians and bureaucrats; the laws that are made to preserve minority groups, and how these laws are sometimes misused by higher castes, the bureaucracy and even the judiciary; how corruption has become so widespread in the country even among certain government servants.

The author's account is based on considerable personal enquiry and investigation and on standard published sources. Co-published with Athlone Press Ltd., London.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

UNIVERSITIES HANDBOOK—1985-86

Salient Features

—Contains information covering all the Indian Universities including agricultural universities, institutes of national importance (including IITs) and deemed to be universities on following heads of information :

- Officers & Deans of Faculties;
- Library & Research Facilities;
- Scholarships and Fellowships;
- Academic year—last date for admissions and the approximate dates of examinations;
- Courses of Studies;
- Minimum requirements for admission to each course, duration and the subjects of study for each course;
- Names of Professors and Readers/Assistant Professors together with their academic titles department-wise;
- Names of Colleges together with names of Principals and Heads of Postgraduate Departments in Colleges;
- Statistics on examination results.

—Introductory chapter on overview of the University System in India.

—Map showing location of universities.

Academic Staff College Programme
Some Experiences

B.K Passi* & P.K. Sahoo**

The Academic Staff College (ASC) Programme of Indore was formally inaugurated by Dr. S.M. Dasgupta, Vice-Chancellor, Devi Ahilya Vishwavidyalaya in the Department of Education on 2nd November, 1987. The objectives of the ASC are :

(i) to develop awareness among University/College teachers regarding the role of Higher Education in a changing social order;
(ii) to acquiant teachers with the principles and practices of pedagogy at Higher Education Stage;
(iii) to make the teachers self-sufficient in keeping themselves continuously abreast of the new knowledge in respective disciplines; and
(iv) to make the teachers aware of the means for development of their personality during teaching career.

In order to achieve the above objectives, the curriculum had four components viz.

(A) Awareness of linkages between Society, Environment, Development and Higher Education;
(B) Philosophy of Higher Education, Indian Education System and Pedagogy;
(C) Subject Upgradation; and
(D) Management and Personality Development.

Three components A, B, and D are covered in the first phase programme of 4 weeks' duration.

The first module programme of 4 weeks functioned during 2nd November to 28th November, 1987. In all 60 teachers belonging to institutions (University Departments and Colleges of Indore) participated in the programme. They belonged to as many as 22 different subjects (Commerce-13, Chemistry-5, Physics-3, Botany-4, Zoology-2, Geology-3, Statistics-2, Maths-1, English-4, Hindi-1, Marathi-1, Sociology-4, Psychology-3, Economics-4, History-2, Political Science-1, Geography-1, Philosophy-1, Home Science-1, Social Work-3, Music-1, and Drawing-1). In the initial stage 62 participants had registered. Their mean attendance was 22 days out of 24 days Programme.

Thirty resource persons, besides the Director and Co-ordinator of the ASC taught during the training programme. Five of them belonged to outside institutions viz; Kurukshetra, Baroda, Delhi and Bhopal. The rest of the resource persons belonged to University Departments, Colleges and other educational institutions of Indore. The resource persons were invited on the basis of their interest and knowledge of different subjects.

**Director, ASC, Indore, **Co-ordinator, ASC, University Department of Education, A-B Road, Indore.*

The Programme included theoretical as well as applied aspects of different topics belonging to A, B, and D Components. The topics covered under 'A' Components were egalitarian society, secularism, national integration, multilingualism and multiple culture, poverty and unemployment, rural development, urbanisation, environmental pollution, etc. The topics like Philosophy of higher education, learning processes, methods of teaching, techniques of teaching, material production, use of computer in higher education, educational system, management of universities and colleges, problems and issues of higher education, and economics of higher education were selected under Component 'B'. The Component 'D' included topics like communication theories, speech training, effective writing skills, how to run a club, youth and indiscipline, etc.

Presentations of 20 to30 minutes on each topic were followed by group discussions of around one hour. Necessary teaching aids like overhead projector, slides projector, video cassette recorder, and audio cassette players were used to make the presentation effective. Apart from classroom Lecture-cum-Discussion, practicals were organised for use of methods of teaching, preparation of self-learning materials, communication techniques, brain storming, administration of psychological tests, preparation of curriculum outline and test items etc. Necessary background materials and lecture notes were supplied to each participant. On selective topics assignments were given to them.

The course outlines prepared in the initial stage were modified to a certain extent during the 4 weeks' programme on the basis of feedback from the participants. Continuous efforts were made to get feedback from the participants through, informal and formal discussions with the participants and administration of weekly reaction scales. The participants' suggestions were sought for improvement of models of presentation and their participation in the same. For studying the overall effectiveness of the Programme, a questionnaire was administered to the participants at the end of the Programme.

With a view to evaluate the performance of participants, an assignment was given to each of them at the end of the Course. They were directed to submit the same within a week of complection of the Programme. The assignments will be graded; and pass certificate will be issued to the participants on the basis of their successful performance in the assignments.

It was observed that, the participants, in general, had appreciated the relevance of components 'B' and 'D'. Some of them did not perceive the direct relevance and immediate implication of component 'A'. All the participants were keen for the organisation of Component 'C' where they could have got opportunity to learn about current developments in their respective subjects and to link their learning experiences on principals and practices of pedagogy with them.

The participants felt that the duration should have been extended for a few more weeks for covering these three components viz. 'A', 'B', and 'D'. The organisers, also, realised the requirements of involvement of full 6 hours duration of every day for one month. Especially, a few topics like methods of teaching, preparation of instructional materials, use of teaching, evaluation techniques, curriculum development, use of computer in teaching could not be dealt with at intensive level because of the paucity of time. The participants demanded more details on these topics. As per their requests, the ASC is in the process of organising two more one week courses on "Computer Education" and "Psychological Testing" for more than 40 participants. They had expressed their likings for involvement of more number of outside resource persons in the Programme.

The participants appreciated the process of short presentation followed by longer discussions, small group discussions, practicals and use of sophisticated media like VCR. With regard to the need and mod of evaluation of participants during their participation in the Programme, they were equally divided. The participants willing for assessment insisted on certification and consideration of the same for their professional growth. In addition to the coverage of 4 Components, the participants, especially belonging to social science groups wanted training on general methodology of research for conducting their owe research work as well as guiding their master level, and doctoral level students.

The organisers and the resource persons observed the heterogenous background of the participants. The participants were least concerned with theoretical presentations. While a selective number of them participated very well in discussions, most of them acted as the silent spectators. The cyclostyled handouts and some reference material supplied to them remained almost unutilised. Further more, sustaining motivation of participants for daily programmes of around

UNIVERSITIES WITHOUT WALLS
The Case of India

B.L.Misra*

Mushroom growth of Universities and falling standards of education have rightly occupied the minds of many a people in India. But the right of education cannot be denied to anyone in a democratic country like ours. Rather, it is one of the core responsibilities of our government to provide sufficient and suitable educational facilities and create a climate for their proper use in terms of our constitutional mandate. Our Government has taken long strides in educational fields since independence and has made vigorous efforts to take it to the most distant parts of the country. Serving such a large country through institutionalised education was bound to have numerous educational institutions and in the process education was bound to suffer in terms of quality. But our Government has had a bigger and more meaningful objective and the needs of the masses in view.

India is today served by a wide network of a variety of educational institutions established by the Government and private organisations. A new phenomenon distinct from existing formal system of education has recently been added to it in the form of Open Universities (Universities without walls) for distance education with a different chunk of clientele and methodology in view. India have at present two such universities—(i) Andhra Pradesh (A.P.) Open University established by State Government of A.P., and (ii) Indira Gandhi National Open University (IGNOU)—a Central Government organisation. This paper intends to evaluate the case of Open Universities in India with special reference to IGNOU. The study is divided into four parts—(i) Genesis and growth; (ii) Objectives and Organisation; (iii) Operational Policies; and (iv) Observations and suggestions. It must be made clear at the outset that the study refers to higher education.

Rationale

At present there are a large number of colleges and universities in India for higher education. Statistically, the number of colleges and universities went up from 370 to 5246 and from 27 to 140 respectively and that of professional colleges from 208 to 727 during the period 1950-51 to 1983-84. The number of students enrolled for higher education increased from 5,56,000 in 1960-61 to 33,59,000 in 1983-84. Expenditure on education also increased gigantically, i.e, from about Rs. 100 crores in 1950-51 to over Rs. 5185 crores in 1982-83. But these data do not prove that the educational facilities in India are sufficient and available to all sections of society.

The existing formal/conventional system of education suffers from many drawbacks. It is elitist, traditional and expensive, and has pushed the society, bit by bit, to the brink of disintegration. Second set of its defects include the need for full-time teachers and classrooms, age limits and face to face teaching. By and large, the conventional system cannot take charge of all sections of the society due either to its own limited capacity or the students' inability to adjust to its constraints. Formal system is of no help particularly to those who cannot afford to be full time learners. The formal system, in fact, has lost its utility in modern times of advanced communication technology and more so due to its inability to carry out its much propagated objectives.

In these circumstances, the Open Universities may prove a boon. Colleges and universities remain closed for most part of the year for reasons not unknown and even during their working days, classes are not held regularly. Thus, the system requiring full time teaching as we have today, is wasteful.

Open universities propose to impart education to those who cannot afford full-time learning, through printed material, audio-visual aids, tutors and academic counsellors. Students enrolled with such universities will be free from various constraints which exist in formal system and will enjoy flexibilities of the new system.

However, the Open University system is not intended to compete with the existing formal system of education. Rather, it will supplement the formal system. The rationale for the creation of the Open Universities vis-a-vis the present system may be seen in the following points :

(1) The present system is unable to accommodate all sections of the society due to its limited capacities.

**Co-ordinator, Indira Gandhi National Open University Lucknow Study Centre, Jai Narain Degree College, Lucknow.*

(2) The existing system is not accessible to all sections of the society owing to their inabilities to meet its requirements such as costs and full time attendance.

(3) In the present day world, the formal system of education has lost its utility and is wasteful; classroom teaching and library facilities as available and utilised in this system fail to justify full time learning.

(4) The open universities can serve a large clientele with less hands and at lower costs.

(5) India is today equipped with sufficient communication technology for distance education, which the Open Universities propose to utilise, saving both the students and the Government different types of costs.

(6) The open university system will serve a different type of clientele which for social reasons, or otherwise, cannot join the formal system of education. For example, girls, housewives and employed and retired persons can benefit most from the open universities.

(7) There was need for such universities as could work with flexibility and openness in respect of courses. Correspondence institutes cannot assume this responsibility because they act as an adjunct to the conventional universities.

In view of the handicaps of the formal system of education, an alternative was found in the Open University system, which was well supported by the intention to use modern communication technology in education and also by the experience of other countries.

Historical Background

The idea of distance education was executed long back through correspondence courses. The importance of distance education may be visualised in the creation of the International Council for Distance Education, affiliated to UNESCO, by the correspondence institutes of different countries.

To reinforce the efforts for distance education, the first full-fledged Open University came into being in U.K. in 1969, the idea for which originated in 1959 when Harold Wilson, the then opposition leader in U.K. proposed a University of the Air. Later in 1964 when he became the Prime Minister, the idea was implemented through a Royal Charter. But "the University of South Africa can be considered as the forerunner of all distance teaching Universities." Over the passage of time, Pakistan, Sri Lanka, Thailand, West Germany, Israel, Japan, Venezuela, Spain and Canada have also established open universities.

Open Universities in India

The establishment of the Open University, U.K. impressed our policy makers. In 1970, a seminar co-sponsored by the Ministry of Information and Broadcasting was held under the aegis of Ministry of Education, Government of India, to consider the feasibility of creating an Open University in the country. The Seminar came out with positive findings.

In pursuance of the Seminar's recommendations, the Government of India constituted a eight member working group in 1971 under the chairmanship of Mr. G. Parthasarathy. The Group which submitted its report in 1975 reinforced the idea. Later in 1982, the committee to enquire into the working of Central Universities under the chairmanship of Dr. (Mrs.) Madhuri R. Shah forcefully recommended the establishment of a National Open University.

In the meantime, Government of Andhra Pradesh (A.P.) developed a proposal in 1978 to have an Open University in the State. In 1982, an expert committee under the Chairmanship of Professor G. Ram Reddy to prepare a project profile on the establishment of an Open University was constituted by the Government of A.P. through Government Order No. 494 dated 25th May, 1982. The committee submitted its report on 9th August, 1982 and the Andhra Pradesh Open University, the first in India, was established on 25th August, 1982 by an Act of the Andhra Pradesh State Legislature.

The idea of National Open University remained shelved for a long time. It was again taken up in January 1985 when the Prime Minister Shri Rajiv Gandhi in his first broadcast to the Nation, made a policy statement that included establishing a National Open University. Immediately after this, vigorous efforts were made and the Indira Gandhi National Open University was brought into being on 20th September, 1982 by an Act of Parliament.

Organisation and Objectives

Indira Gandhi National Open University (IGNOU) is the outcome of the new education policy which envisages dissemination of educational opportunities to all parts of the country with thrust on innovation, minimisation of cost, flexibility, learning-based-teaching, and, to cap it all, democratisation of education.

The organisation structure of the IGNOU has been so devised that it suits its needs. Its organisation structure is fairly comparable with that of other Central universities. Certain distinctive features have arisen as it has refrained from creating decorative and unuseful positions like Chancellor and Court, or opted for having new posts. The organisational committees of the University include the Board of Management, the Academic Council, the Planning Board, the Finance Committee and the Board of Recognition. The University proposes to have various schools instead of departments as in the traditional universities to undertake its academic activities. Each of the schools will be headed by a Director, not a Dean as in the conventional universities. The Board of Management is identical to the executive council in the traditional universities. The Officers of the University include the Vice-Chancellor, the Pro-Vice-Chancellors, the Directors, the Registrars and the Finance Officers. The University proposes to open its Regional Centres at least one in each State which will have a number of study centres under it. In fact, the Regional and Study Centres will be responsible of arranging for student support services.

Thus, IGNOU will function through its Regional and Study Centres. It has by now opened four Regional Centres, one each in Lucknow (Uttar Pradesh), Bhubaneswar (Orissa), Bhopal (Madhya Pradesh) and Hyderabad (Andhra Pradesh), and has made arrangements for establishment of its first study centres numbering about 46 all over India. In the absence of Regional Centres, the study centres will be controlled directly by the University Headquarters at Delhi. It may be mentioned that open universities abroad also function through regional and study centres or other similar establishments.

IGNOU is intended to take education to every corner of the country. Its jurisdiction extends to the entire country. Although all universities function as national organisations, their benefits are normally limited to their locational region. IGNOU proposes to approach students through Regional and Study Centres and thereby cover the entire country. Its objectives have been made clear in the IGNOU Act. The following extract from the Act seems pertinent.

> "The objects of the University shall be to advance and disseminate learning and knowledge by a diversity of means, including the use of any communication technology, to provide opportunities for higher education to a large segment of the population and to promote the educational well-being of the community generally, to encourage the Open University and distance education system in the educational pattern of the country and to coordinate and determine the standards in such system....

The objectives of the Indira Gandhi National Open University can be categorised as follows :

A. **Main Objectives**

(i) to take education to all corners of the country.

B. **Secondary Objectives**

(i) to make use of modern communication technology in distance education;

(ii) to provide learning-based-teaching;

(iii) to cover housewives, employed and retired persons;

(iv) to ensure societal involvement in education.

Operational Policies

Indira Gandhi National Open University has nation-wide jurisdiction and is expected to attract learners from all corners of the country, unlike the conventional universities which fail to serve extensively. It is a common knowledge that the Open University, U.K. provided a model for promotion and creation of IGNOU. So far as the operational policies of the University are concerned, these have been planned and developed through marathon discussions and extensive surveys. No doubt, the working of the foreign Open Universities and A.P. Open University has been a constant source of confidence.

Regional Centres

Section 2(j) of the IGNOU Act defines the Regional Centre as below :

> "Regional Centre" means a centre established or maintained by the University for the purpose of coordinating and supervising the work of Study Centres in any region and performing such other functions as may be conferred on such centres by the Board of Management."

Thus, a regional centre headed by a Regional Director will be the branch office of University and it will be charged with the responsibility of managing the University's operations and supervising Study Centres in the allotted region. The University may have one regional Office in each State but some big states may have more than one and some small states may be allotted to one regional Centre all depending upon the response. As already noted. IGNOU has established 4 Regional Offices one each in Uttar Pradesh, Madhya Pradesh, Orissa and Andhra Pradesh. The Regional Centres will be equipped with teaching material on distance education.

Study Centres

Depending upon the strength of students and their dispersal various learning aids will be available at the study centres. Such centres will be responsible for providing student support services. Except printed study material which will be sent through mail directly to the student, all other learning facilities will be available at the study centres. These include.

(i) Library

(ii) Audio-Visual Aids

(iii) Tutorial and counselling facilities

(iv) Reception and information services

Study centres will be headed by a Coordinator who will work under the overall supervision of the head of the institution where it is located. The Coordinator shall coordinate the work of tutors/counsellors and act as a link between the University, Regional Centre and Study Centre. The University has by now opened 46 study centres all over India. Where there is no regional centre, study centre is expected to report to the University directly.

Magnitude of Operations

The University has launched two diploma courses from January 26, 1987—(i) Diploma in Management, and (ii) Diploma in Distance Education. To cope up with the requirements of Diploma in Management, the University has established 46 study centres all over the country and the needs of Diploma in Distance Education will be catered to centrally, i.e., by the University directly. It may be mentioned that admissions to these courses have been completed with a good response for the course in Management. Other courses like B. Com. and B.A. are being launched from January, 1988.

Conclusion

In order to strengthen the working of the IGNOU and to make it more effective, the following suggestions are offered.

(i) A proper liaison with the State Governments is necessary. It would be useful if the University authorities keep in touch with the State authorities and also hold regular meetings with them.

(ii) Many States have been toying with the idea of opening a State Open University. The IGNOU should act as a lead institution and the State Governments should first ascertain the need for state level open university in consultation with the IGNOU. The parameters like relationship between various State Open Universities and cooperation and collaboration between State Open Universities and the IGNOU should be given due consideration.

(iii) The University should make arrangements for aggressive publicity of its aims and objectives, the courses it starts, and eligibility criteria thereof.

(iv) A systematic growth rather than widening of commitments should be the aim. For this, proper infrastructural facilities should be ensured.

Indira Gandhi National Open University will go a long way in solving the problem of distance education. It will act as a catalytic agent for educational improvement in the country. To make it a grand success, the State Governments and, Private, Public and Social organisations should volunteer their support to the cause the IGNOU is avowed to serve. ☐

WOMEN'S STUDIES
Some Curricular Issues

Mira Ghosh* and Dr. K.K. Ghosh**

The University Grants Commission has just selected seven Indian Universities to introduce Women's Studies in their curricula to change society's attitudes, and values towards women's role and rights. Studies will have to be conducted in such fields as Women's contribution to social processes, women's perception of their own lives, the broader social reality, Women's stuggle and aspirations, Roots and structure of inequality, exclusion of women from the scope and approaches and conceptual framework. In this connection the Ford Foundation has offered US $ 100,000 as aid. The UNESCO is also being submitted a research project in this connection by S.N.D.T. Women's University, Bombay, who have also been entrusted to prepare a manual. The NCERT in New Delhi has also prepared an undergraduate course and produced text books.

To change Society's attitude towards women and project values towards Women's role and rights are subjects which can be introduced in curricula as compulsory reading for all—whether male or female—in undergraduate courses, where women's contribution to social processes and broader social reality can be highlighted. Such courses may include topics from history maybe, Women's role in the freedom struggle from the modern to the medieval and ancient world, Rajput Women's heroic struggle, Rani of Jhansi, Razia Begum. Comparative studies of the history of other countries like Joan of Arch in English history will also help. Not only in history but in supplementary reading, such feminist stories as 'You can't Kill the Spirit' by Jill Miller, 'Women & Revolution' might form good studies. In Psychology & Philosophy, such books as 'Regulation of Desire', 'Social and Sexual Revolution', 'Sex and Germs' (University of Toronto Press—Black Rose Publications) might form ideal books to be recommended. From other collections in fields of Science, may be quoted Jen Green's 'Despatches from the Frontiers of the Female Mind', 'Susan Griffin's 'Woman and Nature', 'You Can't Keep a Good Woman Down' (Women's Press, London).

When we come to Postgraduate Studies, the most important study would be in the field of Anthropology with such topics as causes of disorders in the social and emotional pressures which pursue women from birth and the needs they are taught to deny; Woman's struggle for dignity against a background of urban racism; how does religion relate to women's struggle for social change and such other topics. Sex and Love, Love and Friendship, Woman as a Child-birth Machine, Feminist Aesthetics, Pornography and Possessing Women, the Dialectic of Sex, Sexual Violence and similar subjects may form studies in Sociology. In Politics and History of course, there is abundant scope for research in the evolution of roots of inequality, Women's struggle as well as Women's contribution to social processes.

No doubt introducing these aspects of Women's Studies for undergraduate and postgraduate curricula for both men and women might well help in changing society's attitudes and value towards women's role, but will these studies help in achieving the aspirations of women, remove the inequality in society and assist in non-exclusion of women from the scope ? Unless women can understand their own importance in the broader social reality and make them important and useful with sufficient perception of their own lives, the inequality will never go and naturally they will be excluded from the scope.

In other words, to prevent women to be excluded from scope, make them important and useful, also to imbibe strength in their own selves, what is needed is to give them such type of education that they might feel economically strong not to depend on the menfolk, achieve their own aspirations without the help of their male counterpart or partner and can stand in the struggle against inequality, exclusion from scope and resist physically and mentally, any upsurge against feminism. By imparting such an education or training it does not mean preparation for "battling to improve Women's status" by making crowded processions and uttering cruel slogans against men rending the atmosphere, but an education for "preparation of complete living". For this are required to prepare well-designed curricula which may discipline the women to be loved and respected in society and they in their turn, might feel strong enough to withstand the stress of "exclusion" and "inequality".

As the flower is to the plant community, so women are to the animal species the most pretty and beauti-

---

***Chairman, Indian National Committee of World University.*

ful of the creatures in living nature. Rudeness, roughness and indiscipline on the part of women—even falsehood and immorality—are disqualifications on the part of women. Therefore discipline should be the motto in all female education, to make them really lovable to all in society. On the one hand therefore, the curricula should include beauty culture from the beginning of education, on the other hand discipline in all spheres, in drills, in music, in dance and in classroom. And a disciplined mother will ultimately fit into prepare a disciplined child.

Whereas therefore, beauty culture, dance, music and good behaviour should form the curricular studies, alongwith training in domestic chores like cookery, sewing, home management and so on, to change the broader social reality, women should be given sufficient physical education so as to be able to resist with force any kind of violence. Here softness will not pay. In this context, Sports and Physical Education should form a compulsory curriculum.

Talking of aspirations and economic independence, from the very start, there should be vocational courses as many as can be opened to welcome women candidates. Some of the vocations like typing, stenography, nursing, hospital and hotel management, catering, passenger relations (P.R.O. HOSTESS and such other jobs) should have scrupulous reservation for women in as much as driving, masonry, engineering for men. In all these fields and also in fields where day to day services are required like those of sanitarymen, electricians, dressmakers and so on, women should be given proper education. It is only by giving the maximum vocational and technical training with the Government making cent per cent reservation to positions where women might most fit in, that Society's attitude towards women and value towards women's role and rights can be changed, so that a feeble family partner or a humbug housewife might not detract the sweet perceptions that women might have of their own lives and aspirations. Here educators have as much to contribute by preparing the right types of curricula from the grassroot level as the State to co-ordinate. □

Academic Staff College Programme

(*Continued from page 2*)

4 hours was the major concern of the organisers. As per the participants enthusiasm, two short form get togethers and one cultural programme was organised. These brought a lot of freshness among participants during the Programme. The organisers were overloaded with answering daily queries of the participants. Every care was taken during the Programme, for informal dialogues between the participants and resource persons on academic matters.

On the basis of first round experiences it is felt that the ideal group size of each course should be around thirty. Supply of relevant books and self learning packages to all participants should be encouraged. Educational films in VCR form could have been used to a large extent. Several organisational problems with regard to accommodation of participants, finance, correspondence etc., can be solved smoothly provided a full-time administrative Officer is appointed for the ASC.

Moreover, library facilities for the full working days must be provided to the participants. Keeping in view the above experiences the ASC, Indore will work out a plan of organising the future programmes. Necessary datas are being collected from around 160 institutions of Madhya Pradesh which fall under the jurisdiction of ASC, Indore. □

Population, Education & Unemployment

Hon'ble M. Hidayatullah, Former Vice-President and Chief Justice of India, delivered the Convocation Address at the 77th Special Convocation of the University of Poona. While dwelling upon some of the crucial issues facing education today, Shri Hidayatullah pleaded for delinking degrees from jobs and strengthening of vocational and technical education to meet the challenges of growing population and unemployment. He said "to put a premium on degrees makes a student lose many years of useful employment and much expenditure on the part of parents who give support to him to go through a university curriculum". Excerpts :

The problem of education in our country is unique. The real core of the problem is our population and its growth. Not only our population explosion the root cause of our poverty, it is the cause of all our other ills. Recently, extracts from a paper published by the Population Crisis Committee of Washington has given the figures. Our population stands today at the staggering figure of 785 million people and is growing at 2.3 per cent per annum which means that by turn of this century, we will have added 232 million people. The world population is expected to cross 8 billion by the year 2022 and by that time we shall have one person in seven. That is to say the Indians will be 1/7th of the population of the world. We have to bear this fact in mind because, I regret to say that in the celebrations of forty years of Independence we have thought of everything except the pressures of our own population by the time we reach the twenty first century.

Our educational policy has not taken full stock of these eventulaties. We promise free and compulsory education up to the age of 14 which will mean an increase in the number of schools to a staggering extent. As to advanced education very recently in this University a learned lecturer referred to the words of Alfred North Whitehead where he said "First-hand knowledge is the ultimate basis of intellectual life" and inferred that

> "book learning conveys second hand information and as such can never rise to the importance of immediate practice."

He goes on to say

> "What the learned world tends to offer is one second hand scrap of information. The second handedness of the learned world is the secret of its mediocrity. Of course lessons in life are all around us."

Shri M. Hidayatullah delivering the convocation address

As against this Carlyle had said that a modern University is a mere collection of books. You cannot learn to work a super computer or produce a super conductor by self education. We are not Blaise Pascal whose genius began to appear before he was twelve and with a piece of charcoal he drew diagrams on floor and walls of the room in which he used to play. He had his own vocabulary. He called a line a bar and a circle a round. But he constructed his axioms and worked out complete demonstrations and found for himself the secrets of Geometry and without ever seeing a mathematical book he got to the thirty second proposition of the book of Euclid. We cannot all learn from Nature around us and must depend on the knowledge in garnered in books by others.

I have had a chance to be a student and a teacher and know the problems of teaching and of students, teachers and Universities. Unfortuately, today the problem of education is made many times more difficult because student life is not entirely academic but gets involved with the politics of the day. This is because the politicians do not leave them alone. I have known how disturbing and disrupting politics can be to the smooth running of education. When the students should concentrate on their studies they indulge in political squabbles and lose that serentity which is needed for absorption of knowledge and this knowledge can only come from those who possessed it before and work books.

A University is really a ground of various disciplines opening the door to diverse employments. It comes at the end of ones educational career. The problems of education both at the University level and earlier have been discussed by various committees and experts.

There is no one single suggestion but a variety of suggestions how to plan and establish our educational standards and competence of persons educated. Unfortunately, we have fallen into a routine which may be described as a rut. Time was when a modicum of education served the purpose both of the nation and its needs. Today the call of the nation is for excellence and the qualification needed to answer that call is also from your side.

We had, in the earlier days, when I was a student, a set pattern of education in the schools and colleges. I attended half a dozen schools and found the education run, on almost similar lines. Later, when I became more educated and entered the University as a student and later as a part of the University administration, I noticed in half a dozen Universities in india that the educational pattern was almost the same. There is very little variety or specialisation. Therefore when we talk of the problem of education in India, we have to think of it in two different directions. The first is the education of masses of the students who begin their scholastical career. The second is, if I may say so, to put the finishing stage when a specialised education is imparted to fit the students for certain occupations. The problem of educating the children and adults is different from a problem of educating the University students. In the first instance there may be some similarity in education because in the formative period of a child as he grows to be an adult, he needs the equipment of basic knowledge—the basic knowledge used to be described in our days by reading, writing and arithmatic. Once that was over, the basic education was complete. Today that basic education has become very fast and the schools try to hurry from the first entry to the next stage viz , the University stage. For this purpose, we have now evolved what is known as 10+2 stage before a student enters the University. The 10+2 stage is the most important stage in the education of the masses. In fact most of the tasks to be done in our country can be done by persons who have finished the 10+2 education with a little extra training for a specialised job. Unfortunately, a University degree viz., B.A., M.A. or Ph. D. have attained some importance which they do not deserve for ordinary purposes. A 10+2 student with a little specialised training, as I said, can handle most of the jobs; you do not need a Ph. D. for being a stenographer, a sub-inspector or a storekeeper. I have had people working under me who were very highly educated but were employed in such a place that their high qualifications did not count. Therefore, much emphasis on University degree is to be discouraged and that can only be done if the qualification for employment is placed at a lower level, say 10+2 qualification. In fact, for most ordinary jobs, in government or private undertakings a person with a good background of 10+2 education can be as satisfactory as a person with an M.A. or a Ph. D. degree. To put a premium on degrees makes a student lose many years of useful employment and much expenditure on the parents who give support to him to go through a university curriculum.

On the other hand, the problem of the education of children up to the age of 14 and of uneducated adults is even more difficult. If our population is placed at 800 Million, the number of such persons can be imagined. The number of schools and teachers needed will be staggering. Our effort should be to make all literate and to go slow in trying to give all a University education. We must have more technical and vocational schools who must be in touch with employers and cater to their needs. That way employment will be assured. That is how unemployment has been brought down to almost nothing in South Korea. In Korea, the aptitude of a boy or a girl is found from special reports given by the teachers. As soon as he or she is basically trained, they are diverted into a channel where their aptitude will grow and they will become useful workers. Employment follows and they pursue the line which had been determined for them. The result is that there is almost no unemployment because every child going through school is assured of a job according to the aptitude. In our country the unemployment figure is in the neighbourhood of the 20% of the citizens.

Therefore, we have to take a second look at our educational policies keeping in view the requirements of the country and pay attention to the aptitude of the person concerned. There is no use trying to teach the same curriculum year after year to different batches of students without training. What would be the use of that education in our life ? The Mahatma said that he learnt so many things in the schools and colleges which he never put to use in life. Therefore stereotyped curriculum is to be avoided.

We Congratulate . . .

(1) **Dr. H. S. Singh who has taken over as Vice-Chancellor of the Haryana Agricultural University, Hisar.**

(2) **Dr. Bhaskar Roychoudhury who has taken over as Vice-Chancellor of the University of Calcutta.**

National Centre of Astronomy

The University Grants Commission has approved a National Centre of Astronomy and Astro-Physics in the University of Poona which would be connected with the proposed project of the "giant metre wave length radio telescope" at Narayangaon, about 100km. from Poona. According to Vice-Chancellor Dr. V. G. Bhide, the Rs. 5-crore telescope project would have its academic headquarters in the university in which the Department of Atomic Energy and the Tata Institute of Fundamental Research were also participating. The university headquarters and the main telescope would have a satellite link.

Eminent scientist and astronomist, Dr. Jayant Narlikar, had set up the centre which was the second of its kind after the Nucleus Science Centre of the Jawaharlal Nehru University, New Delhi set up one-and-a-half years ago.

The UGC Chairman would head the Governing Council of the centre and the Poona University Vice-Chancellor would be its co-chairman.

Gorakhpur Engg. College Silver Jubilee

The Uttar Pradesh Chief Minister, Mr. Vir Bahadur Singh, has emphasised the need of close coordination between the technical institutions and the industry to enable wider application of modern technology in the country. He said that these institutions should try to keep themselves apprised of the latest requirements of the industry. He was speaking at the silver jubilee conference of the M. M. Malviya Engineering College in Gorakhpur recently. He said that the students studying in these institutions should be prepared to accept the challenges in the field.

The Chief Minister emphasised the need for developing a technology which suited the needs of the rural areas. It should require minimum possible money and should be able to utilize the resources available in the rural areas. Referring to the expansion of technical education in the State, Mr. Singh said that at the time of independence, there were only two engineering colleges while the present number of the engineering colleges is 10. Besides there are 72 polytechnics functioning in the State.

Keeping in view the latest developments, he said, courses in electronics engineering, production and computer science had also been introduced in various engineering colleges. He said that courses in textile engineering and chemical engineering would also be started soon in this college.

North Gujarat University Fully Functional

The North Gujarat University, established last year, is now fully functional. 42 colleges in North Gujarat with a student population of over 25,000 have been transferred to the New University from Gujarat University. It imparts postgraduate instruction in 22 Centres with an enrolment of 3242 students. At present the New University has the faculties of Arts, Science, Commerce, Law, Education and Engineering. It proposes to start postgraduate departments in the subjects of English, Mathmatics, Sociology and Computer Science.

Special UGC Aid for Madras Varsity

About 100 departments of Madras University doing research in science and technology have been identified by the University Grants Commission for special funding, according to Prof. Yash Pal, Chairman, UGC.

These departments will be given equipment which normally the Universities could not hope to possess and the value of this assistance may go up to Rs. 50 lakhs. All these would be on top of the basic infrastructure aid being given by the UGC to the university through departments for special assistance and the Centre for Advanced Study. The special aid now being processed will lead to the adoption of quality programmes by universities.

Inter-University Centres

Inter-university centres for collaboration between universities with the help of common facilities are sought to be promoted by the UGC. The first of these coming up will be the Nuclar Science Centre to be located in the Jawaharlal Nehru University in Delhi, where a large accelerator facility is being set up. A registered society has been formed which will be managed by an inter-university board in which the UGC also will be partner. The cost of the accelerator will be of the order of Rs.10 crores spread over a span of five years.

Central Varsity for Assam

The Union Government is reported to have agreed to set up a Central University in Assam's minority dominated Barak valley. This was revealed by Shri Santosh Mohan, Union Minister of State for Communications, on one of his recent visits to Silchar.

News from Agril. Varsities

Biotechnology in SAARC Countries

An international seminar on the role of plant physiology and biotechnology in the SAARC Countries was organised by the Gorakhpur University. Delivering the inaugural address at the seminar, Prof. V. Puri, Prof. Emeritus observed that ever since man started farming, about 8,000 years ago, efforts were being made to increase crop yield by various methods and practices evolved in years of long experience rather than a clear understanding of factors involved. He said that shifting-cultivation was one such method—a practice still followed by some tribals in our eastern states. Recently substantial increase in yield had come from : (1) increased fertilizer use, (2) use of improved agronomic practices, (3) use of improved seed and to some extent (4) understanding of environmental conditions.

All this, he said, appears to give the impression that increased crop productivity was essentially the function of plant breeder and the agronomist, and breeding work and management studies had achieved much and would continue to do so in future. But a clear understanding of the factors and processes contributing to yield potential, enabled us to circumvent some of the limitations that may confront us, he said. Besides, most of the basic facts about plant nutrition, plant growth and plant responses were provided by physiologists and the plant physiologist could still make significant contributions to crop productivity notwithstanding the scepticism expressed in certain quarters, he added.

A promising alternative that came to mind, he said, was the biofertilizers that harness atmospheric nitrogen with the help of specialised soil micro-organisms. The importance of biofertilizers was said to have been "indirectly known to our ancestors when they transferred large amounts of soil from areas where leguminous crops were flourishing to areas where they were less luxurious." The nitrogen fixing micro-organisms might be either free living in the soil or symbiotically living with other plants and they might, therefore, contribute fixed nitrogen to plants directly or indirectly.

Prof Puri said that many laboratories, all over the world were busy finding ways and means to augment biological nitrogen fixation as it was so cheap. But the conventional approach involved using better strains of rhizobia, providing better environmental condition for these strains, while the non-conventional approach had great potential and this aimed at inducing nodule formation in cereals, and other plants hybridizing nitrogen fixing bacteria with other bacteria.

Discussing the problems relating to cooperation for quality research, he said that some of these problems were being tackled in the various laboratories, but the technical facilities available to the workers here were by and large not adequate. This could be made good to some extent by more frequent exchange visits by research workers in the area and by resorting to some sort of planning with a view to avoid unnecessary duplication and wastage of limited resources. In fact, some sort of cooperation between different SAARC countries could not be overemphasized and this might even extend beyond agriculture to energy and health, two other areas that deserved equal emphasis, he added.

He lamented that the experimental research work had not yet received the international recognition to the extent it deserved. He exhorted the practitioners of different areas of plant sciences, to see that the work we produce was of such a nature and standard that it got due place in international literature. This would be possible only when we commit overselves to science and scientific attitude, he said.

New Poultry Project for KAU

The ICAR has accorded sanction for the implementation of an AICRP on Poultry Nutrition during the seventh five year plan for a period of three years at a total financial outlay of Rs. 5,12,240 to be shared between ICAR and Kerala Agricultural University (KAU) on a 75:25% basis. The objective of the project is to establish nutrient requirements as influenced by season, for promising strain crosses of white leghorn developed at AICRP on Poultry for eggs, at Mannuthy Centre.

New Cotton Varieties Evolved

Three improved varieties of cotton have been envolved by Pakistan's cotton research institute at Faisalabad. The new varieties are not only high yielding but their fibre quality and fibre length is also good.

The Ayub Agricultural Research Institute has recently evolved a new rice variety as well. The new variety labelled as Basmati-385 has all the characteristics of Basmati-370 in addition to being short statured. It has a high yielding potential and gives 80 per cent more produce.

News from Abroad

Message To Next US President

The Commission on National Challenges in Higher Education, created by the American Council on Education, has prepared a Memorandum for circulation to all the Presidential candidates. It sets out five major challenges facing the next president and detailed steps the federal government and higher education should take to make sure the challenges are met.

Highlights of the five challenges are as follows :

(1) Educate Americans for an increasingly interdependent world.

"Many Americans are uniformed about other peoples and countries and poorly prepared for an increasingly interdepent world", the commission said.

The report called on colleges and universities to strengthen all fields of international study, to improve teaching of foreign languages and culture, and to provide more opportunity for educational exchanges for both students and scholars.

The report recommended that the next president provide federal support to bolster such programs and to support development on joint international research and educational programs at the university level.

(2) Help revitalize the economy.

"As major sources of discovery, innovation, and invention, colleges and universities are already significant contributors to our advanced, technology-based economy," the memorandum said.

But, it pointed out, the institutions of higher learning can do much more to develop working relationships with industry, to secure private funding for research, and to take initiatives far beyond research activities to help the nation become more competitive.

These initiatives would include: improving management training in business schools; strengthening programs in industrial engineering; increasing international emphasis in law, business, and public administration schools; and upgrading teacher preparation and attracting more mathematics and science teachers.

The educators recommended that the next Aministration initiate programs to increase the supply of teachers at all levels, provide tuition benefits received from an employer tax exempt.

Addressing the link between a vital economy and "America's preeminence in research," the commission recommended that the next president expand federal support for graduate research assistantships and support the construction and renovation of research and teaching facilities through the National Science Foundation and the National Institutes of Health.

(3) Expand educational opportunity.

The educators called on the next president to :

● intensify federal efforts to encourage disadvantaged students to seek higher education through expansion of such successful programs as Head Start and Upward Bound;

● increase need based education grants funding and other student assistance programs; and

● reduce excessive reliance on student loans by increasing grant support.

The commission said colleges and universities should "share the responsibility" for assuring repayment of student loans.

The message also said the new Administration should consider an "educational savings account" concept to provide parents with an incentive to save for their children's education and to increase graduate fellowships for minorities.

(4) Address human needs and the quality of life.

To restore the close partnership between government and higher education for the purpose of attacking social problems, the commission called on the new president to :

● provide increased support for applied social science research;

● initiate programs to study and improve the quality of public and preventive health care; and

● increase support for preserving our scholarly resources and develop new computerized information storage and retrieval systems.

(5) Restore respect for fundamental values and ethical behavior.

The commission pointed to the

pervasive sense in America today that "we have lost touch with fundamental values and standards of ethical behavior," evidence being widely publicized scandals in the public and private sectors.

It noted the effort to strengthen values is less a task for government than for the family, schools, and religious institutions, but said higher education can make a contribution by improving curriculum offerings in traditional courses in philosophy, religion, literature, and political science, as well as by creating new courses in moral reasoning and professional ethics.

The Commission urged the new president to expand federal programs for community service at home and abroad and to create incentives for students to enter public service careers in teaching, public health, and social welfare.

The Commission chaired by William Friday, President Emeritus of the University of North Carolina comprised prominent educators of the United States.

World's Most Accurate Clock

Physicists at the University of Western Australia (UWA) are developing a clock which they believe will keep time more accurately than ony other in the world. It will be made from ultra-pure, artificial sapphire.

The scientists recently announced the completion of the first stage of their project, a clock which loses or gains only one second every 30 million years. This makes the present UWA clock as accurate as the other most accurate timepiece presently in use, the atomic clock.

The new Australian clock has a core made from artificial sapphire, in a principle similar to that which uses quartz in everyday wrist watches. According to Dr. David Blair, senior UWA physics lecturer, this gives their invention more stability than the atomic-hydrogen clock.

Dr. Blair said the UWA team could make the sapphire clocks—which would be suitable for use in radioastronomy and the tracking of spacecraft—more cheaply than the atomic clock. The oversized, handless sapphire clocks could be produced for $100 000 each compared with the atomic-hydrogen clocks, which cost $300 000 a piece and were very expensive to maintain.

Dr. Blair predicted that the UWA team could make a breakthrough in producing a yet more sophisticated clock "in the next few months". This clock of the future would be out by only a second in the estimated age of the universe—10,000 million years. By comparison, the average wrist watch loses or gains a second a day,

The discovery in 1984 of revolutionary sapphire technology provided a lead to the development of the new generation clocks. The research was a spin-off from gravitational wave research.

The UWA research has been supported by grants from the Commonwealth Scientific and Industrial Research Organisation and the Australian Research Grants Scheme.

The precision of the clocks would be demonstrated in a Bicentenary project in 1988 when more than 11 radio dishes around Australia would link up to obtain an accurate picture of the skies above the Southern Hemisphere.

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
January 20-23, 1988	History and Literature : Patterns of Identity Formation in Modern India	To explore the possibilities of using literature for understanding the formation of a veriety of collective identities—national, regional, linguistic—in modern India by getting together specialists from literature and the social scientists.	Centre for Social Studies, South Gujarat University, Surat.	Prof. Sudhir Chandra, Centre for Social Studies, South Gujarat University, Surat-395007
January 25-Feb. 5, 1988	International School on Crystal Growth and Characterisation of Advanced Materials for Solid State Applications	An advanced level School highlighting the pace of advances in the field of Crystal Growth, especially showing the links between fundamental and applied research.	Crystal Growth Centre, Anna University, Madras.	Prof. P. Ramasamy, Head, Department of Physics, Anna University, Madras-600 025
February 5-6, 1988	**National Seminar on Interaction between Institutions and Industries through Science and Technology Entrepreneurs' Parks**	**To provide a forum of young entrepreneurs, industrialists, scientists and educationists to deliberate on the vital issues of Industry-Institution interaction.**	**STEP, Roorkee and University of Roorkee, Roorkee.**	**Prof. M.P. Jain, Organising Secretary, National Seminar IIISTEP, Office of the DRIL, University of Roorkee, Roorkee-247667**
February 7-9, 1988	Mapcost Symposium on Indian Studies on Chrysomelidae and Bruchidae	To discuss different aspects of study of Chrysomelidae and Bruchidae insects.	Govt. Arts and Science College, Durg (M.P.).	The Secretary, Mapcost Symposium, Govt. Arts and Science College, Durg-491001 (M.P.)
February 18-20, 1988	Dalit Literature	To review and reassess the role and relevance of Dalit Literature in building an alternative perspective on Indian social, political and cultural life.	Centre for Soical, Studies, South, Gujarat University, Surat	Prof. S.P. Punalekar, Centre for Social, Studies, South Gujarat University, Surat-395007
February 19-21, 1988	Conference on Ecology and Environment	To identify and define various issues relating to Ecology and Environment and evolve Strategies to meet the challenges of ecological imbalance, environmental pollution, etc.	Mugra—Gagan, Hingoli—Sponsored by the Department of Science and Technology, Govt. of India, and supported by Marathwada University, Aurangabad.	Prof. Vasant Purohit, Director, Ecology and Environment Conference, Saket, 6 Shri Saikripa Colony, Shiwaji Nagar, Hingoli-431 513
March 10-12 1988	Nationalism : Problems and Challenge	To discuss different aspects of the development of nationalities during 19-20th centuries and their relationship with Indian nationalism.	Centre for Social Studies, South Gujarat University, Surat in collaboration with K.M. Munshi Centenary Committee, Gandhinagar.	Prof. Ghanshyam Shah, Centre for Social Studies, South Gujarat University, Surat-395007
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis**	**University of Hyderabad in collaboration with the Indian Society of Andrology**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**

MINISTRY OF HUMAN RESOURCE DEVELOPMENT
(Department of Education)

SPANISH GOVERNMENT SCHOLARSHIPS 1988–89.

Application on plain paper as per prescribed format, are invited from Indian Nationals for the award of five scholarships to study Spanish language. The salient features of the offer as are under :—

1. **Qualifications** :—Master's degree in Spanish language.
2. **Experience** :—Preferably two years' Teaching/Practical Training/Research experience as on 1.4. 1988 after the prescribed qualification. Candidates already registered for Ph.D. in an Indian University will be given preference.
3. **Level of Study** : Ph.D. level research/training.
4. **Duration** : A minimum of two & maximum period of nine months or twelve months starting from October, 1988.
5. **Value** : 58000 (Approx. Rs. 6,500/—) peretas p.m.
6. **Age** : Not exceeding 33 years as on 1.10. 1988 (Relaxation in age upto two years will be given in the case of SC/ST candidates).
7. **Passage Cost** :—Passage cost from India to Spain and back will be borne by the candidate or his/her employer/sponsor, subject to the availability of funds, the passage cost may be met by the Government of India in accordance with the rules of eligibility etc.

Note : (i) Equivalent foreign degree will be considered. (ii) Candidates, who have already been abroad for research/training/study on scholarship are eligible to apply only if they have been in India for at least three years after their return from abroad. (iii) Candidates should have adequate knowledge of geographical situation and cultural heritage of India, and of the donor country. (iv) Applications of candidates who are abroad will not be considered. (v) A recent passport size photograph should be affixed on the right side of the format. (vi) Applications which do not contain Postal Order will not be considered. (vii) Candidates **NOT** fulfilling the requisite qualifications need not apply. (viii) Canvassing in any form will be disqualified for interview/fellowship.

FORMAT OF APPLICATION

Recent
Passport
size
Photograph

1. Name of the Scholarship Scheme
2. (a) Subject (b) Sub-subject
3. Name of the Candidate (in Block Letters)
   (Full Mailing Address)
4. Date of Birth and the State to which
   the Candidate belongs
5. Whether a member of SC/ST or a tribal or
   aboriginal community if so, give full particulars.
6. Academic record starting from High School/Higher Secondary.

Name of the Board University/ Institution	Exam(s) Passed	Year of Passing	Division/Class with Position if any*	Percentage of Marks obtained & Position, if any.	Subjects taken

*(In case no Division/class is awarded and only grading is done, the conversion formula adopted may be mentioned).

7. Details of Professional Practical Training and Research Experience specifying the period and number of papers published, previous employment with the name and date of employment if any.
8. Nature of the present employment with date of appointment, designation and the name and address of the employers.
9. Have you been abroad, if so, give full particulars of the country and the period. Also mention the year of return to India.
10. Proposed programme of study/research/training, specifying ; (1) the work at present engaged in; (2) future plans prospects after the proposed studies/research; (3) nature and programme of study/research desired; (4) how are these related to the technical or economic development of India.
11. Number and Date of Crossed postal order of Rupees five (Rupee one and paise twenty five only in case of SC/ST candidates etc.) attached with the form.

Note : Employed persons must send their applications fully-sponsored by their employers. However, advance applications complete in all respects will be considered provisionally pending sponsorship by employers. Applications must be sent to the Assistant Educational Adviser, Ministry of Human Resource Development (Deptt. of Education), External Scholarships Division, ES. 5 Section, Room No. 577, 'B' Wing, Shastri Bhavan, New Delhi-1 by **31st January, 1988.**

Place : **Date :** **(Signature of Candidate)**

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

RESEARCH IN PROGRESS

A List of Research Scholars Registered for Doctoral Degrees of Indian Universities

PHYSICAL SCIENCES

Mathematics

1. Kalayanthanickal, Sunny Joseph. *Special classes of regular semi-ground and construct structure therein about them.* Kerala. Dr. S. Madhavan.

Physics

1. Aggarwal, Mamta. *Study of equatorial waves in the middle atmosphere.* Delhi. Dr. O.P. Nagpal.

2. Dashtiani, Masoud. *Semi-conductor material device.* Delhi. Prof. P.C. Mathur.

3. Jha, Pankaj Kumar. *Ionospheric Physics.* Delhi. Dr. K.M. Aggarwal.

4. Pradeep Kumar, V. *Molecular studies on mycobacterial assemblies : Experimental and theoretical aspects.* Delhi. Dr. Madan Mohan Bajaj.

5. Prasad, Abhay Kumar. *Solar Physics.* Delhi. Dr. K.M. Aggarwal.

6. Raj Kamal. *Gause theories in 10 dimensions.* Delhi. Dr. R.P. Saxena.

7. Sethi, Shiv Kumar. *Field theories and early universe.* Delhi. Prof. N. Panchapakasan.

8. Sherawat, Kiran. *Certain equilibrium configuration in latest field theories.* Delhi. Dr. R.P. Saxena.

Chemistry

1. Awate, S.V. *Synthesis and characterisation of zeolites catalysts.* Shivaji. Dr. P. Ratnasamy.

2. Bobde, Vivek. *Physico-chemical and enzymatic studies on synthetic oligonucleotides.* Delhi. Prof. M. Atreyi.

3. Jayaprakash, T.N. *Synthesis of organic compounds possessing bioactivity.* Delhi. Dr. H.G. Krishnamurty.

4. Redekar, R.R. *Studies in solution chemistry of metal complexes with thio-ligands.* Shivaji. Dr. P.P. Hankare.

5. Vithalkar, L.G. *Immobilization of some industrially important enzymes-glucosidases.* Shivaji. Dr. N.B. Patil.

BIOLOGICAL SCIENCES

Microbiology

1. Bansal, Sunita. *Studies on yet unknown fungal allergenic spores in Delhi Metropolitan Area.* Delhi. Dr. M.K. Aggarwal and Dr. R.K. Saxena.

2. Wadhwa, Vipul. *Microbial genetics.* Delhi. Dr. Sheela Srivastava.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities.

PHYSICAL SCIENCES

Mathematics

1. Agarwal, Sudha Rani. *The effects of rotation and tidal distortions on the structure and periods of small adiabatic oscillations of composite models of stars.* Roorkee.

2. Arora, Laxmi Kant. *Study of general transcendental functions.* Rajasthan. Dr. A.N. Goyal.

3. Bhramarambica, M.V.S. *On the densities of certain sets of integers.* Osmania.

4. Deo, Shridhar. *Some problems of physical distribution in Robertson-Walker universe.* Manipur. Dr. R.K. Tarachand Singh.

5. Durga Prasad, K.V. *Construction of translation planes and determination of their translation complements.* Osmania.

6. Jayanthan, A.J. *Dispersed metric spaces and related topics.* Hyderabad. Prof. V. Kannan.

7. Manoj Kumar. *Numerical solutions of some flow problems.* Roorkee.

8. Mohanty, Shakti Prasad. *Application of probability in theory of equation.* Utkal.

9. Nath, J.K. *On convolutable Banach spaces of distributions.* Roorkee.

10. Patil, Mahadeo Raghunath. *Some problems in fluid mechanics.* Shivaji.

11. Shah, Madhubala Arun. *Rheology of special materials in relativity.* Shivaji. Dr. B.B. Waghmode.

12. Shukla, Anjali. *Differential geometry of almost complex and almost contact monifods.* Magadh.

13. Udpikar, Shrinivas Gururaj. *On the coefficients of the Hilbert polynomial of certain determinental ideal.* Panjab.

Physics

1. Agarwal, N.C. *Study of reactive and non-reactive inelastic collision in molecular systems.* Vikram. Dr. P.M. Agarwal.

2. Desai, Jayashree Shrinivas. *Some studies on Cu-In-S thin films and their use in ECPV cells.* Shivaji. Dr. S.H. Pawar.

3. Ghiya, Bhimsen Hargovind. *Study of zi centre formation in alkali halides.* Nagpur. Dr. B.T. Deshmukh.

4. Gopalakrishnam Raju, Dandu. *Some studies on infrasonic waves and gravity waves in the ionospheric F. region using H.F. Phase earth technique.* Andhra.

5. Jain, Rajnish Kumar. *Studies on mechanical and thermal behaviour of carbon fibre reinforced phenolic and furan composites.* Delhi.

6. Kanitkar, Ravindra Govindram. *Studies on mineral zeolites-heulandite and mesolite and hydrothermally synthesized zeolite crystals.* Patel. Dr. M.S. Joshi.

7. Khasare, Shailendra Bajirao. *Investigation on some aspects of molecular interactions in liquid state.* Nagpur. Dr. B.A. Patki.

8. Mishra, Mahesh Kumar Bajarang. *Crystal growth and studies in ferro-electric domains in* $KNbO_3$ *single crystals.* Nagpur. Dr. S.G. Ingle.

9. Mithlesh Kumari. *Some problems of condensed matter.* Roorkee.

10. Mukhopadhyay, Asokchandra. *Some studies on the structure and physical properties of jute fibres.* Calcutta.

11. Palaniandavar, N. *Studies on periodic crystallisation of cadmium hydroxide and cadmium sulfide in agar agar gel.* Anna.

12. Pothukuchi, V.K.S. Baba. *Production of resonances* $(\pi^{x\circ}\Sigma_x)$ *in high energy M+P and K—P interactions.* Jammu. Dr. N.K. Rao and Dr. V.K. Gupta.

13. Ramvir Singh. *Heat conduction through multi phase porous systems.* Rajasthan. Dr P.V. Bakore and Dr. D.R. Chaudhary.

14. Raychaudhuri, Anuradha. *X-ray diffraction study of some crystals.* Calcutta.

15. Sharma, Bal Krishan. *Some studies on electrical and structural behaviour of borate glasses.* ITT Delhi. Prof. S.C. Mathur and Dr. D.C. Dube.

16. Sharma, Rameshwar. *Semi-empirical SCF-MO-CI calculation of electronic spectra of polyatomic molecules.* Magadh.

17. Shylaja, B.S. *Emission live studies on Wolf Rayat Binary systems.* Bangalore. Prof. J.C. Bhattacharya and Dr. M.N. Anand Ram.

18. Soneji, Devendra Kumar. *Study of hyperfine fields in some metals and alloys.* Sukhadia. Dr. J. Verma.

19. Swain, Bipin Behari. *Study of some dielectric properties of polar liquid mixtures.* Utkal.

20. Varshney, Ravendra Kumar. *Studies on the propagation characteristics of polarization maintaining optical waveguides*: IIT Delhi. Dr. Arun Kumar.

Chemistry

1. Dani, Shripad Prabhakarrao. *Studies on the use of modified starches, celluloses and some other unconventional materials in the treatment of waste waters containing toxic heavy metal ions.* Nagpur. Dr. S.S. Dara.

2. Jain, P.K. *Studies in the use of brilliant cresyl blue for solar energy conversion.* Sukhadia. Dr. R.C. Ameta.

3. Kuchekar, Shashikant Raghunath. *Extraction and separation studies of some metals.* Shivaji. Dr. M.B. Chavan.

4. Mehta, Surinder Kumar. *Thermodynamic properties of some binary and ternary systems and their correlation with their viscosities.* Panjab.

5. Mishra, Anita. *Synthesis and analytical applications of some imidoyl chloride derivatives.* Ravishankar. Prof. R.K. Mishra.

6. Mohammad Saidul Islam. *Studies on the metal complexes of some organic acids, amines and acid imides.* Roorkee.

7. Mukherjee, Satendra Nath. *Nature and composition of clay minerals in coal and their changing pattern with reference to coal metamorphism.* ISM. Dr. P.K. Gangopadhyay and Dr. B.K. Mazumdar.

8. Nepal, Jitander Kumar. *Coordination chemistry studies on the stability of some bivalent transition metal complexes.* Kurukshetra.

9. Pandya, Bhavna Jagannath. *Study of mono and binuclear complexes involving oxo-cation.* Baroda.

10. Prasada Rao, Talluri Dinakara. *Analytical studies on chemical composition and physical properties of Northern light soil flue-cured virginia tobacco as influenced by varieties, fertiliser schedules and cultural practices.* Andhra.

11. Ram, Kapil Deo. *Some studies of isotopic exchange reaction of iodine on iodide-iodate system by radiotracer technique.* BHU. Dr. Ramji Tripathi.

12. Ramachandran, Kishore. *Synthesis of pyrethroids based on (+)-3-Carene.* Baroda.

13. Ramachandran, Nirmala. *Electrochemical coal conversion.* ISM. Dr. Dipak Guha.

14. Ramachandran, Rama Devi. *Synthesis of Si(IV), Al (III), Mn (II), Al(III) and Ca(II), Al(III)u-oxoisopropoxides and their reactions with N and O containing ligands.* Delhi.

15. Rayappa Reddy, T. *One election oxidation of some organic and inorganic compounds by* Ni_3 *+ion in aqueous* H_2SO_4 *media : A kinetic and mechanistic approach.* Osmania.

16. Sanwari, Rehna. *Studies with ion exchange resins on phenolic compounds.* Sukhadia. Dr. C.V. Bhatt.

17. Saxena, Mira. *Chemical investigation of some Indian medicinal plants.* Devi Ahilya. Dr. S.K. Srivastava.

18. Seth, Sushila. *Studies in photogalvanic cells and solar energy conversions.* Sukhadia. Dr. S.C. Ameta.

19. Varma, Roop Chand. *Studies on zinc complexes of hydroxytriazenes.* Sukhadia. Dr. B.N. Purohit.

20. Vajra Lingam, G. *Synthetic of modified steroids.* Osmania.

21. Venkateswarlu, S. *Oxidating of some organic compounds by N-bromoacetamide : Kinetic and mechanistic study.* Osmania.

22. Wadhwa, Anju. *Iodometric microdetermination of certain acids by potentiometric and spectrophotometric methods.* Durgawati. Dr. R.M. Verma.

Earth Sciences

1. Bheemalingeswara, K. *Geochemical dispersion of base metals in soils and stream sediments in Pur-Banera mineralized belt, Bhilwara District, South Central Rajasthan.* Delhi.

2. Bhushan, S.K. *Petrology of malani volcanic rocks with special emphasis on the genesis of rhyolites.* Roorkee.

3. Chandrakantha, G. *Geo-hydrological and geochemical studies of ground water relating to irrigation and rural water supply in Dakshina Kannada District of Karnataka.* Bangalore. Dr. C. Naganna and Prof. M.R. Gajendragad.

4. Durge, Madhusudan Vishwanath. *Geology of the rocks of Patharia hills, Sagar, M.P.* HS Gour.

5. Joshi, B.C. *Geo-environmental studies in parts of Ramganga Catchment, Kumaun Himalayas.* Roorkee.

6. Paliwal, Rajendra Kumar. *On certain aspects of short range numerical weather prediction over India with a multilevel limited area primitive equation model.* IIT Delhi. Prof. M.P. Singh and Dr. U.C. Mohanty.

7. Pandian, M. Soundra. *Metallogenetic investigations of the Degana Tungsten Mining District, Rajasthan with an emphasis on identifying exploration parameters for tungsten deposits associated with acid magmatism.* ISM. Prof. O.P. Verma.

8. Qureshi, Mohammad Shafi. *A study of malani suite of rocks around Jalor, Rajasthan.* Durgawati.

9. Roy, Indrajit Ghosh. *The regularization method and its application on inverse problem for the interpretation of layered earth in resistivity method.* ISM. Prof. B.B. Bhattacharya.

10. Sharma, S. D. *Subsolidus equilibria relations in* $CoO\text{-}Mg^8\ Fe_2O_3$ *system in air and magnetic behaviour of its ferrimagnetic spinel phase.* Roorkee.

Engineering & Technology

1. Bimbhra, P.S. *Analysis and performance of semi converter fed Dc drives.* Roorkee.

2. Chaudhuri, Jyoti Prasad. *Separation of ethanol from ethanol-water system by membrane technique.* IIT Delhi. Dr. P. Ghosh and Dr. B.K. Guha.

3. Deb, Swapan Kumar. *Study of coordinated multimodel urban mass transportation system.* IIT Delhi. Dr. S.L. Dhingra.

4. Gupta, O.S. *A study of resonant cavity multiple device oscillator.* Roorkee.

5. Gurnam Singh. *Steady-state stability of synchronous generators with static excitation systems.* Panjab.

6. Jain, Ganpat Lal. *A new biotechnological approach to compensate for altered peripheral sensory perception.* IIT Delhi. Dr. J S. Pasricha and Prof. S.K. Guha.

7. Jain S.S. *Analysis, design and evaluation of flexible pavements for Indian environment.* Roorkee.

8. Kotdawala, R.R. *Limit state behaviour of ferrocement flexural elements.* Roorkee.

9. Maiske, Devdas Hari. *Study of computer methods in image analysis.* Nagpur. Dr. K.K. Joshi.

10. Mohan Rao, K.M. *Hydrological response of unsaturated zone upto water table.* Roorkee.

11. Mukhraiya, Jay Kishore. *Flow and performance investigations of centrifugal blowers with aerofoil blades impellers.* IIT Delhi. Dr. D.P. Agrawal and Dr. S.M. Yahya.

12. Pal, Jayanta Kumar. *Studies in well test analysis of some Indian oil fields.* ISM. Shri S. Laik and Dr. Gopal Krishnan.

13. Ramamoorthi, V. *Studies in mass transfer operation.* Anna.

14. Singh, S.P. *Studies on some potential non wood fibrous plants for pulp and paper making.* Roorkee.

15. Singh, Sheojee. *Rapid solidification studies of aluminium-transition metal alloys.* BHU. Prof. C. Suryanarayana.

16. Singh, Vimal Sheel. *Studies on the adsorption of surfactant/micellar flooding process for enhanced recovery of petroleum.* ISM. Dr. B.P. Pandey.

17. Sinha, Amarendra Nath. *Computer aided design and analysis of conveyorised material handling.* ISM. Prof. A.K. Basu.

Council of Scientific & Industrial Research

Advertisement No. 1/88

It is proposed to appoint two Scientist-F for the Central Electro-chemical Research Institute, Karaikudi. The major areas of R & D work at the Central Electro-chemical Research Institute are: all aspects of Electrochemical Science & Technology, Electronics & Electrobiology, Corrosion Science and Engineering, Industrial Metal Finishing, Fuel Cells and Batteries, Electro-hydrometallurgy, Electropyrometallurgy, Electrochemical Physics and Materials Sciences, Organic/Inorganic electrochemicals, Electrochemical Instrumentation and Electrochemical Education.

Job Requirements : These are senior research and management positions and the selected incumbents are expected to possess high level leadership in the respective disciplines with ability to motivate and lead a team of research scientists as well as to generate new ideas and take these to fruition. They would also be expected to assist the Director academically and administratively in planning, projecting, monitoring and evaluating multi-disciplinary research programmes as well as to identify, plan and coordinate research projects in their relevant areas at the HQ and at the regional centres of the institute. The incumbents in addition, are expected to have familiarity with modern equipments and techniques in their relevant areas of work. Since CECRI is multidiscipline-oriented, the incumbents should have skill for interaction with other scientists of the Institute.

Experience and Qualifications for Post—1 : (for Industrial Metal Finishing Division)

Essential : High academic qualifications in Science, Ph. D. degree with at least 20 years experience in the field of coating for corrosion protection and functional applications. Experience in fundamental and applied work on pre-treatment, organic coating, inhibitive pigment, electroplating of metals and alloys, electrodeposition, metallic coatings, surface modification of metals, diffusion coatings and inorganic coatings for decorative, protective and functional applications.

Desirable : Experience in dealing with protective coatings for pipelines in chemical industries, marine environments, piles in different port trusts, transport vehicles including railway coaches and protective schemes for steel structures in fertilizer industries, defence establishments, electricity boards and development of radiation resistant coatings for nuclear installations, painting of rusty steel, high solid coatings, zinc-rich paints, inhibitive primer and water-based coatings for electropainting and brushable air-drying/stoving type.

Experience and Qualification for Post—2 : (For Corrosion Science & Engineering Division)

Essential : High academic qualification in Science, Ph. D. degree, with a minimum of 20 years research experience in the field of Corrosion Science and Engineering, especially in the areas of basic studies, development of anticorrosion products like inhibitors, inorganic coatings, sacrificial anodes for cathodic protection etc. and design of electrochemical protection systems.

Desirable : Since CECRI is required to render services to the industries on various aspects of corrosion control, the incumbent is expected to possess proven experience in failure analysis, control of corrosion of heat-exchangers and other industrial equipments, design of anodic and cathodic protection systems for industrial equipments and structures and ability to interact with industries whenever on-the-spot examination of corrosion problems are to be undertaken.

Experience in organising colloquia, seminars, symposia, Industrial Get-togethers, training programmes and short and long-term refresher courses in their respective areas would be an added requirement.

Salary/Conditions of Service : The Salary Scale is Rs. 5100-150-5700-200-6300 plus allowances at Central Government rates. Higher initial pay can also be considered. This is a contractual appointment initially for a period of six years. The contract is extendable and the incumbent can also be confirmed. Consultancy subject to an upper limit of Rs. 15000 per year is permissible. Free medical aid and leave travel concession are also permissible for the family as per Government rules. Residential accommodation will be provided on payment of usual rent subject to availability.

Age : Preferably below 50 years, relaxable in deserving cases. A duly constituted Screening Committee will decide on the number of Scientists to be invited to meet the full Selection Committee. The decision of the Council on this behalf will be final. Applications from employees working in Government Departments, Public Sector Organisations and Government funded research agencies will be considered only if forwarded through proper channel and with a clear certificate that the applicant will be relieved within one month of receipt of the appointment orders.

Those interested may kindly send in their curriculum vitae in duplicate in the form obtainable from the Joint Secretary (Admn.) Council of Scientific & Industrial Research, Rafi Marg, New Delhi-110 001 on or before **15th March, 1988**. Any information about the Central Electrochemical Research Institute, Karaikudi, can be obtained in writing from the Director of CECRI, Karaikudi 623006, Tamil Nadu.

INDIAN COUNCIL OF MEDICAL RESEARCH

The Council proposes to appoint a **Research Officer** (Hindi Publication) for the Headquarters office of the Council, New Delhi.

Job Description

The incumbent will be required to

(1) Prepare in Hindi & English Scientific articles/bulletins on selected topics both for scientists and the lay public.

(2) Prepare Hindi Versions of the Annual Report of the Director-General, ICMR; the ICMR bulletin and other technical documents and information, as and when required.

(3) Participate in the preparation of display material and in exhibitions meant for scientific community and also laymen.

(4) Undertake copy-editing and proof-reading of Offset publications in Hindi and English.

Qualification and Experience

Essential : (i) Ist Class M.Sc. in Biomedical Sciences (preferably in Zoology, Microbiology, Biochemisty, Pharmacology, etc.) with a sound knowledge of Hindi and English.

(ii) Experience in technical writing/translating and editing of Science articles/reports in a reputed publishing organisation.

Desirable : Ph. D. in Biomedical Sciences (in the topics listed above)

(ii) Ability to interpret Science concepts in English and Hindi;

(iii) Experience in preparing Science material in layman's/Semi-technical language;

(iv) A degree or its equivalent in Hindi;

(v) Knowledge of Indian languages other than Hindi.

Salary/Condition of Service

The scale of pay attached to the post is Rs. 2200-75-2800-EB-100-4000 plus allowances as per Central Govt. Rules. Non-practicing allowance is admissible to Medical Graduates only as per rules of the Council. Benefit of pension admissible.

Age

Below 45 years. SC/ST candidates allowed relaxation in accordance with Government of India Rules.

Candidates called for interview will be paid 2nd class return fare on production of documents.

Applications from employees working in Govt. Departments, Public Sector Organisations and Govt. funded research agencies should be forwarded through proper channel.

Applications can be obtained from the office of the Director-General, Indian Council of Medical Research, Post Box No. 4508, Ansari Nagar, New Delhi-110 029 on or before **28th January, 1988**. Forms duly completed should be sent to the Director General, Indian Council of Medical Research, Post Box No. 4508, Ansari Nagar, New Delhi-110 029 with a crossed Indian Postal Order for Rs. 8/- payable to Director-General, ICMR, New Delhi. SC/ST candidates are exempted from this payment. Incomplete and late applications will not be entertained. Forms duly completed should reach the ICMR Office **on or before 6th February, 1988.**

MINISTRY OF DEFENCE

DEFENCE RESEARCH & DEVELOPMENT ORGANISATION (DRDO)

Advt. No. 014/RAC/88

Openings for a Challenging and Rewarding Career in the Field of Defence Research and Development

The DRDO undertakes research and development projects for upgrading the technology to meet the multitudinous requirements of fighting force of the country. Excellent career opportunities affording a challenging and rewarding work experience in different streams of disciplines exist. There are about 40 laboratories/establishment located all over the country equipped with latest R & D facilities. Labs are located in Delhi, Bangalore, Hyderabad, Pune, Madras, Bombay, Dehradun, Cochin, Vishakhapatnam, Balasore etc.

Applications are invited for the following positions:

(A) Scientist 'G'—(Rs. 5900-7300) —1 Post

Item No. HQ DRDO, New Delhi—1 Post

Essential Qualifications : At least second class Bachelor's degree in Civil Engg. from a recognised university or equivalent, (ii) Twelve years' experience in planning, design or development of large R and D civil works projects including setting up of specialised technology facilities of which 5 years should be in a senior responsible position having displayed innovative skills in introducing newer approach to construction management.

Desirable Qualifications: (i) Master's degree in Civil Engg, (ii) Postgraduate degree or diploma in management, (iii) Candidate should have wide exposure and be conversant with high technology R and D facilities in the country and abroad.

(B) Scientist 'E' (Rs. 4500-5700) —2 Posts

Item No. 2 -1 Post - (Defence Research and Development Laboratory, Hyderabad)

Essential Qualifications: (i) At least second class Bachelor's degree in Electronics/Telecommunications/Electronics and Communications/Computer Engg. from a recognised university or equivalent. (ii) Ten years' research, design and development experience in developing computer-based Management Information System for R and D projects of which at least three years should be in a responsible position.

Desirable Qualifications: (i) Master's degree in Electronics/Telecommunications/Electronics and Communications Computer Engg., (ii) Experience in planning and commissioning of communication/computer systems.

Item No. 3 —1 Post—(Defence Research and Development Laboratory, Hyderabad)

Essential Qualifications : (i) At least second class Bachelor's degree in Mechanical/Aeronautical Engg. from a recognised university or equivalent, (ii) Ten years' research, design or development experience in precision fabrication of aerospace systems hardware.

Desirable Qualification : (i) Master's/Ph.D degree in Mechanical/Aeronautical Engg., (ii) Experience in management of aerospace systems hardware.

(B) Scientist 'D' - (Rs. 3700-5000) —2 Posts

Item No. 4 -1 Post -(Naval Science and Technological Laboratory, Vishakhapatnam)

Essential Qualifications: (i) At least second class Bachelor's degree in Electrical/Electronic Engg. with specialisation in Control Engg. from a recognised university or equivalent, (ii) Eight years' research design or development experience in electrical/electronic control systems.

Desirable Qualifications : Master's/Ph.D. degree in Electrical/Electronic Control Engg.

Item No. 5—1Post- (Defence Research and Development Laboratory, Hyderabad)

Essential Qualifications : (i) At least second class Bachelor's degree in Electronics Engg. from a recognised university or equivalent, (ii) Eight years' research, design or development experience in system engineering of radars and signal processing.

Desirable Qualifications : (i) Master's/Ph.D. degree in Electronics Engg./Microwave Engg., (ii) Experience in synthetic aperture radars and Track While Scan (TWS).

(D) Scientist 'C' (Rs. 3000-4500) —12 Posts

Item No. 6—Mechanical Engineering—1 Post (Defence Laboratory, Jodhpur)

Essential Qualifications : At least second class Bachelor's degree in Mechanical Engg. from a recognised university or equivalent, (ii) Four years' research, design or development experience in the field of desalination technology.

Desirable Qualifications: (i) Master's degree in Mechanical Engg., (ii) Experience in the design, maintenance and operation of high pressure pumps.

Item No. 7 —Physics —1 Post—(Defence Laboratory, Jodhpur)

Essential Qualifications: (i) At least second class Master's degree in Physics from a recognised university or equivalent, (ii) Four years' research, design or development experience in the area of Microwave Physics.

Desirable Qualifications : M. Tech./Ph.D. degree in Microwave Physics/Remote Sensing.

Item No. 8—Physics 1 —Post (Defence Laboratory, Jodhpur)

Essential Qualifications : (i) At least second class Master's degree in Physics from a recognised university or equivalent, (ii) Four years' research, design or development experience in Infra-red or Solid State Physics.

Desirable Qualifications : M. Tech./Ph.D. degree in Infra-red/Solid State Physics.

Item No. 9—Psychology —1 Post —(Defence Laboratory, Jodhpur)

Essential Qualifications: At least second class Master's degree in Psychology with specialisation in experimental psychology from a recognised university or equivalent, (ii) Four years' research and development experience in experimental Psychology—visual perception related studies.

Desirable Qualifications : Ph.D. in Experimental Psychology/Visual Perception.

Item No. 10—Bio-Chemistry —1 Post (Directorate General Medical Services)

Essential Qualifications : (i) At least second class Master's degree in Bio-chemistry from a recognised university or equivalent, (ii) Four years' research and development experience related to medical pathological problems.

Desirable Qualifications: Ph.D degree in Bio-chemistry.

Item No. 11 —Electronics Engineering —1 Post (Aeronautical Development Establishment., Bangalore)

Essential Qualifications : (i) At least second class Bachelor's degree in Electronics/Telecommunications/ Electrical Communications Engg from a recognised university or equivalent. (ii) Four years' research, design or development experience of hardware in VHF/ microwave frequency band for airborne applications.

Desirable Qualifications : Master's degree in Electronics / Telecommunications / Electrical communications Engg.

Item No. 12 —Electronics Engineering —1 Post (Electronics and Radar Development Establishment, Bangalore)

Essential Qualifications : (i) At least second class Bachelor's degree in Electronics/Electrical Engg. from a recognised university or equivalent, (ii) Four years' research, design or development experience in microwave transmitter systems, high voltage power supplies and control circuits and microwave measurements.

Desirable Qualifications : (i) Master's degree in Microwaves/Control Systems, (ii) Experience in transfer of technology.

Item No. 13 —Aeronautical/Mechanical Engineering—2 Posts —(Resident Technical Office, Koraput)

Essential Qualifications : (i) At least second class Bachelor's degree in Aeronautical /Mechanical Engg. from a recognised university or equivalent, (ii) Four years' research, design, or development experience in aero-gas turbine engine components.

Desirable Qualifications: Master's degree in Aeronautical/Mechanical Engg.

Item No. 14 —Physics/Polymer Chemistry —1 Post (Defence Research and Development Laboratory, Hyderabad)

Essential Qualifications: (i) At least second class Master's degree in Physics/Chemistry/Polymer Chemistry from a recognised university or equivalent, (ii) Four years' research and development experience in the area of fibre reinforced plastics with special reference to carbon reinforced plastics or carbon—carbon composites.

Desirable Qualifications : M.Tech./Ph.D. degree in Physics/Chemistry/Polymer Chemistry.

(Those who have applied for this post in response to our earlier advertisement No. 012/RAC/87 published in Employment News and various newspapers in July 1987 need not apply again as their previous applications will be considered provided they meet these requirements).

Item No. 15— 1 Post—Electrical/Electronics Engg—(Naval Science and Technological Laboratory, Vishakhapatnam)

Essential Qualifications: (i) At least second class Bachelor's degree in Electrical/Electronic Engg. with specialisation in Control Engg., (ii) Four years' research and development experience in Electrical/Electronic Control Systems.

Desirable Qualifications: Master's/Ph.D degree in Electrical/Electronic Engg.

Item No. 16 —Electronics/Computer Engg. —1 Post —Centre for Aeronautical Systems Studies and Analysis, Bangalore)

Essential Qualifications: (i) At least second class Bachelor's degree in Electronics/Electronics and Communications Engg./Computer Engg. from a recognised university or equivalent, (ii) Four years' research and development experience in avionics/air-borne radar systems or modelling and simulation of avionics/radars/communications systems.

Desirable Qualifications: (i) Master's/Ph.D degree in Electronics/Electronics and Communications Engg/ Computer Engg. (ii) sound knowledge of radar systems, radar signal processing and simulation on digital computers, (iii) Working knowledge of simulation languages.

(E) Scientists 'B' —(Rs. 2200-4000) —48 Posts (UR-25, SC-15, ST-8)

Item No. 17 —Physics/Nuclear Physics —3 Posts —(UR-2, ST-1) (DGMS)

Essential Qualifications : At least second class Master's degree in Physics/Nuclear Physics with diploma in radiation protection/therapy from a recognised university or equivalent.

Desirable Qualifications: Working experience in the field of Radiation Physics as applied to nuclear medicine and handling of nuclear medicine instrumentation.

Item No. 18 —Electronics Engineering —25 Posts —(UR-13, SC-10, ST-2)

Essential Qualifications: At least second class Bachelor's degree in Electronics Engg. from a recognised university or equivalent.

Desirable Qualifications: Master's degree in Electronics Engg.

Item No. 19 —Mechanical Engineering —4 Posts—(UR-2, SC-1, ST-1)

Essential Qualifications: At least second class Bachelor's degree in Mechanical Engg. from a recognised university or equivalent.

Desirable Qualifications: Master's degree in Mechanical Engg.

Item No. 20 —Aeronautical Engineering —5 Posts —(UR-3, SC-1, ST-1)

Essential Qualifications: At least second class Bachelor's degree in Aeronautical Engineering from a recognised university or equivalent.

Desirable Qualifications: Master's degree in Aeronautical Engg.

Item No. 21 —Computer Science —3 Posts —(SC-2, ST-1)

Essential Qualifications: At least second class Bachelor's degree in Computer Engineering from a recognised university or equivalent.

Desirable Qualifications: Master's degree in Computer Engineering.

Item No. 22 —Physics —1 Post (Reserved for ST)

Essential Qualifications: At least second class Master's degree in Physics from a recognised university or equivalent.

Desirable Qualifications: Ph.D degree in Infra-red Physics or in Remote-Sensing.

Item No. 23 —Applied Chemistry —1 Post—(UR)

Essential Qualifications: At least second class Master's degree in Applied Chemistry from a recognised university or equivalent.

Desirable Qualifications: (i) Ph.D degree in Applied Chemistry, (ii) Working experience in desalination using reverse osmosis technology.

Item No. 24 —Library Science/Documentation —3 Posts (UR-1, SC-1, ST-1)

Essential Qualifications: (i) At least second class Master's degree in science subjects including Mathematics or second class Bachelor' degree in Engineering or Technology from a recognised university or equivalent, (ii) Post-graduate degree or diploma in Library Science/ Associateship of INSDOC/DRTC/M.Lib/B.Lib Science from a recognised university or equivalent.

Item No. 25 —Applied Mathematics —1 Post (UR)

Essential Qualifications: At least second class Master's degree in Applied Mathematics with specialisation in Fluid Mechanics.

Desirable Qualifications: (i) Ph.D. degree in Fluid Mechanics, (ii) Working experience in mainframe/ mini-computers.

Item No. 26 —Civil Engineering —1 Post —(UR)

Essential Qualifications: At least second class Bachelor's degree in Civil Engineering from a recognised university or equivalent.

Desirable Qualifications: (i) Master's degree in Civil Engg., (ii) two years' experience in planning and execution of civil works.

Item No. 27—Geology—1 Post—(UR)

Essential Qualifications—At least second class Master's degree in Geology from a recognised university or equivalent.

Desirable Qualifications—(i) M. Tech/Ph. D. degree in Geology, (ii) Working experience in geological surveys.

GENERAL CONDITIONS

1. **Promotion Prospects :** DRDO offers excellent opportunities for career advancement as Scientists. Result-oriented motivated scientists can look forward to promotions to following grades of scientists :

Scientist "B" : Rs. 2200-4000, Scientist "C" : Rs. 3000-4500, Scientist "D" : Rs. 3700-5000, Scientist "E" : Rs. 4500-5700, Scientist "F" : Rs. 5100-6300, Scientist "G" : Rs. 5900-7300.

2. **Age Limits :** For Scientist "B" not exceeding 28 years, (ii) For Scientist "C" not exceeding 35 years, (iii) For Scientist "D" not exceeding 45 years, (iv) For Scientist "G" not exceeding 50 years.

3. **Method of Applying :** Neatly Type-written applications should be sent to Director, Recruitment & Assessment Centre, Lucknow Road, Timarpur, Delhi-110007, preferably by Registered cover, superscribed "Application for the post of Scientist"—Item No. on plain paper in the prescribed format (reproduced below) accompanied by a crossed non-refundable Postal Order of the value of Rs. 8/- drawn in favour of Senior Accounts Officer, Recruitment & Assessment Centre, DRDO, payable at New Delhi. There is no fee for SC/ST candidates. Last date of receipt of applications is **8th February 1988**. In respect of candidates from Andaman & Nicobar Islands, Lakshdweep and abroad, last date of receipt of applications is **22 February 1988.**

4. **Method of Selection :** A written test may be conducted for certain posts at selected places. No TA/ DA would be admissible for this purpose. Persons called for interview would be reimbursed actual train/bus fare by shortest route limited to second class rail fare from the normal place of residence to the place of interview.

5. Only Indian nationals need apply.

6. Candidates should send two self addressed unstamped envelopes of 23 x 10 cms alongwith the application.

7. One copy of recent passport size photograph should be pasted on right hand corner of the first page of application.

8. Attested copies of certificates / testimonials should be attached to the application form. Self attested copies will be accepted. NO ORIGINALS SHOULD BE FORWARDED.

9. Candidates will have to produce original certificates at the time of interview.

10. Incomplete applications or those received late will be rejected and no correspondence would be entertained in this regard.

11. In case SC/ST candidates are not available in requisite number, general candidates will be considered for the posts reserved for SC/ST.

12. Candidates working in Government/Public Sector Undertakings/Autonomous Organisations must apply through proper channel. They shall not be interviewed if they fail to produce a 'No Objection' Certificate from their employer at the time of interview.

13. Prescribed essential qualifications are the barest

minimum and mere possession of the same does not entitle any candidate to be called for interview.

14. Candidates desirous of applying for more than one post may apply separately for posts indicating Item No. of the posts.

15. Candidates on appointment will have the opportunity to carry out Ph. D. with external registration and may be sponsored for doing M. Tech.

16. Opportunities are also available for study leave for carrying out higher studies abroad.

17. DRDS Officers may be sponsored for training abroad.

18. Though initial place of posting is indicated against some of the posts, yet candidates have the liability to serve anywhere in India.

19. Handwritten applications will not be entertained.

20. Number of posts against each item is tentative and may vary.

21. All extra sheets used by the candidates MUST be duly authenticated by them.

22. Knowledge of French, German, Russian, Japanese, and Chinese is a desirable qualification for all posts.

Canvassing in any Form will Mean Disqualification.

APPLICATION FORMAT

APPLICATION FOR THE POST OF SCIENTIST

1. Advertisement No.
2. Item No.
3. Details of Postal Order(s)
   No., Date and Amount
4. Name in full (Shri/Smt/Km)
   (in block letters)
5. (a) Date of Birth :
   (In Christian era in figures)
   (b) Age as on 08 February 1988 :
6. Nationality :
7. Marital Status :
8. Father's Husband's Name :
9. (a) Address for Correspondence :
   (b) Permanent Address :
   (in block letters with Pin Code)
10. Nearest Railway Station :
11. Whether belong to SC/ST :
    (If yes, attach Certificate)
12. Educational Qualifications :

Affix passport size latest photograph

Sl No.	*Course Passed	University/ Institution/ Board	Year of Passing	Subjects taken	Result with Division/ Class

*In Chronological order from X standard (SSLC/ HS/HSC) onward

13. Professional Training :

Organisation	Period		Details of Training
	From	To	

14. Employment Record :

Name & address of the employer/ institution	Period of service		Designation of the post held	Scale of pay of each post	Detailed description of work	Reason for leaving
	from	to				

15. Present Basic Pay :
    Other allowances :
    Total emoluments :
16. (a) Are you a Govt. Servant
    (b) If yes, whether Central/State/UT
    (c) If not, whether employed in undertaking/autonomous body under Central/State Govt.
17. Minimum joining time required :
18. Resume of research work/experience, if any :
19. Number of papers published (enclose list) :
20. Field of special interest :
21. Are you under any contractual obligation to serve Central/State Govt./Any other public sector undertaking or Autonomous body and if so the details:
22. Details of relatives employed in DRDO:

Name of Relative	Relationship	Lab/Estt. in which employed	Post Held

23. Have you applied for any post in DRDO during the past two years ? If yes, give particulars :

Sl. No.	No. and Date of Advt.	Name of Post/ Discipline	Date of Interview	Remarks

24. Any other information you may wish to add:
    (use separate sheet if necessary)
25. Declaration :
    I declare that the foregoing information is correct and complete to the best of my knowledge and belief and nothing has been concealed/distorted. If at any time, I am found to have concealed/distorted any material information, my appointment shall be liable to summary termination with notice/compensation. I will, if and when required, take up duty in the discharge of government assignments anywhere in India.

Agricultural Scientists Recruitment Board (ICAR)

KRISHI ANUSANDHAN BHAWAN, NEW DELHI-110012

Advt. No. 1/88

Applications are invited for the following posts in Agricultural Sciences and other fields under the different Research institutes and at the Headquarters of the Indian Council of Agricultural Research.

INDIAN VETERINARY RESEARCH INSTITUTE REGIONAL STATION, SRINAGAR (J & K)

1. Joint Director (S-5) (One post) Rs. 2000-2500 (Pre-revised) Age : Below 55 years.

Qualifications Essential : (i) Doctorate in any of the branches of Veterinary Parasitology/Veterinary Microbiology/Veterinary Pathology. (ii) At least 12 years' Research/Teaching experience at Postgraduate level of which 7 years' experience should be at least at S-3 level or equivalent pay including at least 3 years' as Director/Head of Division/Research Project Coordinator/Joint Director/ADG/Head of the Department or an equivalent post in a University in the Professor's scale. (The experience in research/teaching is to be reckoned from the date the candidate has completed his Master's Degree and will include the period, not exceeding 3 years, spent to obtain Doctorate Degree). (iii) A record of productive research in Animal Health as evidenced by published work.

CENTRAL INSTITUTE OF FRESHWATER AQUACULTURE, DHAULI

2. Director S-5 (One post) Rs. 2000-2500 (Pre-revised). Age : Below 55 years.

Qualifications Essential : (i) Doctorate in Zoology or any branch of fisheries. (ii) and (iii) as in Item No. 1 above.

CENTRAL TUBER CROPS RESEARCH INSTITUTE, TRIVANDRUM

3. Scientist S-2 (Agricultural Structures and Process Engineering) (One post) Rs. 1100-1600 (pre-revised). Age : Below 45 years.

Qualifications Essential : (i) Master's Degree in Agricultural Engineering with specialisation in crop processing (relaxable to Bachelor's Degree or an equivalent qualification in case of candidates with experience in Post harvest technology). (ii) At least 3 years' Research/Teaching experience in the Post harvest technology of crops for candidates possessing a Master's Degree and 5 years' for those having Bachelors' Degree or an equivalent qualification. Experience will count after the attainment of entry qualification to ARS.

SUGARCANE BREEDING INSTITUTE, COIMBATORE

4. Scientist S-2 (Plant Breeding) (Three posts) Rs. 1100-1600 (Pre-revised). Age : Below 45 years.

Qualifications Essential : (i) Doctorate in Plant Breeding/Agricultural Botany or Botany with specialisation in Plant Breeding (relaxable to Master's degree or an equivalent qualification in case of candidate with exceptionally distinguished record of productive research). (ii) At least 5 years' research/teaching experience at least Bachelor's Degree level for candidates possessing a Doctorate Degree (excluding the period spent for obtaining the Doctorate Degree) and 8 years' for those having a Master's Degree or an equivalent qualification.

ICAR RESEARCH COMPLEX FOR NEH REGION, SHILLONG

5. Scientist S-3 (Fish and Fishery Science) (One Post) Rs. 1500-2000 (Pre-revised). Age : Below 50 years.

Qualifications Essential : (i) Doctorate Degree in Zoology (fisheries)/Fish and Fishery Science or any related field (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research and responsible leadership of productive research programme in the relevant field). (ii) At least 7 years' experience of research/teaching at least at Bachelor's degree level for candidates possessing a Doctorate degree (excluding the period spent for obtaining the Doctorate degree) in fresh water fish culture breeding in Hill region or in cooler water temperate and subtemperate conditions and 10 years' for those having Master's degree or equivalent qualifications. Out of 7/10 years, at least 2 years' experience should be at S-2 or equivalent pay level.

6. Scientist S-2 (Livestock Production and Management) (One post) Rs. 1100-1600 (Pre-revised). Age :

Below 45 years at ICAR Research Complex for NEH Region, Sikkim Centre.

Qualifications Essential : (i) Doctorate in Livestock Production and Management (relaxable to Master's Degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in item 4 above.

7. Scientist S-2 (Agronomy) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years. Reserved for S.C. Candidate. Special allowances admissible to Scientist on posting to Tripura : (a) Special duty allowance and (b) special compensatory allowance as admissible under rules of ICAR.

Qualifications Essential : (i) Doctorate in Agronomy (Crop Production/Extension) (relaxable to Master's degree or an equivalent qualifications in case of candidates with exceptionally distinguished record of productive research). (ii) At least 5 years' research experience in crop production teaching/ extension experience at Bachelor's degree level for candidates possessing a Doctorate degree (excluding the period spent for obtaining the Doctorate degree) and 8 years' for those having a Master's degree or an equivalent qualification.

8. Scientist S-2 (Silviculture) (One post) Rs. 1100-1600 (Pre-revised) at Sikkim Centre under ICAR Research Complex for NEH Region, Shillong. Age : Below 45 years. Extra allowance and facilities admissible to Scientist on posting at Sikkim Centre. (a) Sikkim compensatory allowance @ 30% of basic pay subject to a maximum of Rs. 400/- per month. (b) Rent free accommodation.

Qualifications Essential : (i) Doctorate in Agricultural Science (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) At least 5 years' research/teaching experience in any aspect of Silviculture/Silvipasture/ Agro-Forestry at least at Bachelor's degree level for candidates possessing a doctorate degree (excluding) the period spent for obtaining the Doctorate Degree) and 8 years' for those having a Master's degree or an equivalent qualification.

9. Scientist S-2 (Horticulture) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years, reserved for S.C. Candidate. Extra allowances admissible to Scientists on posting at Shillong. (a) Special duty allowance @ 25% of basic pay subject to a maximum of Rs. 400/- p.m. (b) Special compensatory allowance @ 5% of basic pay subject to a maximum of Rs. 50/- p.m.

Qualifications Essential : (i) Doctorate in Horticuture (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) At least 5 years'/teaching experience in Horticulture at least at Bachelor's degree level for candidates possessing a Doctorate degree (excluding the period spent for obtaining Doctorate degree) and 8 years' for those having a Master's degree or an equivalent qualification.

10. Scientist S-2 (Agronomy) (One post) Rs. 1100-1600 (Prerevised) at Tripura Centre of ICAR Research Complex for NEH Region, Shillong. Age : Below 45 years. Extra Allowances admissible to Scientists on posting at Tripura (a) Special duty allowance and (b) Special compensatory allowance as admissible under rules.

Qualifications Essential : (i) Doctorate in Agronomy (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) At least 5 years' research/teaching experience in the field at least at Bachelor's degree level for candidates possessing a Doctorate degree (excluding the period spent for obtaining the Doctorate degree) and 8 years' for those having a Master's degree or an equivalent qualification.

Central Soil and Water Conservation Research and Training Institute Dehradun

11. Scientist S-2 (Agronomy) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years. Reserved for S.T. Candidate.

Qualifications Essential : (i) Doctorate in Agronomy (relaxable to Master's degree or an equivalent equalification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item-No. 10 above.

12. Scientist S-2 (Forestry) (One post) Rs. 1100-1600 (Pre-revised) Age : Below 45 years. Reserved for S.C. Candidate.

Qualifications Essential : (i) Doctorate in Plant Science/Forestry (relaxable to Master's degree or an equivalent qualification in case of candidate with exceptionally distinguished record of productive research). (ii) As in Item No. 4 above.

Central Soil Salinity Research Institute, Karnal.

13. Scientist S-3 (Agronomy) (One post) Rs. 1500-2000 (Pre-revised). Age : Below 50 years.

Qualifications Essential : (i) Doctorate in Agronomy (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research and responsible leadership in the relevant field). (ii) At least 7 years' research/teaching experience at least at Bachelor's degree level for candidates possessing a Doctorate degree (excluding the period spent for obtaining the Doctorate degree) and 10 years' for those having a Master's degree or an equivalent qualification. Out of the 7/10 years, at least 2 years' experience should be at S-2 or equivalent pay level.

14. Scientist S-2 (Microbiology) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years at C.S.S.R.I., Karnal or its Research Station, Canning Town.

Qualifications Essential : (i) Doctorate in Soil Microbiology (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Items No. 10 above.

15. Scientist S-2 (Soil and Water Cons. Engg.) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years.

Qualifications Essential : (i) Master's degree in Agril. Engineering with specialisation in Soil and Water Conservation Engg. or Civil/Hydrology Engg. (relaxable to Bachelor's degree or an equivalent qualification in case of candidates with experience in the relevant field). (ii) At least 3 years' research/teaching experience in the relevant field for candidates possessing a Master's degree and 5 years' for those having a bachelor's degree or an equivalent qualification. Experience will count after the attainment of entry qualifications to A.R.S.

16. Scientist S-2 (Agriculture Economic) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years at CSSRI, Karnal or its Research Station.

Qualifications Essential : (i) Doctorate in Agril. Economics (relaxable to Master's degree or an equivalent qualifications in the case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

17. Scientist S-2 (Soil Physics-Soil and Water Cons.) (One post) Rs. 1100-1600 (Pre-revised) Age : Below 45 years at CSSRI Research Station in Gujarat.

Qualifications Essential : (i) Doctorate in Soil Physics/Soil Science (relaxable to Master's degree or an equivalent qualification in case of candidate with exceptionally distinguished record of productive research). (ii) As in item No. 10 above.

18. Scientsts S-2 (Soil and Water Cons. Engg.) (One post)Rs. 1100-1600 (Pre-revised). Age : Below 45 years at CSSRI Research Station in Gujarat. Reserved for S C. Candidate.

Qualification Essential : (i) Master's degree in Agril. Engineering with specialisation in Soil and Water Conservation Engg. or Civil/Hydrology Engg. (relaxable to Bachelor's Degree or an equivalent qualification in case of candidates with experience in the relevant field). (ii) As in Item No. 15 above.

19. Scientist S-2 (Plant Breeding) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years at CSSRI Research Station in Gujarat.

Qualification Essential : (i) Doctorate in Plant Breeding (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

20. Scientist S-2 (Plant Physiology) (One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years at CSSRI Research Station in Gujarat.

Qualifications Essential : (i) Doctorate in Plant Physiology (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

21. Scientist S-2 (Agronomy) One post) Rs. 1100-1600 (Pre-revised). Age : Below 45 years at CSSRI Research Station in Gujarat.

Qualifications Essential : (i) Doctorate in Agronomy (relaxable to Master's degree or an equivalent qualifications in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

22. Scientist S-2 (Soil Physics & Soil & Water Cons). (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Reserved for S.C. Candidate.

Qualifications Essential. (i) Doctorate in Soil Physics/Soil Science (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) At least 5 years' experience of research/teaching at Bachelor's degree level in the field of water management and salinity and other allied subjects for candidates possessing a Doctorate degree (excluding the period spent for obtaining the Doctorate degree) and 8 years' for those having a Master's degree or an equivalent qualification.

Indian Institute of Soil Science, Bhopal

23. Scientist S-3 (Soil Physics & Soil Water Cons.) (One post) Rs. 1500-2000 (Pre-revised). Age: Below 50 years.

Qualifications Essential : (i) Doctorate in Soil Physics/Soil & Water Conservation (relaxable to Master's degree or an equivalent qualification in the case of candidates with exceptionally distinguished record of productive research and responsible leadership in the relevant field). (ii) As in Item No. 13 above.

24. Scientist S-3 (Soil Chemistry/Fertility/Microbiology) (Six posts) Rs. 1500-2000 (Pre-revised). Age: Below 50 years. Two posts reserved for S.C. and One post reserved for S.T. Candidates.

Qualifications Essential. (i) Doctorate in Soil Chemistry/Soil Fertility/Soil Microbiology (relaxable to Master's degree or an equivalent qualification in the case of candidates with exceptionally distinguished record of productive research and responsible leadership in the relevant field). (ii) As in Item No. 13 above.

25. Scientist S-2 (Soil Physics and Soil & Water Cons.) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential : (i) Doctorate in Soil Physics & Soil & Water Conservation (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

26. Scientist S-2 (Soil Chemistry/Fertility/Microbiology) (Six posts) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Two posts reserved for S.C. Candidates.

Qualifications Essential : (i) Doctorate in Soil Chemistry/Soil Fertility/Soil Microbiology (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record or productive research). (ii) As in Item No. 10 above.

Central Institute of Agricultural Engineering, Bhopal

27. Scientist S-2 (Biochemistry) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Reserved for S.C. Candidate.

Qualifications Essential: (i) Doctorate degree in Food Science/Food Technology/Agricultural Biochemistry (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

Central Institute for Research on Buffaloes, Hisar.

28. Scientist S-2 (Animal Nutrition) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential. (i) Doctorate in Animal Nutrition (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

Jute Technological Research laboratories, Calcutta

29. Manager (Experimental Spinning & Weaving Mill) Technical T-7 (Workshop Staff) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Reserved for S.C. Candidate.

Qualifications Essential: (i) Degree in Textile Technology. (ii) Five years' experience in a Jute Mill of repute in Weaving.

Indian Agricultural Research Institute, New Delhi

30. Head, Photo Laboratory (T-7) (Photography staff) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential: (i) Sound General Education. (ii) At least 15 years' experience in a supervisory capacity in Photographic studio of repute with proficiency in all branches of Photography including news and colour Photography. (iii) Adequate knowledge of India's Agriculture & progress of planned development.

National Bureau of Plant Genetics Resources, New Delhi

31. Instrumentation Engineer (T-7) (One post) Rs. 1100-1600 (Pre-revised) Age: Below 45 years.

Qualifications Essential: (i) Three years' Diploma/Bachelor's degree in mechanical Instrumentation/Electrical Engineering. (ii) At least 5 years' experience of repairs, maintenance and installation work related to refrigeration, air-conditioning, Biological and analytical instruments in an organisation/workshop/factory of repute.

National Bureau of Animal Genetics Resources/National Institute of Animal Genetics, Karnal

32. Scientist S-3 (Animal Genetics & Breeding-Cytogenetics) (One post) Rs. 1500-2000 (Pre-revised). Age: Below 50 years.

Qualifications Essential: (i) Ph. D. degree in the discipline of Animal Genetics & Breeding Genetics with specialisation in Cytogenetics (relaxable to Master's degree or an equivalent qualifications in the case of candidates with exceptionally distinguished record of productive research and responsible leadership in relevant field). (ii) As in Item No. 13 above.

Indian Institute of Horticultural Research, Bangalore.

33. Scientist S-2 (Agril. Structure & Process Engg.) PHT (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential: (i) Master's degree inAgril. Structures and Process Agril. Engg./Angg. with specialisation in any aspect of Post Harvest Technology (relaxable to Bachelor's degree or an equivalent qualification in case of candidates with experience in the Agril. Engg. on Post Harvest Technological aspects). (ii) At least 3 years' research experience in Post Harvest Engg. and Technology aspects packing, Transportation etc. for candidates possessing a Master's degree and 5 years' for those having a Bachelor's degree or an equivalent qualification. Experience will count after the attainment of entry qualifications to ARS.

Central Research Institute for Dryland Agriculture, Hyderabad

34. Scientist S-2 (Soil & Water Cons. Engg.) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential: (i) Master's degree in Soil & Water Conservation Engineering (relaxable to Bachelor's degree or an equivalent qualification in case of candidates with experience in the relevant field). (ii) As in Item No. 15 above.

Central Plantation Crops Research Institute, Kasaragod

35. Scientist/S-5 (Plant Pathology) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential: (i) Doctorate in Plant Pathology/Mycology (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research). (ii) As in Item No. 10 above.

Central Tobacco Research Institute, Rajahmundry

36. Scientist S-2 (Agronomy) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Reserved for S.C. Candidate.

Qualifications Essential: (i) Doctorate in agronomy (relaxable to M.Sc. Degree or an equivalent qualification in case of candidates with exceptionally distinguished record or productive research). (ii) As in Item No. 10 above.

National Bureau of Fish Genetic Resources, Allahabad

37. Scientist S-2 (Agricultural Statistics) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Reserved for S.T. Candidate.

Qualifications Essential: (i) Doctorate in Agricultural Statistics/Fisheries Statistics (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research in the relevant field). (ii) At least 5 years' experience of research/teaching at least at Bachelor's degree level in fisheries or animal statistics/ handling data pertaining to fisheries for candidates possessing a Doctorate degree (excluding the period spent for obtaining the Doctorate degree) and 8 years' for those having a Master's degree or an equivalent qualification.

Central Institute for Research on Goats, Makhdoom, P.O.Farah, Mathura

38. Scientist S-3 (Animal Gene. & Breeding/Animal Reproduction/Animal Physiology (One post) Rs. 1500-2000 (Pre-revised). Age: Below 50 years. Reserved for S.T. Candidate.

Qualifications Essential: (i) Doctorate in Animal Genetics & Breeding/Animal Reproduction/Animal Physiology (relaxable to Master's degree or an equivalent qualification in case of candidate with exceptionally distinguished record of productive research and responsible leadership in the relevant field). (ii) As in Item No. 13 above.

39. Scientist S-2 (Livestock Products Technology) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years.

Qualifications Essential ; (i) Doctorate in Livestock Products Technology with specialisation in meat science & technology (relaxable to Master's degree or an equivalent qualification in case of candidates with exceptionally distinguished record of productive research. (ii) As in Item No. 10 above.

40. Scientist S-2 (Agricultural Economics) (One post) Rs. 1100-1600 (Pre-revised). Age: Below 45 years. Reserved for S.T. Candidate.

Qualifications Essential: (i) Doctorate in Agricultural Economics/Economics (relaxable to Master's degree or equivalent qualifications in case of candidates with exceptionally distinguished record of productive research in relevant field). (ii) As in Item No. 10 above.

Closing Date for Receipt of Applications in Agricultural Scientists Recruitment Board Office is 17-2-1988.

(For candidates abroad and in the Andaman and Nicobar Islands, Lakshadweep, Minicoy and Amindivi Islands, State/Union Territories in the North Eostern Region, Ladakh Division of J&K State and Sikkim Last Date is 2.3.1988.

General Instructions :

1. For application forms, please write to the **Secretary, Agricultural Scientists Recruitment Board, Krishi Anusandhan Bhawan, Pusa, New Delhi-110012.** Request for forms must specify Advt. No. 1/88 Name of the Post and Item Number and should be accompanied by a self addressed unstamped envelope (23x10 cms. size).
2. Separate application with separate fee is required for each post.
3. Application forms complete in all respects should reach Office of the ASRB together with the Application Fee of Rs. 8/- (No fee for SC/ST candidates) in the form of Crossed Indian Postal Order drawn in favour of the Secretary, Indian Council of Agricultural Research by the closing date. Applications received after the closing date will not be entertained. In case a candidate anticipates delay in forwarding of his application through proper channel he must send an advance copy of the application alongwith the fee which must reach this office on or before the closing date.
4. Candidates abroad may apply on plain paper and send their applications together with an International Postal Order/Bank Draft covering the application fee drawn in the favour of the Secretary, Indian Council of agricultural Research so as to reach the office, of the ASRB by the closing date. In countries where regular commercial channels are not available the candidates can deposit the application fee in local currency with the Indian Missions/Posts abroad who in turn will issue on R.B.I. Draft in favour of Secretary, ICAR, New Delhi.
5. If suitable candidates belonging to SC/ST are not available for filing up the vacant scientific posts in a particular grade and discipline, the reservation will be transferred to another post/ posts in the same grade irrespective of the discipline to which it belongs. As such non-SC/ST candidates can also apply for scientific posts reserved for SC/ST. This would not be applicable in the case of Technical posts reserved for SC/ST.
6. Crucial date for determining the age limit of candidates for each post will be the closing date for receipt of applications from candidates in India. There will be no maximum age limit for ICAR Employees. Relaxation in age is allowed to SC/ST persons to the extent permissible under the rules.
7. The prescribed Essential Qualifications are minimum and possession of same does not entitle candidates to be called for interview. Where the number of applicants is large, the Board may restrict the number of candidates for interview to a reasonable limit on the basis of qualifications and experience higher than the minimum prescribed in the Advt.
8. T.A. will be admissible for those called for interview as per ICAR Rules.
9. If required, candidates must appear for personal interview.
10. Higher initial pay may be recommended by the ASRB for specially qualified and experienced candidates for all the posts.

REGISTRAR

UNIVERSITY OF NORTH BENGAL

No. F. 22/Advt./Estt./40 R-87

Dated : 29.12. 1987

Applications in prescribed forms are invited from Indian Citizens for the following posts :

1. Professor of Chemistry (Specialisation : Physical Chemistry) : Post one
2. Professor of History (Specialisation : Archaeology) : Post one
3. Reader in Sociology & Social Anthropology (Specialisation : Industrial/Urban Sociology) : Post one (Reserved for S.C.)
4. Reader in Philosophy (Lien bound but likely to be made permanent) : Post one
5. Lecturer in Sociology & Social Anthropology : Post one
6. Lecturer in Chemistry (Specialisation : Inorganic Chemistry—Lien bound but likely to be made permanent) : Post one
7. Lecturer at the University College of Law : Post one (Reserved for S.C.)
8. Lecturer in Commerce : Posts two

(a) For one post qualification : M. Com. (with specialisation : Personnel Management/Industrial and Labour Relations).

M.B.A. (with specialisation : Personnel Management).

M.A. (Econ) (with speciaiisation: Labour/Industrial Relations).

M.A. (Sociology), (with specialisation : Industrial Sociology). (Reserved for S.T.)

(b) For the second post qualification: with basic qualification M. Com./M.B.A./M.A. (Econ) with specialisation in Banking / International Trade / International Finance/Industrial Finance (Reserved for S C).

Scales of Pay : Professor : Rs. 1500-2500/-, Reader : Rs. 1200-1900/- and Lecturer : Rs. 700-1600/- respectively with other allowances and benefits as per University rules. Lecturer in Law : Rs. 700-1600/- with other allowances and benefits as per rules.

Qualifications : For Professors, Readers and Lecturers as prescribed by the University Grants Commission. Details of qualifications for Professors, Readers and Lecturers as also for the posts of Lecturer in Law may be obtained with application forms.

Choice of selection committee may not necessarily be confined to those who apply formally. No Application except in prescribed application forms will be considered.

Those who applied earlier for the post of Professor of Chemistry need not apply again as their cases will be considered.

Any candidate applying for more than one post shall send separate application for each post.

Prescribed application forms may be obtained from the office of the Registrar personally on payment of Rs. 5/- (Rs. 3/- for S.C./S.T.) in cash at the University Cash Counter or by sending a self addressed envelope of 25 x 13 cms. affixed with stamps worth Rs. 3/- accompanied by crossed I.P.O./Bank Draft of Rs. 5/- (Rs. 3/- for S.C./S.T.) in favour of the University of North Bengal. Filled in application forms (7 copies) along with one self addressed unstamped envelope must reach the office of the Registrar, P.O. North Bengal University, Dt. Darjeeling, Pin : 734430 on or before **20 2.1988.**

REGISTRAR

UNIVERSITY OF NORTH BENGAL

No. F. 22/Advt./Estt./2/R-88
Dated : 6 1.1988

Applications in prescribed forms are invited from Indian Citizens for the post of Systems Manager (One post) in the scale of pay of Rs. 1500-2000/- (scale likely to be revised) with other allowances and benefits as per University Rules.

Essential qualifications : M.Sc./M.Tech./M.C.A./Master in Computer Science and Applications with consistently good academic record (B+).

Desirable : Atleast 6 years experience in application Software development preferably in Systems Engineering consultancy and support activity in a responsible position in any medium/large installation. Good knowledge of high level languages and Assembler is essential. Ph.D. degree or publications in fields related to Computer Science & Applications.

Choice of selection committee may not necessarily be confined to those who apply formally. No application except in prescribed application forms will be considered.

Prescribed application forms may be obtained from the office of the Registrar personally on payment of Rs.5/- (Rs. 3/- for S.C./S.T.) in cash at the University Cash Counter or by sending a self addressed envelope of 25 x 13cms. affixed with stamps worth Rs. 3/- accompanied by crossed I.P.O./Bank Draft of Rs. 5/- (Rs. 3/- for S.C./S.T) in favour of the University of North Bengal. Filled in application forms (7 copies) along with one self addressed unstamped envelove must reach the office of the Registrar, P.O. North Bengal University, Dist. Darjeeling, Pin : 734430 on or before **20.2.1988.**

COMMON ENTRANCE EXAMINATION—1988

(Pre-Veterinary Test/Pre-Agriculture Test/Pre-Home Science Test)

P.V.T. P.A.T. P.H.T.

The University will hold a Competitive Examination on May 21 & 22, 1988 at Kanpur, Mathura Bareilly, Varanasi, Faizabad and Gorakhpur Centres (For Pre-Home Science Test (P.H.T.) only Faizabad and Kanpur Centres) for selecting candidates for admission to the following programmes :

Programme	Duration	Minimum Eligibility Qualifications
(1) B.V. Sc. & A.H. (Veterinary Course) of C.S.A.U. at Vety. College, Mathura.	Five Years	Passed Intermediate Examination (10+2) in Science with Biology OR Agriculture OR any other Examination recognised as equivalent thereto.
(2) B.Sc. (Ag. & A.H.) (Agriculture Course) of C.S. Azad University of Agri. A Tech; Kanpur	Four Years	Passed Intermediate Examination (10+2) in Agriculture OR Science OR any other Examination recognised as equivalent thereto.
(3) B.Sc. (Ag.) (Agriculture Course) of N.D. University of Agri. & Tech; Faizabad.		
(4) B.Sc. (Home Science) (Home Science Course) of C.S. Azad Uni. of Agri. & Tech; Kanpur.	Four Years for Arts Students Three Years for Science Students	Passed Intermediate Examination (10+2) in Science OR Arts OR any other Examination recognised as equivalent thereto.
(5) B.Sc. (Home Science) (Home Science Course) of N.D. University of Agri. & Tech; Faizabad.		

Candidates who are appearing at the Intermediate Examination of 1988 may also apply but their admission will be subject to their passing the Intermediate Examination.

Candidates seeking admission should not be above 22 (Twenty two) years of Age on 1-7-1988 (First July, Nineteen hundred eighty eight). Upper age limit is relaxable by 3 (Three) years in case of S.C./S.T. & B.C. candidates.

A set of application form including Information Bulletin containing inter-alia syllabi and rules for the Common Entrance Examination can be had either from the office of the Registrars, C.S. Azad University of Agri. & Tech; Kanpur/N.D. University of Agri. & Tech., Kumargang, Faizabad OR from the Dean, College of Veterinary Science and Animal Husbandry, Mathura on cash payment of Rs. 10/- (Rs. Ten) only. Candidates desirous of getting the application form by post are advised to send to the Registrar, C.S. Azad University of Agri. & Technology, Kanpur—208 002.

A crossed Bank Draft for Rs. 18/- (Rs. Eighteen) only issued by the State Bank of India in favour of the **Comptroller, C.S. Azad University of Agri. & Technology, Kanpur** payable at State Bank of India, C.S. Azad University Branch, Kanpur (Code-3809).

The candidates should clearly mention their postal address at which the application is to be sent.

Complete application forms will be received in the office of the Registrar, C.S. Azad University of Agri. & Technology, Kanpur, latest by **March 15**, 1988. Application forms can also be received upto April 10, 1988 with additional late fee of Rs. 20/- (Rs. Twenty) only.

Incomplete application forms OR those received after the due date shall not be accepted.

The University will not be responsible for any postal delay on the part of the candidates in submitting the application forms after the due dates.

Evaluating Teacher Performance

V. Natarajan*

The concept of student evaluation of teachers has been more misconceived in the past. It is still not properly conceived in its perspective. In order to make the concept clear one must look at certain parameters like validity, relevance, acceptibility, objectivity, need and utility. The Mehrotra Committee considered three modes of evaluation of teachers :—

1. Evaluation by students/ex-students
2. Self appraisal by teachers; and
3. Evaluation by peers and heads of departments

Even though the evaluation of teachers' performance by students has been a well accepted practice in the Institutes of Technology and other technical institutions for a long time, this concept has not yet been extended to evaluation of teachers in other settings. One is certainly aware of the existence in our country of a wide complexity of institutions ranging from central universities, main stream affiliating universities (affiliating anything between ten to hundred colleges), single faculty universities, single campus universities, multi-campus universities and, of late, autonomous colleges. In each of these institutions teacher evaluation is to be interpreted in different ways since the variables involved are so different and as different persons have different ideas about the objectives, their evaluation is also likely to differ. Some of these variables can be understood in terms of sheer numbers; in terms of numbers of teachers, in terms of number of students, in terms of varied activities involved in teacher performance, in terms of colleges and institutions, in terms of quality of students admitted, in terms of library and laboratory facilities available, in terms of concept, need, objective, purpose and utility of teacher evaluation, and finally and most importantly, in terms of reliability and validity of such evaluation procedures.

Some of the arguments advanced in favour of teacher evaluation are :

(a) a data base objective assessment of teacher performance will enable the system to have a measure of accountability;

(b) an objective assessment of all the activities of a teacher will enable an appraisal of individual's strengths and weaknesses in order that certain remedial action will be suggested for overcoming weaknesses; and

(c) to evolve, on the basis of this appraisal and evaluation, a set of guidelines for future.

In regard to student evaluation of teachers the thrust given by the Research Cell of Association of Indian Universities is to get students' response to a series of actions, activities and jobs performed by the teacher in the classroom and outside in so far as they pertain to student interactions with the teacher and in this evaluation no judgement or assessment about the performance of the teacher by the students will be called for. Once the data from students is available it will be analysed by a group of experts to work out a summary of performance of the teachers as perceived by his own group of students, objectively data base

GOVERNMENT IN EDUCATION

S. M. Israney*

Although universities have always been involved with governmental policies, the current publicness and politicization of higher education in India are unprecedented. Here, as almost everywhere else in the world, the cost of higher education has increasingly been paid by the government and there is a corresponding claim for accountability for these public funds. There is no facet of Indian higher education today that is not significantly influenced by government such as, enrolment, curriculum, faculty appointments and pay structure.

Academics' View

At the same time as the academic and political worlds interact, a sizeable gap widens between the attitudes of academics and politicians towards one another. Academics complain that

(a) Most politicians have a short-term time perspective. Often there is no continuity to policy making—programmes change from one legislative session to another, each year's committee chairperson moves on to another committee, and there are quick compromises on issues of great importance.

(b) Politicians are primarily concerned with their own narrow constituencies, and they seldom consider the broader public interest. They often tend to politicize issues and only view higher education in terms of political benefits and costs.

(c) Politicians are often not fully informed about higher education and seldom attempt to understand fully the complex issues.

Politicians' View

Politicians, on the other hand, often hold unfavourable views of academics. They complain that

(a) Academics do not understand the political process and make politicians' job more difficult.

(b) Academics are solely concerned with their own interests seeking more and more money, seldom have the information needed for policy decisions or the ability to communicate precisely and clearly, and pay only lip service to accountability.

Higher Education and State Government

In order to compare the current political norms, or conventional attitudes, effecting state higher education policy with those of the past, the Carnegie Commission on Higher Education suggested in 1986 four norms :

(a) **Low Responsiveness** : Responsiveness refers to the actions of state officials that correspond to the attitude of their constituencies, which may or may not be articulated. It should be added that other pressures on state officials—insufficient time and staff, the degree of interest in higher education, and the complexity of the issues—also promote non-involvement.

(b) **Passivity in Oversight** : In higher education, legislators generally seem to feel that it should be largely limited to budgetary matters and broad policy guidelines. This view is based on two reasons : First, on traditions of academic freedom and keeping policies out of higher education and, second, on a feeling that professional judgement is often required and that politicians are not really qualified in this regard. However, when some institutions are perceived to act irresponsibly and state officials feel forced to act, they indeed take action; however, they generllay prefer quiescence.

(c) **Deference to Professional Authority** : Higher education issues are often complex and require detailed knowledge. Little knowledge and lack of expertise leads legislators and other state officials to depend on those who appear to be knowledgeable, who are often self selected, executive agencies, state higher education boards ond committees and their chairpersons.

(d) **Preference for Favourable Comparisons** : This means that officials is one state are able to compare their higher education structures and activities favourably with those in other states.

Applying the above four norms to the states in India, it will not be difficult to say that during 1960s, more specially after Kothari Commission Report in 1966, the above norms have affected the interface between state officials and higher education. It was in the latter part of 1970s that the grant-in-aid formula was changed.

---

* *Department of Economics, University of Bombay, Bombay.*

A great increase in the appropriation of public funds for both operating and capital expenditures accompanied the expansion of the role of public sector in higher education. The existence of mass higher education, in terms of both students and public expenditure along with students activism beginning in 1970s, increased the political visibility of higher education and prompted calls for accountability.

However, respect for and confidence in the academic profession have lessened significantly among parents, students, and citizens as well as state officials in the last ten years. The declining economic value of a college degree and unemployment of vast majority of the educated, are only two of the contributing factors. New skepticism toward professional authority has had an important impact on the relation between colleges and state government. Experiencing serious fiscal stringencies, state officials have also shown a preference for setting priorities and for weighing the benefits and costs of competing programmes and interests. The preference for favourable comparison with other states has largely disappeared, and higher education has clearly lost whatever priority it had.

Given the current nature of state level budgetary politics, many observers believe that colleges and universities, both public and private, will ironically have to give up some of their individual authority in order for higher education as a whole to maintain its influence.

The growth of federal involvement in higher education is a second vitally important aspect of the changing policies of higher education.

Higher Education and the Central Govt.

According to the Constitution of India, Education is on the concurrent list. But the practice, higher education is conceived of as a central function, and the state government until recently had little or no direct concern with higher education. Many government programme administrators have been academics and leading scholars who have often assisted the government in allocating federal funds. Universities and their administrators are interested in building their organisations' size, financial condition, and reputation. Their faculties sought to control independent funds, expand their own research domain and reputation, attract good graduate students, and enjoy increased amenities. Therefore, the influence of central funds grew during and after 1970s. The result is what Edgar Litt (*Content and Context : Essays on College Education* McGraw Hill, 1973) calls "Public Vocational University", one that is supported by central funds and directed by governmental decisions.

Despite the increasing quantity of paper work, the rising cost of compliance with central regulations, and even a profound central influence, there is no national direction or plan for higher education.

Following ten years of efforts to improve access to higher education for low income students, pressures are mounting for greater assistance to middle income students. While there is some evidence to the contrary, middle class families in this period of economic pressure, are under an increasing strain in meeting the cost of college attendance. These pressures again raise questions about the degree of egalitarianism in Indian higher education and Indian society in general.

Policy Implications

It is a wellknown fact by now that more than two-third (70%) of the direct cost of higher education is now paid by the government. The principle of accontability at the state or central level suggests that it is not too much to ask that such funds be spent prudently, efficiently and effectively. Certain requirements are inherent in the categorical approach to funding public programmes. It seems only fair then to ask institutions of higher education to disclose their spending practices fully and honestly and treat consumers fairly. At the same time, educators have to be content with constantly changing reporting requirements. Clearly, there is ample evidence that the trend toward increased politicization and regulation of higher education must be reversed.

Practical Aspects

Government involvement in higher education will continue. Indeed, government support is essential to the continued development of higher education in the last decade of the present century. But institutions of higher education and the important societal interests that they represent can alter their limited role in government policymaking in three specific ways :

(1) First, the higher education community can help government officials understand the benefits of diversity. As one studies higher education in other industrialized nations, the pluralism and diversity of Indian higher education, as well as its strengths, become clear. To have the government of higher education dispersed among 23 states is an advantage. To have research universities and community colleges as well as private universities in such a 'system' promotes quality, innovation, and responsiveness. Comparative analyses reveal that a healthy private higher education sector is fundamentally important to the integrity of all Indian higher education. This long term understanding could substantially influence higher education policymaking in states.

(2) Second, the higher education community can articulate its own cause. It must propose alternative legislation, communicate clearly with politicians, and work to change regulations. No distasteful regulation should even be accepted as permanent, and accountability need not always be distasteful. Even more fundamentally, higher education must minimize its own conflicts in order to change the attitude of the public and politician and to eliminate their stereotype of academics. Academic aspect of the teachers' unions' must form an integral part of their programmes.

(3) Finally, higher educational institutions need fully to understand and to document the financial costs of regulation, specially central legislation, and to seek modification or reimbursement for them.

The expanding government role in higher education has shifted much higher educational policymaking authority to public officials. But the debate has only begun. A dynamic balance between autonomy and control in higher education has always been needed. Universities are already perhaps inherently, political institutions, and they are compelled to become even more political much against their will. Accordingly, autonomy will become an increasingly important and contested issue, specially in the light of the New Education Policy, which cannot deliver the goods, unless its implementation is made effective by widening the scope and autonomy of the university. ☐

Evaluating Teacher Performance

(Continued from page 1)

to build up over a period of three years rather than a single assessment by a particular group of students. Then a data base about the performance of the teacher is accumulated and this will serve to identify the strengths and weaknesses of the teacher. Even though it may be that certain strong points of teacher evaluation can be rewarded suitably no attempt should be made to punish for the weaknesses for the simple reason that most of the weaknesses arise out of extraneous factors and not certainly dependent on individual teacher. This will certainly lead to better acceptability by the teacher.

One of the most important aspects of teacher evaluation should be seen as a self-assessment. In the questionnaire that is prepared by Research Cell of Association of Indian Universities emphasis is given to self evaluation. In this the teacher is asked to respond to a series of activities performed by him for which there can be both direct and indirect evidence. This again over a period of time will enable not only a data base of activities undertaken by him but will also enable an assessment of a teacher's performance as perceived by him and acceptable to group evaluator. It is strongly felt that this aspect of self evaluation will, in the long run, be the only part acceptable. More so, when it correlates reasonably well with the other areas of evaluation by the teacher and evaluation by peers and heads of departments.

The third aspect of teacher evaluation is evaluation by peers and heads of departments. If this evaluation is made open and done periodically to enable the teachers to perform better, this can also be acceptable to the teachers.

A research project involving three parts of a questionnaire is currently on and it is hoped after studying the reactions of teachers and educational administrators, it will be possible to come out with definite, meaningful and useful guidelines for teacher evaluation. ☐

Our Educational Heritage

Hon'ble Dr. Shanker Dayal Sharma, Vice-President of India, delivered the Convocation Address at the Sixtieth Convocation of the Agra University. Delving deep into the traditions of education in India and its decline, Dr. Sharma observed, "Our educational system has for a long time, depended only on the English language as medium of instruction. Political and economic aspects of colonialism are no doubt, most powerful. But the most silent, yet the most serious of all the foreign influences is the linguistic colonialism. Any predominance of an alien language binds for ever the minds of men for generations. The semi-colonial character of the system of our education, is mostly responsible for blinding the eyes of our people to the values of Indian system of education." Excerpts

Convocation

Our Indian tradition is not a ostrich-like attitude, refusing to see and absorb the light of learning—around us—from different parts of the world. The whole world is a family. "VASUDHAIVA KUTUMBAKAM" is our ideal. In the words of Adi Sankara, "Swadesho-Bhuvanatrayam"—All the Three Worlds are our Motherland". At the same time, the acid-test of rational discrimination of what is right and what is wrong, should be applied. In the words of Kalidasa, Quote : "Puranamithyeva—No Saadhu Sarvam."

"Decide it not to be good, just because it is ours and ancient; Reject it not as bad, because it is foreign and modern".

In short, Kalidasa says, "All that is old, is not gold and all that is mod, is not bad." He concludes that for a healthy and happy system of education, a blending of both the old and the new is a must.

Until a few centuries ago, the entire system of Indian education was based on the 14 Works of Pramana. They comprise the 4 Vedas, 6 Vedangas, the Meemamsa, the Puranas, the Nyaya Sastras and Dharma Sastras. In addition to these Fourteen, four more worldly Vidyas namely, Ayurveda, Arthasastra, Dhanur Veda and Gandharva Veda were also considered as Vidya Sthanas. All told, these Ashtadasa Vidyas namely, these 18 systems, were considered very important for any man, to be considered educated in those days. It is not as if only in the hermitage-retreats of bearded Maharshees with matted rocks, these systems were imparted to desiring disciples amidst their forest dwellings ! These systems were the regular academic routine of many famous universities. The Chinese travellers Fahien and Huen Tsang, after visiting the Universities of Nalanda, Takshasila and Kanchipuram, particularly, recorded that the syllabus of even the Buddhist universities in ancient India consisted of the Chaturdasa Vidya or the 14 Works of Pramanas, in addition to the Buddhistic literature. Throughout South India, at several educational centres called Ghatika Sthanas or Vidya Sthanas, the Chaturdasa Vidyas were the compulsory curriculum. Copper plates of the 9th and 11th Centuries refer to several centres like Ashta Sahasra where the studies contained the same syllabus. It is strange that these are studied these days very much more outside India than in our own universities.

Technical training and job-orientation, are the bye-products of the Industrial Revolution. In our own country, the colonial clerical culture has so much enlarged white-collar employment, that ours is one of the very few countries, where the blue-collar employment and the white-collar services are more or less equally balanced in strength. We have in India about 10 million industrial workers equally matched in strength by an equal number of clerical cadres comprising government, semi-government employees, both Central and the State, as well as in the public sectors. But the objective of the Indian system of education was not merely "Udara Nimiththa" but to promote the development of the total personality of the individual.

The meaning and significance of Indian system of education are seldom appreciated by modern educationalists particularly within India. Our educational system has for a long time, depended only on the English language as medium of instruction. Political and economic aspects of colonialism are no doubt, most powerful. But the most silent, yet the most serious of all the foreign influences is the linguistic colonialism. Any predominance of an alien language binds forever the minds of men for generations. The semi-colonial character of the system of our education, is mostly responsible for blinding the eyes of our people to the values of Indian system of education.

The most outstanding quality of the ancient Indian educational system is humility, almost to the point of anonymity. Almost all our works of literature and fine arts have no known authors. The painters of Ajanta, the sculptors of Mahabalipuram and the Composers of Smritis and Srutis, have always remained anonymous. Years of research could ultimately discover only pseudonymous authors. Even when we have names like Panini and Patanjali, modern scholars believe that they are only Gotra names and not their personal names. Effacing the ego, was an all-time objective of the Indian educative system. I have given only a very few examples from the vast dictionary of Works of Ancient India, whose Creators have remained to this date unnamed. The humility of the Indian educators is such that they have never labelled anything as the ultimate or the final answer to any question on any subject. 'NETHI' is always the last line or the last word on any subject which means "This is not the last word".

The whole world knows the Indian origins of the very fundamentals of modern sciences. The so-called Arabic numerals are called Hindsa in Arabic itself, meaning "From India". The concept of the Zero and the decimal system are traced to the Indian thought. Ancient India produced most valuable treatises on Astronomy, Mathematics, Cosmology, Geography, Physiology and Medicine, Logic and Philology, Sculpture and Architecture, Music and Dance, on Grammar, Prosody and Linguistics, as well as Science of War including training of Elephants and Horses.

We should remind ourselves of the Vedic Maxim, "Aano Bhadraha Kratavo Yantu Vishwataha" let noble thoughts come from all sides". We should freely and frankly accept the ideas and thoughts of all countries and of all languages. Mahatma Gandhi told us to keep the windows of our home open to the winds of all countries but we should be careful that we are not swept off our feet. He thus emphasised the basic Indianness of our education.

An equally outstanding feature of the ancient Indian educational system is Adhyaatma Vichara. Because of this very basic character of an eternal spiritual quest, the Indian system of education is sometimes mistaken to be "Otherworldly". Whatever be the walk of life or the field of specialisation, be it the science of medicine, or the mechanics of war or the art of music or dance, the performer and the performance are always dedicated to the Divine. "Daivarpana Mastu" is the attitude of every author, of every educator, of every house-holder and of every student. There is no science without sublimity, and no education without enlightenment. A totally materialistic world is like the paper-flower. It may last longer but exists without natural fragrance and an inner potentiality to multiply its message. Unfortunately, our modern educational system is like this paper-flower. That is the reason why an increased emphasis is laid these days on non-formal education. A large number of books have emerged even from the West like the "Peasant Pedagogy" of Paulo Fraire. Another title is "Deschooling Society". Even in the West, very sensitive and highly intellectual people have got fed up with formal education. The Paper-Degrees and Diplomas have formalised the system so much that our whole society is swelling up with the educated unemployed. A peculiar situation arises therefrom; all the uneducated somehow seem to be employed all the time, and all the educated seem to be unemployed all the time. That is the reason why, an increasing tendency is noticed on the part of employers to prefer performance to mere qualifications.

L.L.D. Hony. Degree being conferred on former Vice-President of India, Mr. M. Hidayatullah, by the Vice-Chancellor, Prof. S.K. Agrawala.

Apart from the other two qualities of humility and faith, the third outstanding quality of Indian system of education is skill-development. Every individual is trained in particular skills useful to him and to the society. Only a self-reliant person can be complete personality of a "Whole-man". One's contribution to this world, should be more than proportionate to one's own receipts therefrom. The student is therefore, taught to be simple in his habits of food, life-style and living. We must use up as little as possible of "Chaya-Thoyam-Asanam-Vasanam" i e. of natural resources of roofing, water, food and clothing. The bowels of the Earth have to be preserved for posterity. A very vast depletion of these resources leads to environmental pollution and ecological imbalance. Such teaching and training again has been mistaken by modern intrepreters as almost a worship of poverty. Indian system of education teaches the student not to be unlimited in his wants but to be limitless only in thirst for knowledge. Such a system is based on an innate discipline which comes by cultivation of mind, not by an external imposition. Contrasting this for a moment with the happenings of any university campus today is an unpleasant lesson of our own making.

At the same time we have to concede the fact that certain degeneration and degradation of the Indian system did take place during periods of repeated foreign invasions. Particularly, during medieval period, the retrogression of our system was caused by undue obscurantism—almost a "planned withdrawal" by our teachers into their own domestic shell of insularity and isolation. Many systems of preventive and curative medicines, went out of our hands, because of hereditary secrecy. This decline of the Indian tradition is one of the important reasons for the dislike of the present generation to reintroduce it in the present-day system.

I am addressing these words more to the teachers of today than to the students and the youth. The elder generation has hardly realised the role and significance of a good teacher. They are mostly responsible for relegating to the background Guru-Sishya Paaramparya. The intense individual involvement and commitment between the teacher and the taught is so much missing in the classrooms and schools of today. In ancient India an eminent educator has always been known as the Acharya. The word 'Chara' means 'to move' or 'to march'. The march of times, the procession of events and the movement of men and matters is, therefore colled Charitha or Charitra. An Acharya is one who practises what he preaches—one who makes people "move" in the right direction. He becomes an example to be emulated both in precept and in practice both in "Achaara" and "Aacharana". He is an ideal practitioner of Achara-Anusthanas as well as Shastriya-Sampradayas.

All this has cast a special responsibility on all of us. To live up to the examples and expectations of the past and present, is an arduous task. The responsibility is that of the teacher and the taught alike. There is an increasing tendency on our part, to blame the youth and the student-world for all the ills of our system. I should like to humbly submit that the elder generation is always mostly responsible for the breeding and behaviour of the young. I recall an ancient Sanskrit proverb, **Sishya-Paapam Gurum Vrajet**—the master is responsible for the sins of the students. I have myself taught at several universities and was the Education Minister for more than 13 years in my State. May I humbly mention here that I did not have even a single strike either by the students or by the teachers during this entire period? The reason for this is not far to seek. I gave full respect to teachers and provided them with proper emoluments and facilities. I also followed in the footsteps of my great master Pandit Jawaharlal Nehru. Wherever he went, he was willing to learn from the young. Whatever be his otherwise busy schedule, he was always willing to listen to the student groups, sparing some time for them during his visits to any city in India or abroad. In fact, he was a student all his life and, therefore, he was eternally young in his spirits.

The greatest objective of University education is to instil into its alumni the quality of humility and an ever ready willingness to listen and learn. There is the well-known Sanskrit saying 'Vidya dadati Vinayam'. In Tamil the student is called Maanavan; meaning "one who has Maanbu" which means the quality of ennoblement which necessarily includes humility. To quote Shelley. "The more we study, the more we discover our ignorance". Most of our saints and scholars of our past, did not receive any formal education. Even within our own living memory, one of the finest products of the Calcutta University, Swami Vivekananda had to sit and learn at the feet of an illiterate master according to common concept, Shri Rama Krishna Paramhamsa. To quote from G.U. Pope's 'Translation of Thirukkural',

"As on the rich
Poor beggars wait'
To men untaught
The wise are great."

An old Tamil proverb says "What I have learnt is a handful of sand, what I have not, is the size of the world". Sir Isaac Newton, one of the greatest scientists of all times, proclaimed, "I am like a little school boy collecting little pebbles on the sea-shore, while the whole ocean of knowledge is waving before me." Such great masters have declared themselves quite undereducated. To the student, it is said, in our ancient texts, the entire trinity of gods appear before him in the name and the form of his teacher. The Guru is really the Parabrahma during the period of his education. To quote,

Gurur Brahma Gurur Vishnuh
Gurur Devo Mahesvarah
Gurur Sakshat Param Brahma
Tasmai Sri Gurave Namah

It should be the spirit of relationship between the teacher and the taught. The word "Guru" means "one who leads you from darkness unto light."

Today, nearly half of the population of India are below 40-years of age. Most of them are born after the Swaraj. They have no memories of the British Raj and the Freedom Movement. They have no patience with the repeated tales of the sufferings, sorrows and sacrifices of the earlier generation. They have not passed through the World Wars and the Great Depression. They have not witnessed the gruesome real-life scenes of plague and famine. For most of them, Jallianwala Bagh, Chauri-Chaura, Champaran, Bardoli, Vaikom and Dandi, are mere place names in the atlas. It is the fault of the elder generation and the educational system we have devised. If we do not bridge this generation gap right now, the next generation would be further removed from their own basic national and cultural moorings.

The aim and objective of all education is to maintain, sustain and develop a healthy mind in a healthy body. Co-curricular and extra-curricular activities have as much place in our system as the curriculum and the syllabus. The lack of such activities is the reason for the growing evils of habitual smoking, drinking and drug addiction fast growing amidst our student community. Here again, we are responsible for creating such an atmosphere of psychological apathy, isolation and alienation leading to such unhealthy practices spreading like wild fire, amidst the youth today. To quote, Mahatma Gandhi, "Innocent youth is a priceless possession not to be squandered away for the sake of momentary excitement, miscalled pleasure". Every effort within our budget and every step within our capacity, should be undertaken to save the innocent youth for their own future.

The foremost feature of our educational system should be to train the youth to see the good in every human being and to take the best out of each individual's potential. In our secular polity, different religions have a position of great relevance in the structuring of character and personality. I would like to quote the first President of India Dr. Rajendra Prasad's thoughts—which he had put down in his Address for the Convocation of Patna University on February 28, 1963—an address which he could not deliver himself as he passed away on that day. His words I feel are of startling relevance and I regard them as his parting message to the youth of our country: "I have drawn attention to the absence of arrangement for giving a moral bias to our system of education. As we have different religions prevalent in the country, naturally it is not possible for the state to give encouragement to any particular religion, and, therefore, our state is a secular state. It should not be understood, however, that it is necessarily a godless state or an amoral state. What is really meant is that all religions are given equal status and

Overseas Research Students Awards 1988

Around 800 new ORS Awards will be offered on competitive basis in 1988 to overseas post-graduate students of outstanding merit and research potential to pursue research at universities and colleges in the United Kingdom. The awards are intended to cover the difference between the tuition fee for a home postgraduate student and the "Full Cost" fee chargeable to an overseas postgraduate student. Awards are open to overseas graduate students who in session 1988-89 are commencing full time studies as a registered research student and who must be liable to pay tuition fee at the "Full Cost" rate for overseas students.

The only criteria for the awards are outstanding merit and research potential; other factors, such as, means, nationality, proposed field and institution of study, will not be taken into account. The awards are made to individuals and not to academic institutions, and may be held in any field of study. Subject to satisfactory progress of the award holders, they will be renewed for a second and third year according to the normal or remaining length of the research course being undertaken.

The scheme is administered by the Committee of Vice-Chancellors and Principals of Universities of United Kingdom through a special committee comprising senior members of academic staff of academic institution. Further details and application forms may be obtained from the Registrar or Secretary of any of the universities and colleges in the United Kingdom.

no preference is to be shown to anyone of them on account of its being the religion of a particular community, whether large or small. But that does not exclude inculcation of those fundamental principles on which rest right and wrong and which are acceptable to all religions. In fact the cult of disbelief in any religion should not be inculcated among our young people. This has been one of the crying needs and today for various reasons which need not be enumerated here we hear of a certain decline in the moral standards of a large number of our people." It would be pertinent to note that education literally means "Taking out" from the Latin word "Edu-care". Education is not injection or injunction. It is not indoctrination of views and ideas or just an imposition of one's views upon others. In short, education should not be an infliction. The moment education becomes such an infliction, the consequence will be, student-indiscipline, strikes and agitations within the campus. Thiruvalluvar mentions, "Functioning eyes belong to those who are educated. The rest are blind". Writing and arithmetic are considered in Tamil literature as the right eye and the left eye of all education. Initiation of the youth into education is called in Sanskrit as "Upa-Nayana", the second sight. Knowledge is called the "Third Eye" in many systems of philosophy. The real education is described in a famous Tamil work as follows:

> "That which is not destroyed by fire,
> Not sub-merged by flood,
> Not parched up by famine,
> Not swallowed by earthquake,
> Not wiped off by epidemics,
> Not shaken by explosions,
> Not stolen by thieves,
> Is preserved for ever,
> Only in our minds and memories".

We have to search our own conscience and say whether our education system fulfils the above standards. Unfortunately, the system as it has developed, has certain major weaknesses. For instance, it still continues to be dominated by models and value systems of the colonial regime; it lays emphasis on narrow individualism, verbal fluency especially in English, unhealthy competition to the neglect of social good, and mere acquisition of information, while neglecting such other social objectives as cooperation, manual work, skill-development and character-building. In short, as the University Grants Commission points out, it places an almost exclusive emphasis on "formal schooling" with its single-point entry, annual system of examinations and promotions, insistence on full-time attendance and exclusive use of full-time teachers. It neglects both non-formal and recurrent education. The educational institutions function in isolation from one another and from the community as a whole. It is also true that the upper and middle classes are the main beneficiaries of this system.

The role of the University system, as it ought to develop in future, has engaged the attention of the University Grants Commission. The system must inculcate and promote basic human values. It must preserve and foster our great cultural traditions and blend them with essential elements from other cultures and peoples. It must promote a rational outlook and scientific temper. It must enrich the Indian languages and promote their use as important means of communication on national development and unity. It must promote the development of the total personality of the students and inculcate in them a commitment to society. It must not only act as an objective critic of society, but also contribute to the improvement of the entire educational system. □

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
February 7-9, 1988	Mapcost Symposium on Indian Studies on Chrysomelidae and Bruchidae	To discuss different aspects of study of Chrysomelidae and Bruchidae insects.	Govt. Arts and Science College, Durg (M.P.).	The Secretary, Mapcost Symposium, Govt. Arts and Science College, Durg-491001 (M.P.)
February 10-14, 1988	Workshop on Science and Technology	To initiate a dialogue for the interaction of the Government, industry, institutes and to update the present technology.	Department of Astronomy & Space Sciences, Punjabi University in collaboration with the Punjab State Council of Science & Technology.	Prof. H.S. Gurm, Director, Department of Astronomy & Space Sciences, Punjabi University, Patiala-147002
February 18-20, 1988	Dalit Literature	To review and reassess the role and relevance of Dalit Literature in building an alternative perspective on Indian social, political and cultural life.	Centre for Soical, Studies, South, Gujarat University, Surat	Prof. S.P. Punalekar, Centre for Social, Studies, South Gujarat University, Surat-395007
February 19-21, 1988	Conference on Ecology and Environment	To identify and define various issues relating to Ecology and Environment and evolve Strategies to meet the challenges of ecological imbalance, environmental pollution, etc.	Mugra—Gagan, Hingoli—Sponsored by the Department of Science and Technology, Govt. of India, and supported by Marathwada University, Aurangabad.	Prof. Vasant Purohit, Director, Ecology and Environment Conference, Saket, 6 Shri Saikripa Colony, Shiwaji Nagar, Hingoli-431 513
February 20-21, 1988	**National Seminar on Interaction between Institutions and Industries through Science and Technology Entrepreneurs' Parks**	**To provide a forum of young entrepreneurs, industrialists, scientists and educationists to deliberate on the vital issues of Industry-Institution interaction.**	**STEP, Roorkee and University of Roorkee, Roorkee.**	**Prof. M.P. Jain, Organising Secretary, National Seminar IIISTEP, Office of the DRIL, University of Roorkee, Roorkee-247667**
March 10-12 1988	Nationalism : Problems and Challenge	To discuss different aspects of the development of nationalities during 19-20th centuries and their relationship with Indian nationalism.	Centre for Social Studies, South Gujarat University, Surat in collaboration with K.M. Munshi Centenary Committee, Gandhinagar.	Prof. Ghanshyam Shah, Centre for Social Studies, South Gujarat University, Surat-395007
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis**	**University of Hyderabad in collaboration with the Indian Society of Andrology**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee—247667**

National Council for Higher Education

In implementation of the New Education Policy a National Council for Higher Education is proposed to be set up under the chairmanship of the Prime Minister Shri Rajiv Gandhi. The Council is expected to start functioning from the financial year 1988-89.

The proposed Council will oversee the development of higher education and advise the Government on resource allocations to different educational systems. It will also promote collaborative programmes of higher education and research among various institutions and between technical institutions and industry.

The Council will ensure sharing of common facilities and research data among various technical institutions to improve the standard of higher education keeping in view the present and future needs of the country.

The Council will have 20 members. It will have an independent Secretariat which will have a 10-member executive board functioning under the chairmanship of the Minister for Human Resource Development.

The members will include the Ministers for Human Resource Development, Agriculture, Health and Family Welfare and Ministers of State for Education and Culture and Science and Technology. It will also include the Deputy Chairman of the Planning Commission, Secretaries in the Department of Education, Agriculture, Health and Science and Technoloy. The Chairmen of the University Grants Commission, All-India Council for Technical Education and the Indian Council for Agricultural Research, the Vice-Chancellor of the Indira Gandhi National Open University will also be members of the Council.

IGNOU's Graduation Programme

The Indira Gandhi National Open University (IGNOU) is reported to have decided to admianother 10,000 candidates comprising students who have passed the 10 plus 2 courses in schools and colleges, to its bachelor's degree programmes from the next academic session. Candidates in the 10 plus 2 course examinations whose results will be declared this year will a lso be admitted on merit.

Longowal Instt. of Engg and Tech

The Government proposes to set up an Institute of Engineering and Technology in Punjab in the memory of late Sant Longowal. To be known as Longowal Institute of Engg. and Technology, it will be fully financed by the Central Government and registered as an autonomous body under the Societies Registration Act.

Initially, 10 certificate and diploma level courses will be started from the 1988-89 academic year. Later, degree and postgraduate courses will be introduced. An expert committee has been set up by the Human Resource Development Ministry to work out the details and identify the various technical courses to be started.

Degree Course in Maritime Training

The University of Bombay is reported to have agreed to conduct a three-year degree course for providing maritime training for seamen. The course will replace the present two-year course in nautical training. The ship T. S. Rajendra which has given pre-sea training to 5084 personnel so far would be utilized for the degree course training.

The marine academy being constructed at Karwe, New Bombay, would be the training centre for seamen and it would be the first of its kind in India. The construction of the academy is expected to be completed by 1992.

IIT for Assam

An Indian Institute of Technology (IIT) is proposed to be set up near Misa in Nagaon district, Assam. This will be the sixth IIT in the country. According to Human Resource Development Ministry a Bill for the amendment of the IIT Act is proposed to be introduced in the budget session of Parliament.

The proposed institute would offer courses in various fields of engineering and technology at the undergraduate and postgraduate levels.

Orientation-cum-Refresher Programme

The Rajendra Agricultural University has, for the first time, started an internal orientation-cum-refresher programme for its own teachers particularly in pedagogy and various facets of Resident Instructions. The programme is of three days duration and aims at covering all the teachers of the University in phases. Each group will consist of 30 teachers drawn from all cadres. The main aspects covered are curriculum planning, regulations on resident instructions, advisory system, tenpoint grading system, methods of setting objective questions and evaluation and guidance of P.G. research work.

School of Behavioural Sciences

The Bhopal University has set up a School of Behavioural Sciences and Economics as a Centre of Excellence. Set up with the assistance of the State Government, the School includes three interdisciplinary departments, viz, Regional Planning, Sociology and Psychology.

Inter-University National Youth Festival

The Amravati University in collaboration with Punjabrao Krishi Vidyapeeth, Akola is organising the Inter-University National Youth Festival from 25th to 29th January, 1988 at Akola under the auspices of the Association of Indian Universities, New Delhi. 600 to 700 students from all over the country representing various universities are expected to take part in the various cultural activities.

Aquaculture Seminar

The Department of Zoology, Nagarjuna University, organised a national seminar on fresh water aquaculture in India. Sponsored by the University Grants Commission, the seminar was inaugurated by Prof. G.J.V. Raju, Vice-Chancellor of the University. In his address Prof. Raju said that aquaculture was fast developing and its production was more profitable than agriculture. He said that a great competition had started between aquaculture and agriculture in the country, as the two were important export products, unlike horticulture and others.

He said that it was essential to develop aquaculture to meet the growing demands of the present day world. He said that India had great potential to develop aquaculture and added that since past few years our country has achieved great development in this field.

Though aquaculture may not be a solution to all problems, it would definitely solve food problem and provide financial assistance.

Spanish Honour for Prof. Dey

The Government of Spain has honoured an Indian Academician, Prof. Susnigdha Dey with the decoration of the rank of Commander of the Order of Civil Merit for his contributions to Hispanic studies. Prof. Dey, Chairman of the Centre of Spanish Studies at the Jawaharlal Nehru University, is the first Indian scholar having been so honoured by the Government of Spain. Presenting this award to Prof. Dey, the Ambassador of Spain to India, H.E. Mr. Carlos Fernandez Espeso said that his Government was indebted to Prof. Dey for his interest in Spanish culture to which he has dedicated many fruitful years of his life. He said it was an honour for Spain to have such an outstanding academic personality devoted to this area of study.

News from Agril. Varsities

New Field Peas Variety

The scientists of the Department of Plant Breeding, Haryana Agricultural University have evolved a new variety of field peas APARNA (HFP 4), a leafless type which can give as high yield as 35 quintals per hectare as compared to 16-17 quintals per hectare of earlier evolved variety-T 163. It is a medium dwarf genotype with high podding potential. Due to late start of podding, it escapes frost damage but matures in time. Aparna is tolerant to powdery mildew, a most prevalent disease of field peas. The plants grow erect but can spread if there is space. Through this variety, the scientists expect a considerable increase in area/production of field peas during the next few years. In about 30 field trials conducted at farmer's fields during last two rabi seasons, the variety has given an average of 26 quintals of grain yield per hectare. The Haryana State Seed Sub Commit-

Education News Index

The AIU Library receives about 20 daily newspapers from all parts of the country. The Library operates a press clipping service for its readers. To share this information with a wider readership, it has been decided that effective February 1988 a new column, Education News Index be launched in the *University News*. Appearing every second issue of the month, Education News Index will list articles and editorials pertaining to higher education that appear in daily press during the preceding month. It need hardly be emphasised that these articles and editorials serve as an important research resource. We hope our readers will welcome this new feature.

tee and Central Variety Release Committee have approved its release for cultivation in irrigated areas of Haryana.

Rs. 1.5 cr ICAR Grant for PAU

Dr. N.S. Randhawa, Director-General of the Indian Council of Agricultural Research (ICAR), said that Rs. 1.5 crore would be provided to the Punjab Agricultural University (PAU) for setting up a research station in the agriculturally backward region of Mand. Krishi Vigyan Kendras (Agriculture Research Stations) would gradually be set up in each district of the State. Dr. Randhawa was addressing members of the Punjab Kisan Club and the faculty of the PAU in Ludhiana recently. He said that since the number of small farmers was on the increase they should be persuaded to adopt skills like mushroom growing and bee-keeping.

Dr. Sukhdev Singh, Vice-Chancellor of PAU, while presiding over the function, said that quick adoption of new farm technology by the farmers coupled with assured irrigation and mechanisation were the real factors behind the green revolution.

Dr. Khem Singh Gill, Director of Extension Education, PAU, said that specialised training courses had been started to educate orchard workers on pruning and care of fruit plants.

Soviet Delegation at HAU

A Soviet Delegation headed by Prof. Gumerov, Vice-President of the Indo-Soviet Friendship Society, U.S.S.R. and Chairman of the Society's branch in Bashkiria paid a one day visit to Haryana Agricultural University recently. The visiting Russians were taken to the Vet. Clinics and the Museum of Agriculture College where the scientists explained to them the progress that the university had made in the field of veterinary surgery and also the work being done on the research achievements. The delegation also had a meeting with the Vice-Chancellor, Dr. Har Swarup Singh, in which the Vice-Chancellor explained to them the administrative set-up of the University.

News from Abroad

Continued Support for U.N. University Programme

The James S. McDonnel Foundation of St. Louis, Missouri, has granted $ 316,661 to the U.N. University for continued support of the James S. McDonnel Distinguished Scholars Programme at the World Institute for Development Economics Research (WIDER). In this programme distinguished economists and other scholars are invited to spend some time in residence at WIDER, normally during the summer months.

The James S. McDonnel Distinguished Scholars Programme contributes towards establishing WIDER as a centre of excellence for research diverse fields as well as in enabling scholars at the highest professional level to pursue their individual research.

Sports News

Varsities Volleyball Team

Baldev Singh, of Kurukshetra University has been named the Captain of the twelve-member Indian Universities Volleyball team which will be participating in the Federation Cup Volleyball Tournament scheduled to the held at Dariba Mines, Udaipur from 2nd to 9th February, 1988. Other members of the team are: Binu Jose (Kerala); Sanjay Sharma (Allahabad); Deepak Gaikwad (Indore); V. V. Deshpande (Nagpur); Suresh Giakwad (Pune); Mohanan B. (Kerala); Yogesh Sharma (Jabalpur); D. Shreedhar (Osmania); Hasanuddin Siddiqui (Aligarh); Prasant Dondal (Amravati) and Suresh Kumar (Allahabad).

The team has been selected after selection trials at Rajasthan University, Jaipur on January 15th and 16th, 1988. The selected members are at present attending a coaching camp at Jaipur under the supervision of Mr. M. A. Khan of Rajasthan University.

We Congratulate...

(1) Prof. Yash Pal, Chairman, University Grants Commission, who has been elected the General President of the Indian Science Congress Association (ISCA) for the year 1989-90.

(2) Prof. P. B. Mangla, Head of the Department of Library and Information Science, University of Delhi on his election as Vice-President of the International Federation of Library Associations and Institutions (IFLA).

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities.

BIOLOGICAL SCIENCES

Anthropology

1. Malleswara Rao, Pitchika. *An anthropo-serological study of Gadaba.* Andhra.

Environmental Sciences

1. Oberoi, G.S. *Water pollution studies and utilization of the polluted water for irrigation in Dewas areas.* Vikram. Dr. P.S. Dubey.

Marine Sciences

1. Baby, K.V. *Combined toxicity of heavy metals and petroleum hydrocarbons on selected marine organisms.* Cochin. Dr. N. Ravindranatha Menon.
2. Chandge, Manohar Shivaram. *Studies on lipid nutrition in larvae and juveniles of the Indian while prawn, Penaeus indicus.* CUST. Dr. R. Paul Raj.
3. Santhakumari, V. *Studies on associates and parasites of some marine organisms and zooplankton studies with special reference to hydromedusae.* D.Sc. Cochin.
4. Sivadasan, C.R. *Studies on the effects of selected trace metals on Metapenaeous dobsoni.* CUST. Dr. P.N. Krishnan Nambisan.

Biochemistry

1. Dange, Arun Haribhau. *Studies on identification and individualisation of human milk by electrophoretic, immunological and serological techniques.* Nagpur. Dr. D.M. Brahmankar.
2. Krishna Rao, Appasani Satya Mohana. *Biochemical characterization of cloned DNA fragments from bacteriophage MB 78 and its host S. typhimurium.* BHU. Prof. Maharani Chakravorti.

Botany

1. Barua, Karabi. *Studies on abscissic acid during development and ageing of rice seeds, Oryza sativa L.* Calcutta.

2. Gill, Manjit Kaur. *Effect of some phenolics on the nitrogen metabolism in two varieties of peanut, Arachis hypogaea L.* PAU.

3. Gupta, Anil Kumar. *An ecological study on aquatic fungal flora from tanks of Kurukshetra.* Kurukshetra.

4. Gupta, Pratibha. *Studies on the effects of venom of Naja naja and diethyl sulphate on the morphology and physiology of certain blue green algae.* Sukhadia. Dr. R.S. Gupta.

5. Harsh, Shyam Lal. *Observations on the effect of cement dust on plants around Birla Cement Works, Chittorgarh.* Sukhadia. Dr. L.N. Vyas.

6. Iyre, R. Indira. *Studies on endogenous growth hormones from some tropical fruits.* Calcutta.

7. Joshi, Rajkumari. *Studies on the effect of cement dust pollution on soil properties and on some crop plants.* Sukhadia. Dr. L.N. Vyas.

8. Kapoor, Anita. *Responses of Trigonella foenum graecum L and Glycine max (L) Merr to vesicular arbuscular mycorrhiza in relation to phosphorus and nitrogen.* Delhi.

9. Mathur, Sudha Rani. *Studies on the seed biology of certain species of Lathyrus (Fabaceae).* Sukhadia. Dr. K. Prasad.

10. Mulik, Niranjana Gopalrao. *Studies on some aspects of mangroves.* Shivaji. Dr. (Smt) L.J. Bhosale.

11. Revathi, M.L. *Induced discolouration in wood.* Patel. Dr. J.D. Patel.

12. Sadhana Kumari. *Effects of lithium on cell division and cell components in eukaryotic test systems.* Calcutta.

13. Sharma. Madhu. *Histochemical and ultrastructural stndies on anther development in Solanum nigrum Linn. and Pterotheca falconeri Hook F.* Delhi.

14. Srivastava, Alaka. *Effects of cadmium and its accumulation in duck-weeds.* BHU. Dr. V.S. Jaiswal.

15. Umamahesh, V. *Ecological studies of ground nut crop fields with reference to weeds.* Saurashtra. Dr. S.M. Pandya.

Agriculture

1. Ashwani Kumar. *Powdery mildew of wheat pathological and genetical studies.* PAU.

2. Champawat, Ram Singh. *Studies on cumin, Cuminum cyminum L wilt incited by Fusarium oxysporum F Sp. cumin.* Sukhadia. Dr. V.N. Pathak.

3. Deshwal, Inder Singh. *Nutritional studies in pomegranate Punica granatum L.* Marathwada Krishi. Dr. V.K. Patil.

4. Dwivedi, Madhusudan Prased. *Effect of photoperiod and growth regulators on vegetative growth, flowering and yield of strawberry.* Y.S. Parmar. Dr. K.K. Jindal.

5. Gaur, Vinod Kumar. *Studies on the wilt pigeonpea, Cajanus cajan (L) Millsp with special reference to rhizosphere relationship.* Sukhadia. Dr. L.C. Sharma.

6. Jaggi, Ramesh Chand. *Evaluation of soil test methods for available P and fixation of its critical limits for wheat and soybean in some soils of Himachal Pradesh.* H.P. Krishi. Dr. B.S. Kanwar.

7. Jat, Ram Lal. *A study on the effects of levels of nitrogen, phosphorus and potassium and qualities of irrigation water on wheat grown on loamy sand soils.* Sukhadia. Dr. Phulwari Lal.

8. Keshwa, Gopal Lal. *Effect of different soil amendments and sources and methods of phosphate fertilization on growth, yield and quality of wheat, Triticum aestivum L grown on salt affected soils.* Sukhadia. Dr. G.D. Singh.

9. Khandelwal, Ram Baboo. *A study on the evaluation of the water quality with respect to boron for wheat grown on different soils.* Sukhadia. Dr. Phulwari Lal.

10. Kothari, Prahalad Rai. *Evaluation of the combining ability of the S-lines of CM 500 by using different testers in maize, Zea mays L.* Sukhadia. Dr. S.C. Gupta.

11. Kuldip Kumar. *Job satisfaction among the male trainers of Farmers Training Centres in India.* PAU.

12. Makhan Lal, *Scheduling of irrigation by climatological and critical crop stage approaches at different levels of phosphorus in pigeonpea in Gang command area.* Sukhadia. Dr. O.P. Gupta.

13. Maliwal, Pushkar Lal. *Effect of different herbicides with and without phosphorus on weed control and growth and yield of fenugreek, Trigonella foenum graecum L.* Sukhadia. Dr. O.P. Gupta.

14. Masih, Mukul Rani. *Studies on the availability and uptake of sulphur by mustard and ground nut.* Sukhadia. Dr. S. Niwas.

15. Mehrishi, Rajendra Prasad. *Studies on downy mildew disease caused by Pseudoperonospora cubensis (Berk. and Cust) Rostow in Rajastan.* Sukhadia. Dr. B.S. Siradhana.

16. Misra, Ashok Kumar. *Studies on the population dynamics and forecasting of Mythimna separata Walker.* BHU. Dr. Lallan Rai.

17. Nandwana, Ravi Prakash. *Studies on the root-knot nematode, Meloidogyne incognita (Kofoid and White, 1919) Chitwood 1949 associated with cotton.* Sukhadia. Dr. B S. Yadav.

18. Nirmal Singh. *Leaf nutrient status of apple, grape and almond orchards of Kinnaur District of Himachal Pradesh and its relationship with physico-chemical characteristics of soil.* HP Krishi. Dr. A.R. Bhandari.

19. Pareek, Bhanwar Lal. *Investigations into the effect of stand geometry and bio-regulator on the growth, yield and quality of select cultivars of rapeseed and mustard grown in Kota region of Rajasthan.* Sukhadia. Dr. P.C. Gupta.

20. Prashant Kumar. *Studies on the effect of nitrogen, phosphorus and ethephon on onion, Allium cepa L. cv. Pusa red.* BHU. Prof. A.N. Maurya.

21. Qureshi, Faquir Mohammad. *Reclamatian of saline sodic soils of semi arid regions of Rajasthan using local ameliorative materials including Cassia auriculata.* Sukhadia. Dr. Fateh Karan.

22. Ram, Jilathoo. *Studies on genetic architecture of yield and its components in rice, Oryza sativa L.* BHU. Dr. Jagadamba Singh.

23. Sahu, Kartik Chandra. *Studies on sclerotium rot of groundnut.* OUAT. Dr. A. Narain.

24. Sharma, Bhim Sen. *Root rot of sugar beet induced by Sclerotium rolfsii.* Sukhadia. Dr. V.N. Pathak.

25. Sharma, Madan Mohan. *Physio-toxicological studies on the effect of difluran on some Lepidopterous pests,* Sukhadia. Dr. R.P. Srivastava.

26. Sharma S.N. *Genetic architecture of yield and yield associated characters in macaroni wheat, Triticum durum Desf.* Sukhadia. Dr. R.K. Sharma.

27. Singh, Prem Shanker. *Insect pest incidence in relation to certain pigeonpea cultivars and insecticides.* BHU. Prof. H.N. Singh.

28. Sood, Milap Chand. *Effect of different soil management practices on the in-situ depth borne soil physical changes during rice culture and their effect on the subsequent crop of potato.* HP Krishi. Dr. C.L. Acharya.

29. Sudhakar, Yekula. *Genetics of leaf rust and leaf blight resistance in spring wheat, Triticum aestivum (L) em. Thell.* BHU. Dr. G.S. Sharma.

30. Tomer, Shiv Singh. *Nitrogen management for increased N. use efficiency in transplanted rice in vertisols of Rajasthan.* Sukhadia. Dr. J.K. Verma.

31. Tonk, Vijay Singh. *Genetic analysis of pre-anthesis stages of ear development and its association with yield and its components in wheat populations.* HAU.

Zoology

1. Arun Kumar. *Genetic studies of Indian Drosophila* BHU. Dr. J.P. Gupta.

2. Dhir, Ravindra Kumar. *An investigation an the mode of action of postcoital antifertility agents during the pre-implantation stage of pregnancy on rat.* Rajasthan. Dr. Dennis Jacob.

3. Dubewar, Diwakar Madhaorao. *Hormonal control of calcium metabolism in lower vertebrates with special reference to evolution. D.Sc.* Nagpur.

4. Gupta, Ira. *Fertility regulation with the help of plant materials and non-steroidal coumarin compounds : A comparative evaluation with special reference to physiomorphology in male albino rats.* Rajasthan. Dr. V.P. Dixit.

5. Guruprasad, B.K. *Some aspects of ecology and behaviour of Bandicota bengalensis.* Bangalore. Dr. E. Radha.

6. Jayapala, Paladugu. *Studies on the role of selected fertilizers in relation to water quality and fish growth.* Sukhadia. Dr. V.K. Rajbanshi.

7. Kant, Ashwini Kumar. *Evaluation of plant preparations for postcoital antifertility efficacy in rats.* Rajastan. Dr. N K. Lohiya and Dr. Dennis Jacob.

8. Nair, Neena. *Hormonal regulation of enzymes in liver, intestine and testes of albino rats.* Rajasthan. Dr. R.S. Mathur and Dr. K.S. Kohli.

9. Patil, Mohan Ganpati. *Comparative studies on lipids in adipose tissue of Indian bats.* Shivaji. Dr. V.A. Sawant.

10. Rao, Manohar Singh. *Histochemicals and histoenzymological alterations in the spleen of Taphozous melanopogon melanopogon Temmnick (Microchiroptera; Mammalia) from pregnant to pregnant state.* Sukhadia. Dr. S.B. Lal.

11. Sai Sastry, Addepalli Gopala Ranga. *Studies on the hydrography and plankton of a tropical tidal estuary (The Vasista Godavari) on the east coast of India.* Andhra.

12. Sailaja, Rallabandi. *Interaction of environmental and endocrine factors in the regulation of reproductive cycles in free-living female rose-ringed parakeets.* Patel. Dr. V.C. Kotak.

13. Saini, Anita Kumari. *Studies on cytological and biochemical aspects of the toxicity of organophosphorus insecticides and their accumulation in micro-organisms.* Delhi.

14. Sharma, Ragini. *Comparative immunocytochemical studies on the ACTH cells of certain vertebrates.* Rajasthan. Dr. R.R. Unnithan.

15. Sharma, Surendra Datta. *A comparative study of aquatic ecosystem of Ramgarh lake near Jaipur and Ghana Bird Sanctuary, Bharatpur with special reference to zoobenthos and fish productivity.* Rajasthan. Dr. C.L. Mahajan.

16. Shrivastava, Ram Krishna. *Studies on morphology and physiology of the digestive system of Aspidomorpha miliaris F (Coleoptera; Chrysomelidae).* Ravishankar. Dr. K.K. Verma.

17. Srivastava, Vinita. *Relative efficacy of different rodenticides on field and house rats with special reference to silmurin.* Sukhadia. Dr. R.C. Srivastava.

Medical Sciences

1. Hari Shankar. *Studies on brmhana effect of certain lehas mentioned for children.* BHU. Dr. C. Chaturvedi.

2. Mishra, Santosh Kumar. *Mechanical responses of rat vas deferens : Role of calcium and sodium.* BHU. Prof. A.K. Sanyal.

3. Neelarm. *A study on the role of daihika prakriti in artava vyapad.* BHU. Prof. (Miss) P.V. Tewari.

4. Sharma, Sunil Datt. *Hridroga with special reference to ischaemic disease.* BHU. Prof. S.N. Tripathi.

5. Shukla, Veena. *Hemispheric specialization and psychiatric illness.* BHU. Dr. P.B. Behere.

6. Singh, Gyanendra Nath. *Kinetics, stability and physico-chemical studies of butaperazine dimaleate and norfloxacin.* BHU. Dr. R.P. Gupta.

7. Uppal, Arun Kumar. *Haematological response to graded exercise in males belonging to high and low fitness groups.* D. Litt. Jiwaji.

Animal Husbandry

1. Chaudhury, Kamini. *Effect of different levels of protein and amino acids with constant energy level on the performance of broilors.* HAU.

2. Manjunath, N. *Effect of lactic acid bacteria on tumour cell lines.* Kurukshetra.

3. Mehta, Sunder Lal. *Genetic studies of growth and characteristics of sonadi and their crosses with corriedale.* Sukhadia. Dr. R.K. Bhargava.

4. Purohit, Rajendra Kumar. *Radiographic studies on dentition and dental disease in camel.* Sukhadia. Dr. M.R. Patel and Dr. A.K. Ghosal.

5. Salma. *Studies on leuconostocs and their role in the preparation of cultured milk products.* Kurukshetra.

6. Suraj Bhan. *Studies on light management for layers.* HAU.

7. Tilak, K. Bala Gangadhar. *Role of starter cultures in the ripening of cheddar cheese made from buffalo milk.* Kurukshetra.

Central Institute of English and Foreign Languages

HYDERABAD - 500 007

ADVERTISEMENT No. I/88

The CIEFL announces the following courses for the academic year 1988-89 :

A. ENGLISH

Beginning Ist July, 1988

1. Post-Graduate Diploma Course in the Teaching of English/English Studies. (2 Semesters : July 1988 to March, 1989)

   Entrance Qualification : M.A. in English, at least Class II or an equivalent qualification (relaxable in the case of sponsored teachers of English with at least 5 years' teaching experience if they have either an M.A. in English or at least a High Second Class (Grade B) M.A. in an allied subject—Linguistics, Education, Mass Communication or Psychology).

2. M. Litt.—One year (July 1 to June 30)—Two Semesters.
3. Ph.D.—Three Years--Six Semesters.

Area of Research

(1) English Literature (2) English Linguistics and Phonetics (3) English Language Teaching.

B. FOREIGN LANGUAGES

Beginning 1st June 1988

1. M.A. (Correspondence-cum-Attendance) in French/German/Russian (3 years with 8 weeks attendance at the Institute every year during June and July).

Beginning 1st July, 1988

1. Post-Graduate Certificate (post M.A.) in the Teaching of French/German/Russian. (1 Semester : July to October)
2. Post-Graduate Diploma (Post M.A.) in the Teaching of Arabic/French/German/Russian. (2 Semesters : July to March)
3. M. Litt. in Modern Arabic/French/German/Russian. (3 Semesters)
4. Ph.D. in Modern Arabic/French/German/Russian (6 Semesters—3 years)
5. Advanced Diploma in Translation in French (2 Semesters)

Reservations for Scheduled Caste and Scheduled Tribe candidates according to Government of India rules.

Stipends/Scholarships/Fellowships available

1. Stipends worth Rs. 600/- p.m. are offered to teachers sponsored by their Institutions.
2. A few Merit Scholarships worth Rs. 600/- p.m. will be awarded to non-sponsored candidates on the basis of a test.
3. A few merit scholarships worth Rs. 300/- p.m. for non-teacher participants, and stipends of Rs. 350/- p.m. for sponsored candidates during the period of contact programme of M.A. (Correspondence-cum-Attendance) in Foreign Languages are available.
4. UGC/CIEFL Teacher Fellowships—Rs. 500/- p.m.
5. UGC Junior Research Fellowships—Rs. 1000/- p.m. (on the basis of a National Test).
6. CIEFL Junior Research Fellowships—Rs. 800/- p.m. (Item Nos. 1 and 2 for Diploma Courses; Item No. 3 for M.A. (Correspondence) Course; Item Nos. 4 to 6 for M.Litt. and Ph.D. courses.)

For application form for admission/fellowships and Prospectus, please write to the Editor, CIEFL, Hyderabad-500007, with a Crossed Postal Order for Rs. 10/- drawn in favour of the Registrar, CIEFL, Hyderabad-500007.

Last Date for receipt of filled in applications :

Courses in English	:	10-03-1988.
Courses in Foreign Languages	:	31-03-1988.

HAVE YOU ACQUIRED A COPY OF

UNIVERSITIES HANDBOOK–1985-86

Salient Features

—Contains information covering all the Indian Universities including agricultural universities, institutes of national importance (including IITs) and deemed to be universities on following heads of information :

- Officers & Deans of Faculties;
- Library & Research Facilities;
- Scholarships and Fellowships;
- Academic year—last date for admissions and the approximate dates of examinations;
- Courses of Studies;
- Minimum requirements for admission to each course, duration and the subjects of study for each course;
- Names of Professors and Readers/Assistant Professors together with their academic titles department-wise;
- Names of Colleges together with names of Principals and Heads of Postgraduate Departments in Colleges;
- Statistics on examination results.

—Introductory chapter on overview of the University System in India.

—Map showing location of universities.

CLASSIFIED ADVERTISEMENTS

UNIVERSITY OF ROORKEE

ROORKEE

Advt. No. Estt(A)/1/A-86 (Advt.)-88 **Drted: Jan. 8, 1988**

Applications on prescribed forms, obtainable from the Registrar, either personally or by sending a self addressed envelope (9'' x 4'') affixed with 1.40 paise stamps, are invited for the following posts. Higher starting salary could be offered to candidates based on their qualifications and experience. Applicants should not generally be above the age of 55 years. Candidates in employment are required to send their applications through proper channel. Applications received late/incomplete or without required remittance will not be entertained.

Last date of receipt of Applications on prescribed form alongwith application fee of Rs. 10/- (By Bank Draft or Indian Postal Order in favour of Registrar, University of Roorkee) **is February 25,** 1988 and **for overseas candidates is March 25, 1988.**

[Abbreviations used : R-Regular, T-Temporary]

Sl. No.	Post	Pay Scale	Vacancy
A.	**Department of Mechanical & Industrial Engineering** (Welding Research Laboratory)		
1.	Project Scientist	Rs. 1500-2500	1T
2.	Project Scientist	Rs 1200-1900	1T
B.	**Humanities & Social Sciences Department**		
1.	Reader	Rs. 1200-1900	3R+1T
2.	Lecturer in German	Rs. 700-1600	1R
3.	Lecturer in English	Rs. 700-1600	1R
C.	**Roorkee University Regional Computer Centre**		
1.	System Manager	Rs. 1100-1600	2R
D.	**Audio Visual Research Centre**		
1.	Research Scientist 'A'	Rs. 700-1600	1T
2.	Cameraman (Grade-I)	Rs. 700-1600	1T
E.	**Central Library**		
1.	Librarian	Rs. 1540-2200	1R
2.	Asstt. Archivist	Rs. 770-1600	1T
F.	**National Service Scheme**		
1.	Co-ordinator, Training & Orientation Centre	Rs. 1200-1900	1T

Qualifications

(A) Department of Mechanical & Industrial Engineering
(Welding Research Laboratory)

1. For Project Scientist—
Rs. 1500-2500— 1T

(i) M.E. Degree in Mechanical/Metallurgy / Production / Welding Testing.

(ii) An eminent Scholar with published work of high quality actively engaged in research. Ten years experience of teaching and/or research. Experience of guiding research at doctoral level.

OR

An outstanding Engineer/Technologists with established reputation who has made significant contribution to knowledge in the field of Welding Technology.

Specialization : Welding Tech /Welding Metallurgy.

Desirable : Ph.D. in Welding Engineering.

2. For Project Scientist—
Rs. 1200-1900 1T

(i) M.E. Degree in Mechanical/Metallurgy/Production/Welding/Instrumentation/Welding Testing.

(ii) A good academic record with a Doctor's degree in a relevant field. About 5 years experience of teaching and/or research and development, out of which at least 3 years in Welding area.

The candidates not possessing Ph.D. may be considered if they have to their credit equivalent research published work or design/development work of a high order either in the institution or in an industry.

OR

In the case of persons to be recruited from industry or professional fields, candidate should possess good academic record with recognised professional work of about 7 years which should include innovation and/or research and development.

Specialization : Welding Tech./Welding Metallurgy/Welding Equipment.

(B) Department of Humanities & Social Sciences

U.G.C. prescribed qualifications.

Specialization

1. For Readers : — 3R+1T

(i) Psychology (Organization Behaviour & Personnel Management) 1R
(ii) Managerial Economics / Labour Economics/General Management 1R
(iii) English 1R
(iv) Economics / History / Russian/ German 1T

2. For Lecturers — 2R

German 1R
English 1R

(C) Roorkee University Regional Computer Centre

For System Manager — 2R

Master's of P.G. Diploma in Computer Technology/or Master's degree in Engg./or Ph.D. in Science. Specialized experience in Computer Hardware/Software.

Seven years experience of teaching/research, design and industry/System Management/System Hardware/Software

Note : The System Manager may be assigned duty during any hours at night and day. Therefore, only those persons need apply who are prepared to do duty during all the hours.

Specialization : Software — 1
Hardware/Software — 1

(D) Audio Visual Research Centre

For Research Scientist 'A'

(i) A Doctor's degree or research work of an equally high standard in any branch of Science, or Education/Social Psychology, or Education or Sociology,

(ii) Good academic record with at least 2nd Class Master's degree in any subject listed above.

or

(i) Master's degree in Engineering/Technology,

(ii) Good Academic record with a Bachelor's degree in Engineering/Tech. Ist class at Bachelor's degree and/or Master's degree level.

(iii) One year's relevant professional experience outside academic/research institutions.

(E) Central Library

1. Librarian — 1R

Master degree with Master degree in Library Science.
5 years experience.

2. Assistant Archivist — 1T
(Archival Cell)

M.A. with Modern Indian History with Ist or good 2nd Division (50% marks)
A Diploma in Archival and Historical Research.
5 years experience.

(F) National Service Scheme

For Co-ordinator Training & Orientation Centre — 1T

Essential

(a) A Dotor's degree or A Master's degree with published work in Engg./Science/Social Sciences.

(b) 7 years experience of teaching/research/design & industry in appropriate field with atleast 2 years experience in teaching/research.

Desirable

(a) Experience in guidance of research.

(b) Teaching experience in an Institution of University level.

(c) Published research work.

Note

Candidate should have relevant experience of conducting social service activities/work related with rural development.

Note

1. Number and nature of posts shown above may change at the time of selection.

2. Only Indian Nationals need apply.

REGISTRAR

STRUCTURAL ENGINEERING RESEARCH CENTRE

CSIR Campus, TTTI, Taramani
P. O. Madras-600113

Advertisement No. SE-1/88

Applications are invited from Indian Nationals for the under-mentioned posts in the Structural Engineering Research Centre, Madras.

1. Scientist C—3 Posts (Group IV (2))

Scale of pay: Rs. 3000-100-3500-125-4500

Qualifications & Experience

I class B.E. in Civil Engineering with atleast six years experience or M.E. in Structural Engineering with four years experience or Ph. D. in Structural Engineering. Minimum years of experience relaxable only in exceptional cases.

Job Requirements

For Post No. 1 & 2

The condidate should have thorough knowledge of advanced methods of structural analysis (particularly about the finite element method) and design. He/She should possess good experience in development and use of computer programs for analysis and design. Candidates with experience in dynamic/stability analysis of shell structures will be preferred.

For Post No. 3

Candidate should have thorough knowledge of advanced methods of structural analysis and design.

Minimum of three years' experience in the development of Computer Software/program for design/analysis of structures is essential. Candidates with experience in the use of standard software programs like SAP, STRUDL, etc., and familiarity in the use of PCs, mini or main frame systems will be preferred. Experience in development and use of programs with graphics facilities is also preferred. The selected candidate will be required to work on software development, implementation and training of personnel at various sites.

2. Scientist B—2 Posts (Group IV (1))

Scale of Pay: 2200-75-2800-EB-100-4000

Qualifications

I class B.E. in Civil Engineering or M. Tech./M.E. in Structural Engineering.

Experience & Job Requirements

For Posts No. 1

Candidates having 3 to 4 years experience in advanced methods of structural analysis and design will be preferred. The selected candidate is required to work in the area of computer aided analysis and design of structures.

For Post No. 2

The selected candidate should be familiar with advanced methods of structural analysis and design. Preference will be given to those who are having 3 to 4 years of experience in design and analysis and atleast one year experience in computer programming. Familiarity with the use of PCs and graphic facilities is desirable. The selected candidate will be required to work on software development, implementation and training of personnel at various sites.

Note: Out of the two posts of Scientist B, one is reserved for Scheduled Tribe Community. Scheduled Caste candidate will also be considered. If however, no Suitable scheduled Tribe/Scheduled Caste candidate is available, the post will be treated as unreserved and filled by general candidate.

In the case of Scheduled Caste/Scheduled Tribe Candidates, a lower standard of suitability consistent with Efficiency of Administration will be Applied.

The number of vacancies specified in each category is likely to vary.

The posts are temporary but likely to continue. They carry besides pay, allowances as admissible under the Central Government rules. The total emoluments at the minimum of the scale for the posts are as follows :

on Rs. 3,000 — Rs. 4,090/-
on Rs. 2,200 — Rs. 3,036/-

Scientific and Technical posts carry the benefits of Rule 30 of CCS (Pension) Rules, 1972.

Application forms can be obtained (free of cost) from the Administrative Officer, Structural Engineering Research Centre, Taramani, Madras-600113, upto **1-2-1988**. Advertisement Number, Name of the post applied for and full address in Block letters must be indicated at the top of the request which should be sent together with self-addressed stamped envelope (Rs. 1.40p.) of 23 cm x 10 cm for obtaining application form.

The last date for receipt of application form together with non-refundable application fee of Rs. 8/- in the form of Crossed Indian Postal Order drawn in favour of "IRF—Structural Engineering Research Centre, Madras is **15-2-1988.** The candidates belonging to Scheduled Caste/Scheduled Tribe communities are exempted from application fee.

Applications should be supported by attested copies of the certificates/testimonials, relating to educational qualifications, date of birth, experience and community certificate in respect of Scheduled Caste/Scheduled Tribe candidates from the appropriate authority.

Applications from employees working in Government Departments, Public Sector Organisations and Government funded research agencies will be considered only if forwarded through proper channed and with a clear certificate that the applicant will be relieved within one month of receipt of the appointment orders.

Applying for the position advertised herein does not by itself automatically entitle an applicant to be called for interview, which will be governed by prevailing rules and regulations. Since it is not possible to call all the candidates for test/interview, the application will be shortlisted for the purpose and the decision of the competent authority will be final in this regard.

Incomplete applications will not be considered.

Canvassing in any form and/or bringing any influence political or otherwise will be treated as a Disqualification for the Post.

Interim Enquiries will not be attended to.

CENTRAL DRUG RESEARCH INSTITUTE

(Council of Scientific & Industrial Research)

Advertisement No. I/88

Applications are invited for the following posts in Central Drug Research Institute, Lucknow :

1 **Scientist E.I. :** 2 Posts
(Rs. 3700-125-4700-150-5000)

Post No. (i)

Ph.D. with 10 years research experience and publications of significance in the area of lipoproteins or polynucleotides.

Job Requirements : Candidate would be expected to provide leadership in the area of specialisation.

Post No. (ii) (RSIC)

First class M.Sc. in Chemistry with 12 years experience/Ph.D. in Chemistry with 10 years experience in X-ray Crystallography / NMR / MASS / FT-IR Spectroscopy. The person should have proven competence in the use, maintenance and application of these instruments in chemical and biological research as evidenced by research publications in journals of repute. He should have a flair for using these instruments for innovative research.

Job Requirements : The selected candidate will be required to conduct and guide research in the above area and to supervise such facilities in RSIC.

2. **Scientist C :** 3 Posts
(Rs. 3000-100-3500-125-4500)

Post No. (i)

Ph.D. in Statistics & Mathematics with 2 years experience and publications of significance concerned with analysis of biomedical data.

Job Requirements : To collate and analyse data from clinical trials and biological experiments.

Post No. (ii)

Ph.D. with 2 years experience in Mycology. Preference will be given to persons with research experience in relation to immunology of fungal infections.

Job Requirements : To study the immunology of human pathological fungi.

Post No. (iii) (RSIC)

Ph.D. in physical or organic chemistry with atleast 2 years experience of working with superconducting FT-NMR spectrometer / mass spectrometer. He should be well-versed in the application of FT-NMR spectrometry/mass spectrometry in the fields of physical and biological science as evidenced by publications of original research work.

Job Requirements : To maintain and operate a 400 Hz FT-NMR/mass spectrometer and to use it for applications in chemistry and biology. The selected candidate will be expected to conduct and guide research on problems involving FT-NMR spectroscopy / mass spectrometry.

3. Scientist B : 9 Posts
(Unreserved : 5)
(Rs. 2200-75-2800- (Reserved for SC 2)
EB-100-4000) (Reserved for ST 2)

Post No. (i)

First Class M.Sc. or M.V.Sc. with 6 years research experience or Ph.D. 2 years experience in testing compounds for biological activity desirable. Preference will be given to persons having experience in testing against parasitic infections.

Job Requirements : To undertake test for antimalarial activity in primate models.

Post No. (ii)

First Class M.Sc. in Biochemistry/Physiology/Zoology or M.V. Sc. (Physiology) or Ph.D. in any of the above subject. Experience in reproductive biology/radioreceptor/radioimmunoassay will be an added qualification.

Job Requirements : To undertake studies on reproductive biology of mammals and development of antifertility agents.

Post No. (iii) (Reserved for SC)

First Class M.Sc. or Ph.D. degree in Biochemistry/Organic Chemistry. 3 years experience in applied biochemistry and good knowledge and experience in the development of radio or enzyme immunoassay of small molecules desirable.

Post No. (iv)

First Class M.Sc. or Ph.D. degree in Biochemistry/Organic Chemistry. 3 years experience in Synthetic Organic Chemistry and good knowledge and experience in the development of radio or enzyme immunoassay of small molecules desirable.

Job Requirements : Conduct of research in the development of radio and enzyme immunoassay of small molecules for pharmacokinetics studies and study in vitro . metabolism of drugs under development.

Post No. (v)

First Class M.Sc. with 5 years research experience or Ph.D. with 2 years research experience in the Synthesis of peptides of biological interest.

Job Requirements : To synthesise peptides and other molecules of biological interest.

Post No. (vi) (Reserved for SC)

First Class M.Sc. or Ph D. 2 years experience for up-scaling preparations of Organic Compounds desirable.

Job Requirements : The selected candidate would be expected to take up the synthesis and preparation in kilogram quantity of compounds needed for drug developmental studies.

Post No. (vii)

First Class M.Sc. in Physics/Computer Sciences or First Class B.E. in Electronics/Telecommunication Engg. 2 years experience in service and maintenance of digital and microprocessor based analytical equipments or computer systems used in a modern analytical laboratory desirable.

Job Requirements : To troubleshoot analytical equipments like HPLC, UV-Vis & IR spectrophotometers, NMR & Mass Spectrometers, which are microprocessor controlled.

Post No. (viii) (Reserved for ST)

First Class M.Sc. (Biophysics, physics, Biochemistry, Zoology or Life Sciences/ M.V.Sc. (Physiology, Pharmacology)/ M.Pharm. (Pharmacology)/M.B.B.S. 3 years research experience in a field allied with the job requirements desirable. Preference will be given to candidates having research experience in cellular electrophysiology using microelectrode techniques.

Job Requirements : To undertake investigations on the cardiac ionic channel activity and plan and carry out electrophysiological experiments on multicellular and isolated single heat cell preparations.

Post No. (ix) (RSIC) (Reserved for ST)

First Class M.Sc. in physical or Organic Chemistry, or Ph.D. in Mass or NMR Spectroscopy. 3 years experience in the operation of Mass Spectrometer/ FT-NMR spectrometer desirable.

Job Requirements : The person selected will be involved in the operation and maintenance of mass spectrometers/ FT-NMR spectrometers. He is also expected to conduct research using these instrumental techniques.

4. Senior Technical Assistant (RSIC) :
3 Posts (Unreserved 2)
(Reserved for SC 1)
(Rs. 1640-60-2600-EB-75-2900)

Post Nos. (i) & (ii) (Post No. (i)
(reserved for SC)

B.Sc. with 3-5 years experience in the operation of FT-IR Spectrometer/mass spectrometer/NMR spectrometer or M.Sc. or equivalent.

Job Requirements : The selected candidates will be involved in the operation and maintenance of FT-IR Spectrometer/Mass Spectrometer/NMR spectrometer.

Post No. (iii)

Diploma in Engineering/Tech. of 3 years duration or equivalent plus 3-5 years experience in refrigeration, running and maintaining liquid helium and liquid nitrogen plants.

Job Requirements : The selected candidate will be involved in the operation and maintenance of liquid helium and liquid nitrogen plants.

5. Junior Technical Assistant (RSIC) : 1 Post
(Rs. 1400-40-1800-EB-50-2300)

B.Sc. 1-2 years experience in running IR/UV/NMR/MASS/GC/HPLC instruments desirable.

Job Requirements : The selected candidate will be involved in the operation of any of the above instruments.

GENERAL CONDITIONS

1. All the above posts carry usual allowances as admissible under the rules of Govt. of India.

2. A lower standard of suitability consistent with efficiency will be applied in respect of Scheduled Caste/Scheduled Tribe candidates for the reserved posts. Candidates belonging to these communities should invariably enclose an attested copy of original caste certificate issued by a competent authority with their application failing which they will not be entitled to the concessions otherwise admissible to them. In the even of non-availability of SC/ST candidates for the post of Sc. 'B' the post will be filled up by general candidates by following the prescribed procedure.

3. Since it is not possible to call all the eligible candidates for interview, the applications will be shortlisted for the purpose and the decision of the Director will be final.

4. Applicants called for interview will be paid single second class rail fare to and fro the actual place of undertaking the journey or from the normal place of residence as mentioned in the application whichever is nearer to Lucknow Railway Station.

5. The prescribed application form may be obtained from the Senior Administrative Officer, Central Drug Research, Institute, Chattar Manzil Palace, P.B. No. 173, Lucknow-226001 (U.P.) by sending a requisition duly indicating the post and advertisement number alongwith a self-addressed envelope of size (23×10 cm.). Any request for application form received after **10.2.88** will not be entertained for supply by post. Application duly completed (supported by attested copies of certificates and testimonials) alongwith a non-refundable fee of Rs. 10/- (no application fee is prescribed for SC/ST candidates) in the form of crossed Indian Postal Order drawn in favour of the Director, Central Drug Research Institute, Chattar Manzil Palace, Lucknow should reach Director, CDRI, Lucknow on or before **25.2.88.** Application received after this date will not be considered.

6. Separate application for each post alongwith requisite postal order in a separate envelope indicating the advertisement number and post applied for should be sent.

7. Candidates in Government/Semi-Govt. Organisations, public undertakings and autonomous bodies should route their applications through proper chennel.

8. The number of vacancies to be filled may vary at the time of actual selection and due consideration for reservation of posts will be given where necessary.

9. Post No. 1 (ii), 2 (iii), 3 (ix), 4 (i), (ii), (iii) and 5 are in the Regional sophisticated Instrument Centre under Department of Science and Technology, tenable at CDRI, Lucknow.

10. Canvassing in any form and/or bringing in any influence political or otherwise, will be treated as a disqualification for the post.

11. Any of the particulars furnished by an applicant if found incorrect at any stage his/her candidature is liable to be rejected and/or if already appointed, his/her service is liable to be terminated.

INTERIM ENQUIRIES WILL NOT BE ENTERTAINED.

INDIAN INSTITUTE OF SCIENCE

BANGALORE

Requires

SCIENTIFIC OFFICER in the Department of Metallurgy (Reserved for Scheduled Caste).

QUALIFICATIONS AND EXPERIENCE

Essential : M.E./M.Tech. degree in Metallurgy/Materials Technology followed by atleast 2 years experience in Advanced Metallography/Mechanical Testing/Mechanical Processing Laboratories.

Desirable : Experience in the organisation of laboratories for research in the relevant area. Construction and development of equipments and apparatus, capability of conducting research and analyzing data independently.

EMOLUMENTS : Rs. 3,036/- p.m. in the scale Rs.2200-4000.

Details and prescribed application forms can be obtained on request from the Registrar free of cost on production of Caste Certificate from a competent authority alongwith a self-addressed stamped envelope (Rs. 5.40) of the size 28 x 18 cms **on or before 8th February '88.**

STRUCTURAL ENGINEERING RESEARCH CENTRE GHAZIABAD (UP)

(Council of Scientific & Industrial Research)

Central Govt. Enclave, Sector XIX,
Kamla Nehru Nagar, Ghaziabad (UP)

Advertisement No : 1/88

Applications are invited from Indian Nationals for the following posts in the Structural Engineering Research Centre, Ghaziabad which is a forward looking organisation well equipped for advanced research in Structural Engineering :

Scientist Grade 'C/B' 15 Posts. (Rs. 3000-100-3500-125-4500/ Rs. 2200-75-2800-EB-100-4000)

Qualifications and Experience

(i) For Scientist Gde C'

Essential

A first class degree in Civil Engineering with 6 years experience or M.E. with 4 years experience or Ph.D. (Engg.) with 2 years experience.

Desirable

Published papers of high quality in the fields of large span structures, High rise buildings computer aided design of complex structures and numerical techniques for structural analysis.

Job Requirement

The scientist would be required to work in the fields of large span structures and integrated analysis and design of structures computer aided design.

(ii) For Scientist Gde. 'B'

Essential

A first class Bachelor's Degree in Civil Engineering or a first class Master's Degree/Diploma in Computer Science (Software) from a recognised University.

Desirable

Knowledge of computer aided analysis and design of structures. Some research experience.

Job Description

Selected candidates would be required to work on R&D Programs in high rise buildings, long span structures, wind engineering and development of computer software for Civil Engineering Structures.

Prescribed application form for the above posts are obtainable (free of cost) on or before 4.2 1'88 from the Administrative Officer, Structural Engineering Research Centre, Post Bag No. 10, Ghaziabad. Request for application forms must indicate the number of advertisement particulars of the post applied for (speciality and level) and full address of the applicant in block letters with Pin Code alongwith a self-addressed envelope of size 28 x 13 cms duly affixed with postage stamps worth Rs. 1.80 Paise for each application form separately.

Complete application forms alongwith application fee of Rs. 8/- (no fees is required in case of SC/ST candidates) in the form of Crossed Postal Order drawn in favour of the Director, Structural Engineering Research Centre, Ghaziabad, should reach the Administrative Officer, Structural Engineering Research Centre, Post Bag No. 10, Ghaziabad by **18 3 1988**. Separate fee is required for each post. Application from Employees working in Govt. Deptt., Public Sector Organisations and Govt. funded agencies will be considered only if forwarded through proper channel and with the clear certificate that in the event of selection of the candidate he/she will be relieved within one month of receipt of the appointment order. Incomplete applications as well as those received after the due date are liable to be rejected. Those who are called for interview will be paid travelling allowance to the extent of a single second class return rail fare (Mail or Express) by the shortest route as per rules.

The selected candidates will be liable to serve, if so required in any defence service or post connected with the defence of India for a period of not less than four years before attaining the age of 40 years.

Candidates are required to mention clearly on the application if any of their close relative is working in SERC Ghaziabad/Roorkee and if so, full details thereof.

Since it is not possible to call all the eligible candidates for interview/personal discussion, the applications shall be short listed for the purpose and the decision of the SERC in this behalf will be final and binding on all concerned.

Candidates already applied for the post of Sc. 'C' against Advt. No. 1/87 need not apply.

CANVASSING IN ANY FORM AND/OR BRINGING IN ANY INFLUENCE POLITICAL OR OTHERWISE WILL BE TREATED AS DISQUALIFICATION FOR THE POSTS. INTERIM ENQUIRIES WILL NOT BE ATTENDED TO.

GOKHALE INSTITUTE OF POLITICS AND ECONOMICS PUNE-411004

Applications are invited for the following posts in U.G.C. pay-scales to reach the undersigned on or before March 15, 1988.

Two Professors : One with specialisation in any area of Economics and one for the specific project, "Growth of Indigenous Entrepreneurship in Maharashtra" (Temporary, upto May 1990).

Five Readers : Of which one each with specialisation in Agricultural Economics, Economics of East European Countries, Planning and Development (preferably with specialisation in Econometrics/Input Output Analysis), Rural Sociology and one in any area of Economics.

Five Lecturers : Of which two with specialisation in Agricultural Economics and three in any areas of Economics (out of which one preferably in Indian Economic History).

Three Research Associates : Of which one with specialisation in Economics of East European Countries and two in any areas of Economics. (Temporary, initially for one year, extendable upto a maximum period of five years).

One Assistant Librarian

Prescribed application form and information regarding prescribed minimum qualifications and other particulars may be obtained from the Registrar of the Institute. Preference to candidates belonging to Scheduled Castes/Tribes and backward classes, provided they have the requisite qualifications.

ADMISSION NOTICE

A competitive entrance examination for selection of candidates for admission to the First Year of the following Academic Programmes will be held on Sunday the 1st May 1988, from 10 a.m. at Agra, Allahabad, Delhi, Hyderabad, Lucknow, Roorkee, Varanasi, Kanpur and Pantnagar Centres.

A—Bachelor's Degree Programme	**Minimum Eligibility Qualifications**	**Age**
1. B.Sc. Ag. and A.H. 2. B.Sc. (Forestry) 3. Bachelor of Fisheries Sc.	Intermediate Agriculture/Science (Biology or Maths) from U.P. Board, Allahabad, or equivalent examination.	22 years on 30.11.88
4. B. V.Sc. and A.H.	Intermediate Agriculture/Science with Biology from U.P. Board, or equivalent examination.	(3 years relaxation for SC/ST/BC candidates only)
5. B.Sc. Home Science (for girls only)	Intermediate Science (Biology or Maths)/Agriculture from U.P. Board, or equivalent examination.	

Candidates appearing in the above Board's examination in 1988 are also eligible to appear in the entrance examination provided their results are positively declared by 5th July 1988, otherwise they will stand disqualified.

B.—Master's Programmes in 44 Majors in the areas of :	**Minimum Eligibility Qualifications**
1. Agriculture 2. Veterinary Sciences 3. Civil/Electrical/Mechanical/ Agricultural Engineering 4. Basic Sciences 5. Food Science; and 6. Home Science	Bachelor's Degree in Agriculture/Veterinary Sciences/Civil, Electrical, Mechanical, Agricultural Engineering/Basic Sciences (Physics, Chemistry, Maths, Biology) Home Science, as the case may be with 55% marks in aggregate or an equivalent OGPA from a recognized University with not more than one third division at High School or Intermediate level.

C—Ph.D. Programmes in 29 Majors in the areas of :	**Minimum Eligibility Qualifications**
1. Agricultural Sciences 2. Veterinary Sciences 3. Agricultural/Civil/Electrical/ Mechanical Engineering 4. Food Science; and 5. Basic Sciences.	Master's degree in Agriculture/Vety. Sciences/Agricultural, Civil, Electrical, Mechanical Engineering/Food Science/Basic Sciences, as the case may be, in First Division from a recognized University with at least second class in Bachelor's degree and not more than one third division at High School or Intermediate level.

For full details, the Information Brochure and Application Form, prescribed separately for Undergraduate, Master's and Ph.D. programmes, can be obtained by sending an 'ACCOUNT PAYEE' Bank Draft for Rs. 10/- in favour of G.B. Pant University of Agriculture & Technology, Pantnagar on State Bank of India, Pantnagar Branch (Code-1133) or United Commercial Bank, Pantnagar, with a self-addressed envelope or 10"x7" size bearing postage stamps of Rs. 4.00 by Unregistered Parcel, or may be obtained on payment in cash at the Counters set up in the Admission Cell at Pantnagar.

Last Date and Examination Fees : **10th March 1988** with the prescribed Fee of Rs. 100.00 for Undergraduate Programmes, and Rs. 100.00/120.00 (as the case may be) for P.G. Programmes. Applications delivered after 10th March, 1988 but not later than 25th March 1988 must be accompanied with an additional late fee of Rs. 50.00 for Pantnagar Centre only.

INSTRUCTIONAL STRATEGY FOR DISTANCE EDUCATION

A. S. Pillai*

Introduction

We are living in an exciting period in the history of education where new ideas appear faster than old ones become irrelevant. The advances made in the scientific and technological field have put greater demands on individuals in the society who in turn are making increased claims from education. Distance education is yet another dimension which with appropriate academic environment and political will can transform the entire society and immensely contribute towards its development. The offer that distance education is making is very attractive when its major aim is academic progress with special emphasis on reaching the unreached.

A Framework for Distance Education

Preparing a framework for an instructional strategy for distance education will have to be done at three levels—(i) National Level, (ii) University Level, (iii) Instructional Level. The national goals together with the distance education goals should form the official overlying objectives while the practical overlying objectives will be developed by the university or the institution concerned. Based on these the instructional designers formulate the operative goals. These objectives should decide the parameters within which an instructional manager can work on.

The framework represented in the diagram (on next page) clearly shows the importance of objectives at various levels and also that of the target population. Dealing with adults at various levels demands an analytical study. Adults very frequently lack confidence in their own ability to learn though these adult learning groups represent a rich mixture of existing knowledge and experience. Especially, when we are dealing with adults employed or even housewives, they tend to resist the painful process of personal intellectual and manipulative changes which are involved in learning. Adults are likely to overcome these difficulties more effectively in the supportive framework of cooperative learning group at their own pace, possibly in smaller steps and without external pressures such as frequent examinations (Elsdon, 1987).

What is, therefore, required is systematised instructional strategy based on the types of target population and the constraints associated with the implementation. A continuous and thorough evaluation procedure must be employed to test the system itself so that the organizers may very well be aware of the needs of the learners.

Any instructional strategy developed should be based on the

Bharatiya Vidya Bhavan, Makarpura Road, Baroda-390009.

structure of the distance education system. The efficient realisation of the instructional strategy calls for the following instruments :

- —Survey of the target population
- —Segmentation (formation of target groups)
- —Organizing instructional materials (development, printing, etc.)
- —Organizing communication (advertising, personal communication, etc.)
- —Organizing contact seminars, discussions, etc.
- —Organizing reciprocity (fees, finance, etc.)
- —Evaluation of the system.

These instruments must effectively be combined to form the overall nature of the instructional strategy.

Diagram : A Framework for an Instructional Strategy in Distance Education

The academic aspects in the instructional strategy involve the following steps :

(1) Needs assesment,
(2) Preparation of instructional materials :
    (a) Task analysis, (b) Orienting the learner
        (i) Performance expectations
        (ii) Questions
        (iii) Advance Organizers
(3) Transmission of materials,
(4) Performance assessment.

The main focus in this paper is on some of the essential considerations for instructional material development as these will be the most important factors in an educational system where personal interaction is minimized.

The coordination between task arrangements in the academic programmes and the management systems represent the key ingredients in the teaching-learning process in the distance learning system. If a mismatch between the two should occur, success of the programme is less probable.

Needs Assessment

Needs assessment is concerned with determining goals and identifying discrepancies between goals and status quo. It is the process of determining the gap in the results between 'what is' and 'what should be'. This gap in results is more than just academic; with gaps in resources, the means to the end, etc. The first refers to things, or the outcomes of activities which contribute to individual, group or societal 'self sufficiency', while the latter refers to activities which may lead to that end. The first may result in changed organizational goals, while the second may simply call for doing more or less without necessarily influencing the goals, either positively or negatively (Hunt, 1986). In education and training they form the basis of instructional design and curriculum development, and in organizational management the human specification plan.

Preparation of Instructional Materials

Attending to the needs of all and creating and maintaining the conditions under which academic learning can occur is increasingly difficult in the complicated and remote environment of distance education systems. We have to accommodate a more academically heterogenous population of students manifesting variety of learning needs.

It is true that there are epistemological and other differences on how instruction must be carried out. Hacker (1984) points out that internalisation of new facts, concepts, principles, and models are more frequently achieved by direct instruction methods as suggested by Gagne (1970) rather than by cognitive restructuring process favoured by Piaget (1964) and Bruner (1966). Dealing with able, mature and adult minds in distance education system, as the most cases may be, the attention of the instructional strategy should focus on the needs for a task analysis type of

system. Learning should be planned rather than haphazard so that each person will come closer to the goals of optimal use of his talents. The materials developed, based on a task analysis with proper orienting activities and learning expectations clarified, should contribute towards optimum learning.

(a) *Task Analysis*

The task analysis type of strategy comes from the strong belief that success of instruction depends mainly on splitting a complex task to simpler tasks digestible to the learner. The move in this direction was stimulated by the work of Gagne and others (Gagne, 1970) who identified learning outcomes as sequential and prescriptive entities. Acquirement of problem solving behaviour was predicated on the acquisition of prerequisite discriminations, concepts or rules at lower level in an essentially linear progression. Further refinements of Gagne's model saw greater emphasis being placed on the role of information as an entity for analysis (Williams, 1977) and a sub-division of rules into structures and processes (Horn, 1973). In the task analysis, whether it be 'Top to Bottom Analysis' or 'Front-end Analysis', the instructional designer goes through all steps that are necessary for the development of actual materials. These include a decision making process for overcoming performance deficiencies, descriptions of mastery performance criteria, breakdown of jobs into simpler tasks and steps. The outcome of such a task analysis mapping in an instructional system is an increased probability of more efficient learning to take place.

The credibility of a task analysis type of instructional strategy is established beyond doubt by various researchers. Dealing with adults in a distance learning system and characteristics of the learners definitely call for this type of strategy. One should take note that the time factor which is available to each learner is minimum. With competition reduced to almost zero level and a dislike for rigidity, a more simplified, structurally understandable approach may be more efficient.

(b) *Orienting The Learner*

Several orienting activities have emerged during the past few decades. Gagne (1985) provides orientation to instruction by informing learners of lesson expectations. Advance organizers (Ausubel, 1968) are another type of lesson orientation which help to activate the cognitive structures of individual learners.

The importance of orienting activities is related to both cognitive theory building and instructional pedagogy (Hannafin and Hughes, 1986). From a theory building perspective, the effect of adjunct strategies designed to improve encoding must be better understood. Models for better understanding the effect of orienting information can be evolved to clarify relationship among new information within existing cognitive networks. Orienting activities can also aid retrieval by influencing schemata and as a result of supplying relevant cues.

(i) *Performance Expectations* : The expected learning outcomes must clearly be clarified in any instructional processes. According to Gagne (1985) stating performance expectations in advance of instruction serves several functions. Learners are made aware of either the general or specific nature, or both the general and specific nature of forthcoming instruction. Informing of expectations is believed to activate the learners' mental set (Gagne, 1975, p. 94). It is usually activated through instuctions which direct the learner to attend selectively to certain attributes of the instruction. Performance expectations can also function to focus attention to specific information considered central to the task. Statements of a non-explicit integrative nature, on the other hand, are more akin to general statements of performance expectations described by Gagne : "To guide attention without over-prescribing specific information or detail". Several authors have reinforced the necessity to include statements of expectations when producing instructional materials.

(ii) *Questions :* The use of questions prior to the textual information activate the learners' mental processes which focus on relevant information. This can be partially attributed to an increase in attention drawn to the criterion elements of the question. Where pre-questions are specific, intended but not incidental, learning is generally improved (Hannafin and Hughes, 1986). Learners tend to focus effort intensively on information related to orienting questions. Learners will try to identify meaningful relationship and transfer learning when not limited by very specific orienting questions (Clark and Voogel, 1985). Integrative questions require greater effort and processing during encoding, and can help promote learning of both low and high level lesson content (Glover, Plake and Zimmer, 1983). Learners may also view orienting questions as focussing mechanisms for lesson information but the clarifying function of pre-questions may indirectly improve motivation for lesson participation.

(iii) *Advance Organizers* : Ausubel's idea of advanced organizers comes from his view that learning and retention of unfamiliar but meaningful verbal material could be facilitated by advance introduction of subsuming concepts. Advance organizers act as subsumers of information whereby input can be collected into a more meaningful and inclusive scheme (Ausubel, 1960). In fact, proponents of advance organizers suggest that they provide a vehicle through which new information can be subsumed meaningfully within individual cognitive structures. Several advance organizers have been studied. Advance organizers in the form of programme titles, abstract superordinate generalizations, and conceptual questions are embedded effectively in many televised instructions. (Nugent, Tipton and Brooks, 1980). Ausubel advocates that the organizers appropriately relevant and with inclusive introductions that are maximally clear are to be introduced in advance of the learning material itself and are also presented at a higher level of abstraction, generality and inclusiveness; and since substantive content of a given organizer or series of organizers is selected on the basis of their appropriateness for explaining, integrating and interrelating the material they precede, this strategy increases the organizational strength of the cognitive structure. The principal function of the organizer is to bridge the gap between what the learner already knows and what he needs to know before he can successfully learn the task at hand (Ausubel, 1968).

Transmission of Materials

The delivery system forms one of the most important aspects in instructional strategy meant for distance education. This can be done through printed notes, radio/television lectures, video tapes and electronic messages. Though in a country like India with its vastness and remoteness and the complications in communication, one may think more towards printouts which can easily be transmitted to the learners. No doubt, it is the most important and easiest mode of communication. The effect of printed media cannot be forgotten and the researches in this field have shown that the printed word is more effective in certain domains than the others (Rothkopf. 1965). Though radio programmes are getting less interesting, one important area of interest emerging in this regard is television. With the government able to cover almost 70% population with its TV networks, television lectures become the most important component in any distance education system. Moreover, these lectures are becoming popular too. Once the TV lectures are prepared, Video taping is only a technician's job. These video cassettes could easily be sent to different centres for their worthwhile use. Of course media like TV requires a large audience to be cost effective.

The advent of television has not reduced the importance of newspapers which continue to be the main source of information. The recent experiment of Times of India (Ahmedabad, 1987) with English Grammer Lessons was found extremely interesting and educative. The recent survey conducted by the Operations Research Group (ORG, 1987) have clearly shown the dependence on newspapers as the primary source for news. While every second urban adult depends on newspapers for news only one in three depend on television and only one in ten on radio. Between newspapers and TV dependence on TV is higher in the north as compared to other regions (Rao, N.B.; 1987).

	Preferred News Source (India)			
	Newspaper	TV	Radio	None
North	38.5	47.3	9.7	4.5
East	53.4	29.5	13.9	3.2
West	55.3	32.8	8.1	3.8
South	57.6	28.2	13.1	1.1
Total	51.2	34.5	11.2	3.1

The dependence on newspapers is highest in the South and everywhere we notice that dependence on radio is marginal. This has a very clear message for the organizers of distance instruction system. Newspapers can become an effective media in distance learning taking fully into account the target population of that area. An efficient instructional designer can definitely make use of articles and other various references from newspapers also.

Technological advances in communications make physical distances less of a barrier. Developments over the last decade allow people to communicate across great distances at rapid speeds; masses of information can be reproduced and distributed simultaneously throughout the world; knowledge resources can be shared and interactions enriched by people who may never reach face to face. These technological advances also enable people to respond and pose questions directly to others around the country and conduct personalized interactions about topics of mutual interest.

Educational networking through electronic mess-

(*Continued on page 7*)

Education in Secular Perspective

D.P. Verma*

The New Education Policy has been widely discussed in academic and other important decision-making centres. The discussions have led to greater clarification and appreciation of not only the goals set, but of the concrete ways and means for bringing about a qualitative change in the educational set up at all levels. It is certainly worthwhile to set our sights high. Without it the distant destinations of far reaching importance are hard to reach. However, sometimes even sound and ideal policies fail when it comes to transforming them into practical realities. This happens not because of some inherent shortcomings or drawbacks in the policy formulations but for the simple reason that either the persons concerned do not come upto the desired expectations or the social environment is so vicious, venomous and vile that self or sectional interests alone become primary concern and the projection of negative attitudes seek to eclipse what is basically good and ideal in the broader and long range context.

In our country such a phenomenon is being painfully witnessed in the field of education, notwithstanding all the efforts which are afoot to reform the system so as to make it more relevant and worthwhile to meeting the challenge of the coming 21st century.

More than 36 years ago we gave to ourselves a Constitution which sought to weld us into a secular society. A policy came into being whose foundations were not based and whose visions were not to be circumscribed by any religion. We thought that we have taken the right steps to transform ourselves into a modern nation which would be wholly engaged in eradicating nerve breaking poverty through rapid industrialisation and technological advances. Education, naturally was to play a key role in this herculean exercise.

Our schools, colleges, and universities, we thought, would become the nerve centres of national integration, secularism, tolerance, pursuit of scientific knowledge and the truth. But then things have not gone the way they should have These institutions, however, instead of soaring high preferred to sink low.

The reason for this sordid state of things is not far to seek. There has been a complete dichotomy of purpose between the ideals enshrined in the Constitution and the objectives obtaining behind the establishment of majority of our schools and colleges. 'The single-religion-based' institutions, and in some parts of the country even caste-based institutions sprang up like mushrooms. The universities and relevant Govt. Departments, working under undue pressures, succumbed to varied pressures in granting them affiliation or recognition and even according financial support from the public exchequer. If these denominational schools and colleges had addressed themselves to the task of propagating true values and promoted mutual understanding by stressing the oneness of the fundamental principles underlying various religions, besides pursuing prescribed courses of study, one would have found ample justification in the establishment of these institutions. On the contrary, what we find is that these so-called education centres have been surreptitously or otherwise promoting communal and divisive feelings, which today are threatening the very fabric of our secularism. The poison of narrow loyalities and narrower outlook have gone down the spine and the result is so obvious for everyone to see. Perhaps, medieval minds and modern concepts go ill together. We swore by secularism; we are fighting for 'secluded lives'. The complacency with which we allowed things to go astray in the field of education is responsible for the growth of the monster of Communalism, that threatens to break into pieces what was attained after long years of struggle and innumerable sacrifices.

The concept of Secular State in less developed countries like ours demands the promotion of secular education, devoid of sectional and sectarian overtones. The right of education conferred on the minorities by the Constitution has been interpreted rather liberally and under its pretext certain unsavoury developments have taken place, the unpalatable results of which are being faced by us now.

Dr. Gopal Singh, Governor of Goa has rightly raised the question that in the light of some of our recent bitter experiences, the Government's attitude towards minority and other 'single-religion-based' institutions—Hindu, Muslim, Christian, Sikh—in the context of secular education needs to be amplified, nay, it needs to be reviewed and redefined. Our educational institutions, whether State owned or privately initiated

---

**Former Registrar, Panjab University.*

should in no case be allowed to stoke further the fires of fundamentalism and fanaticism. It would require determined and sustained efforts to eradicate the paralytic effects of the dangerous malady.

Our schools, colleges and universities should be like beautiful nurseries and colourful gardens which refresh and enrich our social life and not places where wild weeds and thorny bushes grow unchecked, generating innumerable social health hazards. To compartmentalise the educational structures and to label these with the brand-names of this religion or that defeats the very purpose of imparting sound education. (Christian Institutions are a class apart). We in this country do visualise great goals and go to establish institutions wedded to the attainments of those objectives. But on the ground we mould and manipulate things in such a way, that the ideals recede into the background and only self or sectional priorities surface and engulf us.

Since our independence, universities in our country have multiplied 8 times—from barely 20 or so to over 160 now. Colleges have sprouted like Parthenium, and are mostly sectional in character. Of the universities, barring a few exceptions, these so-called institutions of higher education have so circumbscribed their vision, that they have not been able to transcend the character of 'local bodies'. It is a misnomer to call such an academic set up as a University. However, it is high time for us to realise that the dangerous portents emanating from single—religion-based institutions are now seriously taken note of, before it becomes too late. Perhaps it would not be an easy thing to alter or transform the hue and colour acquired by these institutions. Many would recall that an attempt to bring about a change in the names of the two central universities at Banaras and Aligarh (only the words 'Hindu' and 'Muslim' respectively were to be omitted) met with such stiff resistance that the Government felt compelled to drop the proposal. If that could happen at the national level, one just wonders what hornets' nests would be stirred almost everywhere in the country, if any measure is brought forth to delink educational institutions from their religious bases? Anyhow, a strong persuasive and educative effect in this direction is called for, in case we are not in a position to taking some hard decisions. But it should be clear as the day light that if we are deterred from taking hard decisions, then very hard times will strike us down with unbearable force and we will have no one else to blame for the sordid situation.

The New Education Policy envisions promotion of national unity and integrity. But already forces are at work to pierce the very root of our national values. Our teachers should focus their energies and efforts on something more important and vital, than merely clamouring for higher pay scales, which in any case are their due and much has been done to make them substantially attractive. In U.S A., the Government have felt deeply concerned because America is facing serious challenges to its supremacy in many fields from countries like Japan and has called upon the schools and the universities to upgrade their standards of instructions and research so that America stays ahead of everyone and successfully faces the risks. In India the challenge is that our very existence is at stake. Shall we not rise as one man to save the nation? ☐

INSTRUCTIONAL STRATEGY FOR DISTANCE EDUCATION

(*Continued from page 5*)

age systems can provide a powerful new medium for education (Cohen and Miyake, 1986). Message can be prepared in advance on a microcomputer and quickly transmitted across telephone lines. The characteristics of electronic mail definitely offer a great potential for creating a new environment for learning across the distances. Preparing the message before hand on a computer disk and sending them automatically at low rate hours enables preplanned centres to participate in the same at reasonable cost.

Periodical studies will have to be taken up to check up whether the medium is conveying the desired message to the target population. If these programmes were not viewed or understood in the desired way, what steps could be taken to make these more effective ?

Performance Assessment

Assessment is an integral part of any planned education. Evaluation process should take into consideration of the various policies related to resource availability and constraints. More imaginative and practical evaluation procedures should be designed to meet the demands of time; fully aware of the issues arising out of a perfect feedback system. The adequacy and the appropriateness will depend upon the various factors developing out of the instructional strategy itself. In any case, it should be a growth oriented assessment. ☐

National Seminar on Energy Education

Department of Education of the Rohilkhand University, Bareilly recently organised a National Seminar on Engery Education. Hon'ble Syed Sibte Razi, Education Minister, U.P. Govt., inaugurated the seminar which was attended by over 60 academics from different parts of the country.

After an indepth discussion on different issues and objectives of energy education, the following recommendations emerged at the Seminar :

1. Energy education programmes in our country have yet to be established, therefore, the Govt. should be urged to emphasise energy issues in the educational plans and issues.

2. Energy education needs a prerequisite commitment at the indvidual and national level. A clear national policy on energy is thus essential and without this curriculum development for energy education would lack proper direction and purpose.

3. To be meaningful and significant, energy education programme must be linked to real world situations, and current national development plans.

4. The main hurdles at present are to prepare the lead teachers, to initiate teaching training programmes and develop materials for their use. The courses must be prepared without any delay in order to implement energy education programmes in schools.

5. Energy education should enable people to perceive the energy in its totality i.e. the totality of physical, biological, socio-economic and cultural complex.

6. The compendium of information relevant to energy education including a directory of sources of information about urban and rural resources and institutions, enlisting persons with appropriate expertise should be perpared and made widely available, so that, their expertise may be utilised in preparing energy action programmes.

7. As women are the main consumers of energy, therefore, special attention is needed to prepare and introduce the programmes on energy conservation for them.

8. Energy education should be integrated with cultural, social, economic and developmental needs of the society as well as with the fruitful, suitable, efficient and economic technologies and energy systems.

9. Development of functional values and favourable attitude towards different renewable sources/systems/appliances and awareness about preservation of the ecological balance among masses is to be an integral part of energy education programme.

10. Energy Education Programme and Energy Policy must conform to other related policies like population, pollution, human settlement, housing, environmental conservation, etc.

11. All sections of human society must be exposed to some forms and measures of energy education for arousing their awareness, sensitivity and perspectives of energy problems and thereby motivate them to get involved in worthwhile energy action programmes.

12. Adequate place to energy courses in the syllabi must be given at all levels of education i.e. energy education must be introduced from primary classes and continuing through all formal and non-formal stages of education.

13. Examination of major issues related to energy problems from local, regional, national and international view points is essential, so that, students may receive and develop insights to solve the energy problems by devising and modifying the various devices/systems, according to the needs of their region/country.

14. To promote values, attitudes and necessity of local, national and international co-operation in the conservation, conversion, prevention and invention of energy sources and solution of energy problems. The mass media can be used as a most effective tool in generating awareness and stimulating motivation among people of all sectors of the society.

15. To develop the awareness among journalists and other media people, more seminars and workshops on energy education for these people should be organised. Besides this, a nationwide training/reorientation/refresher programmes in energy for educators, teachers, planners, scientists, decision makers and other professionals should be started.

16. A national level committee may be set up to develop the energy education programmes, to review the progress and evolve required policy at the national level giving due consideration to the recommendations of this seminar.

17. An information exchange network on energy education should be set-up at the national level.

18. Regional and international

co-operation activities in energy education including speedy information transfer should be given priority by muli-lateral agencies.

19. Energy topics should be included in competitive examinations held by Public Service Commission, Agricultural Recruitment Board, Banking Recruitment Boards, Army Service Board, etc. and persons with well developed energy consciousness should be preferred in recruitment at all levels.

20. To further intensify the activities related to energy education, the appex bodies like UGC, DNES, DST, CSIR, Ministry of Energy, etc. must take an initiation to establish a separate cell/panel on energy education, information and training, in some selected universities, with the following objectives :

(a) To increase public awareness with regard to the state of environmental pollution, human health and energy crisis.

(b) To include the responsibility of promoting the use of non-conventional energy sources, saving and transformation of energy and thus controlling the ecological and environmental pollution through public education.

21. Extension programmes in the area of energy education should be introduced at all levels of education and special training be given to teachers for this purpose.

22. The chief concern of the industries is to affect savings in their respective sectors and to substitute renewable sources for oil and electricity as far as possible within the constrains of their economy. To develop an effective and meaningful programme in this direction, strong inter-disciplinary programmes, therefore, are needed to be developed to generate qualified and competent manpower.

In addition to these general recommendations, the Seminar made detailed recommendations for both formal and non-formal education. Under the formal education, recommendations were made under the sub-heads—Primary & Secondary Levels, and University Level and Teacher Education. Recommendations in respect of the latter are as follows :

University Level & Teacher Education

(i) UGC, DNES or other similar apex bodies should establish energy curriculum development centres by constituting a body of experts for preparing a graded curriculum for different levels. Content analysis of present syllabi is also to be done by the experts' committee. UGC can make the compulsion on universities to induce the adoption of energy curricula.

(ii) The universities may start at postgraduate level either a special paper in some related subjects e.g. Physics, Bio Chemistry, Bio Physics, Chemistry, Marine Biology, Genetics, Plant Sciences, etc. or a full two years master degree programme in Energy Science. For this UGC/State Govt., may sanction additional grant to encourage such programmes. The inter-departmental approach to teaching and taking up projects of local relevance should be encouraged.

(iii) At the graduate level also it is proposed to integrate energy topics into the various subject streams such as humanities, physical, biological and social sciences. This can be done by restructuring of courses at graduate level.

(iv) Graduate and postgraduate programmes in Energy Management should also be started at few institutions/universities.

(v) The courses in management, namely, business management and engineering should be reoriented to include topics of energy management. Decision & policy makers must be provided orientation training in energy management.

(vi) Courses on energy management should be started at the staff training colleges or similar other centres for training a large majority of administrators, policy makers and other target groups. Imparted training should be based on local and regional problems and should also be need oriented.

(vii) At graduate level theoretical knowledge of various energy systems—solar, wind, tidal, geothermal, ocean, biomass, etc.,—they must comprise training programmes together with their construction, maintenance and appliances. So that, the persons who are specially trained in dealing with the various aspects of energy, its use and conservation, should go to villagers and apprise & educate the rural folk on the utilization, saving and conservation of the energies available to them.

(viii) At the undergraduate level in Science, Engineering, Medical, Veterinary and Agriculture, separate courses could be designed dealing with the use of conventional & non-conventional energy sources in relation to the specialised areas. Although, some IITs have taken initiative in this direction yet energy education is still needed to be introduced in Polytechnics & IITs as part of existing courses.

(ix) Various teaching and training institutions in collaboration with DNES, CSIR, DST, UGC or various state agencies should shoulder the responsibility of educating users, specialists, trainers and manufacturers of equipments through long and short terms teaching training programmes.

(x) The possibility of starting an inter-disciplinary postgraduate/research programmes should be explored in few selected universities.

(xi) As the teaching methods; (i) question answer, seminar, workshops, etc. (ii) lecture-cum-demonstration and (iii) giving opportunity to work in real situations, are some effective instructional devices, that can be used at tertiary level to teach energy courses.

(xii) Energy education be included in the syllabus of teacher education. Both pre-service and in-service teacher training programme in energy should be started.

(xiii) Carefully drawn syllabi for diploma, degree and postgraduate levels are urgently needed.

(xiv) Social philosophy of energy education, energy policy with its full implications be explained to teachers, teacher educators by organising short term programmes.

(xv) Energy protection/conservation law should be taught at L.L.B. level and facilities for specialisation in energy law should be provided.

Research

(i) Apex bodies should provide financial aid for conducting researches in the area of energy education.

(ii) Research in appropriate technology in energy education should be promoted.

(iii) Problem solving and action oriented case studies on energy issues of local significance should be taken up and instructional materials based on these, be prepared.

(iv) Survey of present attitude of people towards the renewable energy should be carried out to serve as base line index to gauge the impact of energy education.

(v) Pedagogic methodology for energy education as well as examination & evaluation must be evolved in a scientific manner.

(vi) Energy researches should be focussed on issues of national/regional importance and lead to strategies of containment and solution. The research findings should provide guidance & help in taking the decisions by planners and policymakers.

(vii) The universities should undertake advance multidisciplinary researches in energy subjects for imparting higher level teacher training programmes to offer consultancy in energy technology to technologists, experts, planners, decision-makers and energy managers.

Curriculum Development

(i) Curriculum in energy education suitable for different levels from primary to university have to be developed. Simultaneously with productive and required textbooks additional reading materials and audio-visual aids must also be prepared. The UGC/DNES may provide suitable financial assistance for this purpose.

(ii) The Department of Energy and UGC should undertake immediately the preparation of suitable curricula, teaching material and books for energy education. These agencies may establish curriculum development centres in selected universities.

(iii) The teaching of energy requires an integrated learning scheme. Its ojectives need to be elaborated and classified in a multi-disciplinary frame, involving disciplines like Physics, Applied Technology, Chemistry, Economics, Home Science, Environmental Science, etc., to bring expected behavioural changes in the students through several activities. In brief, the objectives of energy education might be :

(a) Functional information of facts
(b) Functional concept
(c) Functional understanding of principles
(d) Instrumental Skill
(e) Problem solving skill
(f) Scientific and Social attitude
(g) Appreciations
(h) Interests
(i) Value in life.

Further details can be had from the Organising Secretary of the Seminar, Dr. Beena Shah, Dean, Faculty of Education, Rohilkhand University, Bareilly.

Workshop on Value Education

A National Workshop on Value Education was recently organised by the Gujarat Vidyapith. Inaugurated by Shri I.J. Patel, former President, Association of Indian Universities, the conference was attended, among others, by Dr. Schouten and Dr. Van Gent from the Armsterdon and Leiden Universities of Netherlands, Dr. Larry Dossey from the United States of America, Shri G.B.K. Hooja, former VC, Gurukula Kangri

Vishwavidyalaya. Dr. T.K.N. Unnithan, former VC, University of Rajasthan and Prof. P.A. Patel Principal, College of Education, Gujarat Vidyapith directed the workshop. Prof. Ramlal Parikh, Vice-Chancellor of Gujarat Vidyapith presided.

After 5-days of intensive deliberations, the workshop recommended asunder ;

1. The following values need to be inculcated through education at all levels : Positive Non-violence; Service to others; Dignity of manual work; Scientific attitude; National Integration; Equality of religion (Sarva dharma Samabhavana); Cleanliness and public hygiene; World brotherhood; and Duties.

2. A content analysis of all the syllabi, courses and textbooks of all States be made to find out to what extent these are value oriented.

3. A handbook of value education both, through formal and non-formal education systems be published so that it can be used for value-education at all levels and in all categories of education.

4. An anthology of readings in value education be compiled and published particularly of selections from Indian Thinkers of 20th Century from Tilak to Gandhiji and Vinoba Bhave.

5. Case studies of experiments in value-education undertaken by various institutions should be published.

6. A cell for documentation of such writing which promote value-education be set up in the Gujarat Vidyapith Library.

7. University Grants Commission (UGC) should be asked to address all the universities to introduce value-education programmes in the foundation courses at the undergraduate level.

8. The NCERT should prepare audio-visual materials for value-education programmes, both at formal and non-formal levels.

9. Possibility be explored to undertake a transnational, cross cultural project on value education with a view to give global dimension to education in human values aimed at promoting world brotherhood.

10. A national convention of all experimental institutions engaged in value-education be organized under the auspices of the Gujarat Vidyapith next year.

National Youth Week Celebrations

Association of Indian Universities (AIU) and the Department of Youth Affairs and Sports, Govt. of India, jointly organised a colourful cultural evening on 13 January 1988 to mark the National Youth Week in commemoration of Swami Vivekanand's birthday. Organised at Azad Bhawan, the headquarters of the Indian Council for Cultural Relations, the programme attracted 70 Student artists from seven universities.

The cultural items comprised Folk Dances, Classical Dances, Group Songs, Light Vocal, Instrumental Music and Mime. These were selected from amongst those presented at the Inter-University North and West Zone Youth Festivals held recently at Aligarh Muslim University, Aligarh and University of Bombay, Bombay.

The programme commenced with a mellifluously rendered Bhajan by the students of SNDT Women's University, Bombay. This was followed by Group Songs presented by SNDT Women's University, Bombay and Dayalbagh Educational Institute (DEI), Agra. The theme of the song presented by SNDT Women's University students was that though we hail from different states and speak different languages yet we are one in spirit.

Holi Folk Dance by students of Dayalbagh Educational Institute, Agra.

The Group Song by DEI, Agra spoke of the sacrifices of great leaders like Gandhiji, Nehru, Bhagat Singh, etc.

Folk Dances performed by the students of University of Rajasthan, Jaipur and DEI, Agra portrayed Holi, the festival of hope, aspirations and joy, which is celebrated in spring—the king of all seasons. When the crop is ready to be harvested and the peasant looks at the successful culmination of his efforts he expresses his joy through singing and dancing to the rhythm and beat of the drums, cymbals, manjeera and dholak. The dance was highly applauded by the audience. Rajasthan University students presented 'Chirmi' Folk Dance depicting how in the olden days, when the houses were without electricity at the time of wedding reception, ladies took 'Chirmi' on the top with fire to welcome the bridegroom and other guests. The Youthful dancers danced while welcoming the guests.

Mime, which regaled the crowd was performed by the students of DEI, Agra. The Mime portrayed the recently concluded Reliance World Cup during which skipper Abdul Qadir was shown bowling and the Umpire Dickiebird cuffing his cuffs.

The Santoor recital rendered by Nikhil Bidwalkar of the University of Jodhpur was highly impressive. Pushpinder Bhardwaj of Maharshi Dayanand University, Rohtak enthralled the audience with Sitar recital. The programme concluded with the singing of the National Anthem.

News from Abroad

Hi-tech Teaching

If the classrooms at Virginia Tech University become strangely empty next year, the professors can blame modern technology. Using a new communications system, due for completion in the autumn, students need hardly leave their beds.

Every dormitory room at Virginia Tech is to be linked to a cable television service, bringing six hours of courses from other universities, world-wide teleconferences by experts in various fields, and foreign language broadcasts. The university's own lectures will be available on videotape in the evenings.

In addition, each room will have the capacity to tap into Virginia Tech's central computer, and home-work will be both assigned and submitted by electronic mail.

It is believed that students who want to eat will still have to leave their rooms occasionally, but Virginia Tech is working on that one.

CENTRAL DRUG RESEARCH INSTITUTE
(Council of Scientific & Industrial Research)
Chattar Manzil Palace Lacknow-226001

Addendum/Corrigendum to Advertisement No. 1/88

Reference to our advertisement published in these columns inviting applications for various scientific/technical posts, the following is issued as Addendum/Corrigendum :

Addendum

6. **JR. Technical Assistant**—2 posts (1 post reserved for S.T.) (Rs. 1400-40-1800-EB-50-2300)

Qualification : B.Sc. with Chemistry as one of the subjects. Experience in Research/Development of processes for synthetic drugs and drug intermediates or chemical process industry desirable.

Job Requirement : The incumbent will assist in scale up studies concerned with R and D programme in the field of drug and drug intermediate. Has to work in shift for operation of chemical plants. Has to carry out literature survey and help in preparation of technical reports.

Corriegendum

The essential qualifications for Scientist 'B' is First Class M.Sc./Ph.D./M.V.Sc., but the experience mentioned against the posts no. 3 (i) to (ix) is optional and only desirable.

In post 3 (viii) under job requirement the sentence ending with "heat cell preparations" should read "heart cell preparations".

General Condition No. 5 : The date of requisition of application form by the candidate will be 29.02.88 and closing date for the receipt of the application will be **15th March, 1988.**

Other conditions will remain the same.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

Applications in the prescribed form are invited for the following posts. Forms with details of the prevailing UGC qualifications will be supplied on request, which should be accompanied by a self-addressed stamped envelope with postage stamps of Rs. 4/-. Seven copies of application, complete in all respects, must reach the undersigned latest by 19-2-88. The Dearness Allowances and other perquisites will be as per University statutes :

1. Professor—One post each in Economics & Commerce. (Rs. 1500-2500)*
2. Reader—One post each in Library Science and Physical Education. (Rs. 1200-1900)*
3. Lecturer—One post each in Library Science, Physical Education, Economics and Commerce. (Rs. 700-1600)* (The post of Lecturer in Economics is reserved for SC/ST candidates.)

*(Subject to revision of pay scale from time to time).

Qualification

(a) **Essential** : As prescribed by the University Grants Commission, New Delhi for Professor, Reader & Lecturer in the Universities.

(b) **Desirable**

(i) For Professor and Lecturer in Economics

Preference shall be given to candidates specialised in or having experience of research and studies in the field of weaker section of society particularly tribals, Harijans and women, and in rural development.

2. No. T.A./D.A. will be admissible to the candidates, if called for interview. The Selection Committee may consider the case of an eminent/suitable person in absentia.

3. Applicants who are in the employment of Govt./Semi Govt. Organization/Educational Institute or of any Govt. Undertaking must send their applications through proper channel but, advance copy should reach in time.

4. The University reserves the right not to fill up the posts.

R.C. Parmar
REGISTRAR

INDIAN INSTITUTE OF ASTROPHYSICS

BANGALORE 560034

Advertisement No. IIA/1/88-89

Applications are invited from Indian Nationals for the following posts :

1. Senior Computer Engineer —2 Posts

Scale of Pay : Rs. 3000-100-3500-125-4500

Qualification : Post 1

Ph.D. in computer Science/Engineeing/Automation or M. Tech or M.E. in Computer Science/Electrical/Eelectronics engineering with three year's experience in real time application software and in assembly level programming on VAX systems.

Qualification : Post 2

Ph,D. in Computer Science/Electronics Engineering / Automation or M.Tech or M.E. in Computer Science/Electrical/Electronics engineering with three years experience in Computer hardware.

Job Requirements : The work involves design and development of electronic circuits and control systems for the instruments at the telescopes and interfacing them to mini/micro computers.

2. Electronics Engineer : 2 Posts (UR-1, ST-1)

Scale of Pay : Rs. 2200-75-2800-EB-100-4000

Qualification (Minimum)

M.E. or M.Tech degree in Electronics/Electrical communication Engineering/Computer Science with one year's experience in Analog and Digital Electronics or B.E./Tech with I class in Electronics with 3 year's experience in designing electronics systems using analog and digital integrated circuits.

Desirable : Knowledge of microprocessors and assembly level programming.

3. Engineer Associate 2 Posts (UR-1, SC/ST-1)

Scale of Pay : Rs. 2000-60-2300-EB-75-3200-100-3500

Qualification (Minimum)

B.E/B.Tech I class in Electronics/Electrical Engineering/Computer Science.

OR

M.Sc. degree in Physics with Electronics as special subject, with one years's experience in digital circuits.

Desirable : Knowledge of maintenance of Electronics instruments and control systems.

Candidates suitably qualified otherwise for posts 1, 2 and 3 can also apply.

HOW TO APPLY

1. Applications on plain paper in English stating (a) Post applied for (b) Name in full (c) Father's name (d) age/date of birth (e) Qualifications giving names of the Institution attended, examinations passed with year and grade commencing from School Leaving Certificate Exam (f) Permanent address (g) Present address (h) Details of previous experience (i) Details of presen employment, address of the employer and the salary drawn presently (j) Salary expected (k) Whether Ex-serviceman/SC/ST, together with copies of qualification, age certificates (SC/ST candidates should attach a copy of the caste certificate) should be sent to the Administrative Officer, Indian Institute of Astrophysics, Bangalore-560034, on or before **February 20, 1988.**

2. Separate applications are required for each post. Please write clearly the post applied for on the envelope.

3. All the above posts carry allowances admissible under the rules of the Institute, which are the same as applicable to Central Government employees.

4. Those employed in Government Departments/Public Sector Undertakings should apply through proper channel.

5. Age limit for all positions is 35 years as on February 20, 1988, relaxable in exceptionally qualified cases.

6. Outstation candidates called for interview will be paid second class return railway/bus fare by the shortest route.

NO INTERIM ENQUIRIES WILL BE ENTERTAINED. CANVASSING IN ANY FORM WILL BE A DISQUALIFICATION

UNIVERSITY OF ROORKEE

ROORKEE

Corrigendum against Advt. No. Estt (A)/1/A-86 (Advt.)-88 dt. 8.1.1988

B. DEPARTMENT OF HUMANITIES & SOCIAL SCIENCES

For Readers : The following correction be read :

Against Post No. 2 Managerial Economics/Labour Economics/ General Management it should be IT instead of IR.

Against Post No. 4 Economics/History/Russian/German, it should be IR instead of IT.

D. AUDIO VISUAL RESEARCH CENTRE

The qualifications for Cameraman (Grade-I) are as under :

Essential : Diploma or Degree in Cinematography from recognised Institute.

Desirable : 3 Years experience in Motion Picture/T.V.(Video) Photography. (The experience requirement is relexable under exception case).

4. Posts at Sr. No, 1, 4, 5, 15, 18, 19, 20, 26, 29, 32, 35, 36, 37 & 39 are reserved for respective reserved candidates and are being advertised for the first time. If suitable qualified candidates belonging to respective reserved categories are not available or are not found suitable, these posts will be treated as open and will be filled in by candidates from open category for the academic year.

5. Posts at Sr. No. 21, 22, 28, 33, 38 are for respective reserved categories only.

6. Posts at Sr. No. 8, 9, 22, 23 are for the Shivaji University Centre for Post Graduate Studies at Solapur.

7. Posts at Sr. No. 2, 3, 5, 6, 7, 11, 12, 13, 14, 15, 17, 19, 20, 24, 25, 27, 29, 30, 34, 37, 39, 40 are U.G.C. VII Plan posts and initially these posts will be for a period of five years but are likely to continue.

8. Post at Sr. No. 16 : Professor in English-Initial appointment will be upto 31-7-1989 but is likely to be made permanent.

9. Post at Sr. No. 23 : Reader in Chemistry-candidates who have specialisation in polymer chemistry, candidates who have M.Sc. in Organic Chemistry and Ph.D. and Research in Polymer Chemistry can also apply. Preference will be given for candidates having M.Sc. and Ph.D. in Polymer Chemistry.

PAY SCALES

Professor : Rs. 1500-60-1800-100-2000-125/2-2500.

Reader : Rs. 1200-50-1300-60-1900.

Lecturer : Rs. 700-40-1100-50-1600.

Likely to be revised as per U.G.C. new scales.

QUALIFICATIONS

1. **Professors** : An Eminent scholar with published work of high quality, actively engaged in research. About Ten years' experience of teaching and/or research. Experience of guiding Research at Doctoral level, OR An outstanding scholar with establised reputation, who has made significant contribution to knowledge.

2. **Readers** : Good academic record with a Doctoral Degree OR equivalent published work. Evidence of being actively engaged in (i) research or (ii) innovation in teaching methods or (iii) Production of Teaching Materials. About five years' experience of teaching and/or research provided that at least three of these years were as Lecturer or in an equivalent position. This condition may be relaxed in the case of candidates with outstanding record of teaching/research.

3. **Lecturers** : (A) Doctorate Degree or research work of an equally high standard; and (B) Good academic record with at least Second Class, [(C) in the seven point scale] Master's Degree in relevant subject from an Indian University or an equivalent degree from a Foreign University.

In case of post of Lecturer in Geo-Chemistry, the candidate may be M.Sc. in Chemistry or in Geology with specialisation in Geo-Chemistry.

The candidates must have teaching/professional experience and/or research publications in the specialisations (if any) shown against the respective posts.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of qualifications prescribed in (B) above.

Provided further that if a candidate possessing a Doctor's Degree or equivalent research work is not available or is not considered suitable, a person possessing a good academic record (weightage being given to M. Phil. or equivalent degree or research work of quality) may be appointed provided he has done research work, for at least two years or has practical experience in a research laboratory/organisation on the condition that he will have to obtain a Doctor's degree or give evidence of research of high standard/research work of equivalent high standard within eight years of his appointment, failing which he will not be able to earn future increments until he fulfils these requirements.

Prescribed application forms (eight copies) can be had from the University Office. Desirous candidates are requested to send Indian Postal Order of Rs. 15/- only.

Eight copies of application along with necessary enclosures attached to each copy of the application should reach the

Registrar, Shivaji University, Vidyanagar, Kolhapur 416 004 on or before **22-2-1988.**

REGISTRAR

ANDHRA PRADESH AGRICULTURAL UNIVERSITY

ADMN. OFFICE 'RAJENDRANAGAR' HYDERABAD-500030

Advertisement No. 1/RC/88

Dated : 16.1.1988

Applications in the prescribed form together with a Registration fee of Rs. 10/- are invited for the undermentioned posts in Andhra Pradesh Agricultural University so as to reach the Registrar Andhra Pradesh Agricultural University Administrative Office, Rajendranagar, Hyderabad-500030 on or before **20.2.1988.**

1. DEAN, FACULTY OF AGRICULTURE
2. DIRECTOR OF AGRICULTURAL EXPERIMENT STATIONS (DIRECTOR OF RESEARCH)

Scale of Pay : Rs. 1500-60-1800-100-2000-125/2-2500 (Vth Plan UGC scale) and special pay of Rs. 250/- in addition to usual allowances admissible as per University rules.

Qualifications : 1. DEAN, FACULTY OF AGRICULTURE

Essential

(a) A Bachelor's degree in Agriculture.

(b) Ph.D. or equivalent degree in any branch of Agricultural Sciences.

(c) A minimum of twenty years of experience in teaching/research/extension in Agriculture, out of which atleast seven years should be as Professor/Senior Scientist/Associate Director or equivalent rank.

(d) Significant professional achievements in his field of specialisation/activity.

Desirable

(a) Experience of teaching undergraduate and post-graduate students in the course-credit system.

(b) Knowledge and experience of organising and administering educational programmes.

2. DIRECTOR OF RESEARCH

Essential

(a) A Bachelor's degree in Agriculture

(b) Ph.D. or equivalent degree in any branch of Agricultural Sciences.

(c) A minimum of twenty years of experience in teaching/research/extension in Agriculture, our of which at least seven years should be as Professor/Senior Scientist/Associate Director or equivalent rank.

(d) Significant professional achievements in his field of specialisation/activity.

Desirable

(a) Experience, as part of duties, in conducting basic/applied research of high quality as evidenced by published work/technologies developed.

(b) Knowledge and experience of planning, organizing and administering research programmes.

Note : The experience prescribed for both the posts shall be reckoned as on the last date prescribed for receipt of applications.

3. The term of appointment for both the posts shall be three years.

4. Those who have already applied for the posts in response to the advertisement No. 1/RC/87, **dt. 22.7.87** and possessing the qualifications as prescribed in this advertisement need not again apply. They may, however, furnish such additional information as may be necessary keeping in view the present qualifications, so as to reach the Registrar on or before the last date prescribed for receipt of applications".

5. Applicants other than those in the service of APAU should send the applications through their employers so as to reach the University on or before the last date.

Note : The inservice teachers of APAU may send applications direct to the Registrar.

6. Application forms can be had from the Registrar, Andhra Pradesh Agricultural University, Administrative Office, Rajendranagar, Hyderabad-500030 on remitting Rs. 10/- in person or through a crossed Demand Draft drawn from any nationalised bank in favour of the Comptroller, A.P.A.U. Rajendranagar, drawn on S.B.H. Rajendranagar branch for obtaining it by post. A self addressed and stamped Rs. 2-50 cover of the size 35cm x 15cm should be sent with the requisition for application form.

Applicants, when called, should appear before the selection committee for interview at their own cost.

SUTINDER SINGH

In Celebration of the Book

'Whatever mankind has done, thought, and achieved is found in the magical pages of the books', said Thomas Carlyle. Maxim Gorky went a step further when he reminded us that 'whatever man has done, and is doing, is an expression of his soul. His art and science manifest his noble instincts. They become forceful and vital when they are embodied in books. Jean-Paul Sartre summed it up when he said 'Whatever is written is an image of our society'. Books are indeed an expression of our perceptions. Education aims at arousing the potentialities of the human mind to channelise them to productive uses. Books help accomplish it in the best possible manner.

Ralph Waldo Emerson said, ' 'Tis the good reader that makes the good book'. And we do not seem to be good readers The plain truth is that we do not lay much stock by the books. It is common knowledge that students and teachers spend minimal time in the library. We just refuse to appreciate how much better students would be were they able to use more skilfully the library facilities. Of course many teaching staff are themselves unskilled in library use. It is surprising how many of them rarely seem ever to be in the library themselves. But are our libraries free from the blame ? Are not most of them aflicted by the custodial approach of the library personnel that reflect little of information services ? Have we not forgotten the dictum handed down to us by Socrates : 'A library should not be the shrine for worship but should be the delivery room for birth of new ideas' ? Are the libraries inviting enough that the students and academics should feel impelled to visit by the creative dynamic attitude of the professionals to be helpful ? These are some of the questions that require to be faced if we are to find an effective answer to the almost absent, or sharply declining, reading habit. What is called for is not only adequate funds be injected into the libraries but also an objective audit of their performance.

If the scourge of illiteracy bothers the nation it is equally alarming to note that the educated are functionally illiterate. Either the books that they need are not available, and if at all they are available, they are just not accessible. This situation is a clear pointer to the absence of a system of living, vibrant libraries. According to a recent Unesco study the rate of growth of literacy in our country is one per cent per year. Assuming that the population will remain constant, we will need atleast another 66 years to be a literate nation. And who does not know that making this assumption is nothing but an exercise in self deception. What is needed is an effective public library system. We have neglected our libraries for too long. One is only to look into the reports of various committees and commissions and the scarce mention that the libraries find in them to convince one self. It is hard to reconcile this situation with the emphasis the New Education Policy places on the expansion of formal, and particularly non formal education. If at all we want to push up the literacy rate, and are serious in our plans to expand educational opportunities, we have to back them up by a network of libraries set up through effective library legislation. Achievements of Cuba, Turkey, Iraq, etc. in banishing illiteracy show us the way that literacy drives are successful only when the literacy centres are backed up by adequate library provision.

Books have been under constant attack. Some times from intolerant governments that are afraid of books and proscribe them. They often forget, nay ignore, the words of John Ruskin. 'If a book is worth reading, it is worth buying'. However, a more serious challenge to the embattled book comes from the television and other electronic mass media. These have encroached upon whatever little time we can afford for reading in the fast life of today. Everyone is convinced that though television is a better media for entertainment, it is the book that holds its own in the performance of the educational function. One will also agree that properly handled, television can be more of a friend only if we were to improve our programmes and design them to promote the reading habit. It could be easily done through programmes introducing upcoming authors, reviewing books and presenting book abstracts.

We are assured that the future of the book is rather secure against the onslaught of microform publications because of its inherent strength reflected in the convenience of its use. It is in celebration of the invincibility of the book that we dedicate this special issue of University News to the 8th New Delhi World Book Fair being organised by the National Book Trust, India in collaboration with the Federation of Indian Publishers and other book trade organisations from 5th to 15th February, 1988. □

National Book Trust and the Publishing Scene in India

Anand Sarup*

Like everything else in India, the Publishing Scene also presents sharp contrasts, with a few, selected beautifully printed, exquisitely illustrated and unbelievably expensive books in English at one end and cheap, smudgy, poorly bound paperback novels with formula mixture of mystery, romance and violence at the other end of the spectrum. As in so many other spheres, the evidence of the existence of the technical capability to produce almost anything of any quality is there but somehow, it comes into play to a very limited extent because most publishers can survive quite easily by swimming along the current or functioning within a protected market producing approved textbooks for schools, reprints of or commentaries on religious and literary classics, titles on scientific or socio-economic research commissioned by National bodies like the I.C.S.S.R., I.C.H.R., etc. and limited editions of a few other books by new authors desperate enough to meet the cost of production.

While the above is a reasonably objective thumb nail sketch of publishing in India, one must admit that there are many publishing houses who have been venturing out of their protective cocoons to promote new authors, explore hitherto untouched areas and produce informative and interesting books on the flora and fauna, the cultural diversity and the socio-political issues facing the country. Notwithstanding the efforts of a few imaginative publishers, must give in to the inertia of the situation because the market for books is determined largely by an inert educational and literary environment, characterised by tremendous inequalities not only between the educated few and millions of illiterate masses but also by a skewed pattern of income distribution and a continuing dependence on foreign publishers for new books for the elite institutions. Even today, an author "arrives" in India only when he or she is published by a foreign or multinational publisher. The static situation in Indian publishing is best illustrated by the fact that even though the overall demand and consumption of paper has been going up from year to year, the demand of paper for book production has not been registering a significant increase over the last decade.

As an intellectual visionary imbued with the zeal to invigorate the socio-cultural and political environment with new initiatives and ideas, Jawaharlal Nehru felt that it would be impossible to nurture and sustain the process of India's multi-faceted development without education or books. As an author who had popularised ideas on a wide range of subjects through his works, brought out by foreign publishers, Jawaharlal knew the limitations of Indian publishers. That is why, he established the National Book Trust, India, in 1957, to produce and to encourage the production of good literature and to make such literature available at moderate prices to the public.

That the National Book Trust, India, would not be a mere publishing house but would play an interventionist role with reference to publishing, distribution as well as the nurturing of the tastes of readers of all the Indian languages was made clear by laying down that it would, *inter-alia* : undertake the publication of outstanding works of Indian authors in Indian languages and their translation from one Indian language to anthor, take up the translation of outstanding foreign books, bring out books for the popularisation of modern knowledge; and, in addition, take steps to create a broad-based awareness and interest in diversified reading and publishing throughout the country.

Undoubtedly, quantitatively and qualitatively, the performance of the N.B.T. leaves much to be desired. This does not mean that the Trust has been either wholly inactive or entirely oblivious of its multifarious responsibilities. It has so far produced more than 2700 titles which are reasonably priced and cover a wide variety of topics, in English and in 12 Indian languages.

The Trust can justifiably lay claim to having promoted the publication of over 800 university level technical textbooks by Indian authors on a variety of subjects through a unique scheme which, despite its many operational bottlenecks, has given its authors a level of financial returns quite unusual in the annals of Indian publishing. It has also done a great deal in the field of childrens' literature. Under the Nehru Bal Pustakalaya Series launched in 1969 to promote national integration and foster a sense of unity and

---

**Chairman, National, Book Trust, India* oneness by providing common reading material in regional languages, to children all over India, the N.B.T. has brought out over a hundred titles on history, folktales and festivals, the freedom movement, science and technology, life and works of outstanding Indians, excerpts from the works of great Indian writers and lately, some books for pre-school children, aimed at creating awareness of books as enjoyable objects of exploration and possession.

Other areas in which the N.B.T. has made a unique contribution are : the publication of popular books about the land and the people of India, National Biographies, Popular Science and, of course, Aadan Pradan, a unique series meant to provide translation of notable titles of one language in as many other Indian languages as possible.

Anyone familiar with the publishing scene will admit that the N.B.T. has been venturing in areas in which there is a void. He will, however, also complain that, through its own publishing programme, the Trust has not had the desired impact across the country. Moreover, it has failed to act as a catalyst of Indian publishing largely because it has shied away from taking risks on a scale commensurate with the size of the undertaking. It cannot be denied that many of its activities, whether in the field of publishing or for promotion of publication and the book-reading habit are being carried on below the minimum threshold required for registering an appreciable impact in a country of India's variety and dimensions.

Perhaps, for the first time, the N.B.T. India, is assuming, during the 8th New Delhi World Book Fair, its true role of a catalytic agent of Indian publishing. In addition to providing facilities for the display of foreign and Indian books, the Trust has invited a large number of authors, voluntary agencies, language associations, State academies, educational planners, etc. to interact informally with each other and to participate in two Seminars and two Workshops being organised to discuss (a) "Publishing in the Electronic Age with Special Reference to Developing Countries"; (b) "Need and Availability of Textbooks for the Higher education Sector in India"; (c) "Production, Publication, Distribution and Marketing of Reading Materials for Continuing Education of Neo-literates and School Drop-outs"; and (d) "Developing Curricular Strategy for Talented Children". Even more important than the planning of these Seminars and Workshops is the fact that all these activities are being undertaken with the co-sponsorship of almost all the major agencies—the U.G.C., the I.C.A.R., the A.I.C.T.E., the Council of Medical Education and the Ministry of Human Resource Development—concerned with the world of education, publishing and readership.

It is difficult to predict the outcome of either the 8th New Delhi World Book Fair or the Seminars and Workshops being organised under its auspices. One thing, however, is clear. By the very process of its involvement with the implications of the New Education Policy for the production, publication and distribution of books of various genre required to meet the needs of different economic, linguistic and educational groups, the National Book Trust will inevitably undergo a change of character. Having identified the hiatus between needs and availability of various types of books, it will be forced not only to assume some new tasks but also accept the responsibility for evolving mechanisms to assist the publishing industry to accept the challenges and opportunities inherent in an educational renaissance in India. □

Birth of the Book Fair in India

K. S. Duggal*

A book fair is not just an exhibition of books, big or small. It is a commercial event organized with a view to providing an opportunity to publishers and distributors to negotiate copyright arrangements in respect of translation, reprint, bulk purchase, etc., of books. It has a fixed periodicity and as far as possible is held at the same venue. It is accompanied by other events like bookweek, seminars, symposia, workshops aimed at promoting writing, translation, designing, publishing and distribution of books. It may also have some entertainment features in the form of cultural and other programmes. Retail sale of individual copies to visitors has a low-priority in a book fair. In fact, it is not permitted in some of the international book fairs like the one at Frankfurt.

I have taken pains to say all this because writing on the subject some time ago when I stated that the first ever book fair was held in 1966 at Cross Maidan, Bombay, someone challenged it referring to an All India exhibition of books, held in New Delhi earlier in 1964 as its precursor. An exhibition which is, at best, an exposition of books has to be distinguished from a book fair.

The Book Fair is, perhaps, the most important annual event of the publishing community in India. The credit for conceiving the idea must go to Dr. B. V. Keskar, Chairman, National Book Trust, India, for over a decade. Dr. Keskar, a man of vision and wisdom, was an inveterate idealist. His contribution to broadcasting in India remains unmatched (though regrettably not quite adequately appreciated so far). The stewardship he provided to the Book Trust is an abiding tribute to his love for books and his anxiety to foster bookmindedness in the country.

Dr. B. V. Keskar believed that more than publishing books the National Book Trust should devote its resources to making people read and purchase more and more books. This is what Jawaharlal Nehru dreamt of when he set up the National Book Trust. He wished to make people book minded and thereby foster a scientific temper in the teeming millions of India.

As Chairman, National Book Trust, Dr. Keskar visited the Frankfurt Book Fair. He was then invited by the British Council to visit the UK when he had an opportunity to discuss with his counterpart in England how best an organisation like the Book Trust could serve the community. The message he brought was that the Trust should devote itself more and more to promotional activity and less and less to publishing. The Trust must try and fill the publishing gaps. It should, as far as possible, supplement publishing in the private sector in India.

This gave birth to the concept of the book fair as an instrument of exposing people to reading materials. It was from this that the idea of regional exhibitions sprouted. It was from here that the Trust stepped on to organising a World Book Fair in 1972. Visiting the World Book Fair held in New Delhi, Dr. S. Taubert, the then Director of Frankfurt Book Fair, observed, 'It is to be seen to be believed !' It is maintained that it was the most glorious moment in NBT's history. The Prime Minister of the day who had earlier regretted her inability to find time to inaugurate the Fair sent word and visited the Fair, spending the entire evening going round the stalls.

However, when the crowds thronged the Fair Premises in Windsor Place in the Capital and the national press was agog with its praise, as Director of the Fair, I was reminded of 1966 when hardly a few months after my taking over the Trust, I was entrusted with the responsibility of organising the First National Book Fair. The Chairman of the Book Trust, Dr. B. V. Keskar, was away in the UK when the proposal was put up to the Trust's governing council for financial sanction. I vividly remember the morning. In Dr. Keskar's absence, Shri Bhagwati Charan Verma, the seniormost member of the Trust, was in the chair. The late Mr. P. S. Jaysinghe of Asia Publishing House and the late Shri Romesh Thapar who a few years later headed the National Book Development Board tore the proposal to pieces. Mr. Jaysinghe, the most leading publisher in the country, who had been participating in the Frankfurt Book Fair year after year, said that the concept of the book fair was essentially alien to Indian publishing. It would never succeed. 'And how could you display a fragile thing like a book in an improvised stall or exhibit it in a temporary pavilion erected for the purpose ?' he

---

Former Director, National Book Trust, P-7, Hauz Khas Enclave, New Delhi-110016.

asked me again & again. Shri Romesh Thapar seemed to agree with Mr. Jaysinghe entirely. It hurt me deeply because I looked upon Shri Thapar as a progressive and a man of independent thinking. But it seemed he had been completely won over by Mr. Jaysinghe. After a long debate, it was felt that since the Trust Secretariat had already made commitments in consultation with the Executive Committee, we might try out the idea on an experimental basis. But I was told in no uncertain terms that if the fair was a flop, I should be prepared to face the consequences. Dr. Keskar being away, the responsibility was entirely mine.

I accepted the challenge. Something in me said that they were being unnecessarily sceptical.

The Fair was held on a 90,000 sq. ft. plot requisitioned at the Cross Maidan, Churchgate, Bombay for the purpose. The exhibition pavilion covered an area of 10,000 sq. ft. and the rest was earmarked for stalls, auditorium, office and lounge, etc. One hundred and fifty stalls, each 8 by 8 ft., were erected and rented to the trade.

The main attraction of the Fair was the exhibition of 8,000 selected books in various Indian languages, including English, published in India since January, 1964. There were about 2,400 books in Hindi, 2,000 in English, 735 in Marathi, 535 in Gujarati, 410 in Bengali and 1780 in other Indian languages such as Telugu, Tamil, Malayalam, Kannada, Assamese, Urdu and Punjabi.

An exclusive section of the pavilion, which turned out to be one of the most popular, displayed an array of choicest children's books.

The stalls were rented out to both Indian and foreign publishers or their agents, diplomatic missions and other agencies related to the book trade. Books could both be displayed and sold in the stalls. They were decorated tastefully and did brisk business.

The Fair was inaugurated on the 5th November, 1966, by Shri Nityanand Kanungo, the Governor of Gujarat, in a tastefully decorated auditorium. Addressing a distinguished and representative gathering, Dr. B. V. Keskar, in his welcome speech, explained the significance of the National Book Fair and described the Fair as the first ever biggest effort made for the promotion of books and publishing in South Asia.

The Book Fair also provided an appropriate setting for conventions of publishers and booksellers which were held under the auspices of the Federation of Publishers & Booksellers Associations in India. Dr. Rafiq Zakaria, Maharashtra Minister for Urban Development, presiding over the inaugural meeting, expressed his conviction that Indian publishing had a bright future. He said that people's hunger for more reading material was on the increase as was evident from the large crowds that the Book Fair was attracting. Important problems relating to book distribution were discussed freely and frankly. The Akhil Bharatiya Hindi Prakashak Sangh also held its Convention on the premises of the Fair. Shri Amrit Lal Nagar, the renowned novelist, presided. On this occasion, an exhibition of about one hundred and fifty manuscripts of outstanding Hindi authors was arranged by the Kashi Nagari Pracharini Sabha. Inaugurating the exhibition of manuscripts, Shri Mahavir Adhikari, the then Editor of "Nav Bharat Times", urged the publishers to give a better deal to writers.

There were, in all, eleven literary and cultural programmes held in the Fair auditorium during the Book Fair each evening being devoted to one Indian language.

The series of cultural programmes was inaugurated by Shri Ramdhari Singh "Dinkar," the noted Hindi poet.

On the concluding day of the Fair, i.e. 20th November, awards were given to the two most outstanding stalls. The awards were given away by Shri Raj Bahadur, Minister for Information and Broadcasting, Government of India.

A Book Week was observed during the Book Fair from 8th November to 14th November throughout the country. Publishers and booksellers displayed book week posters produced by the Trust and allowed a special discount on books purchased during the Week. As many as six trade journals brought out special supplements. The entire network of All India Radio put across a large number of broadcasts relating to the Week and important newspapers like the Hindu (Madras), The Times of India, The Indian Express and the Blitz carried special articles aimed at fostering bookmindedness. All India Radio and the Publishers' Association celebrated the Book Week with conventions, seminars and exhibitions in almost all the important town of Northern India like Allahabad, Varanasi, Lucknow, Jaipur, Udaipur, Jodhpur and Patna. In Varanasi essay competitions were held in educational institutions and prizes given to those who had drawn the largest number of books from the libraries of their respective institutions during the year. The National Book Trust distributed several thousand posters in English and Hindi highlighting the importance of the Book Week.

Several publications were brought out by the Trust and other organisations in connection with the National Book Fair. The Trust published a catalogue of books exhibited together with a book-mark which was distributed free to visitors to the Fair. The Federation of Publishers and Booksellers Associations in India published a handsome volume by way of a souvenir which contained a number of useful articles on the various aspects of the book trade in India and a review of publishing activity in various Indian languages. The Akhil Bharatiya Hindi Prakashak Sangh brought out a pamphlet in Hindi advising their constituents about the way the Book Week was to be celebrated.

By all accounts, the Fair was a remarkable success. It went a long way in fostering bookmindedness in the country. The press, the book trade and the book lovers all hailed the idea of the National Book Trust organising a fair like this and expressed the hope that it would become an annual feature of the activities of the Trust. The Trust received an invitation from the Publishers and Booksellers Association of West Bengal inviting it to hold the next Fair in Calcutta.

This is how the National Book Fair became a regular feature of the Trust activity. Fairs were held at Delhi, Calcutta and Madras culminating in the World Book Fair in 1972 declared by UNESCO as the Book Year.

It was proposed to hold the World Book Fair at the Feroz Shah Kotla Grounds, New Delhi. But owing to Emergency on account of the war with Pakistan, the Fair had to be postponed. Soon after the war was over, it was decided to reschedule the Fair to be inaugurated on March 18. Since the original site at the Feroz Shah Kotla Grounds was not available during the months of March-April, 1972, the Fair had to be moved to Windsor Place, a site smaller in area, but perhaps an improvement on the previous site since it was more centrally located.

Because of the new site and changed dates almost every detail of the project had to be planned afresh. Work started on 15th February 1972, leaving the contractors barely five weeks to execute 4,592 sq.m. of covered space and another 2,198 sq.m. for a large number of participants to build their pavilions.

The assignment was that a pavilion of 2,809 sq.m. in area with a number of ancillary buildings of a type that would provide an intellectual environment had to be put up all in temporary construction when the President of India would inaugurate the Fair on March 18th, 1972, in the presence of an international gathering.

Apart from the main pavilion, a number of well-known publishing houses undertook to construct their own pavilions for which well-demarcated open plots were allotted. They provided an attractive synthesis with the main pavilion and as the scale and grandeur of the main pavilion kept on unfolding, the private pavilions did not lag behind to impart the best artistic touches to their final finish. The interior designing of those pavilions was also tastefully done and attractive styles of book-displays were seen in the pavilions. In perspective, an effect of total elegance was achieved in the architectural style of the entire Fair, and even when the construction was temporary, it projected an image of a rich performance. The facade of the Fair revealed itself in all its simple but striking elegance on the Janpath side, while the ancillary pavilions could be seen stretching towards Ashok Road, each in its unique architectural style and finish.

The Fair was inaugurated by Shri V. V. Giri, President of India, on 18th March at 5.30 p.m. at an impressive function attended by more than 3,000 guests including Prof. S. Nurul Hasan, Minister of Education and Social Welfare, Members of Parliament, diplomats, foreign delegates, authors, publishers and book lovers.

Since 1972 was also being celebrated as the twety-fifth year of India's Independence, one of the highlights of the Fair was an exhibition of outstanding books published in the various Indian languages and in English since India became independent. In this Exhibition nearly 10,000 books in Hindi, English, Bengali, Gujarati, Kannada, Marathi, Tamil, Telugu, Punjabi, Malayalam, Urdu, Assamese, Oriya, Sindhi and Sanskrit were displayed. There were special sections for children's books and paperbacks.

In the International Sector of the Book Exhibition, books on India published in some of the friendly countries were displayed along with a few publications marked for their excellence in printing and production. A large number of foreign countries sent some of their outstanding books for display in this sector. These included the UK, the USSR, the USA, France, the GDR, the Federal Republic of Germany, Switzerland, New Zealand, Hungary, Italy, Greece, Iran, Czechoslovakia, Spain, Sri Lanka, Cambodia, Malaysia, the Democratic People's Republic of Korea, Turkey, Afghanistan, Kenya, Tanzania and Zambia.

Provision was made for publishers both in the public and private sectors to rent stalls or set up their own pavilions where they displayed as well as sold their books. Publishers representing several foreign countries including those from the UK, the USSR, the USA, France, the Federal Republic of Germany, the German Democratic Republic, Ireland, Japan, Hungary, Yugoslavia, Czechoslovakia, the Democratic People's Republic of Korea, Iran and Bangladesh participated. WHO and the Publication Bureau of UNESCO (Paris) also joined. A number of foreign publishers came to the Fair to man their stalls.

Over a hundred Indian publishers rented stalls or put up their own pavilions where they exhibited and sold their publications. Provision was also made for economic stands for members of the Federation of Publishers and Booksellers Associations in India. A number of State Governments (Punjab, Madhya Pradesh, U.P., Andhra Pradesh, Tamil Nadu, Kerala, Maharashtra, Orissa, West Bengal and Assam) participated in the Fair. Also several public sector organisations (the publications Division of the Ministry of Information and Broadcasting the Publications Branch, Government of India, the Council of Scientific and Industrial Research, the Indian Standards Institution, the Indian Science Academy and the Indian Council of Agricultural Research and others) joined in a big way. The various organisations under the Ministry of Education and Social Welfare were housed under one roof in an exclusive pavilion.

During the last three days, a Book Bazar was organised on the precincts of the Fair where books were sold by publishers at reduced rates. It was a tremendous success and attracted large crowds.

Shri G.S. Pathak, Vice-President of India, gave away awards to the best designed stalls and the best produced jackets in a function held in the Imperial Hotel.

While finalising the programme of the World Book Fair, it was decided to organise an International Seminar on 'Books for the Millions' during the Fair. The Seminar was aimed at presenting a wide spectrum of opinions and information on the production of paperbacks and related problems. The papers and discussions were to set in perspective their importance in spreading knowledge and providing entertainment to readers. The participants of the Seminar drawn both from the developed and the underdeveloped countries were invited to examine the subject from the point of view of its origin and history, copyright problems, sales and how they affected authors etc. They were also to study the implications of paperback production for developed countries which produced large numbers of them, and for developing countries which were keen on producing their own inexpensive books.

A standing committee was nominated to look after the organisation of the Seminar. The committee decided upon the following eight sessions spread over three days :

1. Paperbacks—a Historical Survey.
2. Paperbacks and Copyright Problems.
3. Paperbacks and the Author.
4. Production of Paperbacks.
5. Distribution of Paperbacks.
6. Paperbacks in Developing Countries.
7. Paperbacks and Hardbounds.
8. Cooperative Publishing.

Shri Dina Nath Malhotra, Managing Director, Hind Pocket Books (P) Limited, was nominated Technical Director of the Seminar. The Seminar was formally inaugurated by Dr. Prem Kripal, the then Chairman, Executive Board of UNESCO.

A National Writers' Camp was held during the World Book Fair from March 26 to 31, 1972. The Camp was inaugurated by Shri Y.B. Chavan, Union Minister of Finance. In this 93 eminent writers in various Indian languages and in English participated.

With a view to giving to readers an opportunity to meet their favourite authors, Meet the Authors' sessions were held in which writers spoke about their art and philosophy, followed by discussions between the authors and the audience.

Synchronising with the World Book Fair a Book Week was celebrated throughout the country from March 18 to 24. An extensive publicity campaign was launched to foster bookmindedness during this period. Universities and other educational institutions, libraries and cultural organisations celebrated the Book Week appropriately to create an atmosphere in which people purchased and read more books. The Federation of

Publishers and Booksellers Associations in India allowed a special discount of 10% on books purchased during this period. AIR network organised special broadcasts and the P & T Department cancelled postal articles from the principal cities with a slogan of the Week in English and Hindi. The Trust brought out an attractive poster with the Slogan of the Week and distributed it to the educational and cultural institutions in the country for display.

A series of cultural programmes was organised in ballroom of Hotel Imperial for foreign and Indian guests participating in the Fair. The programmes started on March 19, 1972 with a shehnai recital by Ustad Bismillah Khan and party. Vedantam Satyanarayana and party gave a Kuchipudi dance recital on the 20th. Ustad Amjad Ali Khan presented a recital on the sarod on the 21st. Pt. Sampta Prasad accompanied him on the tabla. On March 22 Km. Padma Subramaniam of Madras presented a dance recital. Children of some foreign countries along with Indian children presented a variety programme on the 23rd observed as the International Children's Evening. All India Radio's National Orchestra gave a programme of orchestral music on the 24th. On the 25th Dr. Lakshmi Narayan Lal's Hindi play Suryamukh was produced by Prof. E. Alkazi. April 1 featured an interesting Mushaira, Kavi Durbar and Kavi Sammelan with leading poets in Hindi, Urdu and Punjabi participating in it. The cultural programmes were a remarkable success.

An All India Publishers Convention was organised by the Federation of Publishers and Booksellers Associations in India on March 23, 1972. The Convention was inaugurated by Shri Kanti Chaudhuri, Joint Secretary, Ministry of Education and Social Welfare, Government of India, and was attended, besides publishers and booksellers in the private sector, by representatives of publishing organisations in the public sector, librarians and others interested in books. There was a lively discussion on 'The Public and the Private Sector in Publishing.

The Federation of Publishers and Booksellers Associations in India organised two training courses, one for 'Publishing Management' and the other for 'Book Promotion and Distribution'. The courses were directed by Shri O. P. Ghai, President and Shri M.N. Rao, Past President of the Federation, respectively.

The Indian Library Association had the privilege of having President V.V. Giri to inaugurate the 19th All-India Library Conference on March 24, 1972 on the premises of the Fair.

The Indian National Science Academy organised a discussion on 'Production of Books on Science' on March 31, 1972. Prof. B.R. Seshachar, President of the Indian National Science Academy, and about 50 delegates participated in the discussions. The Akhil Bharatiya Hindi Prakashak Sangh organised a seminar on 'Popularising Hindi Books Abroad' on April 1. The Seminar was inaugurated by Shri D.P. Yadav, Deputy Minister of Education and Social Welfare, under the chairmanship of Dr. B.V. Keskar, Chairman, National Book Trust, India.

The Sangh also held a symposium on 'Paper Scarcity in India', which was inaugurated by Shri Siddeshwar Prasad, Deputy Minister of Industrial Development.

The Association of Master Printers organised an All India Convention of Printers under the chairmanship of Shri Guha Ray, to discuss problems of mutual interest.

A symposium on 'Communication Across Frontiers' was held on March 21. The participants in the symposium were : Dr Satish K. Arora, Fellow of the Indian Council of Social Science Research, Prof. M.L. Sondhi, Associate Professor in the School of International Studies, Jawaharlal Nehru University, Shri Satish Saberwal, Fellow, Indian Institute of Advanced Study, Simla, Shri L. Shivalingappa, Research Scholar, Jawaharlal Nehru University, Smt. Amita Malik, eminent journalist and Shri Ashok Davar, a journalist from the USA. Shri Ashok Mitra, Secretary, Planning Commission, acted as the Chairman of the Seminar.

The following countries participated in the Fair in one capacity or another: Afghanistan, Bangladesh, Sri Lanka, Czechoslovakia, Cambodia, France, the Federal Republic of Germany, Greece, the German Democratic Republic, Hungary, Italy, Ireland, Iran, Japan, Kenya, Mauritius, Malaysia, Nepal, New Zealand, North Korea, Poland, Switzerland, Spain, Tanzania, Turkey, the USSR, the UK, the USA, Yugoslavia and Zambia.

An extensive and well coordinated publicity campaign was launched months before the commencement of the Fair. Ten thousand copies of attractively designed World Book Fair posters were distributed to all important educational and cultural institutions in New Delhi and principal towns all over the country. Hoardings were installed at strategic points and cinema slides released in the leading cinema houses in the city. Over a hundred buses in Delhi and New Delhi carried the World Book Fair advertisement from March 1 till the

Fair was over. Nearly 10,000 beautifully designed car-stickers were distributed in Delhi, Bombay, Madras and Calcutta.

The Posts and Telegraph Department cancelled postal articles with the inscription World Book Fair and the slogan "A Good Book is a Good Friend" during the Fair in 23 important cities.

The Radio network and TV provided extensive coverage to the Fair activities by broadcasting a variety of programmes before and during the Fair. The commercial services of All India Radio carried the Fair advertisement for about three weeks at peak listening hours. The Films Division gave appropriate coverage to the inauguration of the Fair by President V.V. Giri and other important functions in the newsreels.

The press noticed the activities of the Fair liberally. The following newspapers and journals brought out special supplements on the occasion: The Statesman, The Times of India, The Indian Express, The Patriot, The National Herald, The Motherland, The Amrita Bazar Patrika, The Aaj, The Illustrated Weekly of India, The Economic Times, The Contemporary Indian Literature, The Educational Reporter, The Surge, The Point of View, The Dinman, The Thought, The Prakashan Samachar, The Natrang, The Pustak Parichay, The Sanchetna, The Entertainer, The Tarun Bharati, The Consumer Gazette, The Nilachar, The Indian Book Industry, The Round Table, The Mainstream, The Socialist India, The Link and The States.

Due to an unprecedented response from visitors, the Fair was extended by two days upto 4th April. Nearly 2,00,000 visitors visited the Fair. Among them were the President, the Vice-President, the Prime Minister, Union Cabinet Ministers, the Maharani of Sikkim, State Governors and Ministers, Diplomats, foreign delegates, authors, publishers, librarians, teachers, students and others.

The number of books displayed in the Fair was 2,00,000 of which 10,000 books in all the Indian Languages and English were displayed in the National Exhibition. A number of foreign delegations participated in the Fair.

(1) Delegates from USSR
(2) Delegates from GDR
(3) Delegates from East African Countries
(4) Delegates under UNESCO Grants

UNESCO placed two grants of $2000 and $5000 at the disposal of the Trust. The grant of $2000 was made at the Trust's suggestion to enable them invite Dr Sigfred Taubert, Director, Frankfurt Book Fair, and the other grant of $5000 was for the purpose of inviting publishers from some other countries to visit the Fair.

The birthpangs of the Book Fair were agonising but it turned out to be a bonnie baby. It has since grown into a fine institution which is the pride of India's publishing community. The Trust continues to organise a World Book Fair every alternate year. The National Book Fair is an annual event. The year in which the World Book Fair is held, the National Book Fair is merged in it.

The uncertainty and the unseemly controversy that preceded the Eighth World Book Fair is nothing new. Almost every fair held is menaced with one controversy or the other. The publishing community in India being split in splinter groups, it falls to the lot of the National Book Trust to carry them all together tactfully and provide them a common forum. More than anything it is an important contribution of the book fair to the world of books in India. □

BOOK DEVELOPMENT IN INDIA

J.C. Sharma*

Introduction

Indian publishing has shown steep progress since the independence of the country. India is among the 8 largest book producing countries of the world and publishes books in English as well as various Indian languages in a variety of subjects. It is creditable on the part of Indian publishing industry that it ranks 3rd after USA and UK in the production of English titles.

Prior to our independence, publishing in India was limited in its scope and was controlled by a few publishing concerns many of whom were subsidiaries of multinational publishing houses. These publishers were mostly concerned with educational books. As educational system was based on the British model, there was hardly any scope for local book industry to grow. Book publishing thus grew alongwith national conscience after attaining independence. After independence, there was a tremendous expansion of education as well as educational institutions. With the growth of education the need for more books also grew. Indian publishing industry (both private and public sector) rose to the occasion to meet the growing need for books.

School Textbooks

Almost all the books used for school education are indigenous. With a view to provide good and economic books to school children, almost all the State Governments have nationalised textbooks and have set up Textbook Boards. The National Council of Educational Research and Training (NCERT) helps State Governments in getting the books assessed to constantly improve their quality. NCERT is also producing textbooks specifically for schools affiliated to the Central Board of Secondary Education. The State Governments may also adopt these textbooks. The prices of these textbooks are intended only to cover the actual expenditure incurred on material, printing, overheads etc. Besides, NCERT also brings out supplementary reading material in different areas such as India's cultural and literary heritage, development in science etc. However, school textbooks produced by the public sector are not adequate to meet the national requirements. It is estimated that out of 13,000 books in the use, all over india, only 1000 are nationalised books. In order to fill up this gap, educational institutions have to depend upon textbooks prepared by private publishers.

It has been stated in the report on 'National Book Policy' brought out by the National Book Development Council that it is educationally unsound to prescribe a single textbook for all students in a class. It has been recommended that a single textbook situation need to be remedied with the production of more than one textbook in each subject in regional languages so that students and teachers have a choice from available books. Near absence of educational literature for technological education in regional languages for secondary and higher secondary level need be remedied. The agencies, expertise and resources of private sector may be fully availed of in the production and distribution of such literature.

University Level Books

University level books have been mostly with the private publishers and original university level textbooks are being produced suited to the needs of our students. These textbooks are quite popular in many developing countries as they are more readable for them. The Govt. have sponsored the following schemes for making textbooks for university level courses available at reasonable prices :

I. University Level Books from Abroad

In cooperation with the Govts of UK, USA and USSR schemes have been initiated to make available to Indian university students standard books at low prices. The books supplied are those approved by Government. Books from UK and USSR are reproduced in those countries and marketed in India through commercial channels. The approved USA books are published in India with a USIS or USAID Subsidy from PL-480 Rupee holdings in India. The freedom of universities to use or not to use these books is left unhampered. Under these programmes, about 1620 American, 720 British and 550 Soviet books have been published so far. Latest editions of books are considered for coverage under these programmes and are assessed by expert agencies with regard to their suitability for Indian

---

**Deputy Educational Adviser, Deptt. of Education, Ministry of Human Resource Development, New Delhi.*

students and non-availability of comparable books by Indian authors.

II. Indigenous University Level Books

(a) Scheme to Subsidise University Level Books and Reference Books.

The National Book Trust (NBT) has been implementing a scheme to subsidise university books and reference books since 1970. The main objective of the scheme is to encourage indigenous authorship and to make available to students books of acceptable standard at reasonable prices. The scheme neutralises the impact of low cost editions by foreign authors either being reprinted within the country or imported into the country in large numbers. As a result of this scheme the country's dependence on imported books is gradually reducing. This scheme provides finances in the form of subsidy to the publishers and royalties to the authors. The books published under the scheme are generally published and marketed by private sector publishers.

To start with the scheme was to subsidise university level books in English. In July 1982 the scope of the scheme was extended to cover books in Hindi and effective April 1984 the scope of the scheme was further extended to regional languages. So far about 750 books have been subsidised and 950 authors and 250 publishers have been benefitted by the scheme.

(b) Book Promotion in Hindi and Regional Languages

Ministry of Education in cooperation with the State Govts. launched in 1968 a massive programme to produce suitable standard books in Hindi and regional languages. The scheme envisaged to facilitate the change over from English to Indian languages as the medium of instruction at the university level. Under this scheme in the field of textbooks, priority is given to original writings. Textbooks written under the programme are to be directly linked with the syllabii content of prescribed courses. Translations/ adaptation of the best books of the world are also encouraged. This scheme is implemented through Book Production Boards/Hindi Granth Akademies set up by the State Governments. Uptil 31st January 86 a grant of Rs. 14 crores has been released in favour of the State Govts. and Akademies. 7258 books in various Indian languages have been produced.

(c) Core Books Project in the Medical Sciences

In India we still have paucity of books on Medical Sciences by indigenous authors. The imported books are beyond the purchasing capacity of the Indian students. Keeping this in view the Govt. of India envisaged the scheme for preparation of books in medical sciences by eminent subject specialists. The project was entrusted to the NBT in 1970. Under this scheme the authors are commissioned to write books and they are paid preparation charges in advance. In addition, the authors of the core books project are also entitled to get the usual royalty as applicable in the subsidy scheme. So far about 23 books have been published under this scheme.

(d) UGC Programme for Preparation of University Level Books by Indian Authors.

The University Grants Commission (UGC) initiated a scheme in 1970-71 of providing financial assistance to outstanding scholars in the universities, colleges and other institutions of higher learning in the country for the preparation of high quality books and reference materials for use in the universities and colleges. Under the scheme, assistance is given to the authors for the preparation of manuscripts. The authors are paid preparation charges and books are published by the authors themselves. Earlier, such works selected by the UGC use to be subsidised by NBT. According to the available information upto March 1985, 840 projects were accepted and 242 manuscripts have been completed and 511 projects are in different stages of implementation.

(e) Hindi & Other Languages Publications

The Language Division of the Deptt. of Education is also implementing a scheme to provide financial assistance to Voluntary Hindi Organisations for promotion of Hindi. This scheme inter alia provides for assistance for preparation and publication of Hindi manuscripts, assistance for publication and translation into Hindi of books in regional languages, assistance for publication of books written in Devanagari script, setting up and running libraries in Hindi books etc.

Besides, there is a scheme to produce standard literature in Sindhi including printing of books. Under this scheme about 20 books have been published.

For the promotion of Urdu, Deptt. of Education has established Tarqui Urdu Boards which bring out academic literature of Urdu for the benefit of students. The Bureau also compiles technical terms, encyclopedias, dictionaries, etc. in Urdu. This Bureau has published 450 books of various subjects.

There are also other institutes as Central Institute of Languages, Mysore, Central Institute of Hindi, Central Hindi Directorate which are engaged in research in the field of languages and linguistics in India. These institutions have also substantive publication programmes.

Government also provides financial assistance to organisations for production of Sanskrit literature. Assistance is given for printing and publication of original works relating to Sanskrit Literature, printing of out of print Sanskrit books, Sanskrit journals and to improve their quality etc.

(f) Besides, there are a number of Research Institutes and specialised agencies such as IITs, Indian Institute of Science, Council of Scientific and Industrial Research, Indian Council of Agricultural Research, Indian Council of Medical Research, Archaeological Survey of India, Anthropological Survey of India, Indian Council of Historical Research, Indian Council of Philosophical Research, Indian Council of Social Science Research etc., that bring out usual monographs, books in the specialised areas of science, technology, agriculture, medical science, history, philosophy, sociology etc.

General Books

In addition to the private publishers various Government and Government sponsored agencies like National Akademies, Institute of Advanced Study, Simla, Archaeological Survey of India, Indian Council for Cultural Relations, Publications Division of Ministry of I & B, etc. are engaged in the production of general books needed for mental pleasure and general awareness.

The Publications Division of the Ministry of I & B is one of the largest publishing and book selling enterprises. It publishes books and journals in all major Indian languages. Its publications cover a wide-range of subjects including art, culture, history, tradition, political evolution, economic development and social research.

The Publications Division have 7 major series like Collective Works of Mahatma Gandhi, Peoples of Modern India, States of Our Union etc. and Reference Publications like India—A Reference Annual. Besides, the Division also brings out 21 journals of varying periodicity like Yojna, Bal Bharti, Kurukshetra, Bhagirath in English and Hindi. The Division has brought out more than 16,000 titles so far.

The National Book Trust, India was set up in 1957 as an autonomous organisation under the Ministry of Human Resource Development, Department of Education, Government of India, with the objectives of producing and increasing the production of good literature at a low price and to foster bookmindedness. The Trust publishes books under well defined series such as India—the Land and the People, National Biography, Young India Library, Folk Lore of India, Popular Science, Adan Pradan etc. It publishes books in English and modern Indian languages and have brought out over 3,000 titles.

Sahitya Akademi was established in 1954 as an autonomous organisation by the government of India to work actively for the development of Indian literature and to set high literary standards to foster literary activities in all the Indian languages and to promote through them cultural unity of the country. The Akademi brings out a number of books every year besides a bi-monthly journal in English, 'Indian literature', a quarterly 'Samakalin Bhartiya Sahitya' in Hindi, and a half yearly 'Sanskrit Pratibha' in Sanskrit. The Akademi has sponsored two series of publications namely Histories of Literature of various Indian languages and Makers of Indian Literature.

Children's Books

Books are tools for development. Development of of a nation is in the development of its children. A country like India which has multiplicity of languages and ethnic groups need books for children in various languages to cater to their diversified needs. Authors, publishers and illustrators have to work jointly to stimulate young minds with a view to foster national integration, emotional maturity, reading habit among them. There is a need to have more and more children literature with colourful illustration.

The National Books Trust, India and Children Book Trust have brought out good literature for children. The NBT brings out books with uniform content at a uniform price under the series Nehru Bal Pustakalaya. So far 1168 titles and translations have been published under this series. The Children Book Trust is a private organisation devoted exclusively to children's literature. The Trust has been helped to set up its own press. They have so far published 430 titles out of which 200 are original titles in English and others are translations in other Indian languages.

There are not many private publishers who bring out books for children as they cannot afford to compete with the foreign publishers and public sector publishers. It is the need of the time that more books depicting Indian Culture and Progress in the field of science are brought out in simple language for the children to help future society equipped with knowledge and awareness.

Library Movement in India

Since there was a need to increase the number of libraries in the country, Government of India established Raja Ram Mohan Roy Library Foundation in 1972 on the occasion of bi-centenary of the birth of Raja Ram Mohan Roy, International Book Year and the celebration of Silver Jubilee of India's independence. The foundation was set up with an objective to take the library movement to small towns and villages in cooperation with State Governments, Union Territory Administrations and other organisations working in the field with a view to providing reading facilities for all sections of population.

Libraries especially public libraries in India come under the jurisdiction of State Governments. State Governments and voluntary organisations have taken the initiative for developing library services. Voluntary organisations also get grants from the Government and Raja Ram Mohan Roy Library Foundation supports the State efforts by rendering assistance on matching basis under certain schemes such as :

1. Assistance towards building up of adequate stock of books
2. Assistance towards organisation of mobile libraries and rural book deposit centres
3. Assistance towards storage of books
4. Assistance towards seminars, workshops, book exhibitions etc.
5. Assistance to libraries below district level for increasing accommodation
6. Assistance to State Central Libraries and District Libraries to acquire TV cum VCR set and cassettes for educational purposes.

There is a provision of Rs. 442 lakhs in 7th Five Year Plan under the schemes of Central Assistance to States and UTs. Besides, there is a scheme of Assistance to Voluntary Educational Organisations working in the field of public libraries. A provision of Rs. 200 lakhs have been made in the 7th Five Year Plan for this purpose.

There is a scheme of Direct Assistance for :

1. State Central Libraries and District Libraries through Central Selection of Books.
2. Assistance to Centrally sponsored libraries : (a) Nehru Yuvak Kendras (b) Jawahar Bal Bhavans (c) Other libraries recommended by the Central Government and/or approved by the Foundation.
3. Assistance to Children's Libraries and Children's Section of general public libraries.
4. Assistance towards collection and compilation of library statistics through official and non-official agencies. There is a provision of Rs. 159 lakhs in the 7th Five Year Plan for this purpose.

Achievements

District Libraries have been established in most of the districts. Some of the State Central Libraries and Regional Libraries also function as District Libraries for the respective districts in which they are located. State Central Libraries and Regional Libraries are usually Government libraries with a few exceptions such as Sinha Library, Bihar and Maulana Azad Central Library in Madhya Pradesh. For the last fourteen years the foundation has covered 18345 libraries at various levels i.e. State libraries (28), District libraries (387), Sub-division Taluq/Tehsil libraries (466), Nehru Yuvak Kendras (173), Bal Bhavans (49), Town and Rural libraries (16249), Mobile libraries/Rural Book Deposit Centres (879), NSS Centres and others (116).

Besides, all the Institutions have separate provision for the development of libraries. The University Grants Commission also extends grands for the development of University and College libraries. During the year 1985-86 UGC has released grants of Rs. 530 lakhs to the University libraries and Rs. 276 lakhs for the college libraries for the purchase of books and periodicals.

Imports and Exports

Imports : India is following a liberal import policy in respect of books and publications. The main objective of this import policy is to encourage free flow of knowledge and also to gain from the advancements in the scientific and technical fields made in other countries. It has been envisaged while putting a restriction of 1000 copies on each title per importer per year under the open general licence that it does not harm the indigenous publishing industry. Import of foreign editions of books for which Indian reprints are available is not permitted under the rules. Similarly the import of foreign reprints of Indian publications are not allowed.

Exports : India now exports books, including journals and periodicals, to over 80 countries. Beginning with a modest figure of Rs. 6 million in 1965-66, Indian exports had risen to Rs. 250 millions in 1984-85.

A remarkable feature is the wide variety of subjects on which India publishes books. It is gratifying to observe that the USA, UK and West European countries, Japan and Australia are good markets for books on Indian Philosophy, Religion, Yoga, Culture and

Ancient Classics, History, Current topics and Natural Sciences. Children's literature has a steady market in Singapore, Malaysia, Kenya, Nigeria, Fiji, West Indies and Mauritious.

Many factors have been responsible for the phenomenal ries in the export of Indian books over the years. An important aspect has been the systematic manner in which Indian publishers and distributors have been promoting the sale of books abroad. Their representatives travel extensively in various countries where they contact trade and institutional customers. This enables them to meet the existing demand and promote new books.

The Government of India has been very particular to encourage book exports. The Chemicals and Allied Products Export Promotion Council, popularly known as CAPEXIL, and set up a separate panel to deal with the export of books and publications. This panel helps Indian book exporters with their problems and facilitates their export activities by granting cash assistance at the rate of 8% for all types of books. Blanket Exchange permit is being issued to the exporters @ 10% of export earnings. Marketing Development Assistance is granted at the rate of 30% (60% for small publishers) for delegations, study teams etc., sponsored by the CAPEXIL. For export promotion activities such as market studies, publicity, participation in the fairs etc. subsidy @ 60% is given to the members of CAPEXIL.

The National Book Trust has been playing a significant role by helping Indian publishers and distributors to participate in various international book fairs. Regular and increasing Indian participation at the Frankfurt Book Fair and the other important international fairs at London, Cairo, Singapore, Moscow and in several other countries has been an important factor in projecting Indian books and building up their sales in overseas markets.

Copyright

It is very essential for the development of books that the country has a strong national Copyright Law. It is important in the sense that if the rights of the authors and publishers are not protected, there is every chance of their works being pirated. In this regard India stands on a very strong ground. The Copyright protection is governed by the Copyright Act, 1957. The Act provides that the author is the first owner of the copyright except where the work is produced under the contract of service or apprenticeship. Copyright owner according to our Act is empowered to adopt, translate or copy or allow the work for cinematography, record or broadcasting. General terms of the copyright is for author's life and 50 years after his death so that this way even his successors are given protection.

The Copyright Act has been amended in 1984 to check the wide spread piracy. It has incorporated stringent punishment for infringement of Copyright.

According to our Copyright Act authors enjoy special rights. Even after assigning their rights, the authors have a right to claim the authorship of the work and also right to restrain or claim damages for any distortion or mutilation of their work or any action taken on the work which would be prejudicial to their honour or reputation. The right relating to restraint or claim for damages or distortion or mutilation, etc. can be claimed even by the legal representatives of the author.

The Copyright Act provides that any act which is done by anybody else without the authorisation from the author which only the author has the right to do, is punishable offence. Even when there is any violation of the terms of assignment, it constitutes copyright infringement.

Since India is a member of the two International Copyright Conventions, works of Indian nationals get copyright protection in other countries which are members of these Conventions. Likewise, foreign works also enjoy Copyright protection in India as if authors of these works were Indians.

By virtue of 1984 Amendment of the Act, authors can come before the Copyright Board in their disputes with publishers for inexpensive summary disposal of their disputes. The Copyright Board can give permission to copyright owner to revoke his agreement if the terms of the assignment are harsh to him or if the publisher unduly delays the publication. The amended Act further provides that any assessment has to be definite in terms and should indicate clearly the rights proposed to be assessed and the size of the work.

Other Book Promotional Activities

(a) Book Fairs and Exhibitions

Besides participating in the International Book Fairs for the promotion of books abroad, a number of book fairs are organised within the country. These fairs and exhibitions are organised by the National Book Trust which is fully financed by the Government. The Trust so far has organised 7 World Book Fairs in New Delhi, 12 National Book Fairs in the major cities of the country, over 100 book exhibitions in district and university centres and 5 book festivals on a regional basis. Apart from these book fairs and book exhibitions, the Trust also celebrates a National Book Week. All these book fairs, exhibitions and National Book Week are organised in collaboration with the Trade Federations such as Federations of

Indian Publishers, Federations of Publishers and Booksellers Associations, and Authors Guild of India. All these are given wide publicity through Press Media, Posters and Banners.

(b) Book Exhibitions of University Level Textbooks

In order to publicise the indigenous publications, Raja Ram Mohan Roy National Education Resource Centre which is a part of the Book Promotion Division organises a number of exhibitions in the country at various universities and institutions of higher learning. In doing so, the Centre creates an awareness about the presence of indigenous standard books in various fields. The Centre has so far organised 55 exhibitions of indigenous textbooks.

(c) Indigenous Authorship

In general, the economic position of the authors is not very sound except some authors of the best selling books. There are very few authors who survive solely on their royalties. Authors sometimes have some complaints with the publishers and Federation of Indian Publishers. They have established a Committee of Authors and Publishers in collaboration with the Authors Guild of India to sort out misunderstanding between two groups. Besides our Copyright Act also protects the rights of authors. Fellowships are granted for writing books by University Grants Commission. Besides, authors are assisted for organising their conventions, workshops, etc. In order to promote the indigenous authorship, the National Education Resources Centre (NERC) convenes meetings of the experts to evaluate the books written by Indian authors. The comments are circulated by NERC to all the universities. This helps popularising their books.

(d) International Standard Book Numbering System

The NERC has been designated as the national agency for the implementation of ISBN system in the country. This system inter-alia helps to promote the export of Indian books and minimise the process of delay in executing the orders. This system helps to identify the publisher of the book and the individual titles. This is an economic way of communication among publishers, suppliers, booksellers and book buyers. A provisions of Rs. 2 lakhs is being made annually for the implementation of ISBN System.

(e) Scheme of Assistance for Book Promotion

Department of Education has a scheme of assistance to voluntary and private publishers for organising seminars, training courses, workshops, annual conventions, etc., connected with book promotional activities. Whenever such requests are received, the Government usually releases grant to meet 75% of the approved expenditure on such activities. During the past 5 years, a number of organisations have been given grants for this purpose.

Besides these promotional activities, there are a number of facilities available to the publishers in terms of availability of paper, purchase of books by Government agencies, tax rebate under Section 80 QQ, NBT Subsidy, help in publicity and postal rates.

(f) Interaction with the Book Industry

In all the Committees of the Government, the Federation of Indian Publishers and Federations of Publishers and Booksellers Associations in India are given representation. All the exhibitions within the country and abroad are organised with their cooperation. In the matter of policy making, their views are always sought as to understand their difficulties.

(g) National Book Development Council

The Government of India set up a National Book Development Board in 1967 to lay down guidelines for the development of book industry in the context of overall requirements of the country. It remained active upto 1974. This Board was revived in 1983 under the name of 'National Book Development Council'. The Council consists of people from all walks of life concerned with books. This is an advisory body which advises Government for the promotion and development of book industry in the country. This Council was entrusted to draft a National Book Policy. The Council constituted a Working Group to draft the National Book Policy which has been submitted to the Government.

The Report has made a number of suggestions and recommendations on various aspects of book promotion in the country. The main recommendations of the report relate to publication of translation of classics and other outstanding Indian works, publication of children's literature by a nodal agency of the Ministry of Human Resource Development, Association of private publishers in publication of school textbooks, publication of university level books in Hindi and regional languages, production of books for non-formal education, establishment of a national organisation of authors on cooperative basis, acquisition of copyright of books in public domain, establishment of Book Finance Corporation, supply of paper at reasonable prices, reduction in postal rates for despatch of books, development of libraries, registration of publishers, etc. These recommendations are being examined in detail by the Government for implementation. □

GOVERNMENT IN PUBLISHING

S. N. Chakraborty*

Right to read and Society's obligation to ensure that everyone has an opportunity to enjoy the benefits of reading cannot be over emphasised in a democratic set-up as in India. It is not only the active and intelligent participation of people in the governmental process upon which the functioning of a democracy depends, but also the responsibility of the Government to interpret and justify their policy to the governed, and to create an informed and intelligent opinion on all matters related to these activities. Even now, printed literature is the best source of passing information on the activities of the Government in India.

Public Sector publishing plays a major role in Indian publishing Industry, in terms of number of titles, volume, and quality of output. One of our major social tasks, by the time we reach the 21st century, is to bring about 100% literacy in this country, and this task cannot be accomplished without substantial increase in Public Sector publishing activities. The areas of activities in publishing by different governmental organisations is well defined. The Central Government official civil publications—Administrative Reports, Developmental Programmes and activities, Commission or Committee Reports, Bills, Supreme Court Reports, Laws, Codes, Rules & Regulations etc., Periodicals, Gazettes, Digests, etc., and Defence publications of Government of India, are handled by the Department of Publication which comes to about 80% of the total Government publications. The Publications Division of the Ministry of Information & Broadcasting publishes informative publications, useful literature, Periodicals, etc. The Survey of India deals with Maps, Charts etc. NCERT and NBT publish Textbooks and important publications at the Central, level, and State Text Books Corporations at the State level take care of the publications of the nationalised books. The Lok Sabha/Rajya Sabha Secretariat brings out publications related to the records of proceedings of the Houses, Rules & Regulations etc. CSIR, Indian Council of Agricultural Research (ICAR), Sahitya Academy, the National Museum, Archaeological Survey of India, Central Universities and other Central Government organisations are publishing specialised publications, and similar organisations operate at the State level for promotion and publication of scholarly works in Indian languages.

Government publications are, in general, rich in content, reliable, inexpensive source of information on every subject af current interest, and are useful to common men, experts, and policy makers. In this age of information explosion, it is necessary that governmental activities, both regular and developmental, should percolate to all strata of society—peasants, educationists, labour, industrialists, management experts; legal practitioners and others. The people are required to be informed and trained. There is a need of dissemination of knowledge through printed publications by the governmental agencies. It is essential to educate people in their day to day work which helps in injecting new ideas, and results of research activities to be transmitted for application for the progress of the nation and to benefit the people as a whole. Even for maintaining law and order, rules & regulations have to be explained to the public through printed literature.

The substantial amount of direct government publishing is done by managing the materials from the different sources, and getting these printed and finishing work done at Government Presses. The emphasis is on accuracy and rich contents, and the price is fixed keeping in view the general purchasing power of the people in the country so that dissemination of knowledge is always at the blessings of the government and not at the patronage of the readers. In this process, the quality in general, the get-up, printing and finishing of the publications may not be the very best that one can have, but utility remains the prime factor. However, where quality of work is required to be of high standard and the publications are required to be preserved for the purpose of reference for a longer period, the inputs used for such publications are of good quality. Printing and finishing work are also of high standard. Some of the Government of India Presses, where most of the Central Government publications are printed, are now equipped with latest photo type setting equipments and most modern printing and finishing machinery. Government publications are, in general, placed in three categories—Periodicals, one time publications for seasonal use, and publications for reference purpose and preservation. The introduc-

---

**Controller of Publications, Department of Publications, Govt. of India.*

tion of photo type setting, modern preprocess, offset printing and finishing technology have resulted in better quality output without much increase in price. It has always been the endeavour of the public sector publishing agencies to bring out quality publications at reasonable price. Some public sector publishing agencies are not only publishing quality publications having excellent reading material at low cost, but also promoting bookmindedness among the people. Valuable contribution has been made by the Sahitya Academy for promotion of creative literature in Indian languages. Some works published by the National Book Trust and Publications Division etc., are not only of high standard, but also comparable to the best in any country. Government publishing is not a profit making activity. There are publications which are slow-moving and many of them are not commercially viable. No private sector publisher will undertake publishing of such publications. The growth of literacy and readership through government publications helps create a market for general books. The Textbooks published by Central and State Government Undertakings, are, in general, of high quality, and available at affordable prices. In addition to publishing and making books available at very reasonable prices, the government provides funds for subsidised publication of research and scholarly material of high national importance to gear up the developmental process in the country, although the return in terms of sales of publications may not be commensurate with the cost of production, etc.

Essential and authentic information, well produced through print media at a cheaper cost, generally, do not serve the purpose unless disseminate to the widely scattered population in the country. Due to lack of communication, the distribution remains a source of impediment to the publishing industry. Although some government publishers have their own distribution channels, distribution network in the country in general remains inadequate as a result of which the distributor takes the major share in the book trade. In spite of this, the reading public is not well informed in time about the new arrivals, and this communication gap at times results in fruitless exercise. The library movement in the country is yet to take a giant leap forward. The Book Clubs are almost a non-entity, and in remote areas, there are very few booksellers/book shops exclusively meant for government publications. Even the distribution system of the textbooks requires much improvement. The distribution of textbooks in Bihar State is done through the District Teachers Co-operative, and such organisations in other States are also doing well in this area. The important government offices and voluntary social service organisations at State, District and Block level should be in the regular mailing lists of all the Government publishers, and some of them be appointed Sales & Return agents of government publications. They can have a small Sales Counter attached to the offices which will help in reaching the publications to a larger number of readers throughout the country. Due to recent increase in the postal charges and railway freight, the cost of sending publications to longer distance have become a very costly affair for the publisher. The government publishing agencies, who have their own distribution system have their outlets located only in major cities. There should be further extension of distribution system to the district and block level so that the books are available through the government distributing agencies at a reasonable rate at different parts of the country in a minimum possible time. It is sad that even today, one cannot get some important publications or come across a serious book shop even in the affluent areas of our capital except perhaps, at South Extension or Connaught Place. If that is the situation in the capital, what can one expect in Districts or Talukas. The Railways and Postal Departments should being down the freight charges and the postal charges for the despatch of the books and publications to a considerable lower level, and should devise ways and means for quick and safe delivery of books and publications to their destination. There should be more opening of libraries, Book Clubs, and Co-operative Book Shops throughout the country so that important books and publications reach every nook and corner of the country, and benefit the readers at all levels whom the government publishers are required to serve.

Information is a costly resource and has a finite life time depending upon the problems. It is, therefore, all the more necessary that information flows uninterrupted to all at a reasonable cost which is very important for functioning of the democracy. In the coming years, we need quicker and better communications/transportation, introduction of electronic publishing systems, rigid quality control and effective distribution network so that publications are easily available to all citizens in time. □

WHY BOOKS DO NOT SELL ?

Amrik Singh*

The answer should be obvious. Books do not sell because not many people read them. The question therefore needs to be put differently. It should be : Why People Do Not Read.

My answer to it is three-fold. One, it has a good deal to do with our system of education. Secondly, the electronic media is beginning to displace the habit of book-reading. And thirdly, alongwith so many other things books are becoming more and more expensive. Each one of these reasons requires to be considered in greater depth.

System of Education

Most people acquire the habit of reading around the age of 11 or 12.Till the age of 9 or 10, children have not acquired the proficiency to read for any length of time. They have learnt the alphabet and they can read something but what they cannot do is to read for any length of time or on a consecutive basis. Around the age of 10 or so, however, they come to acquire that proficiency.

Then the next question arises. Are books of the right kind available? If they are, children start devouring them. Sometimes books are available but they are not of the kind which would interest or excite them. In other words the books available should be addressed to their age. At that age there are certain things that attract children and there are others which do not. If books of the right kind are available, it ignites their interest.

Children who come from homes which have books lying around find it easier to take to books. In that sense children from literate homes have an advantage over other children. The other source for books can be libraries. We know very well that the one thing most schools do not have are libraries. A very small percentage do have them but then they would not constitute even .001 per cent of the total number of schools. Public libraries for children are so few that it almost looks like a joke to refer to them. Clearly we are doing everything on our part to make sure that at the age when children are most likely to acquire the habit of reading we do not provide them the necessary facilities. It is possible to say much more on the subject but it should not be necessary to do so.

Only about 5 per cent of those who pass out from schools enter college. What happens in college is somewhat better but it is far from satisfactory. More than a decade ago, as a member of the UGC Committee on the Development of Libraries, I discovered that though the committee consisted of a dozen members, not even one of them had a college background. Almost each one of them was connected with the universities and yet 85 per cent of students study in colleges and their interests cannot be ignored.

Appropriate action was taken however and one or two people with a college background were inducted into that committee. But as everyone is aware, the real funding for colleges comes from State governments and not from the UGC. States do not have anything like a policy for college libraries. On a rough estimate one may say that about 5 per cent of colleges have reasonably good libraries and another 5 per cent can manage to sail through. But the rest of them do not pay the kind of attention to libraries that ought to be paid.

This is one aspect of the problem. The second aspect is no less important. For good and competent teaching, it is important that the teachers teach in such a way that the students feel encouraged or inspired to go to the library and consult books on their own. In a sense, this alone is the hallmark of good teaching. Whether we have this kind of teaching or not is there for anybody to see. The general decline in the performance of teachers is to some extent reflected in the absence of that close linkage between classroom teaching and library consultation which is indispensable for learning.

**Former Secretary, Association of Indian Universities.*

Electronic Media

Coming to the increasing importance of the electronic media, one has only to refer to it and see how the situation has been going against the print media. Radio was not as much of a rival to the book as television is. While the television is still confined to urban areas, it is spreading into the countryside as well; in any case education is more of an urban phenomenon than a rural phenomenon. That being so, what is happening was more or less bound to happen. What is truly disquieting is the fact that we are not doing anything by way of a change of policies to reverse the situation.

Books are Expensive

To come to the third point, if books are beginning to be more and more expensive this is basically for two reasons. One, because everything is becoming expensive. But the second reason is no less relevant. Our book reading public is small. Therefore, the print run of an average book is not particularly high. At one time it used to be 1000 or 1100 copies at the time of the first publication. In certain cases, now, it has even come down to half of that. To some extent this is so bacause there are not many readers, but it is also because of the state of publishing in the country. This particular aspect needs to be examined in greater detail.

With more than a dozen distinct languages in the country, readership is fragmented. The largest number of books are published in English. Hindi too has a reasonably good market, though considering the number of Hindi speaking population in the country, it can and ought to be much larger. Some of the other Indian languages like Malayalam, Bengali and Marathi are doing reasonably well. Nevertheless, the percentage of readership is not high and there are all kinds of limitations therefore.

As far as publishing in English is concerned, there is a peculiar kind of notion on the part of most publishers that they cannot sell beyond a limited number of copies. This notion is unfounded. Quite a number of foreign publications sell in large numbers. It stands to reason therefore that potential readership is there. Only it has to be tapped.

Not only that, there is an odd kind of notion that books should be priced high, and if a few hundred copies can be sold, the publisher would recover his cost and then gradually would make some profit. This is a wrong way of going about the job. The fact of the matter is that our publishers have not shown that kind of enterprise whereby the economies of scale are taken advantage of.

To some extent, this is also linked with organization and structure of book selling in the country. Perhaps no sector of publishing is as poor in our country as book selling is. All kind of reasons have contributed to this state of affairs including the fact that there is paucity of finance. The government has hardly helped at any stage and things continue to be difficult therefore.

State of Libraries

The state of libraries in the country is also an important factor. While some educational institutions do maintain reasonably well stocked libraries, the system of public libraries is at a very elementary stage. The situation is better in some of the Southern states. Still it is far from satisfactory. Not only have we neglected the basic job of making every one literate, we have also not paid enough attention to the needs of the neo-literates. They need special kind of books. But the same are not being produced in the country. West Bengal has tried to do something in this direction but it has not succeeded beyond a point.

Extensive and professionally conducted book reviewing also contributes to the promotion and sale of books. This aspect of publishing has been grossly neglected in our country. Some of the Indian languages have made valiant attempts in this direction. But these attempts are as half-hearted as the ones made in English. Altogether this particular sector of publishing is not given the importance that it should have been given.

In order to make sure that books that people do read and that books do sell, a number of simultaneous steps would have to be taken. The more important of them have been referred to above but a few others can also be thought of. Experience in other countries of the world shows clearly that despite all that is claimed for it, the electronic media is more useful for entertainment than for education. All said and done, therefore, education will have to rely upon the written word. The close connection between education and publishing should thus be obvious. Both of them need to be strengthened and streamlined. At the same time, a network of libraries has also got to be established. It is only when the problem is approached from a variety of angles that we will have anything like success. ☐

Recent Trends in Social Sciences Literature

S.P. Agrawal*

Barring natural sciences, almost everything else attracting clear and logical thinking comes under the vast and ever-expanding umbrella of social sciences. The 'harvest' of recent publications emanating from this scientific thinking in our country bears comparison with the harvest we reaped in the first couple of decades of our Green Revolution before it reached a plateau. It is true that the social sciences 'titles' flooding the markets would prove that for the authors in this branch of knowledge only the sky is the limit. But it is also a timely reminder to the reading public that the blue canopy over our heads, called the 'sky' with all our romantic passion, is merely an optic illusion limiting our sights. Discriminating readers of the contemporary social sciences literature would notice that the harvest presented to them contains a massive quantity of chaff with but a few grains in them. It is almost like mining gold after wading through and sieving a lot of unwanted material. What we need is an academic non-partisan panel in each major publishing centre to act as a guide to publishers exhibiting tinsel goods at present. One is constrained to comment that this purpose is not served by a plethora of book reviews given to the people, having based them on whatever little comes to them by way of complimentary copies. Only the panel suggested here could perhaps give the hallmark of grades—like 'Agmark' on public consumption commodities—on each social science publication or even on other books brought out by publishers. But in our kind of set-up every panel so created will be in danger of being subverted by the various pressure groups—social, political, economic and bureaucratic. The result : back to square one. So we might just as well confine ourselves to a post-mortem of what we have.

As we do this, one of the first features about the recent social science literature attracting our notice is a plethora of books on women, who belong not only to the weaker sections of the society, but are also half the country's population. No wonder, they have the pride of place in any comprehensive shelf for social science publications. One such book is the revised and expanded version of '*Feminism and Nationalism in the Third World in the Nineteenth and early Twentieth Centuries*' by Kumari Jayawardena. According to the writer, except for China, in all the other countries chosen for the study, feminist issues hardly became the points of major debates within the anti-imperialist movements. While women in "the other countries" were used by male bourgeois leaders to add to their strength in their fight against the enemy, they were meant to go back to the kitchen as soon as the goals of the movements were achieved. What Jayawardene does not realize is that women's participation in the anti-imperialist movement marked the starting point in women's political participation. When the cause of women was let down, they were forced to resort to more effective means for their liberation. It should not be forgotten that this is what precisely happened in India during the liberation movement against British imperialism, and we are among the few countries where a woman could rise to be a prime minister. This is not to minimize the plight of women in India even today, but only to show that the writer has not done much homework, at least on India. The 268-page book costs Rs. 160.

In another book '*Speaking of Faith*'—a compilation edited by Diana L. Eck and Devaki Jain—several women have been brought forward for their action and greatness, many of whom had to be tested in the fires of injustice, but they have refused to be silent. There is yet another book '*The Wrongs of Indian Womanhood*' by Marcus Fuller, published originally in 1900, and re-published in Delhi in 1984. The book deals with the reality of child marriages and of the cruelty of 'enforced widowhood' inflicted upon a woman when she loses her husband. In many areas of South India, especially in the countryside, widows are still forced to shave their heads. Social ostracism is matched only by self-imposed austerity by widows themselves even if they are educated. The author talks of the lack of courage and "conviction on the part of young men who went overseas but on return "conformed" and married child brides to please their people as was then the accepted practice. But books such as this belong to what we would like to call another age despite some distant echoes that they might have even today.

These books on women, selected at random, do not contribute much to the present thinking or situations, which demand contemporary treatment and have to be updated in content. In '*Some reflections on Dowry*', the Oxford University Press has published a discourse by M.N. Srinivas on the occasion of J.P. Naik Memorial Lecture for 1983. The thought-

---

**Director, NSSDOC-ICSSR, New Delhi.*

provoking piece traces the history of dowry from the old custom of 'dakshina' as part of the ceremony of 'kanyadan' at the time of marriage, and goes on to discuss how it is an anti-social institution, which has influenced the presentday economic behaviour of couples having daughters among different caste groups. The author has suggested an all-out attack on the dowry evil by educating the people and the recognition by them that men and women are equal partners. But even this publication does not go far enough to include the presentday menace of bride burning. A thorough research on current evils is a *sine qua non* of progressive thinking, which must find more and more space in current publications on social science themes.

Take the case of sati—a burning shame in our present times. When the crunch comes, frantic efforts are made to save one's skin. Following the sati tragedy in Deorala village in Rajasthan, scapegoats were found to be much in demand. On whom will the chopper fall ? Everybody was seen passing the buck soon after the hapless young widow, Roop Kanwar, was burnt alive with her dead husband in her village. Long after the gruesome tragedy, the police and a few officials arrived on the scene and started proceedings against the girl's in-laws, but made no arrests. The mela had already started around the spot where Roop Kanwar sat on the pyre with her dead husband's head in her lap before she was set alight by her younger-brother-in-law. The question is : should social science publications focus light on current events or should writers put off these exercises for a post mortem from published documents 10 years hence?

As the latest discovery of the half-burnt body of a woman on the pyre of her husband in Kheda Misr village in Lalitpur district in Uttar Pradesh would show, the Deorala episode was not the last known sati tragedy in India. Social scientists are obliged to do the necessary field work to unravel the ramifications of social disasters perpetrated by heartless men of our own society, perhaps living next door. Apart from the official bungling in these tragedies, the role of women's voluntary organizations in big cities should be thoroughly discussed by social scientists. The story is doing the rounds in Delhi that when Roop Kanwar tragedy took place, for many days it never occurred to women activists in Delhi that they should rush to Deorala. Instead, their daily duty was to move from Speaker Balram Jakhar's house to Union minister Buta Singh's house to their own houses—to relax after their labours in air-conditioned luxury. To them, it was apparently pointless to rush to Rajasthan where some Rajputs were brandishing their naked swords in Deorala village in preparation of the 'chunari' festival.

What the society expects from the writers involved in social sciences in some degree of dedication to values. The latter have to face the challenge of social change, and social sciences cannot afford to remain aloof and objective. As it has been aptly said, those in social sciences have to take sides, and the side it should take is that of the proverbial underdog. This brings us to a publication, which deals with the *Challenge of Social Change*' and is edited by Orlando Fals Borda. Human beings, their aspirations, frustrations and capacity to mobilise are essential factors in the process of change, and, as the contributors to this volume suggest, participation in the decision making process is of vital importance. One of the writers here makes a sound contribution to the thinking process : "Each society should be studied on its own terms and modernization, or the need for it, is not inherent in all societies ; some societies develop according to their traditions and at their own pace without jumping on to the bandwagon of modernization." The social scientist has now been able to find out strategy to channelize frustration and tension so as to avoid or control unproductive conflict. Another contributor has described sociological intervention becoming more and more popular as "participatory action research". Action research groups have met with recognition and initial success in India too, with their "I know what you need" approach. This is the kind of books people in our country are looking forward to, and it is for social scientists and publishers, together, to make way for the books we need, not the made-easy-type of publications being served to us.

An example of some recent off-beat writings is provided by 'Literature, Social Consciousness and Polity' edited by Iqbal Narain and Lothar Lutze. It is a collection of papers presented at the VIII European Conference on Modern South Asian Studies at Talberg in Sweden in 1983 and published in 1987. These essays are based on the premise that a study of literature can enrich our understanding of the subtle interaction between the emerging consciousness and the prevailing political structure. They give us the understanding of resilience and change in south Asian societies. What should be appreciated here is that the focus is not only on the 'big few' but also on the numerous others who have played an important role in shaping the social texture through their responses to new ideas, structures and processes. Running through the essays is the common thread, which is the quest for national integration in the pull and swing of cultural pluralism in the region as a whole.

Another area, where we do not have enough purposeful writing is the one pertaining to development as a whole, particularly with reference to India. Our planning process started fifty years ago, when the Indian National Congress set up a panel with Subhas Chandra Bose at the helm of its affairs to produce what could be rightly described as India's First Plan. Though the British government in India could never be expected to follow it up, we still have the document, projecting the hopes and aspirations of freedom-fighters led by Mahatma Gandhi. In recent years, fortunately, we have had a number of remarkable contributions in this area, one of them being '*Development Planning—the Indian experience*' by Sukhamoy Chakravarty, published by Clarendon Press, Oxford, last year. The book deals with the experience of development planning in India over the last thirtyfive years. It explains the analytical considerations which went into the formation of the country's development strategy, initially chalked out by Nehru and Mahalanobis, and the modifications which were introduced in later years to keep pace with our experience. Dealing with the structure of our Five Year Plans and the problems of their implementation, this is probably the first book to provide a comprehensive review of Indian planning in the light of development theory and the many debates on planning that have been carried out in other countries. The present publication is an expanded and enriched version of Chakravarty's discourse delivered as the Radhakrishnan Memorial Lectures at All Souls' College, Oxford, in 1985. This excellent publication ends with an overall assessment, ending with the words : "If Indian society values growth with equity, as plan documents repeatedly emphasize, India has still a long way to go in adapting institutions and aspirations in that direction. Neither the recently discussed virtues of the free market mechanism nor the earlier panacea of central planning would appear to carry much conviction today. Societies grow in historical time characterized by irreversibilities, and history does not perform controlled experiments for our benefit. Hence the task for perspective planning remains to minimize avoidable social costs. However, the need for flexible adaptable operating mechanisms is very much there. Above all, there has to be a much greater degree of political consensus on what is attempted. India benefited from this in the first decade of planning. It is still greatly needed in the remaining years of this century. No facile conclusion is warranted" Based on this realistic note, there is enough room for worthwhile follow-up books on development in the near future to give the necessary perspectives to our planners, especially those associated with the Planning Commission.

Another book which merits attention here is '*Development Policy and Administration in India*', edited by Ramesh K. Arora and P.C. Mathur. It is a collection of original essays by well-known social scientists, compiled to honour Prof. M.V. Mathur. The subject areas include policy potential of social sciences, strategies and policies for agricultural development, patterns and policies for urban development, strategies of industrial development, public enterprises, energy management, university education, administration for nation-building, and a number of other allied topics.

Publishers and writers should know what the readers want to read, not what they, in their wisdom, think what is easy for them to bring out and to make them money-spinners at the same time. People now would like to know how best to tackle communalism to make India a truly secular state. A book like '*Communalism in Modern India*' by Bipan Chandra is one of those most welcome to readers as well as to our various libraries. The author differentiates between communalism and separatism. While separatism was only the last phase of Muslim communalism, the conflict now is not between the Hindus and the Muslims —as many assert—but between Hindu and Muslim communalism on the one hand and the secular nationalist forces on the other. Why do not political scientists get at the root of the problems ? Bipan Chandra says that the Indian National Congress followed the politics of compromise between the Muslim and Hindu communalists. As a result of this, the Congress could not launch a resolute struggle against communalism. No sustained campaign was ever started to educate the masses and to expose the real designs of the communalists. This weakness on the part of the main national party, says the author, gave ample opportunity to the communalists from both sides to strengthen their respective position. Bipan Chandra's book has been welcomed as a major contribution to the study of communalism.

A survey of recent social science publications also brings to light the subject of development of weaker sections. G.D. Kabra in his book, "*Development of Weaker Sections*" tries to explain why more than three decades of planning on the part of the government has failed to bring about any appreciable change in the condition of the weaker sections of the society. The relationships between the bureaucratic organization on the one hand and the beneficiaries on the other has been examined from the points of view of the various administrative constraints and theoretical assumptions. The 'segregation approach', which favours separate institutions for the weaker sections, and the 'configuration approach', wanting ways and means to make the existing institutions more efficacious have been analysed. The manner in which innovations are accepted by the people at the grass-roots has been examined by the author. The analysis of the socio-economic background of small and marginal farmers reveals that they find themselves unable to take advantage of the bank loans and other facilities because of meagre resources of land and animals, monsoon hazards, lack of irrigation supplies and scarcity of fodder for animals. The writer suggests that there should be steady improvement in the relationship between the officials and the beneficiaries, with a clear change of attitude on the part of the officials. A related book on rural poverty entitled *Direct Attacks on Rural Poverty : Policy, Programmes & Implementation*", by Prabhu Ghate tries to analyse some of the economic, socio-cultural and administrative constraints which come in the way of the anti-poverty programmes. Our experience is that unless the social science books are readable, interesting and useful, they stay in the racks only to be dusted every now and then. □

BIRLA INSTITUTE OF TECHNOLOGY

MESRA : RANCHI

(A Deemed to be University)

ADMISSIONS—1988

Bachelor of Engineering and B. Pharm. (4-Year) Degree Course

Entrance Examination for admission to (1) Bachelor of Engineering (4-Year) Degree course in Civil, Electrical & Electronics, Mechanical, Electronics & Communication, Computer and Production Engineering, and (2) B. Pharm. (4-Year) Degree Course in Pharmaceutical Sciences will be held on May 28 and 29, 1988 at the following centres :

Allahabad, Agra, Bhagalpur, Bhubaneswar, Bhopal,
Bangalore, Bombay, Calcutta, Chandigarh, Delhi,
Gauhati, Ghaziabad, Gorakhpur, Hyderabad,
Jamshedpur, Jaipur, Lucknow, Madras, Muzaffarpur,
Patna, Ranchi, Sindri, Trivandrum & Vijayawada.

provided sufficient number of candidates opt for the proposed centres.

Qualifications

For Bachelor of Engg. : I.Sc. or 10 + 2 or equivalent examination with Physics, Chemistry and Mathematics; for B. Pharm. with Physics, Chemistry and Biology. Maximum age limit 21 years on Ist October. THOSE APPEARING THIS YEAR AT THE QUALIFYING EXAMINATION ARE ALSO ELIGIBLE TO APPLY. Seats are reserved for SC/ST Candidates. The last date for receipt of completed application form is **31.3.1988.**

Application form can be obtained by post on pre-payment of Rs. 25/- by crossed Postal Order, payable to the Registrar, Birla Institute of Technology, Mesra, Ranchi. The request should accompany a self addressed and stamped envelope of size 26 cm. x 12 cm. bearing postage stamps of Rs. 1.80 P., clearly mentioning the Form required i.e. Bachelor of Engg. or B. Pharm.—as the case may be.

Indian Books on Science & Technology 1983-87

An Analysis of Library of Congress' 'Accessions List, South Asia'

Kamlesh Arora*
A.S. Rao**

Among several countries of the world, India has none too insignificant in place book production. It ranks 4th in Asia and 18th in the whole world. The total number of books produced by some of the leading countries of Asia and the world are given in the following table:

Rank	Country	Total No. of Books Produced
Asia		
1.	Japan (1983)	44,253
2.	Korea, Republic of (1984)	35,446
3.	China (1984)	34,920
4.	India (1984)	9,954
World		
1.	U.S.S.R. (1984)	82,790
2.	U.K. (1984)	51,411
3.	Germany, Federal Republic of (1984)	48,836
4.	Japan (1983)	44,253
5.	France (1984)	37,189
6.	Korea, Republic of (1984)	35,446
7.	China (1984)	34,920
8.	Spain (1984)	30,764
9.	Brazil (1982)	19,179
10.	Colombia (1984)	15,041
11.	Italy (1984)	14,312
12.	The Netherlands (1984)	13,209
13.	Switzerland (1984)	11,806
14.	Yugoslavia (1984)	10,918
15.	Denmark (1984)	10,660
16.	Hungary (1984)	10,421
17.	Sweden (1984)	10,373
18.	India (1984)	9,954

The figures given in the brackets are years for which the data is available. The source of information for the above table is the 'UNESCO Statistical Yearbook 1986'. The figures for U.S.A. are not reflected in the above table as the same are not listed in 'Unesco Statistical Yearbook 1986'.

Analysis

An analysis of the book production of a country is in a way a reflection of the efforts of that country to produce information and knowledge. With this premise, an analysis of the books published in Science and Technology during 1983-1987 in India has been carried out. The source for this which indicates the quantity and quality of book production in India could appropriately be the Indian National Bibliography. This is a monthly publication cummulated annually. But on account of production delay in bringing out the issues, it does not provide current data for statistical analysts. However the Library of Congress 'Accessions List, South Asia', lists monthly the acquisition of books produced in South Asian countries which are of interest to American Libraries to support programmes relating to South Asian studies. A fairly good number of books produced in a country are listed language-wise in the 'Accessions List, South Asia'. The books on Science and Technology form a considerable part of this list.

The main objective of this study is to indicate the total no. of Indian books published for the last 5 years (1983-1987), their distribution by subject groups and the U.S. interest in Indian books. The analysis restricts itself to books in the English language, as books in other Indian Languages in Science and Technology are few and far between. Secondary publications like catalogues, bibliographies, etc., Laws and Statutes, Reports of various adhoc commissions and legislative proceedings of S & T subjects etc., have not been included for the present study.

Methodology

Every issue of the 'Accessions List, South Asia' for

**National Science Library, Indian National Scientific Documentation Centre, New Delhi.*

the past 5 years was scanned and items listed there were identified and grouped year-wise and then under seven subject groups. The year-wise data is represented in the following table:

Year	Total No. of Books	S & T Books	% of S & T Books
1983	2736	477	17
1984	4074	629	15
1985	3360	462	14
1986	2827	383	14
1987	2490	415	16

The above Table shows total No. of books and Science and Technology books listed in the 'Accession List, South Asia' for the period 1984-1987. It also shows a fall in book production from 1984-1987 whereas the percentage of S & T books for these years has slightly increased. The above table has also been presented graphically in Fig. 1.

Books on Science & Technology which were produced during 1983-1987 have been grouped under various subject groups and the total No. of books for each group for the last 5-year period is also calculated. The above mentioned data is represented in the following Table :

Subject	Year					
	1983	1984	1985	1986	1987	Total
Science & Technology in General	13	56	26	14	19	128
Physical & Earth Sciences	48	92	65	81	76	362
Biological Sciences	48	92	83	73	39	335
Health Sciences	56	40	32	12	28	167
Engineering	105	132	62	53	61	413
Agricultural Sciences	126	146	156	115	103	646
Others	43	37	16	39	78	213

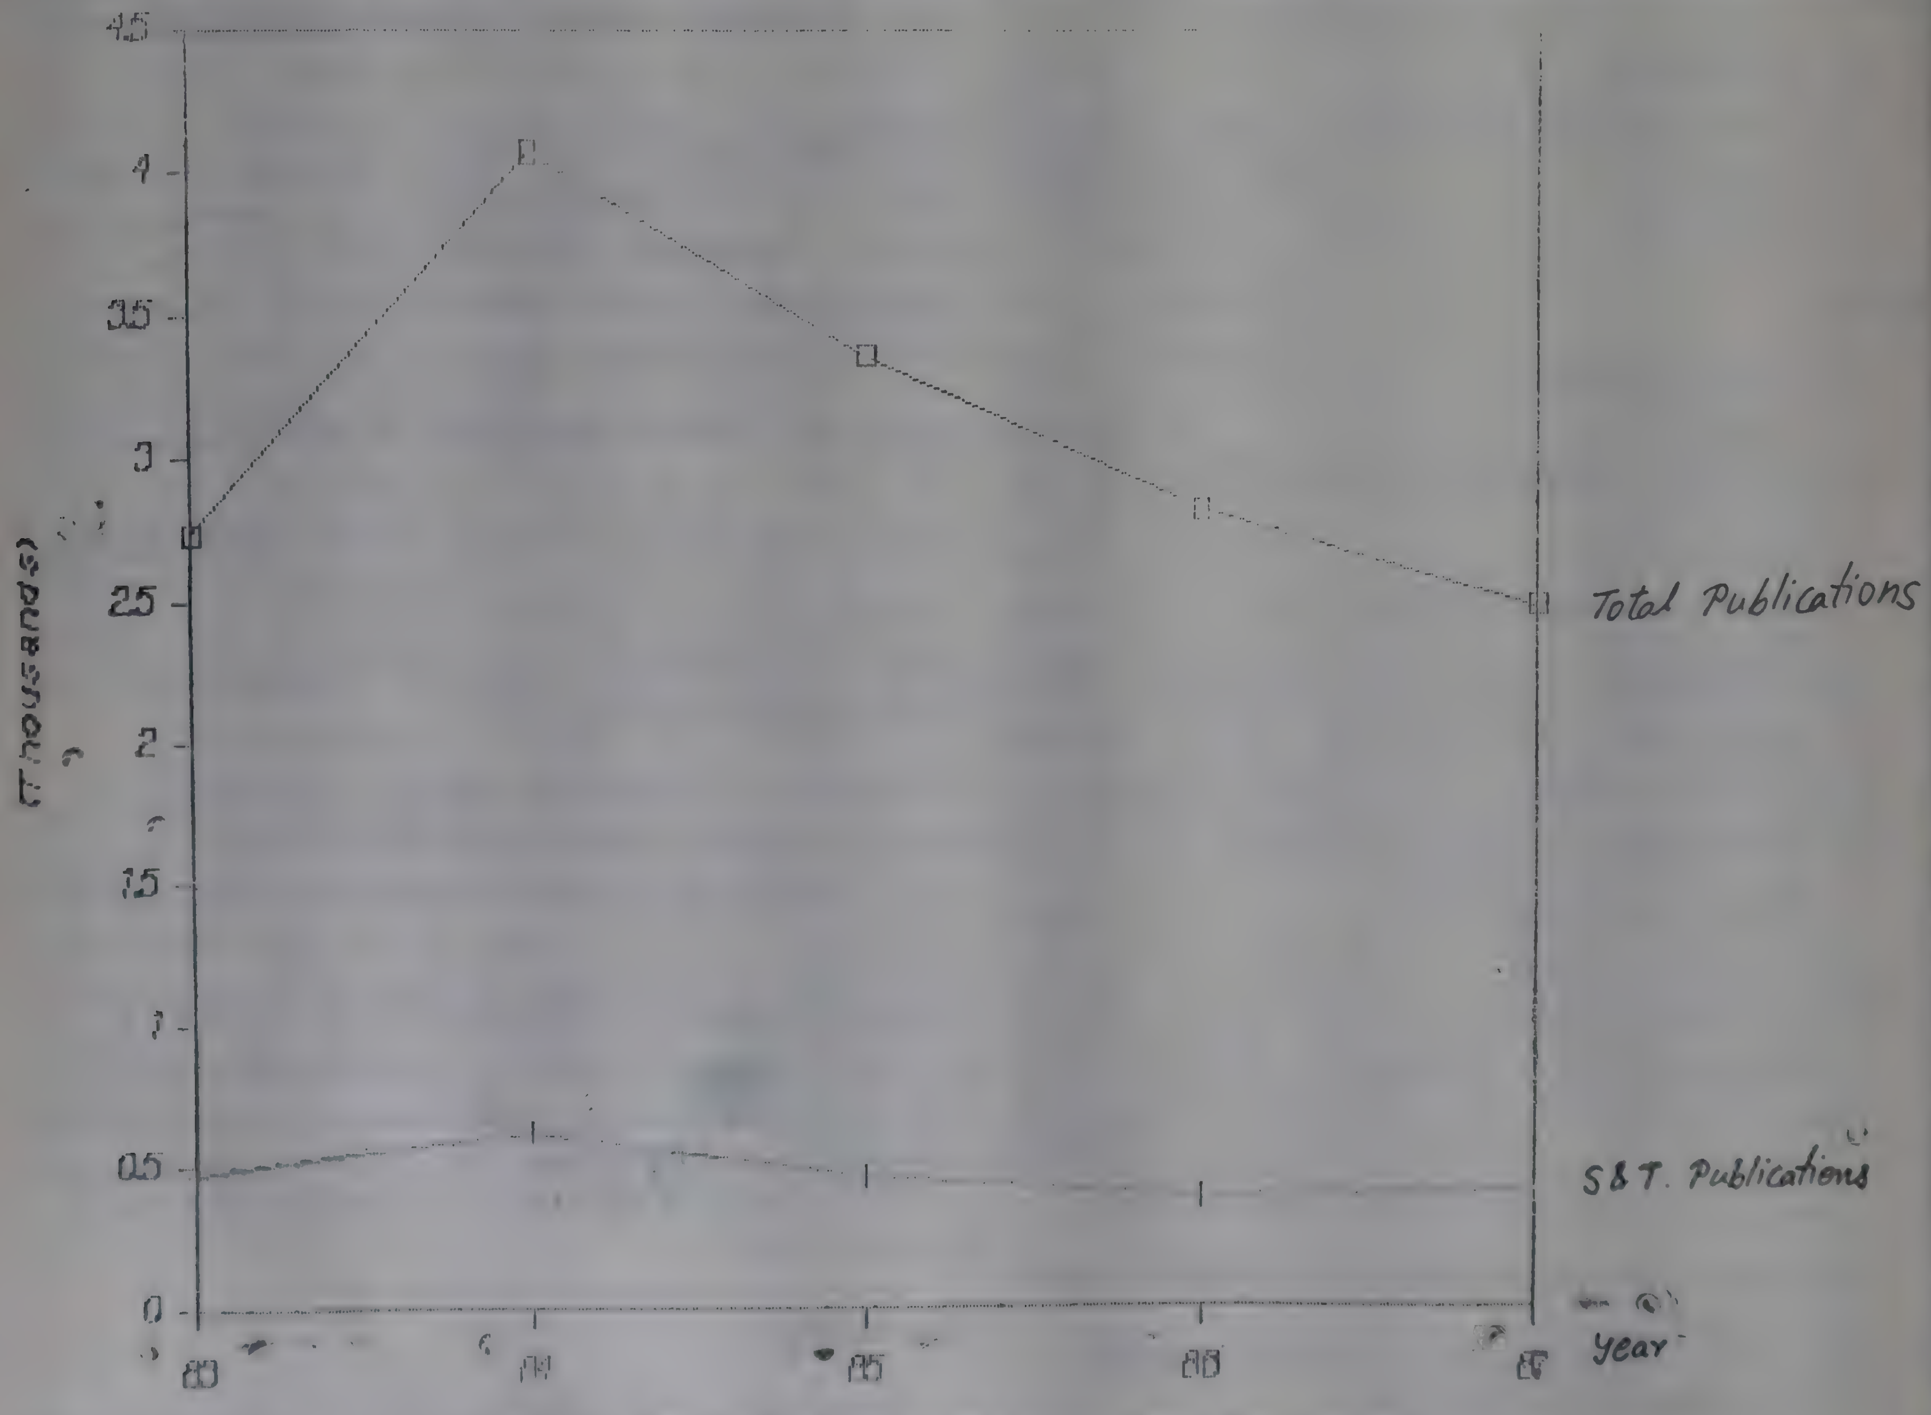

Fig. 1. Year-wise Breakup of Indian Book Production.

The above Table shows year-wise break-up of S & T books in 7 subject groups. Some subjects like Mangement, Rural and Urban development etc., which are accounting for a small percentage of total S & T publications have been grouped under 'Others' category. From the above Table it is clear that Agricultural Sciences are accounting for approx. 27% of the total S & T books, followed by Engineering books which account for 17%.

Observations

1. The study shows that the S&T publications form 15% of the total books listed.

2. Even though there is a fall in the total No. of books listed for the years 1984-87, the percentage of S & T books has slightly increased.

3. The Indian S & T publications are rich in Agriculture, Biological and Geological sciences.

4. Most of the S & T publications listed are about the resource mapping of India like flora and fauna of various regions, the mineral exploration, farming methods on various soil types and in different climatic conditions.

5. Although it is not reflected in the study we have observed that U.S. is also interested in procuring books on regulatory information of the Govt. of India and State Govts. from time to time on subjects like Wild Life, Forestry, Ground Water Resources, etc.

6. Some of the important S & T publications noticed during the study are given as a bibliography in Appendix 1.

APPENDIX I

Important Indian Books on Science and Technology published during 1983-1987

1. **Ali, Salim A.**
   Handbook of the birds of India and Pakistan : together with those of Bangladesh, Nepal, Bhutan and Sri Lanka/ Salim Ali and S. Dhillon Ripley.—Delhi : Oxford, 1983—xlii, 737p.
2. **Banerjee, Brojendra Nath**
   Bhopal gas tragedy : accident or experiment/Brojendra Nath Banerjee—New Delhi : Pacibus Pubs. and Dist., 1986—281p.
3. **Bhide, A.D.**
   Solid waste management in developing countries/A.D. Bhide, B.B. Sunderesan—New Delhi : INSDOC, 1983—222p.
4. Biogas handbook.—Pilot ed.—Bombay : Tata Energy Research Institute Documentation Centre, 1982—133p.
5. **Bose, Jagadish Chandra, Sir, 1958-1937.**
   Life movements in plants / by Sir Jagadish Chandra Bose—Delhi : B.R. Pub. Corp., 1985—x, 251p.
6. Computer simulation/edited by N. Seshagiri, R. Narasimha—Bangalore : Indian Academy of Sciences, c 1979—171p.
7. **Gopalachari, N.C.**
   Tobacco/N.C. Gopalachari—New Delhi : ICAR, 1984—327p.
8. Growing focus on Antarctica/edited by R.C. Sharma.—1st ed—New Delhi : Rajesh Publications, 1986—xxxiv, 286p.
9. **Heptulla, Najma.**
   India's progress in science and technology : continuity and change/Najma Heptulla—New Delhi : Oxford & IBH Pub. Co., c 1986.—xiv, 117p., [12]p. of plates.
10. History of astronomy in India/editors, S.N. Sen, K.S. Shukla—New Delhi : Indian National Science Academy, c 1985—525p.
11. **Iyer, K.V.**
    Pollution control in industry/K.V. Iyer, L.R. Kumar Delhi : K.V. Iyer Assoc., 1986—xvi, [503]p.
12. **Jaggi, O.P.**
    History of science and technology in India/by O.P. Jaggi: foreword by D.S. Kothari—Delhi : Atmaram, 1969.
13. **Kothari, D.S.**
    Atom and self/by D.S. Kothari—Bombay : Bharatiya Vidya Bhavan, 1983—xv, 58p.—(Meghnad Saha Medal Lecture; 1978).
14. **Maheshwar Dayal, 1915—**
    Energy today and tomorrow/Maheshwar Dayal—New Delhi : Publications Division, Min. of Inf. & Broadcasting, Govt. of India, 1983—102p.
15. **Menon, M.G.K.**
    Technology for progress/M.G.K. Menon—New Delhi : Training Division, Dept. of Personnel and Administrative Reforms, Govt. of India, 1983—34p.
16. **Mukherji, Visvapriya.**
    Jagadish Chandra Bose / Visvapriya Mukherji—New Delhi : Publications Divisions, Min. of Inf. & Broadcasting, Govt. of India, 1983—vi, 128p.
17. **Narlikar, A.V., 1940.**
    Superconductivity and superconducting materials/A.V. Narlikar & S.N. Ekbote—New Delhi : South Asian, c 1983—xi, 294p.
18. Profiles in scientific research : contributions of the fellows—New Delhi : Indian National Science Academy, 1986—2v.
19. **Ramanna, Raja, 1925—**
    A 15-year programme for nuclear power in India/Raja Ramanna—New Delhi : Indian National Science Academy, 1984—ii, 34p.
20. **Randhawa, M.S., 1909—**
    A history of agriculture in India/M. S. Randhawa—New Delhi : ICAR, 1980.
21. Science, development and environment/edited by V.P. Agrawal, S.V.S. Rana—Mazaffarnagar : Society of Biosciences, 1987—iii, 332p.
22. Science in India : 50 years of the Academy/edited by C.N.R. Rao, H.Y. Mohan Ram—New Delhi : Indian National Science Academy, 1985—142p.

INDIAN COUNCIL OF AGRICULTURAL RESEARCH

Jawaharlal Nehru Awards for Outstanding Post-graduate Research in Agriculture 1988

The Indian Council of Agricultural Research invites applications from post-graduate students who have obtained their Ph.D degree during the year 1987 in the fields of Agriculture/Animal Sciences (including Fisheries) and home science for "Jawaharlal Nehru Award for Outstanding Post-graduate Research in Agriculture-1988". There will be ten prizes of Rs. 5,000/- each for outstanding research work of the following nature :

"Which may have bearing on finding a solution to any important national problem in the field of Agriculture, which is likely to have an impact on increasing the production or improving the quality of any important crop for human nutrition or animal productivity or increasing the technological efficiency of any process of economic importance connected with agriculture".

Candidates shall be required to submit the following documents through the Head of the Institute from where the thesis has been obtained :

1. A copy of the thesis submitted by them for the award of the doctoral degree.
2. A certificate from the guide of the candidate for Ph.D degree stating the extent to which the work is the candidate's own contribution.
3. 6 copies of the synopsis indicating precisely and in concise terms the work done by the candidate.
4. 6 copies of the bio-data with complete address for correspondence with telegraphic address if possibles.

The certificate awarded to the candidate for Ph.D. degree may also be sent. There is no prescribed proforma for applying for this award. Each candidate will be judged on the basis of the originality and the applied value of the investigations as revealed in the thesis submitted by him. In all matters relating to the award the decision of the Council shall be final and no correspondence on this account will be entertained.

Application with complete documents as mentioned above addressed to Sh. R. C. Mishra, Dy. Secy. (A), Indian Council of Agril. Research, Krishi Bhavan, New Delhi-110001 should be sent so as to reach on or before **31st March 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep State/Union Territory in the North Eastern Region, Ladakh Division or J&K State and Sikkim is **15th April, 1988**. The award winning thesis will be retained by the Council for record. In case the application is not accompanied by a copy of thesis and the required number of synopsis and bio-data, the application is liable to be rejected at the screening stage.

Hari Om Ashram Trust Awards for the Year 1988

Nominations are invited for the Hari Om Ashram Trust Awards for the year 1988. Three awards of the value of Rs. 10,000/- each in cash or kind or both are given every year for outstanding original research, fundamental or applied including inventions, discoveries etc. leading to results of practical value in any field or subject within the purview of research in agricultural sciences, forest farming and social forestry and animal sciences (including fisheries).

All scientists engaged in research in the fields of agriculture, forest farming and social forestry, animal husbandry and allied sciences in India shall be eligible for the awards. The results of research achieved/

ontributions made during the five years preceding the year of the award shall only be considered for the wards. In the case of claims based on evolution of new varieties/strains, the final trials should have been ompleted within five years preceding the year of award.

Nominations can be made amongst others by Vice-Chancellors of agricultural universities or other uni- ersities having faculty of agricultural or biological sciences, Directors of Research Institutes including prin- iples of agricultural and veterinary colleges, Presidents of scientific societies, academies and heads of the rincipal scientific establishments in the country.

Nominations for the awards should be supported by a statement of work, achievement accomplished r performed by the candidate who is being nominated and a reasoned justification for the nomination ogether with reprints of publications or other supporting data.

The last date for refeiving nominations for the awards is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eartern Region, Ladakh Division of J&K States and Sikkim is **15th April, 1988**. Five copies of the nominations on he prescribed proforma for the award should be sent a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhavan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self addressed envelope in the size of 27 cm x 12 cm. Applications/nominations received without five sets of reprints of publications are liable to be rejected at the scrutiny stage.

Dr. Rajendra Prasad Award for the Best Original Standard Works in Hindi on Agricultural including Animal Sciences and Fisheries—1988

Applications are invited for Dr. Rajendra Prasad award for the year 1988 for standard original books/ manuscripts in Hindi on agriculture, including animal sciences and fisheries published/written between April 1987 to March 1988. Books written by more than one author can also be considered. Five copies of the books/manuscripts for the award may be sent in a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhavan, New Delhi-110001, latest by **31st March, 1988** in a prescribed form obtainable from him. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Region, Ladakh Division of J&K State & Sikkim is **15th April, 1988**.

In all matters relating to the award the decision of the Council shall be final and no correspondence on this account will be entertained.

Rafi Ahmed Kidwai Memorial Prizes for Agricultural Research for the Biennium 1986-87

Nominations are invited for the Rafi Ahmed Kidwai Memorial Prizes for Agricultural Research for the biennium 1986-87 carrying an amount of Rs. 10,000 (Rupees ten thousand only) in cash or kind or both, a citation and a certificate.

The award is given once in two years to Indian Scientists for outstanding research, fundamental or applied, including inventions, discoveries, etc. leading to results of practical value in any field or subject within the purview of research in agriculture, animal husbandry and fisheries, including agricultural, economics, agricultural statistics and nutrition. Only results of researches/contributions made during the five years preceding the year of award shall be considered for the award. It the case of claims based on evolution of new varieties/strains, the final trials should have been completed within five years preceding the year of award.

Nominations can be made amongst others by Vice-Chancellors of agricultural universities/general universities with faculties of agricultural or biological sciences, Directors of research institutes, including Principals of agricultural and veterinary colleges, Presidents of scientific societies and academies and heads of the principal scientific establishments in the country such as CSIR, BARC etc.

Nominations for the award should be supported by a statement of work, achievement accomplished or performed by the candidate who is being nominated and a reasoned justification for the nomination together with reprints of publications or other supporting data. In all matters, decision of the Council shall be final and no correspondence on this account will be entertained.

The last date for receiving the nominations for the award is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Region, Ladakh Division of J&K State & Sikkim is **15th April, 1988**. Proposals (in quadruplicate) on the prescribed proforma for the award should be sent in a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhavan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self addressed envelope in the size of 27 cm x 12 cm. Applications/nominations received without four sets of reprints of publications are liable to be rejected at the scrutiny stage.

Fakhruddin Ali Ahmed Award for Agricultural Research in Tribal Areas for the Biennium 1986-87

Nominations are invited for the Fakhruddin Ali Ahmed Award for agricultural research in tribal areas for the biennium 1986-87. Two prizes of the value of Rs. 10,000 (Rupees ten thousand only) each in cash or kind both will be awarded for outstanding original research carried out in the tribal areas in the field of agricultural sciences and animal sciences including fisheries.

All research workers engaged in research in agriculture, animal husbandry, fisheries and allied sciences in tribal areas (tribal areas for this purpose are those notified by the Ministry of Home Affairs, Govt. of India) shall be eligible for the award. The results of research achieved/contributions made during the five years preceding the year of the award shall only be considered for the award. In the case of claim based on evolution of new varieties/strains the final trials should have been completed within five years preceding the year of the award.

Nominations can be made amongst others, by the Vice-Chancellors of the agricultural universities or other universities which have a faculty of agricultural or biological sciences, Directors of research institutes including Principal of agricultural and veterinary colleges, Presidents of scientific societies, academies and heads of principal scientific establishments in the country such as Council of Scientific and Industrial Research, Bhaba Atomic Research Centre etc. Each nomination for this award should be accompanied by a detailed statement of work and attainments of the nominee and a reasoned justification for the nominations together with the reprints of publications or other supporting data. Also, a certificate of residence in the tribal area where the work has done obtainable from Head of the Institutes, should be appended. It is emphasised that the award is intended for recognising outstanding research carried out in tribal areas, and hence the scientist(s) concerned should have lived and carried out the research in any of the tribal areas notified by the Ministry of Home Affairs.

The last date for receiving nominations/applications is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Region, Ladakh Division of J&K State & Sikkim is **15th April, 1988**. Four copies of the nominations on the prescribed proforma for the award should be sent in a sealed cover marked 'Confidential' to Sh. R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhawan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self-addressed envelope in the size of 27 cm x 12 cm. Nominations received without four sets of reprints of publications are liable to be rejected at the scrutiny stage.

ICAR Awards for Team Research for the Biennium 1987-88

Nominations are invited for ICAR Award for Team Research for the biennium 1987-88. The award is given once in two years to interdisciplinary teams of research workers for outstanding research work in the field of agriculture including agricultural economics and statistics., animal husbandry and fisheries in the form of a scroll of honour and a medal to each member of the award winning team.

All scientists engaged in research in the field of agriculture, animal husbandry and fisheries sciences in India shall be eligible for the award. The award of each prize shall be made for notable and original inter-disciplinary research both fundamental and applied as reflected in books, monographs, papers or other forms of published account of outstanding research work, inventions or discoveries. In the case of contributions like new crop varieties or new breeds of animal at least 3 years' date on the performance of the strains will have to be provided. The results of research achieved/contributions made by the team should be during the five years preceding the year of award.

Nominations can be made amongst others by Vice-Chancellors of agricultural universities or other universities having faculty of agricultural or biological sciences, Directors of research institutes including Principals of agricultual and veterinary colleges, Presidents of scientific establishments in the country such as CSIR, BARC, etc.

Nominations for the award should be supported by a statement of the inter-disciplinary team work, achieved, accomplished or performed by the team which is being nominated and a reasoned justification for the nomination together with the reprints of publications or other supporting data. In all matters relating to the award the decision of the Council shall be final and no correspondence on this account will be entertained.

The last date for receiving the nominations for the award is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Ragion, Ladakh Division of J&K State & Sikkim is **15th April, 1988**. Six copies of the proposals on the prescribed proforma for the award should be sent in a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Krishi Bhavan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self-addressed envelope in the size of 27 cm x 12 cm. Applications/nominations received without six sets of reprints of publications are liable to be rejected at the scrutiny stage.

THE FUTURE OF THE BOOK

S.S. Murthy*
V.K. Rangra**

The book is the most powerful medium which has revolutionised the thoughts and ideas of man and has played a pivotal role in the religious, social, economic and technological developments in the world. It has been a convenient mode of preserving facts and ideas and making them readily available to millions of readers. In its physical form, as commonly known and used, it is the printed matter on paper sheets held together and protected by a cover. But in fact, it is much more than that. Book symbolises ideas, and thought processes which the author wants to convey to its readers. The book has undergone changes over years, in its content, presentation of ideas and its physical form.

History

Let us consider how the book has changed in shape during several periods of time. Man first started writing with his finger on earth but the necessity to preserve the writing made him think of using clay tablets. Thus we find that in ancient civilization, the Sumerians, Babylonians and Assyrians wrote on clay tablets. Some of the clay tablets from the library of Ashurbanipal of Nineveh are still preserved in the British Museum. The Egyptians brought into existence the roll form of book using the papyrus reed which abounds along the river Nile. The word paper had its origin in papyrus as the two products resembled each other. In the 2nd century BC Eumenes II, King of Pergamus finding papyrus hard to preserve, introduced leather or parchment. This writing medium offered both of its sides for writing purpose and being flexible could be folded and stitched for proper handling. The roll form of book whether of papyrus or parchment measured about 16 ft. The roll was held in the left hand and unrolled with the right. It was wound on wooden handles and fitted with title tags and storage cases. Plutarch stated that 200,000 book rolls were transferred from Pergamene library to Alexandria as a gift from Antony to Cleopatra. The Romans made further improvements by using smooth wooden boards coated with wax and hinged on thongs at the back so that they could close and protect the writing inside. This was called Codex—a Latin word for book.

The Chinese wrote or incised on animal bones or tortoise shells. Although inscriptions were made on bronze, stone and pottery, the direct ancestry of Chinese book is traced to bamboo or wooden slips and silk rolls. Indians in ancient and medieval period used plam leaves known as tala patra and bhuraj patra. After the death of Buddha, the Tripitaka was first written on palm leaves. A detailed description of bhuraj patra book called 'Punthi' was given by Alberuni in his travelogue. Ashoka spread the message and teachings of Buddha as inscriptions on pillars and stopas.

Many of the medieval books made in monasteries and royal courts were richly decorated and profusely illustrated. A ninth century volume of the four Gospels available in the Pierpont Morgan Library in New York, had 327 gems and raised figures of hammered gold. A sixteenth century book Hamzanama runs into 14 volumes and had hundreds of illustrations which were considered to be the best of the Mughal paintings.

The paper, the most popular medium came later. It is believed to be invented by a Chinese called Tsai-Lun in 105 AD and by the sixth century it was put into common use. A famous book of 868 AD, called Diamond Sutra which is presently preserved in the British Museum is a roll book made up of seven sheets of paper pasted end to end.

To John Guttenburg of Mainz goes the credit of inventing printing, who produced between 1450-1455, the 42-line Bible which was the first printed book in the world. William Caxton who set up shop at Westminster, printed the first book in England in 1477 entitled 'Dictes or Sayengis of the Philosophers'.

Present Scene

The present book on printed paper has stayed for quite a long time with its tremendous growth rate. Prof. Allen Kent has estimated that there are about 30 million printed books (titles) in the world since the times of Guttenburg. According to Verner W. Clapp the world publication has been doubling every forty

---

*Director, **Deputy Director,
Defence Scientific Information and Documentation Centre, Delhi.

five years during the last five centuries—doubling roughly three times as fast as the growth of world population. To overcome the problem of housing and transportation of the ever increasing bulk of printed matter and also to maintain secrecy in official records, the microphotography came into use to reduce the size of the documents. The first large scale use of microphotography was made for sending messages through pigeons as a carrier during the Siege of Paris in 1870. Through microphotography the book is miniaturised to take the form of microfilm, microcard, microfiche etc. A normal microfiche of size 105 mm x 148 mm i.e. A-6, contains 98 pages of text. An advanced version of microfiche called superfiche may contain as many as 1000 pages. A 100-ft microfilm roll holds about 1000 pages. A microcard may hold 100-120 pages of the original text. The micrographic material commonly known as microforms cannot be read through naked eye as we read books. Reading devices like microfilm/microfiche reader are to be used for reading them. Modern information centres depend more and more on microfiche as an economic means of document preservation and supply. The National Technical Information Service (NTIS) of USA, the largest holder and supplier of technical reports literature, has in stock over 1.5 million documents in microform. A number of publishers are bringing out their publications in microform in addition to paper form.

A new device in microprinting was evolved by George Davies and Hedda Wertheimer in which the normal print size is reduced to 10:1 and is printed on PVC paper. The standard reader is a pair of wide coverage binoculars. By this process the Oxford English Dictionary was reduced from 13 to 2 volumes.

The book changed its shape and form to meet the needs of special readers such as the physically handicapped. The book appeared in Braille which the blind use extensively. Sometime back a team of Yugoslav scientists invented a book that talked. It was based on the system of transferring sound to paper similar to the one used in making talkies. The reader moves a device which looks like an ordinary pen over the text, the optically printed lines, are transmitted to a photo-electronic detector whose signals are intensified and then transmitted to a loudspeaker, transistor or radio set as desired.

The emergence of other information technologies like those of computers, has added new dimensions to the form of the book. The computer because of its advantages of large storage capacity, high speed of retrieval, fast manipulation of data, and the portability of data to distant places through telecommunication networks, is now widely used as a medium for recording and retrieval of information. According to F.W. Lancaster who is the author of the concept of paperless society, the paper will cease to be the medium of storage and transfer of information and will be replaced by electronic media by the end of this century. A large number of journals and reference books are already being published in machine readable media. Almost all important indexing/abstracting journals are now available in the form of computerised data bases and can be accessed online i.e. through telecommunication networks.

Besides bibliographic databases, some of the full-text databases like LEXIS (on legal system) is available online. The World Book Encylopdaedia comprising ten million words is available online through computer network in Europe. Network subscribers in various advanced countries today have all kinds of books available on their home computers. The latest is Blind Pharoah a novel by Burke Campbell who spent 62 hours composing it on his Apple III computer and made it available immediately over an electronic network. The Oxford English Dictionary along with its four supplements comprising some 22000 pages is being put on the computer.

Video technology because of its capacity to simultaneously record picture and sound, became more popular for recording books especially the works o art. The video cassettes are ideally suited for this purpose because of their size which is almost the same as that of a book and their reading on TV screen through a Video Cassette Player (VCP). The H.W Wilson Company has brought out "American Storytelling" series in 8 video cassettes each of 30 minutes duration.

Recently another medium combining the advantages of computer and video technology with vas amount of storage capacity has come into use in the form of Compact Disc. A version of this disc, called CD-ROM (Compact-Disc-Read-Only-Memory) i getting more and more popular as a medium of storage and retrieval of information containing hig quality colour pictures and text. The common siz of a CD-ROM is 5¼ inches in radius and can carr about 30,000 pages of text. The CD-ROM system comprises the CD-ROM drive, a personal compute with monitor and keyboard and an optional printer The Domesday book of William, the Conqueror o the Great Britain has been put in a CD-ROM system in the Domesday project. It contains over 50000 sti frame pictures with complete map coverage of the Great Britain at 1 : 50,000 scale, text, moving film sequence and sound. Some encyclopedias such as Grolliers Academic American Encyclopedia (21 vols), McGraw Hill Encyclopedia of Science and Technology (1987 edition) (20 vols) and other publications with large volume of data are being published on CDROM.

We have now seen how the book has travelled from clay tablet (CT) to compact disc (CD) every time adding new features. After the invention of microforms the printed book continued side by side. The extinction of the printed book cannot be visualised in the near future. The conventional book will survive the onslaughts of the electronic media. All these new electronic media require intermediate equipment for reading which causes strain to the eyes if read for longer periods. The book on the other hand is convenient to read without any equipment (except spectacles for some people). It can be read in arm chair, bed or in journey, and several books can be used simultaneously and compared. The most important factor in favour of the printed book is the convenience in reading.

From the point of usage the books may be broadly categorised into three types i.e. entertainment, reference and educational. The entertainment part may be best covered by video/television, while the reference publications (encyclopedias, handbooks, journals, etc.) by computerised databases and the educational publications specially textbooks and light reading material may continue to be in printed form.

In the developing countries where literacy is one of the most essential requirements in the national development, low-cost educational material will be needed on a large scale. There is no dispute about the role of television network in the spread of education, but the importance of printed material for the classroom and for reading in leisure cannot be taken lightly.

Future

The printed book is not going to vanish in the near future. It is going to stay. It may not be necessary to print the book through the conventional letter press when more modern systems for computer-based composing, offset printing and desk-top publishing are available, which will reduce the cost of book production and improve its quality. □

THE FUTURE OF THE BOOK

T.K.S. Iyengar*

Introduction

The automated library, individually profiled journals delivered electronically on demand, word processing, SDI-profiling, key-wording, multiplexing, telefacsimile devices, cable television, electronic : mail, speech synthesis, artificial intelligence, interactive videodisk systems, automated translations, online access thru satellites, holographic media and robotics have all come. All of these innovations share in common, a technology centred around the computer and telecommunications industries and their abilities to provide communication through media other than print or paper.

Whatever happened to that paperless Society wherein several forecasts made that it would evolve during this decade ? Certainly, Desktop computers have become more powerful, and useful, less costly, and more widely used. Inspite of these the paperless society has not come about. On the contrary, paper consumption has increased because most people still want to view and distribute computer-generated information on a hard copy. The traditional view that paper is an ideal medium for working with and transporting information still prevails. In the following pages an attempt is made to focus attention on future of the book and its survival despite the onslaught of the electronic media.

Development of Electronic Media

The rapid developments in the fields of electronics and telecommunications have changed already, and will change more, the way in which information will be generated, stored, distributed and used. The availability of relatively cheap electronic equipment for producing and consuming information, like word processing and type setting equipment, microcomputers, viditext, and the like and at the moment—more expensive ones like videodisk, will not only influence the way people get their information, but also the daily operations at the work floor and the Library. Library workers will have to learn to use the new tools, how to integrate them into their work, how to benefit from them. They will be confronted with user (un) friendliness of hardware and software, with (the lack of) standardisation in these areas, cost/benefit analysis of what they buy and the problem of choice which software on which machine with which information will best suit their short term needs, how does this choice fit in to the still going on new developments ? An immense task in the field educating people of these new tasks lies open.

While it is impossible to deal with the entire range of electronic media products, the following few may be considered as representative samples and they are briefly described here : optical storage; Data on Diskette/CD-ROM; Printing and Publishing Technologies; Desktop publishing; Electronic Composition and Micropublishing,

Optical Storage

The last two years have shown a tremendous development in the technologies of optical storage. A tidal wave of publications exists on these matters and the unsuspecting reader is likely to be baffled by the terminology in use—DRAW, WORM, CD-ROM, laser disk, etc. Are these mere slogans or do they really mean something ? Here is given a brief review of the current technology and then to concentrate on the possible uses of CD-ROM in libraries and documentation centres with some emphasis on those in developing countries. The future CD-ROM may even eliminate on-line access. We can forget about satellites and telecommunications when laser written CD-ROM database on silver diskettes are available.

Optical media can be divided into two main Classes : Digital and Analog. Further, there are three sub-classes for each main class : read only, write-once and erasable. With these distinctions every sort of optical medium can be classified as follows :

(a) **Read only Analog Disk** : These media, frequently called laser videodisks, are as such the oldest form of optical storage. The most common use of these disks is in the home-video market, although there are some sophisticated professional applications. An

---

**Librarian, Indian Institute of Science, Bangalore.*

example of the latter are the products of Laser-Data, which are published by companies such as Information Access Company, Bowker, LSSI etc.

(b) **Read only Digital Disks** : The best known example of this kind of disk is the compact Disk (DC), already well penetrated in the home audio market and now starting to become a candidate for mass storage of digital data (Compact Disk Read only Memory, CD-ROM).

(c) **Write once Analog Disks** : These disks are currently only used by products of video disks for mastering purposes, and are therefore irrelevant within the present context.

(d) **Write once Digital Disks** : These are disks which are often called by ominous names such as WORM or DRAW (write once Read many and Direct Read After Write) or ODDD (Optical Digital Data Disks).

(e) **Erasable Disks** : At the moment there are no commercial applications of erasable disks, although the industry is working hard to conceive the product. The predictions are that in about three years time they will be on the market. In contrast to the media mentioned so far, the erasable disk makes use of a form of a magnetic storage of informations; laser raises the temperature in the magnetic layer, thus changing the reflection.

Applications of CD-ROM in Libraries and Documentation/Information

Several applications of CD-ROM technology are on the market, and more are being developed or are in a test phase. Many applications are notably in the area of (bibliographic) databases. To give the reader an idea a short list of such applications is presented here.

Datexy produces a corporate information database. Digital Equipment Corporation (DEC) has brought several databases on the market (subsets of compendex, such as, aerospace engineering, electrical and computer engineering, chemical engineering; subsets of NTIS, such as, computers, communications and electronics; environmental health and safety etc.).

Silver platter, a well known company in this field produces psyclit, Eric, Pais, Embase, LISA etc.

Library Corporation has introduced bibliofile, a MARC—database with 1,400,000 records for catalogue-production.

Access Innovations together with Silver Platter introduced the NICEM-database (National Information Centre for Educational media), now known as A. V. online.

Whitaker has a test copy of British Books in print ready.

Derwent, together with the French company DARC have submitted a proposal for a database of chemical formulas on CD-ROM to the EEC.

The examples mentioned above are clearly in the field of database publishing. The list can be extended without effort to a much longer one, and now projects are being announced every month.

The application of Brodart Corporation is of a completely different nature. They have developed an online public catalogue which can be easily consulted with the aid of a 10-function keyboard.

Of course, a patriarch of the CD-ROM applications also exists : the Grolier Encyclopaedia. Very recently Sanshusha Publishing Company in Tokyo produced a dictionary of Science and Technology on CD-ROM in the Japanese, German and English languages.

Economic Viability of CD-ROM Applications

On the face of it CD-ROM seems to have made it. Nevertheless one can have doubts as to whether the above mentioned examples are economically viable for the library and information market. After a closer and careful look at what they really offer by way of their usefulness, it can safely be concluded that the CD-ROM is only suitable for larger libraries with a fairly healthy budget though it is obvious that the Lepac option could be a very serious competitor for the traditional COM-catalogue.

CD-ROM Vs Future of Book

What are the advantages of databases on CD-ROM for libraries and documentation information centres ? By the look of it : not many. The information presented is incomplete, because it is confined to a restricted field of Science and to a couple of years of publications, always missing initial investment in hardware amounts to several thousands of dollars. In short one has to conclude that CD-ROM is a freak of fashion.

However there are some reasonable applications in combination with online access, as opposed to instead of online access.

A library that performs many searches on online databases has the opportunity to prepare the online search with the aid of a CD-ROM version. In that way there are no communication-costs. If the search with the profile can be edited and stored the 'real' database can be searched online with this profile. The result : a very short, and therefore cheap search with fairly good results. A thorough cost-analysis will establish if this kind of application would be profitable for the institution. The online public access catalogue will also require a very thorough cost benefit analysis.

The other applications such as the encyclopaedia and the dictionary are not so subject to time. Such publications do not demand revision every month.

Data on Diskette

Commercially available data on diskette has become available only in the past few years. It does not appear to be used widely and may be used only as a temporary alternative between the current choice of online access by time-sharing or the future choices of laser disks. At present, duskettes provide useful alternative for database access.

For most of us, "online searching" is synonymous with accessing remote databases through time sharing systems. Our definition of searching is being broadened by improvements in data storage and the availability of microcomputers. Laser disks now allow us to store large databases locally without the problems associated with maintaining files of byte size. But commercial laser disk systems are still exceptional and expensive. As we wait for laser disk technology to mature, a familiar storage medium, the microcomputer diskette, will allow us to experiment with maintaining and searching commercial databases in house.

Commercial databases in diskette format have a number of advantages over the traditional dial up access format. These advantages include :

* Elimination of connect costs of time sharing systems.

* Accompanying software that allows extensive manipulation of the data or are designed to run with standard spread sheet and database management programs.

* Ability to purchase multiple copies for a nominal cost or make additional copies through licensing agreements. Multiple copies allow the data to be distributed to users.

* Database segmentation or taking a piece from a larger database. This reduces the need to down load information through dial-up systems.

Their disadvantages include :

* Limited storage capacity of the diskettes. The double sided IBMPC diskette, for example, holds about 350,000 bytes (roughly 100 typewritten pages). Of course, multiple diskettes can be loaded on to microcomputer hard disks.

* The need for IBM compatible microcomputers since most data on diskette is only for IBM equipment.

Desktop Publishing

Desktop publishing is a phrase coined by Paul Brainered of Aldus Corporation, publishers of Page Maker, the best selling page layout program for personal computers. A desktop publishing system consists of a personal computer using a program that allows you to display text and graphics elements on the screen, edit and move the different elements around, and print them out on a dot-matrix or laser printer. Most systems make use of laser printers, hard disks, and some use special scanners that convert drawings and photographs into digitally stored immages that can be incorporated in the document. The final print out is used as a camera-ready master for duplication. Some graphics shops use the laser output as a proof sheet before the master is type set on a Linotronic or other typesetting machine. Because the results are so impressive and comprehensible to computer novices and experts, this application has given rise to a new market for the computer industry.

Nobody talks much more about the paperless society, even with the increased use of computers. Printed material is still the most common means of communications for many organisations. You and your library will be judged by the reader of each brochure, letter, or memo, exclusive of content.

Librarians know the substance is not lacking in what they publish, but sometimes the form needs more enhancement. If you want to be remembered in a positive way, you can't send out an important report printed on a dot matrix machine. Until this year daisy wheel printer was acceptable, but now the ente has been raised; people expect laser output for quality work. If you print down loads from sessions in draft format, consider the impression the same material will make if it looks typeset. An expensive report from a consultant carries more weight if produced on a laser printer. It is not claimed that it will take less time to write than a document produced the old way, but it will print more quickly and have more impact on your client, or the reading public.

Micropublishing—Microfilm/Microfische Technology

Changes in publishing methods were foreshadowed by the promoters of the project Intrex at the Massachusetts Institute of Technology. In all probability the major publishers will be able to supply copies of most of their publications in Microform and it is highly likely that this form will replace book acquisitions. They also predicted that journal publishers would publish reprints of articles using the microfiche medium. Libraries, it was thought, would buy these microform reprints only of the articles they wanted and would not continue to bind and retain complete volumes of learned journals. Hardware Microfilm/Microfische readers are available. This has to be related to users psychology.

Fascimile transmission online, based on computer access to micro-form, would be the norm. Obviously we have gone only some of the way along with this route. No economical method has been found to interconnect machine based library systems so as to provide guaranteed rapid access to the full text of documents by electronic means. There are some monograph publications available in printed paper formats with microfiche editions as the alternative. Secondly, some new publications appear only in microform. Thirdly, some reprints appear only in microform. Fourthly, there are some periodicals available at choice in microfiche or paper. Fifthly, there are journals with the full text available only on microfiche. Finally, there are online services retrieving from abstracts in computer storage and some of these have source document capability retrieving from microfiche storage. If we look at each category of micro publications to be found in libraries, we can discuss the merits of each for particular purposes. Yet the print media remains.

Impediments in the Use of Electronic Media Products

Technology diffusion may be hampered by more than one factor : industrial secrecy, military secrecy and the high cost of technology acquisition are wel known factors. New design and production ideas developed in small firms may remain unknown—except in a small circle because the entrepreneurs, especially in developing countries, may not have the experience, or the whereto promote and disseminate the know-how Users of technology regardless of their geographica location, level of development, and particular needs are often found to be unaware of the existence and/or the value of technological knowledge that can be of practical use. This may be partly due to the inadequacy of the information handling systems and partly due to the potential users not being adequately prepared to make the best use of the system and services. And often users lack confidence in the technological information systems, sources and services.

The technological information services available suffer from the exclusiveness in that it may be largely oriented to meet the needs of the elite group of Academic specialists or those using sophisticated or capita intensive technology, etc., leaving out the needs of th rural/urban poor of developing countries. This facto becomes all the more important in the context of th current reorientation of development programmes to the disadvantaged sections of the society.

A worrying feature of the current scene is that wor on programmes and data resulting from computer activities in different institutions are not, in many instances, compatible. The need for standardizatio commands urgent attention. It is unlikely that our wel established book holdings and printed records will b profoundly affected in a short time.

Indian Scenario

Like many other countries and regions of the world India is also experiencing profound change in its scientific, industrial and cultural life as a result of the introduction of the computer and related informatio technologies.

Right from the very beginning modern technolog seems to have been developed for the developin countries. In most cases the technology is only used i the developing countries after a few years, unfortunately often in the form of 'castoffs'. For this reason seems necessary to pay some attention to the potentia advantages of CD-ROM for developing countries. CD

ROM will be highly effective especially in a country ike India. Why aren't our computer manufacturers/PC abricators bring in this technology? What all we need s a disc drive suited for CD-ROM optical discs. So many databases are available in CD-ROM silver platten laser discs. We can cut down cost of telecommunication links of accessing these databases for which CD-ROM discs are available. Why should we invest money on getting SDI-Tapes when they are available on CD-ROM? Institutions such as NISSAT, UGC should do some rethinking on this. Online access, that too dedicated line, is very costly for our country. When the same is available in CD-ROM. Sometimes one gets a feeling that what we do in Indian Information Science is academic exercise only and not service oriented.

Taking a necessarily broad view of the problems facing developing countries in the field of information technology, the following list will be applicable.

(a) Infrastructural problems, such as, lack of good communication facilities; a badly working telephone network, no access to satellite communication etc., even if we want to.

(b) A shortage of skilled labour, in the traditional fields of library and documentation as well as in the field of computers and telematics; no suitable storing facilities for documented information. Lack of coordination between Computer Scientists and Librarians. In other words, more hardware oriented computer specialists would like to take up library jobs.

Information Needs of Developing Countries

D.M. Davies in an excellent article deals with the phenomenon of appropriate information technology. He says amongst other things that developing countries do not have a need for access to the large database from the developed world because the local literature production is not incorporated in these databases and the language in use is not the language of the country itself.

Many projects on information, including in developing countries, have failed because the technology was not adopted to the needs and possibilities of the country. There are however possibilities to introduce modern technology in developing countries provided.

1. It is based on the true needs of the country.
2. It is built from the bottom upwards, which means concentrated on what is available in the right language and there are trained personnel available.

If the picture sketched in the preceding paragraphs is matched to the CD-ROM technology the only conclusion that can be drawn is that developing countries, in particular have to be very careful in introducing this technology, not only because of the costs involved but especially because of the information contents of the products announced so far. There are, of course, possibilities regarding local database production and distribution (*cf.* the Lepac-option of Brodart). A very thorough cost benefit analysis has nevertheless to be made.

It would therefore be a very sensible step if within the framework of UNISIST, one or more trial projects would be set up to test the capabilities of this technology for the developing countries. Only in this way can the true merits of the CD-ROM technology be tested objectively.

On the Survival of the Book

Since at present the printed book can reach a large audience, far larger than any of the new technologies, perhaps this is a good and legitimate use of the printed word. It is difficult not to be sympathetic to this defence. It is not an argument whether to use candles or electricity. It is estimated that over 90% of the capacity for generating, communicating and utilizing information and knowledge, especially in the fields of science and technology, rests with a small number of technologically and industrially advanced countries (some 30 countries with over dollar 8000 per capita income and sharing 35% of the world population burden) and, therefore, developing countries (about 20 countries with less than dollar 500 per capita income and sharing over 60% of the world population burden) have to purchase the knowledge and know-how in the form of books, periodicals, reports, patents, training, expertise and commodity imports : that is, Third World countries have operated at no less a disadvantage even in terms of the traditional information system. It might equally be argued that with the growth of satellite communications this planet will be more equitably spanned.

It has to be noted that the technology and applications of CD-ROM are still in their infancy though the child is growing rapidly and is clothed more and more in ready-to-wear garments. The problems arising from the many incompatible formats of video-tapes and recorders are being avoided in the field of CD-ROM through the energetic standardization activities of the parties involved. Compatibility seems to be warranted. A price decrease might be a result, though it is not very likely in the first two years.

Libraries and Information/Documentation Centres need to be very careful, however, in embracing this new technology. Profound investigations into the relative costs and benefits should be carried out before any decision has to be made. Let us look at the following table :

The Book	Computer Data Bases
1. Relatively low density of data storage.	1. Higher density of data storage.
2. Very portable except in large numbers.	2. Portable, but needs careful handling.
3. Will survive most environments, although life depends on quality of paper, binding, etc.	3. Subject to deterioration and even erasure in some environments.
4. Can be read without intermediate equipment (except spectacles).	4. Needs additional equipment to convert to format suitable for human reading
5. Can be read in an armchair, a desk, in the bed, or wherever convenient.	5. Ease of reading depends on this equipment and its accessibility. Reading must be conducted in an upright sitting position at the computer terminal unless printed text is generated. Computer terminals must be connected to other equipment and are not generally regarded as portable comparing two or more data-bases or parts thereof, the mains flicking between two sets of text on the screen.
6. Several can be used simultaneously and compared.	6. The ease with which this can be accomplished depends on the system.
7. Can be scanned in order to judge whatever is covered in the following few pages, and to review the plan of the book.	7. Additional terminals would naturally facilitate readier comparison. Scanning is possible, but usually must be sequential and thus can be slow.
8. Diagrams and illustrations can be used to amplify and elucidate points.	8. Diagrams are sometimes available with graphic facilities, but picture cannot be faithfully reproduced.
9. Can be a work of art, with both a tactile and visual appeal.	9. Computer terminals are distinctly limited in this respect. All efforts at improving display of text are rooted in functionality.

Also, there has been relatively little progress in the areas of statistical and linguistic analysis of natural languages for meaning. There have been some advances in automatic indexing but there are no theoretical structures formulated yet characterising words and their interaction with context to the extent that parapharasing may be computed. Computers are not yet equipped to deal with meaning. Now then, what do we do when scripts of several languages are involved. Software technologists have to do this home work rather than writing books on programming.

Conclusion

The literature generally reflects the conclusion that conversion to paperless systems will require society to be more resilient. Has computerization produced a new vulnerability for society? And are individual members of society able to absorb large disruptions without grave and lasting societal consequences ? The answer to this question is that modern societies, at least the United States, appear to be resilient and adaptable to the new technologies. Hence the electronic media at least for the present may not be suitable to developing countries, especially India.

Specification for an ideal information storage and retrieval device —it should be portable, able to function in any environment, require no power supply and be immediately usable with no warm-up; it should have high information storage capacity and retain the information indefinitely without degradation or possibility of accidental erasure; file access should be instant and random and it should be possible to mark up, annotate or make manual corrections to text.

There is no electronic media which meets this specification, nor is there likely to be in the foreseeable future. On the other hand, there is a non-electric device which fully meets the specification and has done so far over 500 years, since the invention of printing, that is, of course, the book. ☐

LIBRARY OF THE FUTURE

S.M. Dhawan*

Presently libraries are passing through an exciting phase of transformation under the impact of information technology. The machine readable databases, online retrieval, microforms, amazing storage capacities of CD-ROM disks, etc. are some of the key contributions which have had their impact on library services. Libraries in UK, USA, etc. are adopting new technologies for developing information dissemination systems, and providing services unimaginable, impractical in the past. Although the impact of new technology is not seen as much in India, the libraries are in for a change and cannot escape its onslaughts. If the trend continues what kind of transformation will it bring about in the decades ahead. Whether electronic publishing will replace the book, whether machine readable databases will replace abstracting services, whether libraries would still exist as warehouses or become active information centres, or what changes will new technology bring about in users' information seeking behaviour. These and many more such questions are boggling the professionals, planners, and thinkers in the field.

In order to visualise the future of the library let us first look into the applications of information technology, viz., computers, telecommunications, micrographics, and reprographics to the library field.

Online Services

Online information retrieval systems, which first came into existence around 1970 with the introduction of RECON (Remote Control) system by NASA (National Aerospace Scientific Agency) in USA, demonstrate the tremendous potential computers hold for libraries. Retrieval through computerised databases, the counterparts of abstracting and indexing services, had proved so useful that within a span of 10 years the number of databases rose to 400 and of online service including RECON to 59. By 1987 the total number of databases is estimated at 3369 and of online services to 528. Online database industry owes this fast growth to advantages inherent to online retrieval systems. They are tremendously fast. Computers have the capacity to search relevant information from a large store of bibliographic data in seconds. They eliminate physical handling of bulky volumes of printed abstracting and indexing services and also eliminate the labour of personally visiting the library many times. A computer search is more comprehensive and accurate. Computers provide more access points than the corresponding abstracting services in print format. The retrieval software provide boolean logic facility which is unique to computer systems and unimaginable in a manual search approach. It is useful in improving precision and recall in information retrieval. Online services allow users to retrieve information from remote terminals however far they may be located from the central processor. The printouts are neatly produced according to desired format without errors which normally occur in reproducing references manually. It is a lot cheaper to obtain information online services than assembling libraries from a scratch.

Networks

Advances in telecommunications have opened up entirely new vistas in information dissemination. The mix of satellite and computer technologies have produced communication networks which have made long distance communication, across countries, a reality. The most commonly used networks are ESANET, EURONET, TYMENET, and TELENET. There are still many more. It is through such networks that communication link is established between online vendors such as DIALOG, BRS, ESA/IRS and the remote terminals located across different countries. Broadcast transmission has added yet another dimension to information dissemination by introducing teletext services whereby text and graphics stored in a computer database are displayed on television screen. The information is broadcast on television channels. But it is only one-way communication intended for wide public use, carrying information of broad public interest. Its typical examples are Teletext (India), Ceefax (UK), Oracle (UK). Using telephone lines

---

**National Physical Laboratory,*
New Delhi-110012

interactive information service, called videotax, has also been introduced successfully. Like teletext, videotex also shares a common database but it is much wider in scope and volume. A user gets connected to the computer database on his telephone line. Unlike teletext he can call any page on his television screen. A typical example of videotex is Prestel (UK). It contains vast amount of information on topics ranging from business interests, tourism, travel, weather, governmental information to recipies. Prestel also has a 'Gateway' system which puts a user in touch with external databases using its Prestel terminal.

Electronic Publishing

The information technology has also affected the publishing industry. The publishers have started using computer-based-text processors for editing and producing camera-ready copies in order to bring about efficiency and quality in their productivity. But these developments pertain to paper based publishing industry in which paper is the prime medium of message. However information technology has provided an alternative to printing the text. It is now held as computerised data and distributed as electronic mail. Would-be-user views the text on a VDU and takes out a printout, if necessary, on a local printing device attached to the VDU. Input to, and output from an electronic mail can be also from word processor or facsimile machine. However the transmission of electronic mail requires a telecommunication network. Videotex is also a form of electronic publishing because it allows a user to retrieve information from 'electronic reference book' which otherwise is known as computerised database. Even the databases such as INSPEC, NTIS, COMPENDEX, CA SEARCH are considered as the electronic abstracting journals of Science Abstracts, GRA & I, Engineering Index, Chemical Abstracts respectively. Instead of reading a page here the user retrieves a particular reference using the retrieval software.

Microforms

In addition to micropublishing media (the combination of computer, telecommunication and display technologies) progress is being made in the use of two other media for publishing as well as information storage : microforms, and video tapes and discs. Microforms offer a convenient method of storage, retrieval, and display of images recorded on microfilm or microfiche. A 6" x 4" microfiche card can store 60 to 13000 images depending upon the reduction ratio deployed. They provide the much needed answer for storage problem. Video tape and video disc are also compact storage media. A vedio disc is such a compact storage medium that two copies of the entire Encyclopedia Brittanica (44-million-word text) can be stored on one $5\frac{1}{4}$" disc. It offers a totally new capability for users of small personal computers to have personal ownership, direct access, and control of massive databases.

Document Delivery

Information technology has been applied to document delivery. Documents are distributed either as electrically coded images, as computer print-outs, or as computer produced microfilm. The distribution of documents on paper is aided by high quality, fast xerox machines. The electronic methods use telex, teletex, facsimile transmission.

Library of Tomorrow

It may be observed that information technology offers new ways to store information compactly (examples are magnetic storage, microforms, video discs); new facilities for rapid transmission over long distances (examples are TYMNET, TELENET); and new capacities for manipulation of data on computers. Declining costs of computer hardwares and proliferation in softwares are increasingly making computer technology within the reach of small libraries. Comparing with the past we find that libraries are now better equipped to organise, manage information systems, to overcome storage problems, geographical and language barriers to communication, problems of information scatter, multidisciplinary nature of information, information explosion and information overload. Obviously information technology has contributed a great deal to libraries. One may also conclude that library development is linked to developments in industry, and library future will therefore depend upon new strides coming forth in information technology.

Basically transformations in library functioning are anticipated in following areas :

—media of message communication ;

—technical information processing ;

—information dissemination ;

—compact storage devics ;

—new management approaches such as organising library systems, information dissemination systems, coordination and cooperation in sharing resources ;

—faster document delivery systems;
—new focus in library education;
—new library building designs;
—new user approaches to seeking using information;
—new preservation activities.

Lancaster had predicted "we are already close to the day in which great science library could exist in a space less than 10 feet square". Dr. Raj Reddy in his convocation address at IIT Bombay visualised the possibility' of an 'electronic library' where it would be possible for anyone, anywhere in the world, to reach and read any document at a cost less than a cup of coffee. Does that mean that the book in print format will disappear ? Deniel J. Boorstin, Librarian, Library of Congress discussed this issue in his report 'Books in Our Future'. Examining the new trends he concluded that "technology is not a threat to the book" but cautioned that "we must enlist new technologies with cautious enthusiasm". Continuing further he warned that it would be fatal to take, extract, remove book from our lives. But luckily it is impossible because of enormous investments which libraries, institutions, and individuals have made in books. The basic characteristics of books offer even more compelling reasons to expect the book to remain a "fertile resource" in the decades ahead. The convenience of book, its independence of outside power sources, its unique individualism, its mobility, and exportability are not likely to be replaced. If electronic publishing and electronic mail systems have threatened the existence of book in print format, computerised databases have threatened the existence of secondary journals. A study conducted for the International Council of Science Unions—Abstracting Board (ICSU/AB) in this regard concluded that online services have so far had negligible effect on sales of print products but there is a great uncertainty about the possible impact in next five to ten years. National Federation of Abstracting & Indexing services (NFAIS) was equally concerned about the future of abstracting services. It reported in its study a decline in the subscriptions of printed products of abstracting services, but observed that this decline is not due solely and primarily to the availability of parallel online databases but to many economic factors. It points out that print and online services have independent markets and there is no couse-effect relationship between the two as it normally appears to be. One may conclude that printed products of secondary journals would have a place in future. Even going by the past experience one may also draw the same conclusion because new technologies have generally served to facilitate our life, change our life style, but they hardly replaced the existing ones. For example microfilm did not repla ce printing; telephone and telegraph did not replace personal communication; typewriter did not eliminate handwriting; the railway, the car, the aeroplane did not supersede the human technology of moving around.

A new style of library functioning is therefore percieved. Inhouse library functions and procedures will be performed on computers; the card catalogues replaced by database; more retrieval from online services; greater emphasis on coordination and cooperation between libraries; growth in conceptual and communication networks; greater use of library resources; greater capacities for meeting user demands; greater clientele; better, effective and efficient services. Library collection would be a mix of printed products, video products, computer files, and microform products; greater emphasis on acquiring, using, sharing, storing documents on microfilms, videoforms. Library education would have revised curriculum, more emphasis on new technologies, new skills. Above all, the profession would gain respect, recognition, and due place in society. Emphasis in professional duties and responsibilities would shift to online searching; assisting users in the exploitation of information resources; more of document delivery; developing databases for local materials; selecting and indexing portions of literature from a highly specific point of view; improving intellectual accessibility of information resources; assisting, developing, promoting conceptual networks for resource sharing; advising on databases, indexing policies, procedures, vocabularies, searching strategies, etc. Computerised databases would become useful tools for research in bibliometrics, scientometrics, literature analysis.

In addition to printed products, video products, microform products, the library of tomorrow would possess equipment and devices such as computers, online terminals, teletex machines, fax machines, video players and display systems, microfilm reader-printers, photocopiers. It would command interactive communication facilities for transmission of data, text, graphics.

In a nutshell, new technologies will add on new facilities, and the existing ones would also continue. It is the user who will decide which facilities would flourish more than the others.

The library of tomorrow would become an information center in true sense and its guiding principle would be "information (and not the book) is for use". ☐

BIRLA INSTITUTE OF TECHNOLOGY

MESRA : RANCHI

ADMISSIONS—1988—M.B.A. (2-Yr. Full-time & 3-Yr. Part-time)
M.C.A. (3-Yr. Full-time & 4½ -Yr. Part-time)
Post-Graduate Degree Course

Applications are invited for admission to the following Post-graduate Degree programmes for the academic session commencing August 1988.

(i) M.B A.—(Master of Business Administration)
2-Year Full-time Course and 3-Year Part-time Course.

(ii) M.C.A.—(Master of Computer Applications)
3-Year Full-time Course and 4½-Year Part-time Course.

Admissions will be made through an Entrance Examination which will be held on Sunday, May 29, 1988 at 9.00 a.m. to 11.00 a.m. for M.C.A. and 1.00 p.m. to 3.00 p m. for M.B.A. at the following Centres :

Allahabad, Agra, Bhagalpur, Bhopal, Bhubaneshwar, Bangalore, Bombay, Calcutta, Chandigarh, Delhi, Gauhati, Ghaziabad, Gorakhpur, Hyderabad, Jamshedpur, Jaipur, Lucknow, Madras, Muzaffarpur, Patna, Ranchi, Sindri, Trivandrum and Vijayawada.

Centre for PART-TIME Course will be at Ranchi only.

Eligibility

(i) For M.B.A. (2-Yr. Full-time) course : University Degree with atleast 50% aggregate marks in Arts/Science/Commerce and 60% marks for graduate in Engineering/Technology/Agriculture.
(ii) For M.B.A. (3-Yr. Part-time) course : Same as of (i) above and further the candidate must have two years experience in supervisory capacity in any firm or organisation of repute.
(iii) For M.C.A. (3-Year Full-time) course : University Degree with atleast 50% aggregate marks, with Maths, or Statistics as one of the subjects at the Degree level.
(iv) For M.C.A. (4½-Year Part-time) course : Same as of (iii) above, and further the candidate must have two years experience as executive in any firm or organisation of repute.

22½% seats are reserved for SC/ST candidates.

Those appearing at the various qualifying examinations are eligible. The selected candidates will, however, be required to produce the qualifying examination result by the end of August, 1988.

Application forms can be obtained by post on pre-payment of Rs. 25/- only by crossed Postal Order, payable to the Registrar, Birla Institute of Technology, Mesra, Ranchi. The request should accompany a self-addressed envelope of size 26 x 12 cm. affixed with postage stamps of Rs. 1.80 paise, clearly mentioning the form required i.e. MBA or MCA—as the case may be.

The last date for receipt of completed application form is **April 10, 1988**.

LIBRARY OF THE FUTURE

A POINT OF VIEW

Sewa Singh*

Introduction

To try to make prediction is quite an unrewarding activity, hence waste of time, but at the same time, it is difficult to resist the temptation too. Having accepted the invitation to speculate on the appearance of library of the future, an attempt is made in the following paragraphs to peep into the years to come, though fully aware that the likelihood of its being wrong may be greater. This is because we base our prognostications on the past, which is otherwise considered to be prologue to future, but past itself being imperfect and incomplete not much of the future activities can be based upon past.

Impact of Technology on Libraries

It is an acknowledged fact that the new technology has already had its impact, *inter-alia*, on libraries in the western world. They are becoming more and more information-conscious society where information is regarded as a powerful resource.

As a result of extensive computer application in almost every human endeavour, the American librarians visualise 'library-in-a-desk' and the 'paperless information system'. According to Taylor, the time is not far off when, with further technological developments, the traditional concept of the library will 'wither away, their historic duties done'. Now these are very bold predictions. One might immediately conclude that by the turn of the century in the year 2000 the libraries and librarians will be completely redundant. Lancaster, however, believes that this will be possible because online terminals are increasingly being used in the libraries. The users are also, particularly in the west, buying their own terminals and they will not have to come to the library of tomorrow physically. He feels that the library may be by-passed as an institution and may remain only as archive of the printed records of the past.

Many libraries in the western world have already introduced computers and automated some of their house-keeping jobs such as cataloguing, serials, circulation, acquisitions, etc.; some are in the process of automating these operations : while many are taking into account the socio-economic considerations and feel that incentive for change must come from the users. Nevertheless, there is no denying the fact that they have gone a long way in this direction.

They have already produced substitutes of the conventional book, that is, new form of documents such as microfilm, microcard, microfiche, etc. These collectively are known as microform publications.

The computer and the other like-machines have relieved the librarians of the routine jobs like preparation of the order letter, issuing reminder, issuing chaser, etc. which consume lot of time when prepared manually. The computers have obviously saved that much time which could well be utilised for intellectual jobs.

Thus the tools of the new technology such as word processors, mini and micro-computers, very large scale computers, have displayed great potentialities in fast storage and retrieval of information. These have revolutionised the concept of storage of information during the last 20 years or so and are proving a boon to the librarians in reducing the pressure of space which has been a major problem. This is, however, necessitated by the changing information scenario where the users need information quickly for immediate consumption.

Another major impact of the new technology has been in the area of information transfer. Here, communication technology has great potentialities and it has achieved impressive results in recent years. Further, satellites can also be used for the fast transfer of information from one end to the other. Many computer-based document delivery systems have also been developed for quick supply. The online bibliographic databases have further enhanced the possibilities of quick and easy access to the documents. Through online searches the concept of universal resource sharing has become a reality. The libraries now need not acquire everything, they can rather, through the

---

**Reader & Head, Department of Library and Information Science, Guru Nanak Dev University, Amritsar.*

computer network, depend upon the resources of other libraries.

Similarly, there are non-interactive systems through which information could be transferred to the VDU or the television screen.

Meanwhile, electronic databases have also been developed all over the world. So much so that some databases have also been developed especially for libraries which can either be searched by the librarian or the user. We can therefore agree with Lewis that 'librarianship of the databases is coming'.

Another major development of the new technology is the 'electronic journal' and other 'electronic publications'. The printing industry is already adapting to changing technology. By making use of microfiche synoptic journal publishing is becoming popular which gives only synopsis or extended abstracts of scientific articles. Microform publications have become commonplace. In future, however, authors, particularly in S & T, can send their text directly through their PC or the terminal to the publisher; and time will not be far off when electronic dissemination of information could be made possible. The Third Wave of Alvin Toffler thus begins a truly new era—the age of the de-massified media as described above. So both generation and dissemination of information electronically will usher in the 'paperless information system' in the society of tomorrow.

Changing Face of the Libraries

As a result of the application and transfer of new technology to the libraries, there will be a total face-lifting. The computer and other technology is not being applied as an end but as a useful means to provide more efficient and effective services and enhance the credibility of libraries among the users. In the years to come there is likely to be a more demanding and much more knowledgeable body of users. They would be more information-conscious. The computer will be used not as panacea, but as a tool for quick retrieval and supply of information not only from the sources of one's own library, but also from a neighbouring library. Here, computer networking will come to the aid of librarian as well as user. He can even enter into a dialogue through his terminal with the computerised information system of the library and ask for any information he is interested in to be displayed on the screen of his terminal.

The library of the future will have in its store talking books, sound recordings, video cassettes, films, floppy discs, microfiche, microcards, biochips, etc. The catalogue of these libraries might be stored on optical disc. The librarians of tomorrow would provide information on how to use collections by tape recordings and voice synthesisers. The stacks will not be manned by the attendants, rather by Robots who would collect and reshelve materials on the stacks. Robots might also be put in the circulation section for issue and return of the documents. They might even serve as janitors and control the entry and exit points.

These would change the face of the library of the future completely as it would be transformed into an electronic library. In such a library the users might not be received with the mysterious 'Mona Lisa' smile; they would instead feel the cold of the machines all around.

Library Scene in India

During the last 40 years the total population of academic, public, and scientific and technical libraries has increased rapidly. There are about 160 university libraries, about 5600 college libraries, hundreds of public libraries, and the number of scientific and technical libraries is also reasonably good. They are also following modern library techniques in order to give better library services to their clients.

The Indian librarians have also started to catch up with the new technologies. The use of computers and other electronic gadgets in some scientific and technical libraries is being attempted. Such organisations as BHEL, INSDOC, BARC, DRTC, NAL, SENDOC, NISSAT, SAIL, TISCO, etc. are making use of computer technology. Some of them are also collaborating with international organisations for creating their own databases.

The reprographic technology has already made a big impact in information transfer and document delivery system. Most of the S & T libraries and university libraries possess reprographic equipments and supply photocopies of any document to the users.

Many S & T libraries have gone a long way from the traditional services to the latest services in the form of computerised bibliographic services like CAS, SDI, etc. Some of these libraries have been automated a couple of their house-keeping jobs like circulation control, serials control, acquisition, production of current awareness. services etc.

INDONET is already there and the National Information Centre is to develop ASIANET soon. The potentialities of INSAT-1B are also being planned to be reaped for improving the computer networking.

Limitations

There are some obvious limitations in spite of the picture as portrayed above. These are : (i) insufficient manpower to handle the new situation and new environment in the libraries. Library and Information Science education in India though changing, is not upto the mark regarding the imparting of knowledge about new information storage and retrieval techniques; (ii) lack of computer culture, and even lack of library culture. Without developing satisfactory library culture, a computer culture can not be evolved; (iii) we also have financial constraints. There are costs of installation, providing terminals and peripherals, cabling, air-conditioning, maintenance, materials, and so on.

But this is not going to stay for ever. In future times, skilled manpower will be made available. Library culture and computer culture can also be created and developed so as to make the library a catalyst of social and technological change. We have already borrowed and adopted such American cultural symbols like the jeans, bubblegum, discotheque, rock 'n roll music, fast food, aerobics, etc. This indicates that no matter how the traditionalists try, there is no stopping the tidal wave of this kind of western culture.

Conclusion

Indian librarians are also not averse to the change and the impact of computer technology, etc. on libraries. The fact that they are thinking and talking of new technology indicates some change in attitudes. They really want to equip their libraries with modern equipments, the boon of new technologies. And quite recently, the Indian Library Association for its 33rd All India Library Conference had fixed "Modernisation in Libraries" as the theme for the Seminar, which amply demonstrates the need of the hour. As we prepare ourselves to be ushered into the new century we need to give new shape, new look to the services in the libraries of the future in the light of the techniques heralded by advances in new technology. □

UNIVERSITY OF DELHI

LIST OF THE UNIVERSITY PUBLICATIONS

Sl. No.	Name of the Book	Author	Price
1.	Naturalistic Ethical Theory	Dr. V.K. Bhardwaja	Rs. 35.00
2.	Politics and Prejudice	Sh. O.P. Bakshi	Rs. 45.00
3.	Surat and its Trade in the Second Half of the 17th Century	Dr. O.P. Singh	Rs. 50.00
4.	Social Conditions in 18th Century : Northern India	Dr. Pushpa Suri	Rs. 58.00
5.	Self-Determination from Bifra to Bangladesh	Dr. J.N. Saxena	Rs. 25.00
6.	Some Contemporary Meta-Ethical Theories	Dr. Ved Prakash Varma	Rs. 45.00
7.	Control Over Public Corporations in India	Dr. Ramesh Chandra	Rs. 90.00
8.	Patriotic Songs on Bengali Literature	Dr. Gita Chattopadhyay	Rs. 65.00
9.	Export Marketing on India's New Manufactures	Dr. Sri Ram Khanna	Rs. 240.00
10.	Shah Abdul Latif and His Times	Dr. S.M. Jhangiani	Rs. 140.00
11.	Concept of Welfare State	Dr. M.M. Shankhdhar	Rs. 60.00
12.	Red Signal to Smokers	Dr. D.K. Rao	Rs. 32.00
13.	Second Languages English	Dr. Syngle	Rs. 35.00

SANJAY GANDHI POSTGRADUATE INSTITUTE OF MEDICAL SCIENCES (SGPGI)

Post Box 375, Lucknow, India 226 001

SGPGI is being developed as an apex (tertiary) referal centre for superspeciality medical care, post-graduate education and organised basic and clinical research. The Institute has been chartered to function as a University and centre of excellence for providing medical care, education and research of high order, such as is available in few centres in the country.

This project is conceived to evolve in phases. In the first phase six specialities are being developed : Neuro-sciences, Cardiac-sciences, Renal-sciences, Gastroenterology, Endocrinology, Genetics and Immunology. These six specialities would start functioning by March 1988, with an envisaged 300 beded hospital by the year end. The capacity of the hospital would expand to 600 beds by the year 1990 and to 1800 beds by the end of the third phase.

Each speciality is being developed as a comprehensive centre combining medical, surgical and basic sciences disciplines. In addition departments of Pathology, Microbiology, Radio-diagnosis, Nuclear Medicine, Radiotherapy and Anaesthesiology are developed to provide necessary support to all the specialities. The main hospital and ancillary services are being equipped with the latest and modern investigative facilities. Clinical, experimental and basic research will be an integral part of each department.

The Institute will provide post-doctoral training to medical and non-medical doctors. In case of medical doctors the training will lead to the degree of DM or McH in respective areas. Besides, the Institute will enrol students for Ph.D. programmes and also provide training facilities in nursing and medical technology in speciality areas.

The guiding force behind the spirit of the Institute is the moto that : 'Research enhances vitality of teaching, teaching lifts the standards of service and service opens new avenues of investigation'.

LIBRARY OF THE FUTURE

D.R. Kalia*

One may wonder whether techonological development would affect the resources and services of the Library of the Future. In so far as the philosophical *raison d'etre* of the library as a social organism is concerned, no change is likely to occur. A library shall for all times to come continue to have its main objective of making the sources of knowledge available to the user for his education, information, recreation, aesthetic appreciation and research.

No technological development in the field of electronics and satellite communication can supplant the virtues of a book. The so called Electronic Book shall never be able to replace the book, primarily because of the convenience of its use. The book can be easily carried and read anywhere, any time, without any aid. An electronic book which has not yet been marketed, will have a capsule of the size of corn which may contain upto 500 pages of the text of a book and will be activated on a portable Reader. The text will be read on the screen of the Reader. For the use of the electronic book, the light will have to be subdued during the day when there is bright sunshine. Whether such a book could be conveniently read in an aeroplane, a train or a bus is yet to be experimented with. The video-cassette projected on a TV screen is no substitute for a book either, because of its immobility.

It might astonish some to know that widespread use of radio, cinema, TV and video-cassettes have in no way reduced the incidence of use of libraries. They have no doubt encroached upon the time of the student for study at home. However, the first phase of the craze for TV and video-cassettes seems to be over, as much less time is being spent on this source of entertainment, both by children and adults. The VCRs are being sparingly used in homes. Sometimes they are not used for weeks together and those who possess them regret having bought them. A retired person whose vision and hearing are not impaired may be viewing TV or video-cassettes for long hours. But this is not of much consequence as they were spending only a part of their leisure time on reading and that has not ceased.

The paperless library envisioned by some is nothing but a flick of imagination. Convenience of use of a book is going to prevail for all times to come. A synthetic material may one day be used in place of paper but book is going to retain its present physical form. This is what commonsense would suggest.

Illusions of Computerisation

There is a widespread belief that computerisation of library operations is a panacea for all the ills afflicting the libraries. No. computer has yet been invented and equipped with imagination. It has only a memory. What distinguishes the Hemo Sapiens (Human beings) from other species is their intellectual curiosity, congnitive faculty and their ability to communicate through articulate languages. These capabilities of a human being cannot be taken over by any other species or a man made machine. Computer can do what it is instructed to do but instructions are the product of human mind. The computer only carries them out. The errors that one can commit manually, are also committed while putting in the data and it has to be counter-checked by a human being even after the computer has detected and rectified the errors. Computer is only a time saving device with greater accuracy. It certainly adds to efficiency but not in every situation.

The components of a library are physical plant (building, furniture and equipment) and reading material. Library staff is a physical link between the reading material and the user. Library management is meant to optimise the utilisation of human, material and financial resources possessed by a library. A computer can certainly help in automating the procedures involved in book selection, ordering, cataloguing, serial control, circulation and recovery of overdue books. In addition, it can generate subject bibliographies, documentation lists and retrieval of stored information either online or through a printout or both.

No computer can exercise judgement in selecting books, nor can it find out the subject of a book. This is to be done by the library staff. If the profile of a reader and his needs are fed into a computer, it can only match the material with the needs. But it can exercise no judgement in the choice of titles. The

---

**Editor, CLIS Observer and Director, HKM State Library, Government of Orissa, Bhubaneswar-751001.*

matching is done by the computer mechanically either through the keyword or the descriptor or the class number. Whatever material is available will be listed or displayed on the terminal. The choice will still be exercised by the reader himself as to what is relevant to his needs.

All catalogue entries are to be made by the librarian according to the cataloguing rules through the terminal. Cataloguing rules cannot be put into the computer in the form of instructions as it cannot exercise judgement in the application of the rules.

The librarians are taking as much time to classify and catalogue a book in computerised processing as they did while doing them manually. But once the Main Entry is fed into the computer it can automatically generate further entries by author, title and subject. This is where a tremendous amount of time and labour of the library staff is saved.

I have myself been fiddling with computers since 1968. Once we got the computer facility, we discovered that most of the cataloguing entries were substandard and each book had to be recatalogued and until that was done manually, we could not make use of the computer facility. It was also discovered that many Class Numbers had been wrongly assigned and if there were five copies of a book, each had been placed under a different Class Number. Rectifying the class numbers of a large collection was a herculean task in which the computer was of no help. Yet another problem was to match the class number with the descriptors and prepare class index entries. Though the computer could do it but very detailed study had to be made. The books were all the time on the move and to locate them amounted to weighing the frogs. Many books had been stolen or sent up for binding or were overdue or withdrawn from circulation. It was impossible in an open access system to locate each and every book on record for rectification and rewriting of booktags.

After putting in all the date in computer about books found missing and taken as stolen, books sent up for binding, books withdrawals from circulation and books lent out, we could still not find a large number of books, because the readers had hidden them in different places and there was always a time lag between the reader hiding it and our locating it through shelf rectification.

Identifying, whether a particular book is available in the library, with the help of a computer is one part of the job, but how to make it available to the reader is another. The efficiency of a library is judged by a reader by the time taken in making the book available to him and not by simply identifying it through the computerised catalogue. Computer is of no help in locating a book physically.

In the case of index entries of articles fed into the computer, so long as those pertained to library holdings the article in demand could be located. In case, we did not have it, it took too long a time, to get it from other sources. This exasperated the reader. We also discovered that comprehensive subject bibliographies did not satisfy the reader, because a large number of the titles included in them were not available in our library and we failed to borrow them from other libraries as inter-library lending in India was not well organised. The readers made a mockery of our preparing subject bibliographies and documentation lists.

We also discovered that after having computer facility, we could not reduce our staff and the amount of money spent on computer, its maintenance and operation was extra and it was much more than what we had anticipated. When we had our own computer, the problem was in finding and retaining a good programmer, who had become a scarce commodity.

In case, we depended upon the services of a centralised computer facility, most of the time its services were not available or it was out of order or electricity supply had failed. It took too long to train the library staff in computerisation and once they acquired the skill, they deserted us for better opportunities.

My purpose in pointing out all these difficulties is not to decry the use of computers but only to caution the overenthusiasts. They should go in for computerisation and bibliographic databases only after they have set their house in order. There is light but only at the end of the tunnel. They should first rectify the class and catalogue entries before going in for computerisation. To start with only large libraries should opt for it and the smaller ones should have a centralised computer facility. It is of no use computerising circulation system in a library where number of books lent out per day is very small. Similarly, computerisation of book selection and acquisition is of no use in a library with a small annual intake of new books. It is better to share a common computer facility for these purposes, if one exists.

If any evaluative study is made of all the libraries n India which have gone in for computerisation, one would have a mixed reaction about the virtues of computerisation of library operations. Writing articles on computerisation and delivering speeches is much easier than making a success of computerisation in a library. There are many slips between the cup and the lip than what a novice would think of. Without pre-planning one might burn his fingers and may even incur displeasure of the user.

The author and the publisher are the producers of books; the library is the preserver and promoter; and the user is the consumer of the end product. These three constitute the trinity of knowledge industry. In the trinity library is the Kingpin as it provides a wide and stable market for books. The bookseller is part of the marketing process.

The library of the future is not going to be hurt as much by technological development as by quality of writing, book production and its pricing. Ninety per cent of the hard cover are purchased by libraries, because the books are so highly priced these days that only a few individuals can afford to buy them. Library budgets are not worked out on the basis of the number of volumes to be added in a year. To absorb the inflation, the number of volumes to be acquired in a year should be multiplied by the current average price, and that would determine the book-budget of the library. But the actual practice is to make an adhoc provision, without taking into account, the number of volumes to be acquired and their cost. Consequently the libraries are buying fewer books, whereas the demand for them is on the increase with the spread of education, expansion of knowledge and emergence of new disciplines. Most of the libraries are failing to keep their runs of back files up-to-date for paucity of funds.

In fact, the real danger lies in the phenomenal increase in the cost of library service. The price of every element (building, furniture, equipment, books, journals and staff salaries) has spiralled so high that even developed countries are finding it difficult to maintain their libraries at optimal level of adequacy. The developing countries are in a much worse situation.

Conclusion

The library of the future is not going to be basically very different from what it is today. This makes its position secure. It may acquire new dimensions with improvements in printing technology, printing material and automation. New technological developments will promote the use of printed word but not supplant it. ☐

COLLEGE OF NURSING

CHRISTIAN MEDICAL COLLEGE & HOSPITAL

LUDHIANA, PUNJAB-141 008.

Applications are invited from candidates for the following course commencing in July, 1988. Prospectus and application forms may be obtained from the Principal, College of Nursing, Christian Medical College and Hospital, Ludhiana, 141 008 on payment of Rs. 30/- bank demand draft made out to the Christian Medical College & Hospital, Ludhiana. In category 1 only female candidates are eligible. In category 2 applications from male candidates are also invited.

1. **B.Sc. Degree—four years course in Nursing** : Candidates must have passed Pre-Medical or 10+2 with English, Physics, Chemistry and Biology or an equivalent qualification recognised by the Panjab University, Chandigarh.

2. **M. Sc. Degree—two years course in Nursing** : Candidates must be a holder of B.Sc. Nursing Degree with 60% pass marks and three years experience.

Clinical Subjects :

(1) Psychiatric Nursing
(2) Maternal & Child Health Nursing

Last Date for Receipt of Application :
For Category 1 : July 1st, 1988.
For Category 2 : April 2nd, 1988.

RUSH FOR LATEST TITLES FROM USSR

(Also Available more than 1,000 Titles in English, Hindi, Urdu, Punjabi in the Stalls of Soviet Books At 8th New Delhi World Book Fair)

What's What in World Politics : A Reference Book
HB with Jacket, PP : 462, 15x21 cm, Rs. 12/75

Political life in the present-day world is intricate, tempestuous and diverse. A variety of terms is used daily in the stream of reports appearing in newspapers, on the radio and television. What these terms mean, what is behind the events, what role is played in the world by international organisations and alliances, what is happening in the flashpoints of the world—these and many other questions are answered in this book of references. Its compilers produced brief but conclusive explanations of the various aspects of world politics.

The USSR's Activities in the UN for Peace, Security and Cooperation : 1945-1985
HB with Jacket, PP : 336, 13x21 cm, Rs. 10/-

Compiled by experts in international affairs, this book deals with the USSR's vigorous and consistent work in the UN to preserve and strengthen peace and to make that universal organisation an efficient instrument of collective security.

The October Revolution and the East
by Yu. M. Ivanov
PB, PP : 160, 13x21 cm, Rs. 3/-

Drawing on extensive factual material, this book traces the evolution of the role of the working class in the revolutionary struggle of the peoples of the East after the October Revolution in Russia and analyses the tendency towards the conversion of the proletariat from a social force awakened for political life by the national bourgeoisie into the leader of the national liberation revolution.

The World Energy Problem
by I. Kozlov and V. Pominov
PB, PP : 232, 10x16 cm, Rs. 10/-

This book reviews the energy situation in the world and looks into the origins, current state and prospects of the global energy problem under different social systems.

The Origin of the Human Race
by V. P. Alexeev
PB, PP : 360, 11.5x20 cm, Rs. 9/25

This book is an attemp to take as full account as possible of the latest findings and data, and to modify general conceptions in accordance with them, but at the same time to avoid burdening the text with petty details and to maintain a smooth presentation and paint a whole, integrated panorama of primaeval history.

A Contemporary World History : 1917-1945
by V. Alexandrov
HB with Jacket, PP : 718, 13x21 cm, Rs. 21/75

The book is meant for a wide circle of reader people who are interested in the problems of contemporary world history.

The Developing Countries Social Structure
by Alexei Levkovsky
PB, PP : 178, 12.5 x 20 cm, Rs. 4/-

This book provides an exhaustive insight into the social and class structure of developing countries in contrast to economically developed capitalist states the effect of that motely structure and shifts in it upon the main classes of the transitional society; and the way the old social strata are superseded by new ones.

The USSR and International Economic Relations
(A collection of Documents on the USSR's stand on the Restructuring of International Economic Relations and the Establishment of a New International Economic Order)
HB with Jacket, PP : 494, 13x21 cm, Rs. 19/-

This collection includes documents on the foreign and foreign economic policies of the USSR.

Albert Einstein's Philosophical Views and the Theory of Relativity by D. P. Gribanov
HB with Jacket, PP : 262, 13x21 cm, Rs. 12/-

This book presents the first integral treatment of the philosophical views of Alber Einstein and their influence on the origin and interpretation of the theory of relativity.

Population and Socio-Economic Development
(A Collection)
HB With Jacket, PP : 190, 13x21 cm, Rs. 7/-

The book analyses theoretical questions of the relationship between social progress and population development, methodological problems in applying the systems approach to interdisciplinary research into demographic processes, and shows the importance of population studies for the theory and practice of planning socio-economic development in the developing countries.

The Steep Steps : A Journalists Note
by Yuri Zhukov
HB with Jacket PP : 436, 13x21 cm, Rs. 16/-

The author, journalist and writer, describes here about the rapid development of the young Soviet Country in the 1930's and at the beginning of 1940's about the sources of the Soviet peoples' victory over the Nazi invaders in the Second World War.

rime and Punishment
y F. Dostoyevsky
B with Jacket, PP : 576, 13x21 cm, Rs. 22.50

The novel was conceived by Dostoyevsky during is exile in Siberia.

Its theme was focal in all his writings : the fate of ine-tenths of mankind morally crushed by the society f his times.

Maxim Gorky and the Literary Quests of the Twenieth Century
y Alexander Ovcharenko
HB with Jacket, PP : 320, 13x21 cm, Rs. 14/75

This volume by Alexander Ovcharenko, the well-known Soviet literary critic, reveals the vital and enduring significance of the great writer's work.

Mother
by Maxim Gorky
HB, PP : 408, 13x21 cm, Rs. 15/-

Maxim Gorky's "Mother" has been enormously popular with Soviet and foreign readers for many decades. It has been published in large editions and translated into many languages.

Envoy of the Stars
by Ashot Arzumanyan
HB with Jacket, PP : 232, 13x21 cm, Rs. 11/-

This book is about Academician Victor Ambartsuman, an outstanding astrophysicist, President of the Academy of Sciences in Armenia, Director of the Byurakan Astrophysical Observatory, in recognition of whose services to world astronomy, thirty foreign academies, Scientific Societies and universities have elected him as an honorary member.

Russian for Tourists
by V. G. Kostomarov and A. A. Leontyev
PB, PP : 184, 11x16 cm, Rs. 7 50

This second, revised and enlarged edition, with illustrations, is for busy businessman and lazy tourists.

BOOK FAIRS AND LIBRARIES

N.B. Inamdar*

Books and Modern Media

Books are the records of civilization. Till the recent development of mechanical means of communication, the written word has been the single most important factor in the intellectual development of mankind In an age when new electronic channels of communication are taking hold, the question being heard is : Will the book survive ? The television set and the computer epitomize the electronic challenge to books and publishers and libraries.

But in spite of the rapid strides made by the electronic media, books remain an essential input for individual fulfilment and national development. The increase in the world output of books, not withstanding modern technologies, provides testimony of the fact that all these fascinating machines are complementary to, and not substitute for, book and the printed word. The essence of book, unlike other forms of communication, is that it is a personal and cooperative experience between the reader and any author from any period of recorded history.

Undoubtedly, a modern library is expected to provide access to records, tapes, films, lectures, concerts and online computer searches, but books are their most dominant and visible offering. For many years, books will continue to be published by tens of thousands, bought by hundreds of millions. They will remain highly familiar objects and popular media of information and knowledge in libraries.

However, libraries face many problems regarding acquisition and availability of books. It is in this context that the role of 'Book Exhibitions' and 'Book Fairs' becomes important for libraries.

Libraries & Book Development

The year 1972 was declared by Unesco as the International Book Year. An important document that was published during the period was 'Charter of the Book'. This charter was the outcome of intense deliberations by an International Committee comprising booksellers, authors, composers, documentalists, librarians, translators and publishers.

The ten articles of this charter cover all aspects of books and their relevance to the quality of life. According to articles 7 and 8 the libraries are national resources for the transfer of information and knowledge for the employment of wisdom and beauty, They occupy the central position in the distribution of books, the promotion of reading habits, the providing of lifelong education, and economic, social and cultural progress of the communities. The charter stresses the importance of library services by establishing a network of libraries. It specially highlights the need for rural libraries in developing countries. It is recognized throughout the world that the libraries are effective instruments for human resource development.

During the 40 years of India's independence, not adequate attention was paid to development of libraries. Inspite of the fact that the Library Advisory Committee appointed by the Government of India in 1957 and subsequently constituting of the Working Group on libraries by the Planning Commission in 1964 and valuable suggestions and recommendations made by them, there are only 5 States in India which have network of public libraries based on library legislations.

Similarly ambitious schemes of educational expansion are often thwarted in the absence of a corresponding growth of libraries and book industry. Our new educational policy lays thrust on universalization of elementary education, diversified vocationalization, continuing education and functional literacy, open universities, correspondence courses, etc. These objectives could be realized only when adequate support and due attention is paid to development of libraries and books.

The National Adult Education Programme introduced by the Government of India in 1978 with a huge outlay of Rs. 600 crores, does not earmark any amount for libraries. Similarly library services in schools and colleges at present are meagre and rudimentary. Proper expansion and improvement of these services will help in raising the quality of education at comparatively small cost. There need be a planned and well organized relationship of the library systems with producers and distributors of books. It is the duty of the State and Central governments to promote such linkages.

---

*University Librarian, Osmania University, Hyderabad-500 007.

Despite the handicaps and constraints described above, Indian publishing since the independence has come a long way. India today publishes 20,000 titles a year in English and 18 Indian Languages covering a variety of subjects. It ranks seventh in the world of International publishing in terms of titles and third in the production of titles in English language. 80% of these books are purchased by libraries. Therefore, libraries' concern for availability of quality and relevant publications is obvious.

Extension Services in Libraries

Libraries not only collect books and other graphic records, but devise and plan various activities that help in promotion and use of books by readers and inculcate reading habits in them.

The introduction of extension work in libraries is one such activity. This work aims at reaching group of people, who might be otherwise unaware of the library and its services. The extension activities differ from library to library. They generally include 1. Lectures and Film Shows, 2. Reading circles, 3. Discussion groups, 4. Story hours for children, 5. Play and Poetry reading groups, 6. Seminars, and 7. Book exhibitions.

Book Exhibitions

The new books are brought to the notice of library members by displaying book jackets and arranging book exhibitions under the sign 'New Arrivals'. Also catchy captions like 'Book of the Day' 'Book of the Week' 'Book of the Month' are used for books' displays. These devices certainly help in promotion of book reading.

Special and topical exhibitions are organized coinciding with important national and international events, like UN Day, Human Rights Day, International Literacy Day, World Health Day, etc. Similarly on the occasion of Republic Day (January 26) or Independence Day (August 15) book exhibitions are arranged taking out related books from the racks and arranging them in an attractive manner. All such book exhibitions, provide readers visual impression and promote the use of materials lying on the racks unused. These type of book exhibitions help in implementing the following laws of Library Science, vigorously. (1) Books are for use, (2) Every reader his/her book, (3) Every book its reader, and (4) Save the time of the Reader.

Libraries also ask leading publishers/booksellers to arrange book exhibitions in libraries and thus help students, faculty, and researchers in knowing about new and scholarly publications. These exhibitions also imbue the book sense among the users o libraries.

Libraries believe in the slogan "Catch Them Young" and organize, particularly, in public and school libraries, display of childrens' books.

Book Fairs are nothing but extension of the book exhibitions and librarians and libraries are beneficiaries of such fairs to a great extent.

Book Fairs and Libraries

The idea of Book Fair has its genesis in Leipzig Fair which was introduced in the early part of the 19th century. It was originally annual gathering of booksellers, publishers and printers to settle their accounts. This practice continued until the World War II. In the year 1949, Frankfurt Book Fair was held for the first time. This Fair is considered as a successor to Leipzig. It is very important Book Fair at the international level and is organised every year. It gave impetus to the movement of book fairs. Now book fairs are held at different levels; international, regional, national, city, etc.

As the publications kept growing, the idea of book fairs got popular. Publishers all over the world were interested in finding outlet for their publications. The extraordinary growth of the book fairs during the past 25 years can be attributed to the internationalization of publishing industry. There are now about a dozen countries with Book Fairs as annual events and another dozen which have experimented with them. Every year several new ventures are made in this direction. The growth of book fair as an institution in international publishing shows no signs of slowing down.

Book Fairs are sponsored or supported by organisations, institutions, associations, etc. The significance of such fairs lies in promotion of literature and culture of a nation as well as fostering better understanding among the people and countries of the world. Books are most vital food for the human mind and human spirit. They strive constantly shaping and moulding the minds of millions and hold humanity together and bring mankind closer in search of its own identity. Book Fairs create and promote a world society of bookminded people; the objective and mission libraries strive at.

mportant International Book Fairs

The following Book Fairs have achieved great mportance in recent years. A brief description of ach of them is as follows :

Frankfurt Book Fair

It is attended by publishers, authors, literary agents, librarians, booksellers and distributors from all continents. It is the biggest book show in the world. The 1986 Fair had its theme "India—change and continuity" and a total number of 6000 books and journals in as many as 14 languages of India were displayed by Indian publishers. An equal number of books published on and about India in other countries were also exhibited. About 7000 publishers/booksellers took part in 1986 Fair. Frankfurt Fair offers best opportunity to the men in book trade for negotiating listing rights, translation rights and co-publishing rights.

Association for Asian Studies

This is an important professional society. It serves the needs of scholars of Asian studies in different parts of the United States. During their annual meetings book fairs are arranged regularly.

London Book Fair

This Fair was started in the year 1971 and has become one of the major book fairs in the world. Books in English covering various subjects are exhibited. It provides a good forum for establishing useful commercial contacts for the participant publishers and booksellers from all parts of the world.

Moscow Book Fair

This is one of the biggest Book Fairs held biannually. Major publishers from all over the world display books in different languages.

Beijing Book Fair

A considerable number of foreign publishers participate in this Fair. This Fair enables Chinese readers to have a better understanding of trends in science, technology, economy, education and culture in other countries. During the Fair the Chinese and foreign publishers negotiate co-publishing arrangements to develop scientific, technical and cultural cooperation and strengthen friendship among peoples of the world.

Pesta Buku Malaysia

This Fair is held every year. In addition to the publishers and distributors from Malaysia, the foreign publishers participate at this fair through their South East Asia offices located in the region.

Singapore Festival of Books

The renowned publishers and distributors all over the world take part in this annually held book fair.

New Delhi World Book Fair

It started in 1972 as a gift of 'International Book Year' declared by UNESCO. This book fair is held every alternate year. Leading publishers from Pakistan, Bangladesh, Nepal, West Asia, Europe and United States of America participate in this Fair, which provides excellent opportunity to the bookmen to quench their knowledge thirst. The librarians from all over India visit the fair in great numbers and buy books selecting from among thousands and thousands of books displayed. The leading personalities of the publishing world visit this fair. This provides an opportunity to the Indian publishers and book distributors to build contacts and negotiate about different matters relating to book trade and book production.

International fairs are also held regularly in Belgium, France, Argentina, Italy, Switzerland, Poland, United States of America, Zimbabwe, Spain, Yugoslavia, Baghdad, Phillipines and Egypt.

The important role of Book Fairs is that they make possible for book lovers to see under one roof such vast collection of books. The readers are influenced and become bookminded and reap the benefits of reading books. Book Fairs are great catalysts in changing the attitudes of community towards reading; the cause most dear to libraries and librarians.

Book Selection and Book Fairs

In addition to World Book Fair at New Delhi, the fairs are held in India annually at Calcutta, Madras, Bangalore, Bombay and Hyderabad. On all such occasions, the publishers and book distributors bring and display their recent and scholarly books. The wholesalers representing a number of leading publishers throughout the world participate in good numbers and display huge stocks of books. The importance of such book fairs is enhanced by participation of government sponsored autonomous organisations like, National Book Trust, Childrens Book Trust, Sahitya Academy, NCERT, Association of Indian Universities and quite a few research institutions of national importance.

Book selection is the first task of the librarian. The three main factors involved in selection of books are : Books and other library materials, (2) Readers, and (3) Funds available. These factors are ever present irrespective of the type of the library. Their interplay has resulted in a fundamental enunciation by Melvil Dewey, "The best reading for the largest number at the least cost."

As the books multiply to unmanageable proportions, judicial selection becomes very important. Demand by readers, value of materials and the objectives of library will be guiding factors. The selection should be impartial and serve as vehicle to instruct, teach and recreate.

The educational background and experience of author, reputation and reliability of publisher, treatment of the subject matter, style of presentation, accuracy and uptodateness of information and data, and physical features like typographical layout, design, appendices, glossaries and indexes, etc. are some criteria that are applied for evaluation of books before they are selected for the libraries. Publishers' catalogues, national and subject bibliographies and book reviews in journals, no doubt help libraries as selection tools. But the opportunities provided by the book fairs for the selection of required materials are much more advantageous. The variety and the volume of materials available for selection is unparallel.

Acquisition of Books in Libraries

The efficiency of acquisition programme in any library depends on librarian's having intimate knowledge of all agencies relating to book trade; publishers, wholesalers, booksellers and a number of government agencies and autonomous bodies involved in promotion and production of books. It is noticed that library science schools in Indian universities have not paid adequate attention to this very important aspect of librarianship. There is not much interaction between library and publishers/booksellers/associations. The formation of Good Offices Committee at the central level is a positive step in this direction but not adequate to cover all nuances of book acquisition.

There is a tremendous increase in book publishing in India after independence, both by private sector and government agencies. The annual output of books is about 20,000 in all the 15 languages of India including English. But it is seen that proper dissemination of information about these publications is absent. This hampers the rhythm of acquisition schedule. The librarians always feel lost when they are asked to procure books of specialised nature for which there are no direct trade channels in India. Ironically sometimes they go in for foreign publications when equally scholarly books of high standard have been produced in India.

Book fairs provide unique opportunity to the librarians to get first hand knowledge about the book trade and thus overcome these shortcomings.

Developing Special Collections

The university and special libraries will be focussing their attention in acquiring books relating to specialised areas like nutrition, medicine, genetics, etc. It is seen that there are very few publishers and booksellers that have paid attention to this aspect of libraries' needs. The librarians have to take chances by contacting a number of booksellers, sometimes without any success. There are very few publishers like Wilson and Bowker (US), Whitaker (UK), Elsevier (Europe), and NTIS (US) to whom librarians can look confidently for acquisition of reference books, books on science and technology and technical reports.

A widely represented book fair at international or national level will be a great boon for libraries in building specialised collections.

Books in Indian Languages

This is another area where librarians do not possess adequate knowledge. Out of the 20,000 annual book production in India, 55% relate to Indian languages. The bibliographical control of these publications is not satisfactory. In the bargain the libraries miss good books produced in Indian languages. Almost all states have taken up programmes of book production in their respective state languages through Academies and encouraging other scholarly agencies.

A special display of books in Indian languages is organised during the World Book Fair. Also the translations of some of the standard titles in other Indian languages are exhibited. This is very important aspect for libraries in as much as the states have adopted the respective state language as a medium of instruction in schools and colleges. These languages are being used very widely in official matters also.

ildrens Books

All public libraries have children's corners. Besides here are exclusive libraries for children like Bal Bhavan n Hyderabad. There is a great need of having attracve books in all such libraries. Attempts are being nade in India through NBT, CBT, NCERT and some rivate publishers to produce childrens books in nglish and Indian languages. But the total annual utput has not exceeded 500 titles.

Design, contents, style and language of children's ooks needs special attention. The librarians and uthors who are interested in working in this field will e amply benefited by visiting book fairs, where hildrens books from all countries are displayed. cience and technology books for children that are roduced in Russia and displayed during the World Book Fair need special mention. They are quite attracive and inexpensive. Some of these titles could be asily translated by the librarians and authors having ngenuity and imagination.

Book Grants and Book Fairs

It is typical of India that book grants are released owards the end of the financial year. This upsets the rhythm of acquisition of library materials. Added to that the procedure requires that the library should spend the grant before the end of the financial year. The natural result of this is that the librarians do spend the money and procure books but at the cost of quality and relevance. In all such cases World Book Fair held in the month of February could be visited by the librarians and allotted grants used more profitably. They will have ample choice to select the materials from among the great number of books displayed under one roof. Any other book fair held during the month of March will also be helpful in buying useful books within the stipulated time.

Seminars and Workshops

Lectures, seminars, workshops, etc, are the essential part of the book fairs. The librarians should be invited to all such programmes. In fact, it will be of great use and interest if these programmes are jointly organised by library and book trade associations. The exchange of ideas and contacts built during such meetings will be of mutual benefit.

There is an intimate connection between book trade and libraries. Both of them have the common objective of promoting the welfare of the society through medium of books. Book fairs provide a unique opportunity to libraries and people in book trade to have meaningful interaction. □

Spiralling Prices And Library Budget

V.B. Nanda*

Introduction

Richelieu said that 'finances are the nerves of state', a 'lever of Archimdes', when firmly set gives power to move the world. Given unlimited financial resources and free hand, any library shall endeavour to acquire every book and journal printed anywhere in the world and thus build its collection to formidable proportions. But like the philosopher's stone, such ideal situation does not exist anywhere.

Libraries all over the world suffer from financial famine, which of course, is more severe in the developing countries. With the present financial instability the world over, libraries in the developing countries are the worst hit by the financial famine. On the one hand new educational institutions with libraries as their essential components are being established in large numbers, on the other, the financial resources of the government and funding bodies have dried up or are in process of drying up. In India, whenever any calamity or emergency hits the nation, the axe of economic cut falls upon the educational budget and in that process library finances are the first casualty.

The financial problems faced by the libraries, especially in our country, are manifold. The fast expanding boundaries of knowledge and proliferation in publishing have made it difficult for the libraries to keep pace. The prices of books and subscription rates of journals have been increasing at a very high rate. The financial resources of libraries have been shrinking. Where the budget cut has not been enforced, the rate of increase in the budget which varies from 3 to 5 per cent is not sufficient to keep the present rate of addition of books and maintenance of the current subscription list of journals. With the expanding universe of knowledge and widening horizons of research, the demands upon the libraries have become enormous which they are not able to meet. In India, while the growth of the academic libraries have become stunted, the public libraries are at the verge of turning into stinking pools of books. In this light, we study here the spiralling problem of price rise of books and journals and how best we may counter the same.

Book Production

In spite of proliferation of knowledge, the actual production of books has decreased the world over. After World War II, the faculty and the scientists have been caught in a net called 'publish-or-perish' and there was a boom in publishing. Though today many bright authors do not get published or are waiting in the wings, the book production has developed into a purely professional-profit-oriented-business. Gone are the days when scholars would build their personal libraries by purchasing two penny 'Everyman's Library' or 'World Classics' series and feel proud of their personal collection. Today, even in the U.S.A., any lover of books wanting to build his personal library shall have to wait for a year or two till the publishers consign their unsold stocks to the super markets and general stores for disposal at throw-away prices. Then watchful eyes would collect the books of choice for addition to the personal library.

These stocks of unsold items are also sold to the book trade in the third world countries where these are unscrupulously sold as 'new' at the printed price. In India, this game has been played successfully by the Trade to the disadvantage of the unsuspecting libraries. From this single fact it will be seen that there has been a change in orientation of the publishers after the World War II. Their only aim is to price the books very high and make profit by selling a limited number of copies to the libraries at home and then unload the unsold stocks elsewhere with a 'who cares' attitude.

A reference may also be made to the multi-tier book pricing schedules of foreign publishers, where books called EEE, ELBS and like editions, are priced low for sale in foreign markets. Sometimes there are prices in two different currencies to offer advantage to the trade only. If the publishers cannot make profit in their own countries, how can they survive by reducing the price to half or so in foreign markets ? Most of the time one finds xth edition in economy price only after its subsequent (x+1)th edition has come in the domestic market. This trend has implications for the third world countries which are the only losers in the long run.

Clive Bingley has identified the following two

**Librarian, Jawaharlal Nehru University, New Delhi.*

main reasons about the sharp rise in the book prices during the last two decades : (1) progressive under-pricing of books over the long period of time before World War II, and (2) the concurrent decline proportionately in publishers' profits. He further says that it was before the 1950s that the books were under-priced in comparison to the high cost of production and distribution, and this realisation dawned upon the trade only when the book production industry was in the grip of a stock boom. The book publishing industry is a very high-capital-investment industry and cannot afford to keep the stocks of unsold books. Richard Blackwell too, supports the view of Bingley. The result had been that the number of copies published came down with profits going sky high in the 50s. The trend continues till this date. The average price of an ordinary book has gone up hundred times when compared to the price in the year 1939. Tables 1, 2 and 3 shall support this view.

Table 1 : Production

Country	1979	1980	1981	1982	1983	1984
USA	88721	86377	76976	45935	53380	41380
UK	41864	48069	42972	48307	51071	51535
W. Germany	59666	64761	56568	NA	NA	NA
India	11087	13148	11582	10649	NA	NA

Table 1 shows that in the USA, production of books had gone down during 1979 and 1984 period. In the UK, it had gone down during 1979 and 1981, but in 1982 it caught up and in 1984 exceeded the 1979 mark. In Germany it rose in 1980, but declined in 1981. In India, it increased in 1980, but came down in 1981 and subsequently in 1982 the overall trend in book production was downward.

Table 2 : Average Prices of Books in UK
(Cut-off Year 1971-72=100)

Year	Ave. Price in £	Index
1971-72	3.70	100.00
1972-73	3.33	90.00
1973-74	3.33	90.00
1974-75	3.50	92.00
1976	4.99	133.00
1977	5.93	160.00
1979	10.81	292.00
1982	14.29	386.00
1983	13.61	367.00
1984	16.51	445.00

Table 2 shows that average unit price of book the U.K. taken as 100 in 1971-72 rose to 445 in 198

Table 3 : Average Prices of Books in USA
(Cut-off Year 1966-69=100)

Year	Ave. Price in $	Index
1966-69	8.77	100.00
1971	13.25	151.00
1972	12.99	148.01
1973	12.20	139.01
1974	14.09	160.07
1975	16.19	184.06
1976	17.39	198.03
1977	19.22	219.02
1981	26.63	300.01
1982	30.34	345.00
1983	31.19	350.01
1984	29.81	340.00

Table 3 shows that if the average unit price w 100 in 1966-69, it touched 340 in 1984.

In case of Indian books the random sampli shows that if the price of a book was Rs. 30 in 197 it is Rs. 200 in 1987. This is about seven tim increase in price and has become difficult to absorb b any library.

The Indian Scene

In the Indian context, one would like to refer the problems faced by the libraries. Mr. Khushwa Singh has said that the only sufferer in the game book production is the author. His is a subjecti statement. In fact the libraries are bracketed wi authors as the sufferers. The Indian book trade h followed, in matter of pricing, the ways of the brothers abroad. Their concern for quality is total missing. The eye is only on the libraries. The who production and the pricing of book is oriented t wards its sale to the libraries alone. In this gan the readers, who otherwise would be tempted to pu chase books for their personal use, have been total alienated because of high price of the Indian book Thus if on the one hand many promising authors not get published, or get cheated if at all publishe on the other, the libraries' budgets have become i sufficient to meet the bill of adequate book purchase

The Indian book industry has not made any effor which it otherwise should have done morally i.e. price the books reasonably so that an average citiz may have strength enough to purchase. If mo opies of a book at reasonable price are thrown for ale in the market, there would be more readers, more ales, more educational and intellectual development of the society, and more profit for the publishers. This fact has been totally forgotten by the Indian Book Publishing Trade.

The Indian scene is not different from the scenes in the U.K. and the U.S.A. from the commercial point of view. We have noticed from Table 1 that the book production, numberwise, has gone down in all the three countries. Perhaps in the coming years we may see increase in book production in India, but the situation in matter of price vis-a-vis libraries and readers is not likely to change until and unless some awareness in concerned quarters takes place or the government come down heavily upon the Book Publishing Trade. Of course, the government and the semi-government organizations have been publishing and selling books at a price which in all cases is nearly 1/4 of the price otherwise fixed for the same book by the book trade. The hegemony of the book trade and the red tape in the government departments have been such that many good government and semi-government publications are sometimes not able to sell well and reach the public. For this also, some revolutionary changes are required.

But the Indian publisher is held at ransom by the Indian bookseller who is unmindful of the needs of the reading public because the aim is huge profit only. The Indian publishing industry could be counted on fingertips. In some cases the publishers are the booksellers too and enter into barter deals among themselves. This is not conducive to the book industry. If the pricing schedules are not standardized and the book prices not drastically cut and brought to a reasonable level, there will be no support from the reading community. The libraries with their shrinking financial resources shall soon cease to be the sole source of support to the book trade.

The very qualily of reading material published in India also leads the industry to print fewer copies. This is also one factor for the price of the book to be high, making it virtually impossible for the average reader to purchase. Another factor is the low capacity of the average Indian reader to purchase a book for his own use. The inflation and the consequent higher cost of living have made the individual's resources limited. High price acts as a disincentive to individual to purchase books. All these factors have affected general readers, who prefer newspapers and popular magazines to the serious reading of higher intellectual content. Whether it is an academic institution or general public, we need libraries to keep our academic programmes going on and our masses provided with means of self-education. But the book production cannot survive upon the libraries alone. The publishing trade shall therefore have to be economically self-supporting and for this published price shall have io be standardised in a logical way to suit the pockets of the individuals as well as institutions in the interest of both, the trade and the society.

Production of Periodicals

The periodicals form the backbone of research programme in any subject or discipline. They are the primary source of information and are valued the most. The periodicals therefore have preference over books. Proliferation of periodicals has been such that in 1987-88 we have 70,800 periodicals listed in the Ulrichs' International Periodicals Directory against 40,000 listed in the same Directory in 1969-70.

Table 4 : Growth of Periodicals

(Cut-off year 1966-69=100)

Year	No. of Periodicals	Index
1969-70	40,000	100.00
1971-72	60,000	150.00
1977-78	60,000	150.00
1983-84	64,800	162.00
1987-88	70,000	177.00

Table 4 gives a clear picture of rise in periodicals published in the world. As compared to the book production, which has a downward slope, the periodical publications have risen to 177 with 1969-70 figure taken as 100. This increase in number of periodicals shall have to be read in conjunction with increase in their subscription rates.

From Table 5 (on next page) it will be seen that subscription rates of journals have increased by leaps and bounds and have totally upset financial management in the libraries the world over. The annual rate of increase in library budget in India is 3 to 5 per cent which comes to 51 to 85 per cent during 1970 to 1987. But the journals' subscription rates have increased six times during 1970-1987, which even the libraries in the U.S.A., called the Land-of-Libraries, are not able to afford. The publishers argue that increased costs of labour and material have forced them to hike the subscription rates. But Robert L. Houbeck Jr. asks whether the production costs in publishing industry have really gone up by four times faster than the general inflation rates in the U.S. He further cites the U.S. Deptt. of Commerce report on the American magazine industry that the rise in prices of paper and postage had been 'moderate' enough for the publishers of journals to balance the subscription rates with 3 to 4 per cent annual increase. This is a just argument and is in line with budgetary increase of 3 to 5 per cent as admissible in India and elsewhere in the world.]

Table-5

Selected Journal Prices, 1970-1987
(In U.S. Dollars)

Journal (Publisher)	1970	1975	1978	% Increase 70-75	% Increase 75-87
Sciences					
Biochimica et Biophysica Acta (Elsevier)	$495	$1551	$3882	213%	150%
Coordination Chemistry Reviews (Elsevier)	25	136	745	444	448
Inorganica Chimica Acta (Elsevier-Sequoia)	26	235	1918	804	716
International Journal of Theoretical Physics (Plenum)	26	135	395	419	193
Journal of Theoretical Biology (Academic)	80	234	1195	193	411
Humanities & Social Sciences Accounting Review (American Accounting Assn.)	9	25	50	178	100
Architectural Review (Architectural Press)	14.40	37.50	85	160	127
Historical Abstracts (ABC-Clio)	151	495	1749	228	253
Journal of Industrial Economics (Black-well)	5	20	75	300	275
Survey of Current Business (U.S. Office of Bus. Econ.)	9	48	48	433	0
U.S. Consumer Price Index	$116.3	$161.2	$338.3*	39%	110%

*Based on 1986 CPI (328.4)+1987 inflation of 3%

Source : **J. of Acad. Libnship v. 13(4) : 1987, p. 215**

In fact, publishers of both the books and the periodicals have taken the customers i.e. the libraries for granted and have been changing during the last 2½ decades, about as much as the customers would pay. Since the customers have not grudged these payments, the price hike has been a regular phenomenon and has reached the proportion that has become impossible to bear today.

Proposed Remedies

Robert L. Houbeck Jr. has pleaded for aggressi librarianship and advised the publishing trade to abso the costs and not take the libraries for granted. Tru we have paid as far as we could pay. But now we ha reached the tether's end. The following measures a therefore proposed for consideration of all concerne

1. The funding agencies should ensure that t libraries are given adequate funds to mainta the acquisition programmes, namely, regul inflow of books and maintaining current sub cription lists of journals at all costs.
2. The academicians, intellectuals, users of th libraries and all book-lovers should acknowledge and support the 'citizen's right' purchase books at a reasonable price an organize a 'Consumer Movement'. The publ opinion thus created shall force the publishir trade to realise the importance of publishin more copies at less price so that they hav their rightful profit and the public has acces to the printed word. This is the only alternative which is in the interest of all.
3. The resource sharing by the libraries is a ver very important topic which has been discusse all over the world. But the results have no been satisfactory. A fresh thought shall hav to be given, and ways and means devised. Th accounts and audit rules shall have to b relaxed. The Telecommunication Departmen shall have to permit the online arragement between the libraries and the databases to cros the public roads unhampered. The librarie shall have to wake up to the knocks of th 21st Century and start upon automation at onc and assist in creating databases at focal point on regional and national levels. A full volum could be written on this issue. A proposal o this issue from the Haryana Agricultural University has also been pending before the AIU.
4. The rising subscription rates have given anothe thought, that is, we may draft a national polic and subscribe to the costly abstracting and indexing services on national and regiona levels only, feed them in the data bases an permit online access to the user libraries. The city of Delhi need not purchase multipl copies of Biological Abstracts, Chemical Abstracts and the like.
5. An idea which is advanced by the Faculty is that the journals have two-tier pricing system– a higher price for the libraries and a lower

price for the individuals. The faculty members may therefore register a subscription in their individual names but the parent body pays, and the journals when received by the individuals, are passed on to the libraries. This shall affect enormous saving and ease the financial stringency. This shall also make the publishers see the reason.

6. Another remedy is that the libraries having a book and journal budget of Rs. 10 lac and above start Bookshops of their own and force the Trade on their own or through government channels to extend Trade Terms to these Bookshops. The Bookshops then sell books and journals to the libraries and also to the faculty and the students at a 'no profit no loss' basis. Some of the librarians have called this venture as a 'fall from professional ethics'. One should not forget that the question of 'ethics' is equally applicable to the Publishing and Book Trade. The Indian Rupee in the name of 'managed floating' have depreciated considerably. In December 1986 the rates were 'Rs. 100.00= U.S.$7.6 = U.K.£5.2 = D.M.14.8=Yen 1214', while in December 1987 the rates were 'Rs. 100 = U.S $7.8 = U.K.£4.2=D.M.12.5=Yen 965'. The Rupee vis-a-vis Dollar seems stable. But it has floated down considerably in matter of other currencies. In such circumstances, how are we to stretch our Rupee to purchase or subscribe to adequate number of books or journals ? The Bookshop is one strong answer to this problem. The experiments at the Universities at Pantnagar and Hisar and now at the JNU have shown a marked success of this venture.

7. The publishers of books and journals too have a remedy to the problem of rising costs in their own hands. The annual trend increase in cost of materials and labour has been around 3 to 5 per cent during last about two decades, but the increase in price in case of books and journals is six to seven times. It is obligatory upon the Trade to acknowledge the right of the people to have free access to the printed word. They should therefore rise to the occasion, check the price-rise and help the people read more. This shall obviously and ultimately prove to their advantage.

The old saying, 'it is the speaking wheel that gets the grease while the silent one is thought to be working well' holds good here. The librarians and the libraries have remained silent enough. Now is the time to raise the voice and demand the right of masses to the printed word at reasonable price. □

UNIVERSITIES HANDBOOK—1985-86

Salient Features

—Contains information covering all the Indian Universities including agricultural universities, institutes of national importance (including IITs) and deemed to be universities on following heads of information :

- * Officers & Deans of Faculties;
- * Library & Research Facilities;
- * Scholarships and Fellowships;
- * Academic year—last date for admissions and the approximate dates of examinations;
- * Courses of Studies;
- * Minimum requirements for admission to each course, duration and the subjects of study for each course;
- * Names of Professors and Readers/Assistant Professors together with their academic titles department-wise;
- * Names of Colleges together with names of Principals and Heads of Postgraduate Departments in Colleges;
- * Statistics on examination results.

—Introductory chapter on overview of the University System in India.

—Map showing location of universities.

INDIAN STATISTICAL INSTITUTE

ADMISSION NOTICE 1

Session : 1988-89

Applications are invited for the following courses/fellowships for which duration, values of monthly stipend/fellowship and eligibility conditions are briefly described below. Further details and other conditions are available in the prospectus. Selection of candidates is based on academic record, written tests and interviews.

1.1 **Bachelor of Statistics (Hons)** : *Duration* : 3 years; *Stipend*: Rs. 250 ; *Eligibility* : Successful completion of 10+2 years of secondary education (or equivalent thereof) with Mathematics and English.

1.2 **Master of Statistics** : *Duration* : 2 years ; *Stipend*: Rs. 400 ; *Eligibility*: 3-year Bachelor's degree with Statistics and Mathematics as full subjects or equivalent qualification, obtained after twelve years of secondary education. Those without Statistics, but having outstanding mathematical ability, may also be considered. Holders of Statistician's Diploma/Senior Diploma of ISI are eligible for admission to the second year of the course.

1.3 **Master of Technology in Computer Science** : *Duration* : 2 years; *Stipend* : Rs. 1000 ; *Eligibility* : Master's degree in a relevant subject or Bachelor's degree in Engineering/Technology or equivalent qualification and knowledge of relevant topics of Physics and Mathematics.

1.4 **Post-Graduate Diploma in Statistical Quality Control and Operations Research** : *Duration* : 15 months ; *Stipend*: Rs. 1000; *Eligibility* : Bachelor's degree in Engineering/Technology or Master's degree with Statistics or Mathematics up to graduate level or recognised research/other work in Statistics.

2. **Junior Research Fellowships**: *Fellowship*: Rs. 1000. The Institute conducts research in many areas of Mathematics, Statistics and Economics and offers fellowships for Research Courses in these subjects leading to registration for Ph. D. degree of the Institute. Details are available in the prospectus. The Institute also offers fellowships in other research areas. Eligibility conditions for the fellowships are given below :

2.1 **Research Courses** leading to Registration for the Ph. D. degree : *Eligibility* (i) A good academic record with M.A./M.Sc. degree in Mathematics, Statistics, Economics or Econometrics or (ii) outstanding mathematical maturity with B.A./B.Sc. degree with Mathematics or Statistics or Economics as the main subject.

2.2 **Fellowships in other Research Areas** :

Group A : Several areas of Computer Science which include Analysis of Algorithms, Artificial Intelligence, Computer Communication Network, Computer Vision, Digital Communication, Fault Tolerance, Image Analysis, Parallel Algorithms and Processing, Pattern Recognition, Testable Design, VLSI Architecture. *Eligibility* : (i) A good academic record with M.Sc. or equivalent degree in Physics/Mathematics/Statistics or (ii) B.E. or equivalent degree or M.E. or equivalent degree in Electronics/Computer Science/Electrical Engineering.

Group B : Dynamical Meteorology, Hydrodynamic Stability, Statistical Theory of Turbulence, Viscous Flow, Sediment Transport and Theory of Dispersion. *Eligibility* : (i) A good academic record with M.Sc. or equivalent degree in Physics Mathematics/Statistics or (ii) B.E. or requivalent degree in Mechanical Engineering.

Group C : Quantum Mechanics and Quantum Field Theory, Nuclear and Particle Physics, Statistical Physics, Cosmic Ray Physics and Plasma Physics. *Eligibility* : (i) A good academic record with M.Sc. or equivalent degree in Physics/Mathematics/Statistics preferably with Physics or Mathematics at the graduate level.

Group D : (i) Stratigraphy and Sedimentation and (ii) Stratigraphy and Palaeontology. *Eligibility* : A good academic record with a Master's degree in Geology/Applied Geology/Geo-

logical Sciences and capability of undertaking field work.

Group E : Urban Human Biology/Biological Demography. *Eligibility* : A good Academic record with a Master's degree in Anthropology with specialisation in Physical Anthropology.

Group F : Advanced techniques of analysis in Demography, Stochastic models in Demography, Family Planning Programme Evaluation. *Eligibility* : A good academic record with a Master's degree in Demography/Statistics/Economics/Sociology with Mathematics/Statistics at the graduate level.

3. **Certificate/Diploma Courses on Operation and Programming of Automatic Data Processing Equipment :** *Duration* : 1 year for certificate and additional 1 year for Diploma if one attains a specified standard in the Certificate Course. *Tuition Fee*: Rs. 200 per year, no stipend. *Eligibility*: (i) Age below 25 years on 1.4.88, (ii) Bachelor's degree or equivalent with Mathematics as a subject at higher secondary (10+2) level and (iii) acquired typing speed of 25 words per minute.

All courses/fellowships are offered in Calcutta. In addition, courses **1.2** and **2.1** are offered in both Delhi and Bangalore.

Besides stipend/fellowship there is also a suitable annual book allowance for all courses except 3. Hostel facilities are available. Selection tests for the courses/fellowships will be conducted at a number of centres. Candidates who have completed or are due to complete the qualifying examinations before **1 July 1988** may also apply. This date may be relaxed by the Institute in case of candidates with outstanding academic record and performance in the selection tests and interviews. Candidates should satisfy themselves that they are eligible for admission to the course or for the award of the fellowship for which they apply. If at any stage it is found that a candidate does not satisfy the eligibility conditions or the information furnished in the application is incorrect, the application will be cancelled. Prospectus and application form can be obtained from the **Dean of Studies, Indian Statistical Institute, 203 Barrackpore Trunk Road, Calcutta-700 035,** by paying an amount of Rs. 15/- by cash (between 11.00 a.m. and 2.00 p.m. on working days between Monday to Friday) or by crossed postal order/bank draft payable at Calcutta in favour of "**Indian Statistical Institute**". Postal orders must contain the name and address (in block letters) of the sender. Money orders and cheques will not be accepted.

Last Date for receiving requests for Application Forms : 7 March 1988
Last Date for receiving completed Application Forms : 28 March 1988
Date of Selection Tests : SUNDAY, 15 May 1988
Tentative Dates of Interview : 20 June—30 June 1988

TATA INSTITUTE OF FUNDAMENTAL RESEARCH

HOMI BHABHA ROAD, BOMBAY-400 005

Advertisement No. 1/88

ADMISSIONS FOR RESEARCH LEADING TO PH.D. IN MOLECULAR BIOLOGY

The Molecular Biology Group of the Tata Institute of Fundamental Research admits, each year, small number of Research Scholars for pursuing basic research in modern biology. The Research Scholars work towards a Ph.D. in one of the following areas :

Molecular genetics, recombinant DNA, molecular parasitology, epithelial membrane transport, differentiation and development, neurogenetics and behaviour, neurochemistry and neuroanatomy.

Students with a good Master's degree in any branch of Biology, Physics, Chemistry, Mathematics or Engineering with a strong interest in Biology are eligible for admission. Students who are appearing for their Master's degree examination in May/June this year may also apply.

Research Scholarships carry an initial monthly stipend of Rs. 1800/-. The appointments are made for a year at a time but are renewable upto a maximum of 5 years. Candidates called for interview from outstations will be paid 1$\frac{1}{3}$ railway fare each way by second class (not air-conditioned) and a sum of Rs. 35/- as halting allowance for the day on which they are interviewed.

A small number of applicants to the Ph.D. programme will be invited to work in the laboratory for a 6-week period during May and June. Please indicate in your application whether you would like to be considered for this. Selected candidates will be paid a stipend of Rs. 600/- per month and return second class rail fare from their place of residence to Bombay and if required will be provided with hostel accommodation costing about Rs. 200/- per month. Those who will not be staying in the hostel will be paid stipend Rs. 400/- per month.

How to Apply :

Prescribed application forms may be obtained by writing to the Administrative Officer (Establishment), Tata Institute of Fundamental Research, Homi Bhabha Road, Colaba, Bombay 400 005 alongwith a self-addressed stamped (Rs. 1.80) envelope of approximately 25 cms x 12 cms. The last date for receiving applications in the prescribed form is March 15, 1988.

ON BOOKS

Baljit S. Grewal*

What we learn from the book of nature, we book it, to atune the coming generations. A good many seasoned people, from different times and climes, have expressed their views on books, as per their experiences, which read as follows :

1. Books are light houses erected in the great sea of time.

—E.P. Whipple

2. Books are those faithful mirrors that reflect to our mind, the minds of sages and heroes.

—Gibbon

3. A good book is the best of friend, the same today and forever.

—Tupper

4. Some books are to be tasted; others to be swallowed; and some few to be chewed and digested.

—Bacon

5. Without books, God is silent, justice dormant, natural science at a stand, philosophy lame, letters dumb, and all things involved in darkness.

—Bartholini

6. Books are the legacies that a great genius leaves to mankind which are delivered down from generation to generation, as presents to the posterity of those who are yet unborn.

—Joseph Addison

7. The past but lives in written words; a thousand ages were blank if books had not evoked their ghosts and kept the pale embodied shades to warn us from fleshless lips.

—Bulwer

8. Books are masters who instruct us without rods or ferules, without words or anger, without bread or money. If you approach them, they are not asleep; if you seek them, they do not hide; if you blunder they do not scold; if you are ignorant, they do not laugh at you.

—Richard de Bury

9. The books we read should be chosen with great care, that they may be as an Egyptian king wrote over his library, "The medicines of the soul".

—Paxton Hood

10. There was a time when the world acted on books; now books act on the world.

—Joubert

11. There is no worse robber than a bad book.

—Italian Proverb

12. Bad books are like intoxicating drinks; they furnish neither nourishment, nor medicine—both improperly excite; the one the mind; the other the body. The desire for each increases by being fed—both ruin; one the intellect; the other the health; and together, the soul. The safeguard against each is the same —total abstinence from all that intoxicates either mind or body.

—Tryon Edwards

13. The best of a book is not the thought which it contains but the thought which it suggests; just as the charm of music dwells not in the tones but in the echoes of our hearts.

O.W. Holmes

14. We are liable to be corrupted by books, as by companions.

—Fielding

15. Books are but waste paper unless we spend in action the wisdom we get from thought.

—Bulwer

16. Books, like proverbs, receive their chief value from the stamp and esteem of ages through which they have passed.

—Sir W. Temple

17. A good book is the precious life-blood of a master-spirit embalmed and treasured up on purpose for a life beyond.

—Milton

18. When a book raises your spirit and inspires you with noble and manly thoughts, seek for no other test of its excellence. It is good, and made by a good workman.

—Bruyere

**Dean of Students, Punjabi University, Patiala-147002.*

19. In books, it is the chief of all perfections to be plain and brief.

—Butler

20. Books are men of higher stature; the only men that speak aloud for future times to hear.

—Barrett

21. He that loves not books before he comes to thirty years of age, will hardly love them enough afterward to understand them.

—Clarendon

22. A book is a garden, an orchard, a storehouse, a party, a company by the way, a counsellor, a multitude of counsellors.

—H.W. Beecher

23. Most books, like their authors, are born to die; of only a few books can it be said that death hath no dominion over them; they live and their influence lives for ever.

—J. Swartz

24. Books should to one of these four ends conduce, for wisdom, piety delight, or use.

—Denham

25. A great book that comes from a great thinker is a ship of thought, deep freighted with truth and beauty.

—Theodore Parker

26. To use books rightly, is to go to them for help; to appeal to them when our own knowledge and power fail; to be led by them into wider sight and purer conception than, our own and to receive from them the united sentence of the judges and councils of all time, against our solitary and unstable opinions.

—Ruskin

27. A bad book is the worse that it cannot repent. It has not been the devil's policy to keep the masses of mankind in ignorance; but finding that they will read, he is doing all in his power to poison their books.

—E.N. Kirk

28. The silent influence of books, is a mighty power in the world; and there is a joy in reading them known only to those who read them with desire and enthusiasm. Silent, passive and noiseless though they be, they yet set in action countless multitudes, and change the order of nations.

—Giles

29. If a book comes from the heart it will contrive to reach other hearts. All art and authocraft are of small account to that.

—Carlyle

30. Every man is a volume if you know how to read him.

—W.E. Channing

31. The first step to knowledge is to know that we are ignorant.

—Robert Cecil

32. The more you practice, what you know the more shall you know what to practice.

—W. Jenkin

33. Every branch of knowledge which a good man possesses, he may apply to some good purpose.

—C. Buchanan

34. Scientific knowledge is constantly changing. A discovery of one year receives confirmation the next or is thrown aside.

—James T. Adams

35. The end of all knowledge should be in virtuous action.

—Sir P. Sidney

36. Real knowledge in its progress, is the forerunner of liberality and enlightened toleration.

—Brougham

37. The word knowledge, strictly employed, implies three things viz., truth, proof and conviction.

—Whately

38. Pleasure is a shadow, wealth is vanity, and power a pageant, but knowledge is ecstatic in enjoyment, perennial in fame, unlimited in space, and infinite in duration. In the performance of its sacred offices it fears no danger, spares no expense, looks in the volcano, dives into ocean, perforates the earth, wings its flight into the skies, explores sea and land, contemplates the distant, examines the minute, comprehends the great, ascends the sublime—no place too remote for its grasp, no height too exalted for its reach.

—De Witt Clinton

39. True wisdom is to know what is best worth knowing and to do what is best worth doing.

—Baljit S. Grewal

40. Library is an everblossoming garden from where the seekers of knowledge gather the honeyed sweetness of life.

—Baljit S. Grewal

Responsibilities to Future Generations

The advancement in science and technology has made significant contributions to economic well-being of people. Increasing industrialization and urbanisation and excessive exploitation of natural resources have however adversely affected ecological balance and the capacity of land to support growing population. The intergenerational equity of options exercised by the human kind is seriously threatened by new genetic, nuclear and other technologies, new capacities for ecological change and certain socio-economic phenomena such as large scale underdevelopment and inequalities. All these impinge on the well-being of future generations, and the diversity of options available to them. Their interests are not represented in the decision making process of the present generations, or in the content of development programmes at all levels.

It is therefore desirable to preserve cultural and national heritage of mankind to protect the interests of future generations. With a view to sensitizing the economic and social planners, scientists, educationists and experts on environment, a regional conference on 'Responsibilities to Future Generations and their Environment (RFGE)' was organised at the Asian Institute of Technology, Bangkok from January 12-18, 1988. The Conference was jointly sponsored by the United Nations Educational, Scientific and Cultural Organisation (UNESCO), United Nations Environment Programme (UNEP) and International Environment Institute (IEI). The deliberations of the Conference were conducted under the chairmanship of Y. Fukushima (Japan) and Mr. G. Gunatillike (Sri Lanka) with Mr. M. M. Ansari (India) and Mr. D. Gayawali (Nepal) as rapporteurs of various sessions. The delegates from a number of countries and International agencies participated in the Conference.

In his opening remarks, Dr. Tony Macelli, Director, International Environment Institute, Malta said that one of the major objectives of the Conference was to clarify the interests of future human generations and to stimulate the world community to act to promote these interests explicity and actively. The concept of responsibilities of present generations to future generations is a logical complement to the universally respected norm of the common good of the human species, and the important concept of the common heritage of mankind. The participants at the conference emphasised the need for establishing a network of relations between individuals and institutions so as to promote the interests of future generations.

The Declaration adopted by the Conference and the programme of action suggested by the participants are as follows :

Declaration

Development and environment are the contexts in whice we may identify the interests of future generations. Without claiming that a single world-view or formulation can be shared in detail by everyone, we have come to the following consensus about the need for an alternative vision of environment and development, that would protect nature and the interests of present and future generations.

The environment consists of the non-living and living natural environment, the human-built physical environment, and the socio-cultural environment. Up to now, development has been the changing of parts of the overall environment in an attempt to secure a better human life, at least of certain groups or categories of people. That is, development has been an attempt to change the world for the sake of human well-being, the fulfilment of human potential.

However, from the ecological insights of modern science, and from observation of the environmental and human effects of human technologies, it is clear that the environment is part of man, and man is part of the environment. The image of the environment as something which is to be overcome through development is now clearly an inadequate image, and must be replaced by more holistic paradigms. Man-environment harmony is crucial, and must be maintained whenever the form of this harmony is altered in development.

A major indicator of human potential is the amount of available options and decision-making capacity of persons and collectivities in respect of their own life. They use these options to meet their basic needs and to develop their human potential in their own way.

However, humans are observed to have a biological, emotional, psychological, and spiritual orientation to collective living and endeavour. Thus, another indicator of the fulfilment of human potential should be seen to be the extent to which persons are able to fulfil themselves by contributing to each other's welfare and enrichment. Such a paradigm of human life would tend to ultimately favour the achievement of more harmony between individual and society. Social justice, of course, is one of the prerequisites for social harmony.

Harmony of the single man-nature system, personal and societal autonomy, and available personal and social option; and social solidarity, are thus indispensable elements which must be preserved or be improved in true development. These elements may then be used fore valuating whatever purports to be human development. The same considerations also suggest that the universal human values which people actually hold, within the diverse cultural traditions of humankind are respected in genuine human development.

Since economic and environmental development has been an attempt to promote human development, it must therefore be judged a failure when it does not pass the tests of diversity of available options, increased autonomy of persons and groups, promotion of human solidarity, and respect for universal human values. If we also accept the need for man-naure harmony; then the failure of many past development processes is even more clear.

Various significant processes in the environment, in the human species itself, and in the man-environment interface extend through time-periods that are long compared to the life of any one human generation. Some of these processes are the result of human action, and these are irreversible, and reduce available options for future generations.

Thus, development attempts are mistaken or shortsighted when they lack an intergenerational perspective and an intergenerational responsibility, such that the criteria already mentioned can apply also in the future: diversity of available options, human autonomy and solidarity, and respect for cultural values. The time-perspective for development must include future generations.

The criteria are here understood to relate to intragenerational values, but as applied to future generations affected by development attempts of the previous generations. They render illegitimate, for example, actions today that are bound to increase or maintain inequality among people of some future generations. However, the essential unity (e.g. felt unity, genetic unity) of the human species through time, requires that the required solidarity be also intergenerational, i e. between generations. Present generations contribute to their own human fulfilment when they feel and implement in action their solidarity with future generations. Similarly, the necessary autonomy should be also enjoyed by each generation, or each group of contemporary generations, who should not be subject to restrictions of options imposed by previous generations.

Also, because of the interconnectedness of many of these long-term processes, not only is the man-against-nature paradigm just as mistaken intertemporally as it was intratemporally, but also the consequences of holding it are likely to become catastrophic given enough time. Only a paradigm of man-nature wholeness and harmony is appropriate to guide an intertemporal perspective about life and development on planet Earth. This harmony may, and will undergo transformation while still remaining a harmony.

We conclude that development activity of present generations must inescapably follow a new vision, one with a long time-perspective encompassing present generations and future generations. The new vision insists on the preservation and enhancement of options and autonomy. It also insists tha present actions should promote justice and solidarity within the present generations, within future generations, and between present and future generations. The vision must be based on a changing harmony between man and nature.

We therefore affirm our own concern for present and future generations, and reflect the growing public concern that the interests of future generations should be protected. We believe the possibility of having a world for future generations that is more secure, more substainable economically and environmentally and richer in quality of life. For the realisation of this possibility we urge the present generations to design new approaches to promote and carry out the required transitions essential to a planet that is at the same time sustained and renewed and enhanced. These include :

- —a demographic transition to a stable population;
- —an energy and resource-use transition through technologies which rely on nature's "income" and not depletion of its "capital";
- —a transition to patterns of human settlement which promote rural-urban harmonay;
- —an economic transition to sustainable development and an equitable sharing of its benefits within and between countries and regions;
- — an educational transition to a comprehensive and integrative understanding of the world and of human knowledge and wisdom;
- —a cultural transition to a world or harmonious cultural diversity;

—a political, economic, and educational transition to a peaceful word without weapons of mass destruction;

We hold that simultaneous existence of poverty and opulence constitutes an environmental and human threat extending to future generations.

We urge that popular re-examination of values and lifestyles be encouraged and broadened so that it can be undertaken with an awareness of realities that concern the life of the planet today and that of the time of our children's children.

Programme of Action

In order to promote a value system that would be mindful of the interests of the future generations it is felt that a set of actions at the regional level as well as the international level must be initiated. It is also felt that these actions must reach a broad spectrum of the the community that would facilitate the promoting of such a value system. The communities are :

- —teaching community
- —community based organizations (CBOs) and non-governmental organisations (NGOs)
- —mass media
- —religious communities
- —artistic communities
- —legal and judicial communities

Dr. Agrawala Takes Over

Dr. Surendra Kumar Agrawala has taken over from Dr. Jagdish Narain as Secretary of the Association of Indian Universities on 6th February, 1988.

Born at Bilgram in District Hardoi (UP) on 18th January, 1929, Dr. Agrawala did his M.A., LL.M. from Lucknow University. He was awarded a fellowship for Post-graduate studies (LL.M) the Harvard Law School, USA. He followed it up with an LL.D. degree from Lucknow University. A brilliant scholar, Dr. Agrawala claimed Gold Medal for standing first at the LL.M. examination and was awarded the Banerjee Research Prize for best research work done in 1962 for his LL.D. thesis.

A popular and devoted teacher, he taught law at Lucknow University (1953-62), Aligarh Muslim University (1962-65) and University of Poona where he headed the University Department of Law from 1965 to 1985. He was adjudged the Best University Teacher by the Government of Maharashtra in 1978-79. He took up the Vice-Chancellorship of the Agra University in November 1985 which he has relinquished to take over as Secretary of the Association of Indian Universities.

Dr. S. K. Agrawala

A legal luminary, Dr. Agrawala was a member of Bar Council of India Legal Education Committee for two terms, a member of the Governing Council of Indian Law Institute, member of the first Academic Council of the National Law School of the Bar Council of India, and a member of the Executive Board of the International Association of Legal Science, The Hague. He has been on the Editorial Board of the Indian Journal of International Law and the Editorial Board on Constitutional Law of the Bar Council of India Trust.. He has been the Convenor, University Teachers Research Group of the International Law Association (Indian Branch) as also of UGC National Advisory Panel of Law. He was nominated as the National Lecturer in Law by the UGC in 1976-77 and was also called upon to deliver the K.M. Munshi Memorial Lectures in 1985 by the Indian Law Institute.

A widely travelled person, Dr. Agrawala participated in a number of international conferences, seminars and colloquia in Thailand, Greece, Nigeria, Nepal, The Netherlands, West Germany and USA.

He has published 7 books, over 30 research papers and has contributed to over a dozen anthologies.

Dr. Agrawala brings to his new office a rich resource of wide and varied experience. We welcome him and hope that under his stewardship, the Association will not only consolidate its present activities but also add new dimensions to its services to the Member Universities. ☐

Regional Strategy

The network which is designed for the Future program should be linked through personal and institutional means with networks on alternative development strategies.

In the very first phase of the program a set of state-of-the-art studies should be prepared concerning the responsibility to future generations in countries selected on the basis of diversities of culture and development levels.

The resulting studies must be synthesized by an interdisciplinary, group identified by the network to indicate strategies and modes of action for enhancing responsibility to future generations applicable to the diverse societies within the region. Some form of this interdisciplinary group should be involved with designing the methodology and framework of the state-of-the-art studies.

This material will be made available to the groups concerned with the future as identified above for dialogue, feedback, action and interaction.

International Strategy

In order to help raise the world consciousness regarding the long-term dangers to future generations, the IEI secretariat, together with the appropriate UN organizations, is to commission studies on the long-term hidden dangers in the present path of development in the scientific and technological fields as well as in forms of social organization. These studies must again be be disseminated among the communities in a way that will encourage further dialogue.

UNESCO, UNEP and IEI must encourage the active examination of paradigms in disciplines as they relate to the future and emerging trends. For example, in economics, some of the beliefs and practices that need re-examining from the prespective of the future generations are : B/C analysis and the discounting of the future, national accounting which values GDP rather than physical quality of life indicators, financial income rather than the richness of life, and the accounting system which does not distinguish between the output that comes out of renewable and non-renewable resources as well as the durability of capital over time. Such items can be found in most of the other disciplines too. In such studies special sensitivity must be shown to the interdisciplinary and integrative aspects of the disciplines to correct the adverse effects of specialization and fragmentation of human knowledge.

Concurrently with the above, some specific thematic studies should be carried out such as the schooling system of the future, future modes of communication and the effect on social organization, technologies facilitating decentralization, the future relationship between the built and the natural environments, and global migration and the impact on cultural diversity of the future.

UNESCO should support the introduction of courses and programs into the education system to sesitize the younger generation regarding the responsibilities to the future generations.

For further information, or if you are interested in the global network, or if you can send relevant articles and texts or suggestions—please write to Dr. Tony Macelli, Future Generations Network, I.E.I., c/o Foundation for International Studies, Old University Building, Valletta, Malta (telex 1673 FOUND).

Harnessing Technology for Education

The Central Institute for Educational Technology (CIET) of the National Council of Educational Research and Training (NCERT) is reported to have undertaken the work of making the educational video programmes for the children. These programmes are expected to help in the realisation of the Government's goal of universalisation of primary education by 1990 for children up to 14 years of age.

The CIET, set up in 1984, is aided by State Institutes for Educational Technology (SIET) in six States, the Development and Educational Communication Unit (DECU) of the Indian Space Research Organisation (ISRO), and international agencies like the United Nations Development Programme (UNDP), UNESCO, and the Asia Pacific Institute for Broadcasting Development (AIBD).

Set up for promoting an understanding and utilisation of educational technology for the spread of education, CIET realised that the video programmes to be prepared for children, most of whom were from rural areas and non-School going, had to be in their natural locales and steeped in their own culture. With this in view, the SIET were established in the six States, namely, Andhra Pradesh, Bihar, Gujarat, Maharashtra, Orissa and Uttar Pradesh covered under the Satellite Instructional Television Experiment (SITE) and the INSAT-IB programmes.

The CIET initially provided he entire hardware to the SIETs, and continues to provide the finance and infrastructure like software and training. However, most SIETs have now commenced production of their own programmes in their own language and culture. The programmes produced thus are beamed for six hours daily in these six states.

DECU, formed in December 1983, has been engaged in aiding CIET in programme production, development and adaptation of video hardware, communications research, and training and was responsible for the production of science programmes for SITE.

The CIET invited experts of India for its in-country international training programmes under which six workshops have already been held in different parts of the country.

Super Conductivity Research Stressed

Prof. C.N.R. Rao who heads a special cell appointed by the Prime Minister to monitor research in super conductivity called for a greater investment in super-conductivity research which was a major task before national laboratories. He was delivering the Zaheer memorial lecture at the general plenary session of the 75th Indian Science Congress in Pune recently. Prof. Rao said the three major tasks were to make superconducting materials of proper from and shape, find newer and better materials, and intensify research into this challenging field. He said research activities could be strengthened by universities as development of her superconductors would dramatically alter the quality of life.

Prof. Rao said among the applications were big magnets, levitation and nuclear magnetic resonance which had great relevance to modern medicine. India had to remain in the race for superconductivity as no other country will give it to us, he added.

Earlier he gave a detailed description of superconductivity, an important state of matter when materials do not offer resistance to passage of electricity or attain zero resistance. Prof. Rao detailed the experiments conducted by students at IIT Kanpur in the 1970s and at the Indian Institute of Science Bangalore.

Science Congress Recommends Mathematics Council

The platinum jubilee session of the Indian Science Congress held recently at Pune has recommended setting up of an Indian Council of Mathematical Sciences as a tribute to the great mathematician Ramanujam in the year of his birth centenary, to give thrust to the development of the subject. The Congress noted that mathematics education neglected so long needed priority attention. The Department of Science and Technology (DST) should be entrusted with the task of research in mathematics, hitheto the sole privilege of the Department of Atomic Energy (DAE).

The session also called for customs exemption for chemicals, biochemicals and other consumables required for research in educational research institutions.

It recommended that a National Institute of Physiology be set up to provide for researches of the frontier areas of rapidly advancing neuro physiology of behaviour and behavioural disorders and on the effect of electromagnetic field on human physiological aberrations. It added that such an institute could concentrate on the study of the influence of the mind in the healing processes through yoga and hypnotherapy indicating mind modulation over bodily processes.

The study of sports physiology for better performance in sports and athletics and up-to-date survey of the work on management of behavioural disorders has also been suggested.

Another national institute mooted is for psychology to promote sustained work in frontier areas identified as health, environmental sports, managerial psychology and inter-disciplinary and intra-cultural as well as cross-cultural understanding of the individual.

Educational infrastructure for Border States

A new scheme to strengthen educational infrastructure and provide job opportunities to people living in the border States of Gujarat, Punjab, Rajasthan and Jammu&Kashmir has been initiated by the Human Resource Development Ministry, Govt. of India. An amount of Rs. 200 crore has been earmarked for the scheme during the Seventh Plan.

The proposed educational programme is intended for the overall development in the border areas. In the current fiscal year, Rs. 25 crore is proposed to be spent on education under the Border Area Development Programme.

A sanction committee has been set up under the chairmanship of the Education Secretary to oversee implementation of the various programmes under the scheme. The committee includes representatives of the Planning Commission and the State Governments.

JNU Entrance Exam Accredited

The UGC has accredited the JNU Entrance Examination conducted all over the country for admission to M. Phil, M. Tech, Ph.D. programmes in the schools of Computer and Systems Sciences, Life Sciences, Environmental Sciences, Physical Sciences and the Centre for Biotechnology on par with the national educational testing (NET) examination conducted by the UGC for the award of junior research fellowship to candidates pursuing M Phil., M.Tech., Ph D programme in various science disciplines.

The decision has been made in pursuance of the report of the high powered committee appointed by the Commission consisting of Prof. P. M. Bhargava, Director, Centre for Cellular and Molecular Biology, Hyderabad, Vinod Gaur, Director, National Geophysical Research Institute and Mrs Archana Sharma of Calcutta for evaluating the standards of the entrance examination conducted by the JNU in over 24 centres all over the country for admission to M. Phil, M. Tech, Ph.D.

The accredition granted by the Commission for the present was for a period of three years.

As a result of the accredition of the JNU entrance examination for these schools, the candidates, joining these programmes in the schools of Computer and System Sciences, Life Sciences, Environmental Sciences, Phyical Sciences and Centre for Biotechnology on the basis of their inter-se merit in the all India entrance examination conducted by the University would become automatically eligible for the award of Junior Research Fellowship of the UGC without their having qualified the NET examination conducted by the UGC.

Centre for Science & Technology

An International Centre for Science and Technology Education is proposed to be set up by the Government to encourage experiments in science and technology.

The ICSTE has already been registered under the Societies Registration Act and is expected to start its activities by 1989. It will have aresource centre, a media centre a computer centre, a laboratory and a workshop.

The Human Resource Development Minister, Mr. P.V. Narasimha Rao, who is the Chairman of ICSTE, has nominated the Educational Adviser (Technical Education) as Member Secretary of both the Society and its Governing Body.

The Centre will provide an international forum for contacts between educationists, scientists, planners and administrators. It will also promote exchange of national groups of teachers and researchers.

Consistent with the National Policy on Education which lays stress on research as essential component of higher education, the proposed Centre will provide the infrastructure for research and development in various institutions.

The Centre will cover educational institutions in the technical education system which offer undergraduate and postgraduate programmes, namely, the Indian Institutes of Technology, the Indian Institutes of Management, the Regional Engineering and State Government colleges as well as other non-Government institutions and colleges approved by the All-India Council for Technical Education.

Courses in Environmental Science & Engg.

The Centre for Environmental Science and Engineering (CESE) at Indian Institute of Technology, Bombay, has recently introduced a short-term training programme for its graduates, enabling the IIT engineers to emerge as trained environmentalists.

The new course will be conducted in cooperation with Pollution Control Boards and various research and development institutions.

The CESE also proposes to introduce a five-year integrated programme on Environmental Science and Engineering (ESE). Entrants to this programme will be supported by interested industries enabling industry projects to obtain an IIT-Industry interaction.

In order to focus attention on environmental issues and to create awareness among technologists and scientists, some basic courses in environmental science and engineering were initiated at the undergraduate level in 1974. Later an inter-disciplinary M. Tech programme was started in 1977 and a doctoral programme in 1978.

Panel on Distance Education

The Government is reported to have set up a coordination council to look into the policies and utility of courses to ensure that uniform standards of distance education are maintained by the open universities.

The council, comprising the Vice-Chancellors of the Indira Gandhi National Open University (IGNOU), three State open universities and representatives of the Government and the University Grants Commission (UGC), has been mooted to avoid duplication of course materials and minimise the financial burden.

It is hoped that gradually IGNOU will assume the role of a central body coordinating and overseeing the activities of all the State open universities.

UNESCO Award for V.P. Singh

Dr. Ved Pal Singh of the Department of Botany, University of Delhi has bagged the UNESCO/ROSTSCA Young Scientist Award in the field of applied Microbiology and Biotechnology for 1987. The award has been presented to him for his work on calcium mediated macromolecular functions and growth of aerobic spore forming thermophilic actinomycetes--Thermoactinomyces vulgaris.

The annual award is given by UNESCO Regional Office of Science and Technology for South and Central Asia to the young scientists or engineers below 35 years of age in the field of Informatics and Application of Computers in Scientific Research, Applied Microbiology and Biotechnology and New and Renewable sources of Energy.

Kautilya Award Scheme

Ministry of Planning, Govt. of India, have launched 'Kautilya Award Scheme' to encourage writing of original books of high order in Hindi on technical subjects relating to planning. The following awards will be made under the scheme :

1st Award (One)	Rs. 5000/-
IInd Award (One)	Rs. 3000/-
Consolation Award (Two)	Rs. 500/- each

Original books/manuscripts relating to planning, printed/written in Hindi may be sent, in prescribed form, for consideration for award. Only those books and manuscripts would be accepted which have not received financial assistance or subsidy under any other scheme.

Authors desirous of participating in this scheme should send their manuscripts/printed books by 31st March, 1988 positively.

Details of the scheme, prescribed form and other information may be obtained from : Deputy Director (OL), Planning Commission, Yojana Bhawan, New Delhi-110001.

News from Agril. Varsities

Seed-cum-Fertilizer Drill

The University of Agricultural Sciences, Bangalore, has designed a sowing implement namely seed cum fertilizer drill to overcome some of the problems in production of groundnut.

This newly designed seed-cum-fertilizer drill for groundnut, which has many advantages over the conventional implement, helps farmers to sow simultaneously four rows of seeds along with fertilizer.

The local method of sowing groundnut requires one bullock pair with one local plough and three men, one to handle the bullocks, one man for seeds and one man for fertilizer application. This method opens only one furrow. The total cost of sowing at the present rate works out to Rs. 60 a day and the team could cover only ½ hectare per day.

The newly designed seed-cum fertilizer drill for groundnut (shoe type) requires a pair of bullocks and three men—one to run the bullocks, one for handling seeds and one for fertilizer. The cost per day of sowing at the present rate comes to Rs. 60. As the area covered is 1.25 hectares a day, the cost of sowing works out to Rs. 43 only. Further, it helps in the correct placement of seeds and fertilizers in the soil.

The total fabrication cost of the seed-cum fertilizer drill (shoe type) is Rs. 500 approximately. More particulars of this seed drill can be had from the Chief Scientist (Agricultural Engineering) Operational Research Project for Dryland Agriculture, GKVK, Bangalore-560065.

Colic Surgery

A team of Veterinary Surgeons of the Punjab Agricultural University performed, for the first time in India, a surgical operation on a 20-year old pony mare for the treatment of colic (Impaction of colon). The surgery was performed under general anaesthesia. Abdomen was cut open and the impacted colon was emptied and suctured back. The mare recovered on 12th day after the operation.

"Colic" is caused by having pain in the abdominal region of a horse which invariably kills the animal. The disease which is very common in horse is due to one of the following conditions : impaction, tympany, twisted guts, volvulus, intussusception, etc. and urinary problems. This operation has opened new vistas in the field of Veterinary Surgery. Many costly horses can thus be saved which otherwise would usually result in death and great economic loss to the horse breeders.

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
February 10-14, 1988	Workshop on Science and Technology	To initiate a dialogue for the interaction of the Government, industry, institutes and to update the present technology.	Department of Astronomy & Space Sciences, Punjabi University in collaboration with the Punjab State Council of Science & Technology.	Prof. H.S. Gurm, Director, Department of Astronomy & Space Sciences, Punjabi University, Patiala-147002
February 18-20, 1988	Dalit Literature	To review and reassess the role and relevance of Dalit Literature in building an alternative perspective on Indian social, political and cultural life.	Centre for Soical, Studies, South Gujarat University, Surat.	Prof. S.P. Punalekar, Centre for Social Studies, South Gujar University, Surat-395007
Feb. 29-March 2, 1988	Workshop on Internal Reorganization of English Honours Syllabi	To reorganize the English Honours syllabi to meet the specific needs of the students.	Department of English, Ramakrishna Mission Vidyamandira, Howrah	Mr. Sunanda Sanyal Director, Ramakrish Mission Vidyamandi Belurmath, Howrah.
March 10-12 1988	Nationalism : Problems and Challenge	To discuss different aspects of the development of nationalities during 19-20th centuries and their relationship with Indian nationalism.	Centre for Social Studies, South Gujarat University, Surat in collaboration with K.M. Munshi Centenary Committee, Gandhinagar.	Prof. Ghanshyam Sh Centre for Social Studies, South Gujar University, Surat-395007
May 9-June 4, 1988	Summer Course in Analysis and Probability	Topics to be covered are Probability Theory and Stochastic Processes, Fourier Analysis & Functional Analysis.	Indian Statistical Institute, Bangalore Centre.	T.S.S.R.K. Rao, In-charge, Summer School 1988, Stat-Math. Division, India Statistical Institute, R.V. College (P.O.) Bangalore 560 059
May 18-20, 1988	Conference on Recent Advances in Mathematical Techniques and Applications	Topics proposed to be discussed include Mathematical Physics, Mathematical Methods, Biofluid Dynamics, Chaos, Stability and Turbulence	Dr. Y.S. Parmar Institute of Mathematical Sciences, Shimla.	Dr. J.R. Gupta, Organising Secretary, Dr. Y.S. Parmar Institute of Mathematical Sciences, Hainault, Shimla-171002
July, 12-14 1988	International Symposium on Recent Advances in Male Reproduction	The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis	University of Hyderabad in collaboration with the Indian Society of Andrology	Prof. P.R.K. Reddy, School of Life Sciences University of Hyderabad, Hyderabad 50013
September 26-28 1988	International Conference on Welding Technology in Developing Countries	To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.	University of Roorkee, Roorkee.	Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Develop ing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

REFERENCE AND RESEARCH TOOLS

BIBLIOGRAPHY OF DOCTORAL DISSERTATIONS

Invaluable reference for those seeking to register for a Doctoral Programme.

The bibliography is classified by subjects and covers all the disciplines in which a doctoral degree is awarded by the Indian Universities. Each entry gives complete bibliographical details, viz, name of the research scholar, title of the thesis, university/institute where the research was conducted, years of registration and award of degrees, availability note—where a thesis is available in the university library/department concerned/university office and the name and complete address of the guide/supervisor.

Comprehensive and exhaustive as the bibliography is not only reports the research being conducted at the university centres, but also includes research work done at the institutions of national importance, like the IITs, institutions deemed to be universities, like the Indian School of Mines, CSIR Laboratories as also the research establishments connected with ICAR and ICMR.

The bibliography is indeed a measure of the research output of the country.

24B/5 Desh Bandhu Gupta Road, Karol Bagh, New Delhi-5. (Telephones 5727770, 5721928) having realised that our National Technology Policy of "**Self Reliance**" can best be achieved by proper mix o indigenous technology and acquisition from outside on a planned basi and through further intensifying our mechanism for generating technology, absorption and diffusion and providing challenging opportunitie for our young scientists and technologists undertook publishing of th marginally noted journals and serials which contain review and origina research papers from scientists in India and abroad. Detailed prospectu for each serial and journal is available on application without any obligation.

After having developed a prestigious list of titles we now invite yo to contribute findings of your research in the shape of original research papers to our journals. Your thesis, monographs, and symposium/workshops/seminar proceedings of high academic order, can be accomodate in our serials dealing with the discipline concerned.

Your contributions when received will be immediately forwarded to our editors and referees for their considerations and decision to accept these in any of our serials/journals to which they are best suited.

As regards our reprints of **Fauna of British India Imperial Gazetteer of India** and **Indian Studies Past and Present**, we have embarked upon an ambitious programme of bringing these land marks up-to-date by issuing supplement incorporating latest information after these were originally published volumewise. Therefore you are suggested to kindly decide the discipline of your specialisation and send us your biodata so that the same may be forwarded to our advisors for their corresponding with you and assigning appropriate topics in the relevent discipline.

ENDOWMENT SCHOLARSHIP PROJECT

During our life of last 40 years as suppliers of books and journals, we have been buying heavily back volumes of periodicals to cater the needs of University and Research Laboratories in India and, therefore, have accumulated good stocks of journals and reference books. Now we would like to dispose of as much materials as quickly as possible and hence our holdings are offered to the University and Research Laboratories under our **R.K.S.D.J. Endowment Scholarship Scheme.** According to the scheme **the proceeds of your requisition of back volumes of journals and books will be donated to your institute** after deducting 10% to meet the expenses of the trust **for investing in fixed deposit and the interest which accrues on the investment will be utilised for awarding scholarships** to the deserving students of your institute. The modalities of the Endowment Scholarship Scheme and the list of publications which are offered under the project will be supplied promptly on receipt of your request.

DEVELOPMENT PLANNING

The Indian Experience

SUKHAMOY CHAKRAVARTY

Eminent economist and adviser to the Indian government

This is the first book to provide a comprehensive review of Indian planning in the light of development theory and the debates on planning carried out in other countries. It deals with the experience of development planning as practised in India over the last thirty-five years. It explains the analytical consideration which went into the formation of India's development strategy and the modifications which were subsequently introduced in the light of experience. The author gives here a considerably expanded version of the Radhakrishnan Memorial Lectures delivered by him in 1985. Rs. 90

A SOCIAL AND ECONOMIC ATLAS OF INDIA

The first of its kind to be published the country, this is a major work of reference on India in the eighties. It provides a comprehensive picture of India's habitat, society and economy, and projects the social and economic scene in the nineties. The Atlas includes 248 colour maps, 360 colour charts and 142 tables. Its nine sections cover : land, people, climate, natural resources, infrastructure, produce, the tourist vista, national economy, and the international equation. Rs. 450

INDIAN COUNCIL OF MEDICAL RESEARCH

RESEARCH CAREER DEVELOPMENT AWARDS

The Indian Council of Medical Research has instituted a limited number of 'RESEARCH CAREER DEVELOPMENT AWARDS' from the year 1988-89 to provide young talented Scientists/Scholars with an opportunity to pursue their research interests in any institution in India, including the ICMR's own institutes. The basic eligibility criteria are :

(i) Scientists between the ages of 25 and 40 years who have completed doctoral or other equivalent professional training i.e. M.D. or Ph.D. and have a proven track record in the proposed field of research.
(ii) Applicants should be holding permanent posts.
(iii) The staff of the ICMR in the Headquarters Office or in any of the institutes of the ICMR are not eligible for the RCDA.
(iv) Applicants engaged in private practice will not be considered for the award.

Application forms and details of award can be had from the Director General, Indian Council of Medical Research, (Division of Administration-III), Ansari Nagar, Post Box No. 4508, New Delhi-110029. The last date for receipt of completed application form is **31st May, 1988**. Applications received after the closing date will not be considered.

इन्दिरा गांधी राष्ट्रीय मुक्त विश्वविद्यालय

INDIRA GANDHI NATIONAL OPEN UNIVERSITY

This University is going to start undergraduate programme in sciences including mathematics. Experimental work being a vital element of any science curriculum, we are working to develop the same on the lines of (1) Home Experiments, (2) Pre-set and Open Ended Experiments (3) Interactive Video and Computer Programmes, and (4) Project Work. We are also thinking of holding a workshop to design low cost experiments. Well tested experimental activities with desirable learning outcomes may be suitably incorporated in our courses. Constructive suggestions regarding innovative and creative experimental activities in different fields may be sent to the

Director, School of Sciences,
C-4/16, SDA, New Delhi-110016.

SUTINDER SINGH

In Celebration of the Book

'Whatever mankind has done, thought, and achieved is found in the magical pages of the books', said Thomas Carlyle. Maxim Gorky went a step further when he reminded us that 'whatever man has done, and is doing, is an expression of his soul. His art and science manifest his noble instincts. They become forceful and vital when they are embodied in books. Jean-Paul Sartre summed it up when he said 'Whatever is written is an image of our society'. Books are indeed an expression of our perceptions. Education aims at arousing the potentialities of the human mind to channelise them to productive uses. Books help accomplish it in the best possible manner.

Ralph Waldo Emerson said, ' 'Tis the good reader that makes the good book'. And we do not seem to be good readers The plain truth is that we do not lay much stock by the books. It is common knowledge that students and teachers spend minimal time in the library. We just refuse to appreciate how much better students would be were they able to use more skilfully the library facilities. Of course many teaching staff are themselves unskilled in library use. It is surprising how many of them rarely seem ever to be in the library themselves. But are our libraries free from the blame? Are not most of them aflicted by the custodial approach of the library personnel that reflect little of information services? Have we not forgotten the dictum handed down to us by Socrates: 'A library should not be the shrine for worship but should be the delivery room for birth of new ideas'? Are the libraries inviting enough that the students and academics should feel impelled to visit by the creative dynamic attitude of the professionals to be helpful? These are some of the questions that require to be faced if we are to find an effective answer to the almost absent, or sharply declining, reading habit. What is called for is not only adequate funds be injected into the libraries but also an objective audit of their performance.

If the scourge of illiteracy bothers the nation it is equally alarming to note that the educated are functionally illiterate. Either the books that they need are not available, and if at all they are available, they are just not accessible. This situation is a clear pointer to the absence of a system of living, vibrant libraries. According to a recent Unesco study the rate of growth of literacy in our country is one per cent per year. Assuming that the population will remain constant, we will need atleast another 66 years to be a liter
nation. And who does not know that making
assumption is nothing but an exercise in self dec
tion. What is needed is an effective public libr
system. We have neglected our libraries for too lo
One is only to look into the reports of various co
mittees and commissions and the scarce mention t
the libraries find in them to convince one self. I
hard to reconcile this situation with the emphasis
New Education Policy places on the expansion
formal, and particularly non formal education. I
all we want to push up the literacy rate, and
serious in our plans to expand educational opp
tunities, we have to back them up by a network
libraries set up through effective library legislati
Achievements of Cuba, Turkey, Iraq, etc. in banish
illiteracy show us the way that literacy drives
successful only when the literacy centres are bac
up by adequate library provision.

Books have been under constant attack. So
times from intolerant governments that are afraid
books and proscribe them. They often forget, r
ignore, the words of John Ruskin. 'If a book is wo
reading, it is worth buying'. However, a more seri
challenge to the embattled book comes from the te
vision and other electronic mass media. These ha
encroached upon whatever little time we can affo
for reading in the fast life of today. Everyone is co
vinced that though television is a better media
entertainment, it is the book that holds its own in
performance of the educational function. One w
also agree that properly handled, television can
more of a friend only if we were to improve our p
grammes and design them to promote the readi
habit. It could be easily done through programm
introducing upcoming authors, reviewing books a
presenting book abstracts.

We are assured that the future of the book
rather secure against the onslaught of microfor
publications because of its inherent strength reflect
in the convenience of its use. It is in celebration
the invincibility of the book that we dedicate t
special issue of University News to the 8th New De
World Book Fair being organised by the Nation
Book Trust, India in collaboration with the Federati
of Indian Publishers and other book trade orga
sations from 5th to 15th February, 1988.

National Book Trust and the Publishing Scene in India

Anand Sarup*

Like everything else in India, the Publishing Scene so presents sharp contrasts, with a few, selected eautifully printed, exquisitely illustrated and unbelieably expensive books in English at one end and cheap, mudgy, poorly bound paperback novels with formula ixture of mystery, romance and violence at the other nd of the spectrum. As in so many other spheres, e evidence of the existence of the technical capaility to produce almost anything of any quality is here but somehow, it comes into play to a very mited extent because most publishers can survive uite easily by swimming along the current or functioing within a protected market producing approved extbooks for schools, reprints of or commentaries on eligious and literary classics, titles on scientific or ocio-economic research commissioned by National odies like the I.C.S.S.R., I.C.H.R., etc. and limited ditions of a few other books by new authors despeate enough to meet the cost of production.

While the above is a reasonably objective thumb ail sketch of publishing in India, one must admit hat there are many publishing houses who have been enturing out of their protective cocoons to promote ew authors, explore hitherto untouched areas and roduce informative and interesting books on the flora nd fauna, the cultural diversity and the socio-political ssues facing the country. Notwithstanding the efforts of a few imaginative publishers, must give in to the inertia of the situation because the market for books is determined largely by an inert educational and literary environment, characterised by tremendous inequalities not only between the educated few and millions of illiterate masses but also by a skewed pattern of income distribution and a continuing dependence on foreign publishers for new books for the elite institutions. Even today, an author "arrives" in India only when he or she is published by a foreign or multinational publisher. The static situation in Indian publishing is best illustrated by the fact that even though the overall demand and consumption of paper has been going up from year to year, the demand of paper for book production has not been registering a significant increase over the last decade.

As an intellectual visionary imbued with the zeal to invigorate the socio-cultural and political environment with new initiatives and ideas, Jawaharlal Nehru felt that it would be impossible to nurture and sustain the process of India's multi-faceted development without education or books. As an author who had popularised ideas on a wide range of subjects through his works, brought out by foreign publishers, Jawaharlal knew the limitations of Indian publishers. That is why, he established the National Book Trust, India, in 1957, to produce and to encourage the production of good literature and to make such literature available at moderate prices to the public.

That the National Book Trust, India, would not be a mere publishing house but would play an interventionist role with reference to publishing, distribution as well as the nurturing of the tastes of readers of all the Indian languages was made clear by laying down that it would, *inter-alia* : undertake the publication of outstanding works of Indian authors in Indian languages and their translation from one Indian language to anthor, take up the translation of outstanding foreign books, bring out books for the popularisation of modern knowledge; and, in addition, take steps to create a broad-based awareness and interest in diversified reading and publishing throughout the country.

Undoubtedly, quantitatively and qualitatively, the performance of the N.B.T. leaves much to be desired. This does not mean that the Trust has been either wholly inactive or entirely oblivious of its multifarious responsibilities. It has so far produced more than 2700 titles which are reasonably priced and cover a wide variety of topics, in English and in 12 Indian languages.

The Trust can justifiably lay claim to having promoted the publication of over 800 university level technical textbooks by Indian authors on a variety of subjects through a unique scheme which, despite its many operational bottlenecks, has given its authors a level of financial returns quite unusual in the annals of Indian publishing. It has also done a great deal in the field of childrens' literature. Under the Nehru Bal Pustakalaya Series launched in 1969 to promote national integration and foster a sense of unity and

---

**Chairman, National, Book Trust, India.*

oneness by providing common reading material in regional languages, to children all over India, the N.B.T. has brought out over a hundred titles on history, folktales and festivals, the freedom movement, science and technology, life and works of outstanding Indians, excerpts from the works of great Indian writers and lately, some books for pre-school children, aimed at creating awareness of books as enjoyable objects of exploration and possession.

Other areas in which the N.B.T. has made a unique contribution are : the publication of popular books about the land and the people of India, National Biographies, Popular Science and, of course, Aadan Pradan, a unique series meant to provide translation of notable titles of one language in as many other Indian languages as possible.

Anyone familiar with the publishing scene will admit that the N.B.T. has been venturing in areas in which there is a void. He will, however, also complain that, through its own publishing programme, the Trust has not had the desired impact across the country. Moreover, it has failed to act as a catalyst of Indian publishing largely because it has shied away from taking risks on a scale commensurate with the size of the undertaking. It cannot be denied that many of its activities, whether in the field of publishing or for promotion of publication and the book-reading habit are being carried on below the minimum threshold required for registering an appreciable impact in a country of India's variety and dimensions.

Perhaps, for the first time, the N.B.T. India, is assuming, during the 8th New Delhi World Book Fair, its true role of a catalytic agent of Indian publishing. In addition to providing facilities for the display of foreign and Indian books, the Trust has invited a large number of authors, voluntary agencies, language associations, State academies, educational planners, etc. to interact informally with each other and to participate in two Seminars and two Workshops being organised to discuss (a) "Publishing in the Electronic Age with Special Reference to Developing Countries"; (b) "Need and Availability of Textbooks for the Higher education Sector in India"; (c) "Production, Publication, Distribution and Marketing of Reading Materials for Continuing Education of Neo-literates and School Drop-outs"; and (d) "Developing Curricular Strategy for Talented Children". Even more important than the planning of these Seminars and Workshops is the fact that all these activities are being undertaken with the co-sponsorship of almost all the major agencies—the U.G.C., the I.C.A.R., the A.I.C.T.E., the Council of Medical Education and the Ministry of Hum Resource Development—concerned with the world education, publishing and readership.

It is difficult to predict the outcome of either t 8th New Delhi World Book Fair or the Seminars a Workshops being organised under its auspices. O thing, however, is clear. By the very process of involvement with the implications of the New Educati Policy for the production, publication and distributi of books of various genre required to meet the nee of different economic, linguistic and education groups, the National Book Trust will inevitably unde go a change of character. Having identified the hiat between needs and availability of various types books, it will be forced not only to assume some ne tasks but also accept the responsibility for evolvi mechanisms to assist the publishing industry to acce the challenges and opportunities inherent in an educ tional renaissance in India.

With Best Compliments

Birth of the Book Fair in India

K. S. Duggal*

A book fair is not just an exhibition of books, big small. It is a commercial event organized with a ew to providing an opportunity to publishers and stributors to negotiate copyright arrangements in spect of translation, reprint, bulk purchase, etc., of ooks. It has a fixed periodicity and as far as possible held at the same venue. It is accompanied by other vents like bookweek, seminars, symposia, workshops imed at promoting writing, translation, designing, ublishing and distribution of books. It may also ave some entertainment features in the form of ultural and other programmes. Retail sale of individual copies to visitors has a low-priority in a book air. In fact, it is not permitted in some of the international book fairs like the one at Frankfurt.

I have taken pains to say all this because writing on the subject some time ago when I stated that the irst ever book fair was held in 1966 at Cross Maidan, Bombay, someone challenged it referring to an All India exhibition of books, held in New Delhi earlier in 1954 as its precursor. An exhibition which is, at best, an exposition of books has to be distinguished from a book fair.

The Book Fair is, perhaps, the most important annual event of the publishing community in India. The credit for conceiving the idea must go to Dr. B. V. Keskar, Chairman, National Book Trust, India, for over a decade. Dr. Keskar, a man of vision and wisdom, was an inveterate idealist. His contribution to broadcasting in India remains unmatched (though regrettably not quite adequately appreciated so far). The stewardship he provided to the Book Trust is an abiding tribute to his love for books and his anxiety to foster bookmindedness in the country.

Dr. B. V. Keskar believed that more than publishing books the National Book Trust should devote its resources to making people read and purchase more and more books. This is what Jawaharlal Nehru dreamt of when he set up the National Book Trust. He wished to make people book minded and thereby foster a scientific temper in the teeming millions of India.

As Chairman, National Book Trust, Dr. Keskar visited the Frankfurt Book Fair. He was then invited by the British Council to visit the UK when he had an opportunity to discuss with his counterpart in England how best an organisation like the Book Trust could serve the community. The message he brought was that the Trust should devote itself more and more to promotional activity and less and less to publishing. The Trust must try and fill the publishing gaps. It should, as far as possible, supplement publishing in the private sector in India.

This gave birth to the concept of the book fair as an instrument of exposing people to reading materials. It was from this that the idea of regional exhibitions sprouted. It was from here that the Trust stepped on to organising a World Book Fair in 1972. Visiting the World Book Fair held in New Delhi, Dr. S. Taubert, the then Director of Frankfurt Book Fair, observed, 'It is to be seen to be believed !' It is maintained that it was the most glorious moment in NBT's history. The Prime Minister of the day who had earlier regretted her inability to find time to inaugurate the Fair sent word and visited the Fair, spending the entire evening going round the stalls.

However, when the crowds thronged the Fair Premises in Windsor Place in the Capital and the national press was agog with its praise, as Director of the Fair, I was reminded of 1966 when hardly a few months after my taking over the Trust, I was entrusted with the responsibility of organising the First National Book Fair. The Chairman of the Book Trust, Dr. B. V. Keskar, was away in the UK when the proposal was put up to the Trust's governing council for financial sanction. I vividly remember the morning. In Dr. Keskar's absence, Shri Bhagwati Charan Verma, the seniormost member of the Trust, was in the chair. The late Mr. P. S. Jaysinghe of Asia Publishing House and the late Shri Romesh Thapar who a few years later headed the National Book Development Board tore the proposal to pieces. Mr. Jaysinghe, the most leading publisher in the country, who had been participating in the Frankfurt Book Fair year after year, said that the concept of the book fair was essentially alien to Indian publishing. It would never succeed. 'And how could you display a fragile thing like a book in an improvised stall or exhibit it in a temporary pavilion erected for the purpose ?' he

---

*Former Director, National Book Trust,
P-7, Hauz Khas Enclave, New Delhi-110016.*

asked me again & again. Shri Romesh Thapar seemed to agree with Mr. Jaysinghe entirely. It hurt me deeply because I looked upon Shri Thapar as a progressive and a man of independent thinking. But it seemed he had been completely won over by Mr. Jaysinghe. After a long debate, it was felt that since the Trust Secretariat had already made commitments in consultation with the Executive Committee, we might try out the idea on an experimental basis. But I was told in no uncertain terms that if the fair was a flop, I should be prepared to face the consequences. Dr. Keskar being away, the responsibility was entirely mine.

I accepted the challenge. Something in me said that they were being unnecessarily sceptical.

The Fair was held on a 90,000 sq. ft. plot requisitioned at the Cross Maidan, Churchgate, Bombay for the purpose. The exhibition pavilion covered an area of 10,000 sq. ft. and the rest was earmarked for stalls, auditorium, office and lounge, etc. One hundred and fifty stalls, each 8 by 8 ft., were erected and rented to the trade.

The main attraction of the Fair was the exhibition of 8,000 selected books in various Indian languages, including English, published in India since January, 1964. There were about 2,400 books in Hindi, 2,000 in English, 735 in Marathi, 535 in Gujarati, 410 in Bengali and 1780 in other Indian languages such as Telugu, Tamil, Malayalam, Kannada, Assamese, Urdu and Punjabi.

An exclusive section of the pavilion, which turned out to be one of the most popular, displayed an array of choicest children's books.

The stalls were rented out to both Indian and foreign publishers or their agents, diplomatic missions and other agencies related to the book trade. Books could both be displayed and sold in the stalls. They were decorated tastefully and did brisk business.

The Fair was inaugurated on the 5th November, 1966, by Shri Nityanand Kanungo, the Governor of Gujarat, in a tastefully decorated auditorium. Addressing a distinguished and representative gathering, Dr. B. V. Keskar, in his welcome speech, explained the significance of the National Book Fair and described the Fair as the first ever biggest effort made for the promotion of books and publishing in South Asia.

The Book Fair also provided an appropriate setting for conventions of publishers and booksellers which were held under the auspices of the Federation of Publishers & Booksellers Associations in India. Dr. Rafiq Zakaria, Maharashtra Minister for Urban Development, presiding over the inaugural meeting, expressed his conviction that Indian publishing had a bright future. He said that people's hunger for more reading material was on the increase as was evident from the large crowds that the Book Fair was attracting. Important problems relating to book distribution were discussed freely and frankly. The Akhil Bharatiya Hindi Prakashak Sangh also held its Convention on the premises of the Fair. Shri Amrit Lal Nagar, the renowned novelist, presided. On this occasion, an exhibition of about one hundred and fifty manuscripts of outstanding Hindi authors was arranged by the Kashi Nagari Pracharini Sabha. Inaugurating the exhibition of manuscripts, Shri Mahavir Adhikari, the then Editor of "Nav Bharat Times", urged the publishers to give a better deal to writers.

There were, in all, eleven literary and cultural programmes held in the Fair auditorium during the Book Fair each evening being devoted to one Indian language.

The series of cultural programmes was inaugurated by Shri Ramdhari Singh "Dinkar," the noted Hindi poet.

On the concluding day of the Fair, i.e. 20th November, awards were given to the two most outstanding stalls. The awards were given away by Shri Raj Bahadur, Minister for Information and Broadcasting, Government of India.

A Book Week was observed during the Book Fair from 8th November to 14th November throughout the country. Publishers and booksellers displayed book week posters produced by the Trust and allowed a special discount on books purchased during the Week. As many as six trade journals brought out special supplements. The entire network of All India Radio put across a large number of broadcasts relating to the Week and important newspapers like the Hindu (Madras), The Times of India, The Indian Express and the Blitz carried special articles aimed at fostering bookmindedness. All India Radio and the Publishers' Association celebrated the Book Week with conventions, seminars and exhibitions in almost all the important town of Northern India like Allahabad, Varanasi, Lucknow, Jaipur, Udaipur, Jodhpur and Patna. In Varanasi essay competitions were held in educational institutions and prizes given to those who had drawn the largest number of books from the libraries of their respective institutions during the year. The National Book Trust distributed several thousand posters in English and Hindi highlighting the importance of the Book Week.

Several publications were brought out by the Trust and other organisations in connection with the National Book Fair. The Trust published a catalogue of books exhibited together with a book-mark which was distributed free to visitors to the Fair. The Federation of Publishers and Booksellers Associations in India published a handsome volume by way of a souvenir which contained a number of useful articles on the various aspects of the book trade in India and a review of publishing activity in various Indian languages. The Akhil Bharatiya Hindi Prakashak Sangh brought out a pamphlet in Hindi advising their constituents about the way the Book Week was to be celebrated.

By all accounts, the Fair was a remarkable success. It went a long way in fostering bookmindedness in the country. The press, the book trade and the book lovers all hailed the idea of the National Book Trust organising a fair like this and expressed the hope that it would become an annual feature of the activities of the Trust. The Trust received an invitation from the Publishers and Booksellers Association of West Bengal inviting it to hold the next Fair in Calcutta.

This is how the National Book Fair became a regular feature of the Trust activity. Fairs were held at Delhi, Calcutta and Madras culminating in the World Book Fair in 1972 declared by UNESCO as the Book Year.

It was proposed to hold the World Book Fair at the Feroz Shah Kotla Grounds, New Delhi. But owing to Emergency on account of the war with Pakistan, the Fair had to be postponed. Soon after the war was over, it was decided to reschedule the Fair to be inaugurated on March 18. Since the original site at the Feroz Shah Kotla Grounds was not available during the months of March-April, 1972, the Fair had to be moved to Windsor Place, a site smaller in area, but perhaps an improvement on the previous site since it was more centrally located.

Because of the new site and changed dates almost every detail of the project had to be planned afresh. Work started on 15th February 1972, leaving the contractors barely five weeks to execute 4,592 sq.m. of covered space and another 2,198 sq.m. for a large number of participants to build their pavilions.

The assignment was that a pavilion of 2,809 sq.m. in area with a number of ancillary buildings of a type that would provide an intellectual environment had to be put up all in temporary construction when the President of India would inaugurate the Fair on March 18th, 1972, in the presence of an international gathering.

Apart from the main pavilion, a number of well-known publishing houses undertook to construct their own pavilions for which well-demarcated open plots were allotted. They provided an attractive synthesis with the main pavilion and as the scale and grandeur of the main pavilion kept on unfolding, the private pavilions did not lag behind to impart the best artistic touches to their final finish. The interior designing of those pavilions was also tastefully done and attractive styles of book-displays were seen in the pavilions. In perspective, an effect of total elegance was achieved in the architectural style of the entire Fair, and even when the construction was temporary, it projected an image of a rich performance. The facade of the Fair revealed itself in all its simple but striking elegance on the Janpath side, while the ancillary pavilions could be seen stretching towards Ashok Road, each in its unique architectural style and finish.

The Fair was inaugurated by Shri V. V. Giri, President of India, on 18th March at 5.30 p.m. at an impressive function attended by more than 3,000 guests including Prof. S. Nurul Hasan, Minister of Education and Social Welfare, Members of Parliament, diplomats, foreign delegates, authors, publishers and book lovers.

Since 1972 was also being celebrated as the twety-fifth year of India's Independence, one of the highlights of the Fair was an exhibition of outstanding books published in the various Indian languages and in English since India became independent. In this Exhibition nearly 10,000 books in Hindi, English, Bengali, Gujarati, Kannada, Marathi, Tamil, Telugu, Punjabi, Malayalam, Urdu, Assamese, Oriya, Sindhi and Sanskrit were displayed. There were special sections for children's books and paperbacks.

In the International Sector of the Book Exhibition, books on India published in some of the friendly countries were displayed along with a few publications marked for their excellence in printing and production. A large number of foreign countries sent some of their outstanding books for display in this sector. These included the UK, the USSR, the USA, France, the GDR, the Federal Republic of Germany, Switzerland, New Zealand, Hungary, Italy, Greece, Iran, Czechoslovakia, Spain, Sri Lanka, Cambodia, Malaysia, the Democratic People's Republic of Korea, Turkey, Afghanistan, Kenya, Tanzania and Zambia.

Provision was made for publishers both in the public and private sectors to rent stalls or set up their own pavilions where they displayed as well as sold their books. Publishers representing several foreign countries including those from the UK, the USSR, the USA, France, the Federal Republic of Germany, the German Democratic Republic, Ireland, Japan, Hungary, Yugoslavia, Czechoslovakia, the Democratic People's Republic of Korea, Iran and Bangladesh participated. WHO and the Publication Bureau of UNESCO (Paris) also joined. A number of foreign publishers came to the Fair to man their stalls.

Over a hundred Indian publishers rented stalls or put up their own pavilions where they exhibited and sold their publications. Provision was also made for economic stands for members of the Federation of Publishers and Booksellers Associations in India. A number of State Governments (Punjab, Madhya Pradesh, U.P., Andhra Pradesh, Tamil Nadu, Kerala, Maharashtra, Orissa, West Bengal and Assam) participated in the Fair. Also several public sector organisations (the publications Division of the Ministry of Information and Broadcasting the Publications Branch, Government of India, the Council of Scientific and Industrial Research, the Indian Standards Institution, the Indian Science Academy and the Indian Council of Agricultural Research and others) joined in a big way. The various organisations under the Ministry of Education and Social Welfare were housed under one roof in an exclusive pavilion.

During the last three days, a Book Bazar was organised on the precincts of the Fair where books were sold by publishers at reduced rates. It was a tremendous success and attracted large crowds.

Shri G.S. Pathak, Vice-President of India, gave away awards to the best designed stalls and the best produced jackets in a function held in the Imperial Hotel.

While finalising the programme of the World Book Fair, it was decided to organise an International Seminar on 'Books for the Millions' during the Fair. The Seminar was aimed at presenting a wide spectrum of opinions and information on the production of paperbacks and related problems. The papers and discussions were to set in perspective their importance in spreading knowledge and providing entertainment to readers. The participants of the Seminar drawn both from the developed and the underdeveloped countries were invited to examine the subject from the point of view of its origin and history, copyright problems, sales and how they affected authors etc. They were also to study the implications of paperback production for developed countries which produced large numbers of them, and for developing countries which were keen on producing their own inexpensive books.

A standing committee was nominated to look after the organisation of the Seminar. The committee decided upon the following eight sessions spread over three days :

1. Paperbacks—a Historical Survey.
2. Paperbacks and Copyright Problems.
3. Paperbacks and the Author.
4. Production of Paperbacks.
5. Distribution of Paperbacks.
6. Paperbacks in Developing Countries.
7. Paperbacks and Hardbounds.
8. Cooperative Publishing.

Shri Dina Nath Malhotra, Managing Director, Hind Pocket Books (P) Limited, was nominated Technical Director of the Seminar. The Seminar was formally inaugurated by Dr. Prem Kripal, the then Chairman, Executive Board of UNESCO.

A National Writers' Camp was held during the World Book Fair from March 26 to 31, 1972. The Camp was inaugurated by Shri Y.B. Chavan, Union Minister of Finance. In this 93 eminent writers in various Indian languages and in English participated.

With a view to giving to readers an opportunity to meet their favourite authors, Meet the Authors' sessions were held in which writers spoke about their art and philosophy, followed by discussions between the authors and the audience.

Synchronising with the World Book Fair a Book Week was celebrated throughout the country from March 18 to 24. An extensive publicity campaign was launched to foster bookmindedness during this period. Universities and other educational institutions, libraries and cultural organisations celebrated the Book Week appropriately to create an atmosphere in which people purchased and read more books. The Federation of

Publishers and Booksellers Associations in India allowed a special discount of 10% on books purchased during this period. AIR network organised special broadcasts and the P & T Department cancelled postal articles from the principal cities with a slogan of the Week in English and Hindi. The Trust brought out an attractive poster with the Slogan of the Week and distributed it to the educational and cultural institutions in the country for display.

A series of cultural programmes was organised in ballroom of Hotel Imperial for foreign and Indian guests participating in the Fair. The programmes started on March 19, 1972 with a shehnai recital by Ustad Bismillah Khan and party. Vedantam Satyanarayana and party gave a Kuchipudi dance recital on the 20th. Ustad Amjad Ali Khan presented a recital on the sarod on the 21st. Pt. Sampta Prasad accompanied him on the tabla. On March 22 Km. Padma Subramaniam of Madras presented a dance recital. Children of some foreign countries along with Indian children presented a variety programme on the 23rd observed as the International Children's Evening. All India Radio's National Orchestra gave a programme of orchestral music on the 24th. On the 25th Dr. Lakshmi Narayan Lal's Hindi play Suryamukh was produced by Prof. E. Alkazi. April 1 featured an interesting 'Mushaira, Kavi Durbar and Kavi Sammelan with leading poets in Hindi, Urdu and Punjabi participating in it. The cultural programmes were a remarkable success.

An All India Publishers Convention was organised by the Federation of Publishers and Booksellers Associations in India on March 23, 1972. The Convention was inaugurated by Shri Kanti Chaudhuri, Joint Secretary, Ministry of Education and Social Welfare, Government of India, and was attended, besides publishers and booksellers in the private sector, by representatives of publishing organisations in the public sector, librarians and others interested in books. There was a lively discussion on 'The Public and the Private Sector in Publishing.

The Federation of Publishers and Booksellers Associations in India organised two training courses, one for 'Publishing Management' and the other for 'Book Promotion and Distribution'. The courses were directed by Shri O. P. Ghai, President and Shri M.N. Rao, Past President of the Federation, respectively.

The Indian Library Association had the privilege of having President V.V. Giri to inaugurate the 19th All-India Library Conference on March 24, 1972 on the premises of the Fair.

The Indian National Science Academy organised a discussion on 'Production of Books on Science' on March 31, 1972. Prof. B.R. Seshachar, President of the Indian National Science Academy, and about 50 delegates participated in the discussions. The Akhil Bharatiya Hindi Prakashak Sangh organised a seminar on 'Popularising Hindi Books Abroad' on April 1. The Seminar was inaugurated by Shri D.P. Yadav, Deputy Minister of Education and Social Welfare, under the chairmanship of Dr. B.V. Keskar, Chairman, National Book Trust, India.

The Sangh also held a symposium on 'Paper Scarcity in India', which was inaugurated by Shri Siddeshwar Prasad, Deputy Minister of Industrial Development.

The Association of Master Printers organised an All India Convention of Printers under the chairmanship of Shri Guha Ray, to discuss problems of mutual interest.

A symposium on 'Communication Across Frontiers' was held on March 21. The participants in the symposium were : Dr Satish K. Arora, Fellow of the Indian Council of Social Science Research, Prof. M.L. Sondhi, Associate Professor in the School of International Studies, Jawaharlal Nehru University, Shri Satish Saberwal, Fellow, Indian Institute of Advanced Study, Simla, Shri L. Shivalingappa, Research Scholar, Jawaharlal Nehru University, Smt. Amita Malik, eminent journalist and Shri Ashok Davar, a journalist from the USA. Shri Ashok Mitra, Secretary, Planning Commission, acted as the Chairman of the Seminar.

The following countries participated in the Fair in one capacity or another: Afghanistan, Bangladesh, Sri Lanka, Czechoslovakia, Cambodia, France, the Federal Republic of Germany, Greece, the German Democratic Republic, Hungary, Italy, Ireland, Iran, Japan, Kenya, Mauritius, Malaysia, Nepal, New Zealand, North Korea, Poland, Switzerland, Spain, Tanzania, Turkey, the USSR, the UK, the USA, Yugoslavia and Zambia.

An extensive and well coordinated publicity campaign was launched months before the commencement of the Fair. Ten thousand copies of attractively designed World Book Fair posters were distributed to all important educational and cultural institutions in New Delhi and principal towns all over the country. Hoardings were installed at strategic points and cinema slides released in the leading cinema houses in the city. Over a hundred buses in Delhi and New Delhi carried the World Book Fair advertisement from March 1 till the

Fair was over. Nearly 10,000 beautifully designed car-stickers were distributed in Delhi, Bombay, Madras and Calcutta.

The Posts and Telegraph Department cancelled postal articles with the inscription World Book Fair and the slogan "A Good Book is a Good Friend" during the Fair in 23 important cities.

The Radio network and TV provided extensive coverage to the Fair activities by broadcasting a variety of programmes before and during the Fair. The commercial services of All India Radio carried the Fair advertisement for about three weeks at peak listening hours. The Films Division gave appropriate coverage to the inauguration of the Fair by President V.V. Giri and other important functions in the newsreels.

The press noticed the activities of the Fair liberally. The following newspapers and journals brought out special supplements on the occasion: The Statesman, The Times of India, The Indian Express, The Patriot, The National Herald, The Motherland, The Amrita Bazar Patrika, The Aaj, The Illustrated Weekly of India, The Economic Times, The Contemporary Indian Literature, The Educational Reporter, The Surge, The Point of View, The Dinman, The Thought, The Prakashan Samachar, The Natrang, The Pustak Parichay, The Sanchetna, The Entertainer, The Tarun Bharati, The Consumer Gazette, The Nilachar, The Indian Book Industry, The Round Table, The Mainstream, The Socialist India, The Link and The States.

Due to an unprecedented response from visitors, the Fair was extended by two days upto 4th April. Nearly 2,00,000 visitors visited the Fair. Among them were the President, the Vice-President, the Prime Minister, Union Cabinet Ministers, the Maharani of Sikkim, State Governors and Ministers, Diplomats, foreign delegates, authors, publishers, librarians, teachers, students and others.

The number of books displayed in the Fair was 2,00,000 of which 10,000 books in all the Indian Languages and English were displayed in the National Exhibition. A number of foreign delegations participated in the Fair.

(1) Delegates from USSR
(2) Delegates from GDR
(3) Delegates from East African Countries
(4) Delegates under UNESCO Grants

UNESCO placed two grants of $2000 and $5000 at the disposal of the Trust. The grant of $2000 was made at the Trust's suggestion to enable them invite Dr Sigfred Taubert, Director, Frankfurt Book Fair, and the other grant of $5000 was for the purpose of inviting publishers from some other countries to visit the Fair.

The birthpangs of the Book Fair were agonising but it turned out to be a bonnie baby. It has since grown into a fine institution which is the pride of India's publishing community. The Trust continues to organise a World Book Fair every alternate year. The National Book Fair is an annual event. The year in which the World Book Fair is held, the National Book Fair is merged in it.

The uncertainty and the unseemly controversy that preceded the Eighth World Book Fair is nothing new. Almost every fair held is menaced with one controversy or the other. The publishing community in India being split in splinter groups, it falls to the lot of the National Book Trust to carry them all together tactfully and provide them a common forum. More than anything it is an important contribution of the book fair to the world of books in India. ☐

BOOK DEVELOPMENT IN INDIA

J.C. Sharma*

Introduction

Indian publishing has shown steep progress since the independence of the country. India is among the 8 largest book producing countries of the world and publishes books in English as well as various Indian languages in a variety of subjects. It is creditable on the part of Indian publishing industry that it ranks 3rd after USA and UK in the production of English titles.

Prior to our independence, publishing in India was limited in its scope and was controlled by a few publishing concerns many of whom were subsidiaries of multinational publishing houses. These publishers were mostly concerned with educational books. As educational system was based on the British model, there was hardly any scope for local book industry to grow. Book publishing thus grew alongwith national conscience after attaining independence. After independence, there was a tremendous expansion of education as well as educational institutions. With the growth of education the need for more books also grew. Indian publishing industry (both private and public sector) rose to the occasion to meet the growing need for books.

School Textbooks

Almost all the books used for school education are indigenous. With a view to provide good and economic books to school children, almost all the State Governments have nationalised textbooks and have set up Textbook Boards. The National Council of Educational Research and Training (NCERT) helps State Governments in getting the books assessed to constantly improve their quality. NCERT is also producing textbooks specifically for schools affiliated to the Central Board of Secondary Education. The State Governments may also adopt these textbooks. The prices of these textbooks are intended only to cover the actual expenditure incurred on material, printing, overheads etc. Besides, NCERT also brings out supplementary reading material in different areas such as India's cultural and literary heritage, development in science etc. However, school textbooks produced by the public sector are not adequate to meet the national requirements. It is estimated that out of 13,000 books in the use, all over india, only 1000 are nationalised books. In order to fill up this gap, educational institutions have to depend upon textbooks prepared by private publishers.

It has been stated in the report on 'National Book Policy' brought out by the National Book Development Council that it is educationally unsound to prescribe a single textbook for all students in a class. It has been recommended that a single textbook situation need to be remedied with the production of more than one textbook in each subject in regional languages so that students and teachers have a choice from available books. Near absence of educational literature for technological education in regional languages for secondary and higher secondary level need be remedied. The agencies, expertise and resources of private sector may be fully availed of in the production and distribution of such literature.

University Level Books

University level books have been mostly with the private publishers and original university level textbooks are being produced suited to the needs of our students. These textbooks are quite popular in many developing countries as they are more readable for them. The Govt. have sponsored the following schemes for making textbooks for university level courses available at reasonable prices :

I. University Level Books from Abroad

In cooperation with the Govts of UK, USA and USSR schemes have been initiated to make available to Indian university students standard books at low prices. The books supplied are those approved by Government. Books from UK and USSR are reproduced in those countries and marketed in India through commercial channels. The approved USA books are published in India with a USIS or USAID Subsidy from PL-480 Rupee holdings in India. The freedom of universities to use or not to use these books is left unhampered. Under these programmes, about 1620 American, 720 British and 550 Soviet books have been published so far. Latest editions of books are considered for coverage under these programmes and are assessed by expert agencies with regard to their suitability for Indian

---

**Deputy Educational Adviser, Deptt. of Education, Ministry of Human Resource Development, New Delhi.*

students and non-availability of comparable books by Indian authors.

II. Indigenous University Level Books

(a) Scheme to Subsidise University Level Books and Reference Books.

The National Book Trust (NBT) has been implementing a scheme to subsidise university books and reference books since 1970. The main objective of the scheme is to encourage indigenous authorship and to make available to students books of acceptable standard at reasonable prices. The scheme neutralises the impact of low cost editions by foreign authors either being reprinted within the country or imported into the country in large numbers. As a result of this scheme the country's dependence on imported books is gradually reducing. This scheme provides finances in the form of subsidy to the publishers and royalties to the authors. The books published under the scheme are generally published and marketed by private sector publishers.

To start with the scheme was to subsidise university level books in English. In July 1982 the scope of the scheme was extended to cover books in Hindi and effective April 1984 the scope of the scheme was further extended to regional languages. So far about 750 books have been subsidised and 950 authors and 250 publishers have been benefitted by the scheme.

(b) Book Promotion in Hindi and Regional Languages

Ministry of Education in cooperation with the State Govts. launched in 1968 a massive programme to produce suitable standard books in Hindi and regional languages. The scheme envisaged to facilitate the change over from English to Indian languages as the medium of instruction at the university level. Under this scheme in the field of textbooks, priority is given to original writings. Textbooks written under the programme are to be directly linked with the syllabii content of prescribed courses. Translations/ adaptation of the best books of the world are also encouraged. This scheme is implemented through Book Production Boards/Hindi Granth Akademies set up by the State Governments. Uptil 31st January 86 a grant of Rs. 14 crores has been released in favour of the State Govts. and Akademies. 7258 books in various Indian languages have been produced.

(c) Core Books Project in the Medical Sciences

In India we still have paucity of books on Medical Sciences by indigenous authors. The imported books are beyond the purchasing capacity of the Indian students. Keeping this in view the Govt. of India envisaged the scheme for preparation of books in medical sciences by eminent subject specialists. The project was entrusted to the NBT in 1970. Under this scheme the authors are commissioned to write books and they are paid preparation charges in advance. In addition, the authors of the core books project are also entitled to get the usual royalty as applicable in the subsidy scheme. So far about 23 books have been published under this scheme.

(d) UGC Programme for Preparation of University Level Books by Indian Authors.

The University Grants Commission (UGC) initiated a scheme in 1970-71 of providing financial assistance to outstanding scholars in the universities, colleges and other institutions of higher learning in the country for the preparation of high quality books and reference materials for use in the universities and colleges. Under the scheme, assistance is given to the authors for the preparation of manuscripts. The authors are paid preparation charges and books are published by the authors themselves. Earlier, such works selected by the UGC use to be subsidised by NBT. According to the available information upto March 1985, 840 projects were accepted and 242 manuscripts have been completed and 511 projects are in different stages of implementation.

(e) Hindi & Other Languages Publications

The Language Division of the Deptt. of Education is also implementing a scheme to provide financial assistance to Voluntary Hindi Organisations for promotion of Hindi. This scheme inter alia provides for assistance for preparation and publication of Hindi manuscripts, assistance for publication and translation into Hindi of books in regional languages, assistance for publication of books written in Devanagari script, setting up and running libraries in Hindi books etc.

Besides, there is a scheme to produce standard literature in Sindhi including printing of books. Under this scheme about 20 books have been published.

For the promotion of Urdu, Deptt. of Education has established Tarqui Urdu Boards which bring out academic literature of Urdu for the benefit of students. The Bureau also compiles technical terms, encyclopedias, dictionaries, etc. in Urdu. This Bureau has published 450 books of various subjects.

There are also other institutes as Central Institute of Languages, Mysore, Central Institute of Hindi, Central Hindi Directorate which are engaged in research in the field of languages and linguistics in India. These institutions have also substantive publication programmes.

Government also provides financial assistance to organisations for production of Sanskrit literature. Assistance is given for printing and publication of original works relating to Sanskrit Literature, printing of out of print Sanskrit books, Sanskrit journals and to improve their quality etc.

(f) Besides, there are a number of Research Institutes and specialised agencies such as IITs, Indian Institute of Science, Council of Scientific and Industrial Research, Indian Council of Agricultural Research, Indian Council of Medical Research, Archaeological Survey of India, Anthropological Survey of India, Indian Council of Historical Research, Indian Council of Philosophical Research, Indian Council of Social Science Research etc., that bring out usual monographs, books in the specialised areas of science, technology, agriculture, medical science, history, philosophy, sociology etc.

General Books

In addition to the private publishers various Government and Government sponsored agencies like National Akademies, Institute of Advanced Study, Simla, Archaeological Survey of India, Indian Council for Cultural Relations, Publications Division of Ministry of I & B, etc. are engaged in the production of general books needed for mental pleasure and general awareness.

The Publications Division of the Ministry of I & B is one of the largest publishing and book selling enterprises. It publishes books and journals in all major Indian languages. Its publications cover a wide-range of subjects including art, culture, history, tradition, political evolution, economic development and social research.

The Publications Division have 7 major series like Collective Works of Mahatma Gandhi, Peoples of Modern India, States of Our Union etc. and Reference Publications like India—A Reference Annual. Besides, the Division also brings out 21 journals of varying periodicity like Yojna, Bal Bharti, Kurukshetra, Bhagirath in English and Hindi. The Division has brought out more than 16,000 titles so far.

The National Book Trust, India was set up in 1957 as an autonomous organisation under the Ministry of Human Resource Development, Department of Education, Government of India, with the objectives of producing and increasing the production of good literature at a low price and to foster bookmindedness. The Trust publishes books under well defined series such as India—the Land and the People, National Biography, Young India Library, Folk Lore of India, Popular Science, Adan Pradan etc. It publishes books in English and modern Indian languages and have brought out over 3,000 titles.

Sahitya Akademi was established in 1954 as an autonomous organisation by the government of India to work actively for the development of Indian literature and to set high literary standards to foster literary activities in all the Indian languages and to promote through them cultural unity of the country. The Akademi brings out a number of books every year besides a bi-monthly journal in English, 'Indian literature', a quarterly 'Samakalin Bhartiya Sahitya' in Hindi, and a half yearly 'Sanskrit Pratibha' in Sanskrit. The Akademi has sponsored two series of publications namely Histories of Literature of various Indian languages and Makers of Indian Literature.

Children's Books

Books are tools for development. Development of of a nation is in the development of its children. A country like India which has multiplicity of languages and ethnic groups need books for children in various languages to cater to their diversified needs. Authors, publishers and illustrators have to work jointly to stimulate young minds with a view to foster national integration, emotional maturity, reading habit among them. There is a need to have more and more children literature with colourful illustration.

The National Books Trust, India and Children Book Trust have brought out good literature for children. The NBT brings out books with uniform content at a uniform price under the series Nehru Bal Pustakalaya. So far 1168 titles and translations have been published under this series. The Children Book Trust is a private organisation devoted exclusively to children's literature. The Trust has been helped to set up its own press. They have so far published 430 titles out of which 200 are original titles in English and others are translations in other Indian languages.

There are not many private publishers who bring out books for children as they cannot afford to compete with the foreign publishers and public sector publishers. It is the need of the time that more books depicting Indian Culture and Progress in the field of science are brought out in simple language for the children to help future society equipped with knowledge and awareness.

Library Movement in India

Since there was a need to increase the number of libraries in the country, Government of India established Raja Ram Mohan Roy Library Foundation in 1972 on the occasion of bi-centenary of the birth of Raja Ram Mohan Roy, International Book Year and the celebration of Silver Jubilee of India's independence. The foundation was set up with an objective to take the library movement to small towns and villages in cooperation with State Governments, Union Territory Administrations and other organisations working in the field with a view to providing reading facilities for all sections of population.

Libraries especially public libraries in India come under the jurisdiction of State Governments. State Governments and voluntary organisations have taken the initiative for developing library services. Voluntary organisations also get grants from the Government and Raja Ram Mohan Roy Library Foundation supports the State efforts by rendering assistance on matching basis under certain schemes such as :

1. Assistance towards building up of adequate stock of books
2. Assistance towards organisation of mobile libraries and rural book deposit centres
3. Assistance towards storage of books
4. Assistance towards seminars, workshops, book exhibitions etc.
5. Assistance to libraries below district level for increasing accommodation
6. Assistance to State Central Libraries and District Libraries to acquire TV cum VCR set and cassettes for educational purposes.

There is a provision of Rs. 442 lakhs in 7th Five Year Plan under the schemes of Central Assistance to States and UTs. Besides, there is a scheme of Assistance to Voluntary Educational Organisations working in the field of public libraries. A provision of Rs. 200 lakhs have been made in the 7th Five Year Plan for this purpose.

There is a scheme of Direct Assistance for :

1. State Central Libraries and District Libraries through Central Selection of Books.
2. Assistance to Centrally sponsored libraries : (a) Nehru Yuvak Kendras (b) Jawahar Bal Bhavans (c) Other libraries recommended by the Central Government and/or approved by the Foundation.
3. Assistance to Children's Libraries and Children's Section of general public libraries.
4. Assistance towards collection and compilation of library statistics through official and non-official agencies. There is a provision of Rs. 159 lakhs in the 7th Five Year Plan for this purpose.

Achievements

District Libraries have been established in most of the districts. Some of the State Central Libraries and Regional Libraries also function as District Libraries for the respective districts in which they are located. State Central Libraries and Regional Libraries are usually Government libraries with a few exceptions such as Sinha Library, Bihar and Maulana Azad Central Library in Madhya Pradesh. For the last fourteen years the foundation has covered 18345 libraries at various levels i.e. State libraries (28), District libraries (387), Sub-division Taluq/Tehsil libraries (466), Nehru Yuvak Kendras (173), Bal Bhavans (49), Town and Rural libraries (16249), Mobile libraries/Rural Book Deposit Centres (879), NSS Centres and others (116).

Besides, all the Institutions have separate provision for the development of libraries. The University Grants Commission also extends grands for the development of University and College libraries. During the year 1985-86 UGC has released grants of Rs. 530 lakhs to the University libraries and Rs. 276 lakhs for the college libraries for the purchase of books and periodicals.

Imports and Exports

Imports : India is following a liberal import policy in respect of books and publications. The main objective of this import policy is to encourage free flow of knowledge and also to gain from the advancements in the scientific and technical fields made in other countries. It has been envisaged while putting a restriction of 1000 copies on each title per importer per year under the open general licence that it does not harm the indigenous publishing industry. Import of foreign editions of books for which Indian reprints are available is not permitted under the rules. Similarly the import of foreign reprints of Indian publications are not allowed.

Exports : India now exports books, including journals and periodicals, to over 80 countries. Beginning with a modest figure of Rs. 6 million in 1965-66, Indian exports had risen to Rs. 250 millions in 1984-85.

A remarkable feature is the wide variety of subjects on which India publishes books. It is gratifying to observe that the USA, UK and West European countries, Japan and Australia are good markets for books on Indian Philosophy, Religion, Yoga, Culture and

Ancient Classics, History, Current topics and Natural Sciences. Children's literature has a steady market in Singapore, Malaysia, Kenya, Nigeria, Fiji, West Indies and Mauritious.

Many factors have been responsible for the phenomenal ries in the export of Indian books over the years. An important aspect has been the systematic manner in which Indian publishers and distributors have been promoting the sale of books abroad. Their representatives travel extensively in various countries where they contact trade and institutional customers. This enables them to meet the existing demand and promote new books.

The Government of India has been very particular to encourage book exports. The Chemicals and Allied Products Export Promotion Council, popularly known as CAPEXIL, and set up a separate panel to deal with the export of books and publications. This panel helps Indian book exporters with their problems and facilitates their export activities by granting cash assistance at the rate of 8% for all types of books. Blanket Exchange permit is being issued to the exporters @ 10% of export earnings. Marketing Development Assistance is granted at the rate of 30% (60% for small publishers) for delegations, study teams etc., sponsored by the CAPEXIL. For export promotion activities such as market studies, publicity, participation in the fairs etc. subsidy @ 60% is given to the members of CAPEXIL.

The National Book Trust has been playing a significant role by helping Indian publishers and distributors to participate in various international book fairs. Regular and increasing Indian participation at the Frankfurt Book Fair and the other important international fairs at London, Cairo, Singapore, Moscow and in several other countries has been an important factor in projecting Indian books and building up their sales in overseas markets.

Copyright

It is very essential for the development of books that the country has a strong national Copyright Law. It is important in the sense that if the rights of the authors and publishers are not protected, there is every chance of their works being pirated. In this regard India stands on a very strong ground. The Copyright protection is governed by the Copyright Act, 1957. The Act provides that the author is the first owner of the copyright except where the work is produced under the contract of service or apprenticeship. Copyright owner according to our Act is empowered to adopt, translate or copy or allow the work for cinematography, record or broadcasting. General terms of the copyright is for author's life and 50 years after his death so that this way even his successors are given protection.

The Copyright Act has been amended in 1984 to check the wide spread piracy. It has incorporated stringent punishment for infringement of Copyright.

According to our Copyright Act authors enjoy special rights. Even after assigning their rights, the authors have a right to claim the authorship of the work and also right to restrain or claim damages for any distortion or mutilation of their work or any action taken on the work which would be prejudicial to their honour or reputation. The right relating to restraint or claim for damages or distortion or mutilation, etc. can be claimed even by the legal representatives of the author.

The Copyright Act provides that any act which is done by anybody else without the authorisation from the author which only the author has the right to do, is punishable offence. Even when there is any violation of the terms of assignment, it constitutes copyright infringement.

Since India is a member of the two International Copyright Conventions, works of Indian nationals get copyright protection in other countries which are members of these Conventions. Likewise, foreign works also enjoy Copyright protection in India as if authors of these works were Indians.

By virtue of 1984 Amendment of the Act, authors can come before the Copyright Board in their disputes with publishers for inexpensive summary disposal of their disputes. The Copyright Board can give permission to copyright owner to revoke his agreement if the terms of the assignment are harsh to him or if the publisher unduly delays the publication. The amended Act further provides that any assessment has to be definite in terms and should indicate clearly the rights proposed to be assessed and the size of the work.

Other Book Promotional Activities

(a) **Book Fairs and Exhibitions**

Besides participating in the International Book Fairs for the promotion of books abroad, a number of book fairs are organised within the country. These fairs and exhibitions are organised by the National Book Trust which is fully financed by the Government. The Trust so far has organised 7 World Book Fairs in New Delhi, 12 National Book Fairs in the major cities of the country, over 100 book exhibitions in district and university centres and 5 book festivals on a regional basis. Apart from these book fairs and book exhibitions, the Trust also celebrates a National Book Week. All these book fairs, exhibitions and National Book Week are organised in collaboration with the Trade Federations such as Federations of

Indian Publishers, Federations of Publishers and Booksellers Associations, and Authors Guild of India. All these are given wide publicity through Press Media, Posters and Banners.

(b) Book Exhibitions of University Level Textbooks

In order to publicise the indigenous publications, Raja Ram Mohan Roy National Education Resource Centre which is a part of the Book Promotion Division organises a number of exhibitions in the country at various universities and institutions of higher learning. In doing so, the Centre creates an awareness about the presence of indigenous standard books in various fields. The Centre has so far organised 55 exhibitions of indigenous textbooks.

(c) Indigenous Authorship

In general, the economic position of the authors is not very sound except some authors of the best selling books. There are very few authors who survive solely on their royalties. Authors sometimes have some complaints with the publishers and Federation of Indian Publishers. They have established a Committee of Authors and Publishers in collaboration with the Authors Guild of India to sort out misunderstanding between two groups. Besides our Copyright Act also protects the rights of authors. Fellowships are granted for writing books by University Grants Commission. Besides, authors are assisted for organising their conventions, workshops, etc. In order to promote the indigenous authorship, the National Education Resources Centre (NERC) convenes meetings of the experts to evaluate the books written by Indian authors. The comments are circulated by NERC to all the universities. This helps popularising their books.

(d) International Standard Book Numbering System

The NERC has been designated as the national agency for the implementation of ISBN system in the country. This system inter-alia helps to promote the export of Indian books and minimise the process of delay in executing the orders. This system helps to identify the publisher of the book and the individual titles. This is an economic way of communication among publishers, suppliers, booksellers and book buyers. A provisions of Rs. 2 lakhs is being made annually for the implementation of ISBN System.

(e) Scheme of Assistance for Book Promotion

Department of Education has a scheme of assistance to voluntary and private publishers for organising seminars, training courses, workshops, annual conventions, etc., connected with book promotional activities. Whenever such requests are received, the Government usually releases grant to meet 75% of the approved expenditure on such activities. During the past 5 years, a number of organisations have been given grants for this purpose.

Besides these promotional activities, there are a number of facilities available to the publishers in terms of availability of paper, purchase of books by Government agencies, tax rebate under Section 80 QQ, NBT Subsidy, help in publicity and postal rates.

(f) Interaction with the Book Industry

In all the Committees of the Government, the Federation of Indian Publishers and Federations of Publishers and Booksellers Associations in India are given representation. All the exhibitions within the country and abroad are organised with their cooperation. In the matter of policy making, their views are always sought as to understand their difficulties.

(g) National Book Development Council

The Government of India set up a National Book Development Board in 1967 to lay down guidelines for the development of book industry in the context of overall requirements of the country. It remained active upto 1974. This Board was revived in 1983 under the name of 'National Book Development Council'. The Council consists of people from all walks of life concerned with books. This is an advisory body which advises Government for the promotion and development of book industry in the country. This Council was entrusted to draft a National Book Policy. The Council constituted a Working Group to draft the National Book Policy which has been submitted to the Government.

The Report has made a number of suggestions and recommendations on various aspects of book promotion in the country. The main recommendations of the report relate to publication of translation of classics and other outstanding Indian works, publication of children's literature by a nodal agency of the Ministry of Human Resource Development, Association of private publishers in publication of school textbooks, publication of university level books in Hindi and regional languages, production of books for non-formal education, establishment of a national organisation of authors on cooperative basis, acquisition of copyright of books in public domain, establishment of Book Finance Corporation, supply of paper at reasonable prices, reduction in postal rates for despatch of books, development of libraries, registration of publishers, etc. These recommendations are being examined in detail by the Government for implementation. □

GOVERNMENT IN PUBLISHING

S. N. Chakraborty*

Right to read and Society's obligation to ensure that everyone has an opportunity to enjoy the benefits of reading cannot be over emphasised in a democratic set-up as in India. It is not only the active and intelligent participation of people in the governmental process upon which the functioning of a democracy depends, but also the responsibility of the Government to interpret and justify their policy to the governed, and to create an informed and intelligent opinion on all matters related to these activities. Even now, printed literature is the best source of passing information on the activities of the Government in India.

Public Sector publishing plays a major role in Indian publishing Industry, in terms of number of titles, volume, and quality of output. One of our major social tasks, by the time we reach the 21st century, is to bring about 100% literacy in this country, and this task cannot be accomplished without substantial increase in Public Sector publishing activities. The areas of activities in publishing by different governmental organisations is well defined. The Central Government official civil publications—Administrative Reports, Developmental Programmes and activities, Commission or Committee Reports, Bills, Supreme Court Reports, Laws, Codes, Rules & Regulations etc., Periodicals, Gazettes, Digests, etc., and Defence publications of Government of India, are handled by the Department of Publication which comes to about 80% of the total Government publications. The Publications Division of the Ministry of Information & Broadcasting publishes informative publications, useful literature, Periodicals, etc. The Survey of India deals with Maps, Charts etc. NCERT and NBT publish Textbooks and important publications at the Central, level, and State Text Books Corporations at the State level take care of the publications of the nationalised books. The Lok Sabha/Rajya Sabha Secretariat brings out publications related to the records of proceedings of the Houses, Rules & Regulations etc. CSIR, Indian Council of Agricultural Research (ICAR), Sahitya Academy, the National Museum, Archaeological Survey of India, Central Universities and other Central Government organisations are publishing specialised publications, and similar organisations operate at the State level for promotion and publication of scholarly works in Indian languages.

Government publications are, in general, rich in content, reliable, inexpensive source of information on every subject af current interest, and are useful to common men, experts, and policy makers. In this age of information explosion, it is necessary that governmental activities, both regular and developmental, should percolate to all strata of society—peasants, educationists, labour, industrialists, management experts; legal practitioners and others. The people are required to be informed and trained. There is a need of dissemination of knowledge through printed publications by the governmental agencies. It is essential to educate people in their day to day work which helps in injecting new ideas, and results of research activities to be transmitted for application for the progress of the nation and to benefit the people as a whole. Even for maintaining law and order, rules & regulations have to be explained to the public through printed literature.

The substantial amount of direct government publishing is done by managing the materials from the different sources, and getting these printed and finishing work done at Government Presses. The emphasis is on accuracy and rich contents, and the price is fixed keeping in view the general purchasing power of the people in the country so that dissemination of knowledge is always at the blessings of the government and not at the patronage of the readers. In this process, the quality in general, the get-up, printing and finishing of the publications may not be the very best that one can have, but utility remains the prime factor. However, where quality of work is required to be of high standard and the publications are required to be preserved for the purpose of reference for a longer period, the inputs used for such publications are of good quality. Printing and finishing work are also of high standard. Some of the Government of India Presses, where most of the Central Government publications are printed, are now equipped with latest photo type setting equipments and most modern printing and finishing machinery. Government publications are, in general, placed in three categories—Periodicals, one time publications for seasonal use, and publications for reference purpose and preservation. The introduc-

---

Controller of Publications, Department of Publications, Govt. of India.

tion of photo type setting, modern preprocess, offset printing and finishing technology have resulted in better quality output without much increase in price. It has always been the endeavour of the public sector publishing agencies to bring out quality publications at reasonable price. Some public sector publishing agencies are not only publishing quality publications having excellent reading material at low cost, but also promoting bookmindedness among the people. Valuable contribution has been made by the Sahitya Academy for promotion of creative literature in Indian languages. Some works published by the National Book Trust and Publications Division etc., are not only of high standard, but also comparable to the best in any country. Government publishing is not a profit making activity. There are publications which are slow-moving and many of them are not commercially viable. No private sector publisher will undertake publishing of such publications. The growth of literacy and readership through government publications helps create a market for general books. The Textbooks published by Central and State Government Undertakings, are, in general, of high quality, and available at affordable prices. In addition to publishing and making books available at very reasonable prices, the government provides funds for subsidised publication of research and scholarly material of high national importance to gear up the developmental process in the country, although the return in terms of sales of publications may not be commensurate with the cost of production, etc.

Essential and authentic information, well produced through print media at a cheaper cost, generally, do not serve the purpose unless disseminate to the widely scattered population in the country. Due to lack of communication, the distribution remains a source of impediment to the publishing industry. Although some government publishers have their own distribution channels, distribution network in the country in general remains inadequate as a result of which the distributor takes the major share in the book trade. In spite of this, the reading public is not well informed in time about the new arrivals, and this communication gap at times results in fruitless exercise. The library movement in the country is yet to take a giant leap forward. The Book Clubs are almost a non-entity, and in remote areas, there are very few booksellers/book shops exclusively meant for government publications. Even the distribution system of the textbooks requires much improvement. The distribution of textbooks in Bihar State is done through the District Teachers Co-operative, and such organisations in other States are also doing well in this area. The important government offices and voluntary social service organisations at State, District and Block level should be in the regular mailing lists of all the Government publishers, and some of them be appointed Sales & Return agents of government publications. They can have a small Sales Counter attached to the offices which will help in reaching the publications to a larger number of readers throughout the country. Due to recent increase in the postal charges and railway freight, the cost of sending publications to longer distance have become a very costly affair for the publisher. The government publishing agencies, who have their own distribution system have their outlets located only in major cities. There should be further extension of distribution system to the district and block level so that the books are available through the government distributing agencies at a reasonable rate at different parts of the country in a minimum possible time. It is sad that even today, one cannot get some important publications or come across a serious book shop even in the affluent areas of our capital except perhaps, at South Extension or Connaught Place. If that is the situation in the capital, what can one expect in Districts or Talukas. The Railways and Postal Departments should being down the freight charges and the postal charges for the despatch of the books and publications to a considerable lower level, and should devise ways and means for quick and safe delivery of books and publications to their destination. There should be more opening of libraries, Book Clubs, and Co-operative Book Shops throughout the country so that important books and publications reach every nook and corner of the country, and benefit the readers at all levels whom the government publishers are required to serve.

Information is a costly resource and has a finite life time depending upon the problems. It is, therefore, all the more necessary that information flows uninterrupted to all at a reasonable cost which is very important for functioning of the democracy. In the coming years, we need quicker and better communications/transportation, introduction of electronic publishing systems, rigid quality control and effective distribution network so that publications are easily available to all citizens in time. □

WHY BOOKS DO NOT SELL ?

Amrik Singh*

The answer should be obvious. Books do not sell because not many people read them. The question therefore needs to be put differently. It should be : Why People Do Not Read.

My answer to it is three-fold. One, it has a good deal to do with our system of education. Secondly, the electronic media is beginning to displace the habit of book-reading. And thirdly, alongwith so many other things books are becoming more and more expensive. Each one of these reasons requires to be considered in greater depth.

System of Education

Most people acquire the habit of reading around the age of 11 or 12.Till the age of 9 or 10, children have not acquired the proficiency to read for any length of time. They have learnt the alphabet and they can read something but what they cannot do is to read for any length of time or on a consecutive basis. Around the age of 10 or so, however, they come to acquire that proficiency.

Then the next question arises. Are books of the right kind available? If they are, children start devouring them. Sometimes books are available but they are not of the kind which would interest or excite them. In other words the books available should be addressed to their age. At that age there are certain things that attract children and there are others which do not. If books of the right kind are available, it ignites their interest.

Children who come from homes which have books lying around find it easier to take to books. In that sense children from literate homes have an advantage over other children. The other source for books can be libraries. We know very well that the one thing most schools do not have are libraries. A very small percentage do have them but then they would not constitute even .001 per cent of the total number of schools. Public libraries for children are so few that it almost looks like a joke to refer to them. Clearly we are doing everything on our part to make sure that at the age when children are most likely to acquire the habit of reading we do not provide them the necessary facilities. It is possible to say much more on the subject but it should not be necessary to do so.

Only about 5 per cent of those who pass out from schools enter college. What happens in college is somewhat better but it is far from satisfactory. More than a decade ago, as a member of the UGC Committee on the Development of Libraries, I discovered that though the committee consisted of a dozen members, not even one of them had a college background. Almost each one of them was connected with the universities and yet 85 per cent of students study in colleges and their interests cannot be ignored.

Appropriate action was taken however and one or two people with a college background were inducted into that committee. But as everyone is aware, the real funding for colleges comes from State governments and not from the UGC. States do not have anything like a policy for college libraries. On a rough estimate one may say that about 5 per cent of colleges have reasonably good libraries and another 5 per cent can manage to sail through. But the rest of them do not pay the kind of attention to libraries that ought to be paid.

This is one aspect of the problem. The second aspect is no less important. For good and competent teaching, it is important that the teachers teach in such a way that the students feel encouraged or inspired to go to the library and consult books on their own. In a sense, this alone is the hallmark of good teaching. Whether we have this kind of teaching or not is there for anybody to see. The general decline in the performance of teachers is to some extent reflected in the absence of that close linkage between classroom teaching and library consultation which is indispensable for learning.

**Former Secretary, Association of Indian Universities.*

Electronic Media

Coming to the increasing importance of the electronic media, one has only to refer to it and see how the situation has been going against the print media. Radio was not as much of a rival to the book as television is. While the television is still confined to urban areas, it is spreading into the countryside as well; in any case education is more of an urban phenomenon than a rural phenomenon. That being so, what is happening was more or less bound to happen. What is truly disquieting is the fact that we are not doing anything by way of a change of policies to reverse the situation.

Books are Expensive

To come to the third point, if books are beginning to be more and more expensive this is basically for two reasons. One, because everything is becoming expensive. But the second reason is no less relevant. Our book reading public is small. Therefore, the print run of an average book is not particularly high. At one time it used to be 1000 or 1100 copies at the time of the first publication. In certain cases, now, it has even come down to half of that. To some extent this is so bacause there are not many readers, but it is also because of the state of publishing in the country. This particular aspect needs to be examined in greater detail.

With more than a dozen distinct languages in the country, readership is fragmented. The largest number of books are published in English. Hindi too has a reasonably good market, though considering the number of Hindi speaking population in the country, it can and ought to be much larger. Some of the other Indian languages like Malayalam, Bengali and Marathi are doing reasonably well. Nevertheless, the percentage of readership is not high and there are all kinds of limitations therefore.

As far as publishing in English is concerned, there is a peculiar kind of notion on the part of most publishers that they cannot sell beyond a limited number of copies. This notion is unfounded. Quite a number of foreign publications sell in large numbers. It stands to reason therefore that potential readership is there. Only it has to be tapped.

Not only that, there is an odd kind of notion that books should be priced high, and if a few hundred copies can be sold, the publisher would recover his cost and then gradually would make some profit. This is a wrong way of going about the job. The fact of the matter is that our publishers have not shown that kind of enterprise whereby the economies of scale are taken advantage of.

To some extent, this is also linked with organization and structure of book selling in the country. Perhaps no sector of publishing is as poor in our country as book selling is. All kind of reasons have contributed to this state of affairs including the fact that there is paucity of finance. The government has hardly helped at any stage and things continue to be difficult therefore.

State of Libraries

The state of libraries in the country is also an important factor. While some educational institutions do maintain reasonably well stocked libraries, the system of public libraries is at a very elementary stage. The situation is better in some of the Southern states. Still it is far from satisfactory. Not only have we neglected the basic job of making every one literate, we have also not paid enough attention to the needs of the neo-literates. They need special kind of books. But the same are not being produced in the country. West Bengal has tried to do something in this direction but it has not succeeded beyond a point.

Extensive and professionally conducted book reviewing also contributes to the promotion and sale of books. This aspect of publishing has been grossly neglected in our country. Some of the Indian languages have made valiant attempts in this direction. But these attempts are as half-hearted as the ones made in English. Altogether this particular sector of publishing is not given the importance that it should have been given.

In order to make sure that books that people do read and that books do sell, a number of simultaneous steps would have to be taken. The more important of them have been referred to above but a few others can also be thought of. Experience in other countries of the world shows clearly that despite all that is claimed for it, the electronic media is more useful for entertainment than for education. All said and done, therefore, education will have to rely upon the written word. The close connection between education and publishing should thus be obvious. Both of them need to be strengthened and streamlined. At the same time, a network of libraries has also got to be established. It is only when the problem is approached from a variety of angles that we will have anything like success. □

Recent Trends in Social Sciences Literature

S.P. Agrawal*

Barring natural sciences, almost everything else attracting clear and logical thinking comes under the vast and ever-expanding umbrella of social sciences. The 'harvest' of recent publications emanating from this scientific thinking in our country bears comparison with the harvest we reaped in the first couple of decades of our Green Revolution before it reached a plateau. It is true that the social sciences 'titles' flooding the markets would prove that for the authors in this branch of knowledge only the sky is the limit. But it is also a timely reminder to the reading public that the blue canopy over our heads, called the 'sky' with all our romantic passion, is merely an optic illusion limiting our sights. Discriminating readers of the contemporary social sciences literature would notice that the harvest presented to them contains a massive quantity of chaff with but a few grains in them. It is almost like mining gold after wading through and sieving a lot of unwanted material. What we need is an academic non-partisan panel in each major publishing centre to act as a guide to publishers exhibiting tinsel goods at present. One is constrained to comment that this purpose is not served by a plethora of book reviews given to the people, having based them on whatever little comes to them by way of complimentary copies. Only the panel suggested here could perhaps give the hallmark of grades—like 'Agmark' on public consumption commodities—on each social science publication or even on other books brought out by publishers. But in our kind of set-up every panel so created will be in danger of being subverted by the various pressure groups—social, political, economic and bureaucratic. The result : back to square one. So we might just as well confine ourselves to a post-mortem of what we have.

As we do this, one of the first features about the recent social science literature attracting our notice is a plethora of books on women, who belong not only to the weaker sections of the society, but are also half the country's population. No wonder, they have the pride of place in any comprehensive shelf for social science publications. One such book is the revised and expanded version of '*Feminism and Nationalism in the Third World in the Nineteenth and early Twentieth Centuries*' by Kumari Jayawardena. According to the writer, except for China, in all the other countries chosen for the study, feminist issues hardly became the points of major debates within the anti-imperialist movements. While women in "the other countries" were used by male bourgeois leaders to add to their strength in their fight against the enemy, they were meant to go back to the kitchen as soon as the goals of the movements were achieved. What Jayawardene does not realize is that women's participation in the anti-imperialist movement marked the starting point in women's political participation. When the cause of women was let down, they were forced to resort to more effective means for their liberation. It should not be forgotten that this is what precisely happened in India during the liberation movement against British imperialism, and we are among the few countries where a woman could rise to be a prime minister. This is not to minimize the plight of women in India even today, but only to show that the writer has not done much homework, at least on India. The 268-page book costs Rs. 160.

In another book '*Speaking of Faith*'—a compilation edited by Diana L. Eck and Devaki Jain—several women have been brought forward for their action and greatness, many of whom had to be tested in the fires of injustice, but they have refused to be silent. There is yet another book '*The Wrongs of Indian Womanhood*' by Marcus Fuller, published originally in 1900, and re-published in Delhi in 1984. The book deals with the reality of child marriages and of the cruelty of 'enforced widowhood' inflicted upon a woman when she loses her husband. In many areas of South India, especially in the countryside, widows are still forced to shave their heads. Social ostracism is matched only by self-imposed austerity by widows themselves even if they are educated. The author talks of the lack of courage and "conviction on the part of young men who went overseas but on return "conformed" and married child brides to please their people as was then the accepted practice. But books such as this belong to what we would like to call another age despite some distant echoes that they might have even today.

These books on women, selected at random, do not contribute much to the present thinking or situations, which demand contemporary treatment and have to be updated in content. In '*Some reflections on Dowry*', the Oxford University Press has published a discourse by M.N. Srinivas on the occasion of J.P. Naik Memorial Lecture for 1983. The thought-

---

**Director, NSSDOC-ICSSR, New Delhi.*

provoking piece traces the history of dowry from the old custom of 'dakshina' as part of the ceremony of 'kanyadan' at the time of marriage, and goes on to discuss how it is an anti-social institution, which has influenced the presentday economic behaviour of couples having daughters among different caste groups. The author has suggested an all-out attack on the dowry evil by educating the people and the recognition by them that men and women are equal partners. But even this publication does not go far enough to include the presentday menace of bride burning. A thorough research on current evils is a *sine qua non* of progressive thinking, which must find more and more space in current publications on social science themes.

Take the case of sati—a burning shame in our present times. When the crunch comes, frantic efforts are made to save one's skin. Following the sati tragedy in Deorala village in Rajasthan, scapegoats were found to be much in demand. On whom will the chopper fall ? Everybody was seen passing the buck soon after the hapless young widow, Roop Kanwar, was burnt alive with her dead husband in her village. Long after the gruesome tragedy, the police and a few officials arrived on the scene and started proceedings against the girl's in-laws, but made no arrests. The mela had already started around the spot where Roop Kanwar sat on the pyre with her dead husband's head in her lap before she was set alight by her younger-brother-in-law. The question is : should social science publications focus light on current events or should writers put off these exercises for a post mortem from published documents 10 years hence?

As the latest discovery of the half-burnt body of a woman on the pyre of her husband in Kheda Misr village in Lalitpur district in Uttar Pradesh would show, the Deorala episode was not the last known sati tragedy in India. Social scientists are obliged to do the necessary field work to unravel the ramifications of social disasters perpetrated by heartless men of our own society, perhaps living next door. Apart from the official bungling in these tragedies, the role of women's voluntary organizations in big cities should be thoroughly discussed by social scientists. The story is doing the rounds in Delhi that when Roop Kanwar tragedy took place, for many days it never occurred to women activists in Delhi that they should rush to Deorala. Instead, their daily duty was to move from Speaker Balram Jakhar's house to Union minister Buta Singh's house to their own houses—to relax after their labours in air-conditioned luxury. To them, it was apparently pointless to rush to Rajasthan where some Rajputs were brandishing their naked swords in Deorala village in preparation of the 'chunari' festival.

What the society expects from the writers involved in social sciences in some degree of dedication to values. The latter have to face the challenge of social change, and social sciences cannot afford to remain aloof and objective. As it has been aptly said, those in social sciences have to take sides, and the side it should take is that of the proverbial underdog. This brings us to a publication, which deals with the *Challenge of Social Change*' and is edited by Orlando Fals Borda. Human beings, their aspirations, frustrations and capacity to mobilise are essential factors in the process of change, and, as the contributors to this volume suggest, participation in the decision making process is of vital importance. One of the writers here makes a sound contribution to the thinking process : "Each society should be studied on its own terms and modernization, or the need for it, is not inherent in all societies ; some societies develop according to their traditions and at their own pace without jumping on to the bandwagon of modernization." The social scientist has now been able to find out strategy to channelize frustration and tension so as to avoid or control unproductive conflict. Another contributor has described sociological intervention becoming more and more popular as "participatory action research". Action research groups have met with recognition and initial success in India too, with their "I know what you need" approach. This is the kind of books people in our country are looking forward to, and it is for social scientists and publishers, together, to make way for the books we need, not the made-easy-type of publications being served to us.

An example of some recent off-beat writings is provided by 'Literature, Social Consciousness and Polity' edited by Iqbal Narain and Lothar Lutze. It is a collection of papers presented at the VIII European Conference on Modern South Asian Studies at Talberg in Sweden in 1983 and published in 1987. These essays are based on the premise that a study of literature can enrich our understanding of the subtle interaction between the emerging consciousness and the prevailing political structure. They give us the understanding of resilience and change in south Asian societies. What should be appreciated here is that the focus is not only on the 'big few' but also on the numerous others who have played an important role in shaping the social texture through their responses to new ideas, structures and processes. Running through the essays is the common thread, which is the quest for national integration in the pull and swing of cultural pluralism in the region as a whole.

Another area, where we do not have enough purposeful writing is the one pertaining to development as a whole, particularly with reference to India. Our planning process started fifty years ago, when the Indian National Congress set up a panel with Subhas Chandra Bose at the helm of its affairs to produce what could be rightly described as India's First Plan. Though the British government in India could never be expected to follow it up, we still have the document, projecting the hopes and aspirations of freedom-fighters led by Mahatma Gandhi. In recent years, fortunately, we have had a number of remarkable contributions in this area, one of them being '*Development Planning—the Indian experience*' by Sukhamoy Chakravarty, published by Clarendon Press, Oxford, last year. The book deals with the experience of development planning in India over the last thirtyfive years. It explains the analytical considerations which went into the formation of the country's development strategy, initially chalked out by Nehru and Mahalanobis, and the modifications which were introduced in later years to keep pace with our experience. Dealing with the structure of our Five Year Plans and the problems of their implementation, this is probably the first book to provide a comprehensive review of Indian planning in the light of development theory and the many debates on planning that have been carried out in other countries. The present publication is an expanded and enriched version of Chakravarty's discourse delivered as the Radhakrishnan Memorial Lectures at All Souls' College, Oxford, in 1985. This excellent publication ends with an overall assessment, ending with the words : "If Indian society values growth with equity, as plan documents repeatedly emphasize, India has still a long way to go in adapting institutions and aspirations in that direction. Neither the recently discussed virtues of the free market mechanism nor the earlier panacea of central planning would appear to carry much conviction today. Societies grow in historical time characterized by irreversibilities, and history does not perform controlled experiments for our benefit. Hence the task for perspective planning remains to minimize avoidable social costs. However, the need for flexible adaptable operating mechanisms is very much there. Above all, there has to be a much greater degree of political consensus on what is attempted. India benefited from this in the first decade of planning. It is still greatly needed in the remaining years of this century. No facile conclusion is warranted" Based on this realistic note, there is enough room for worthwhile follow-up books on development in the near future to give the necessary perspectives to our planners, especially those associated with the Planning Commission.

Another book which merits attention here is '*Development Policy and Administration in India*', edited by Ramesh K. Arora and P.C. Mathur. It is a collection of original essays by well-known social scientists, compiled to honour Prof. M.V. Mathur. The subject areas include policy potential of social sciences, strategies and policies for agricultural development, patterns and policies for urban development, strategies of industrial development, public enterprises, energy management, university education, administration for nation-building, and a number of other allied topics.

Publishers and writers should know what the readers want to read, not what they, in their wisdom, think what is easy for them to bring out and to make them money-spinners at the same time. People now would like to know how best to tackle communalism to make India a truly secular state. A book like '*Communalism in Modern India*' by Bipan Chandra is one of those most welcome to readers as well as to our various libraries. The author differentiates between communalism and separatism. While separatism was only the last phase of Muslim communalism, the conflict now is not between the Hindus and the Muslims —as many assert—but between Hindu and Muslim communalism on the one hand and the secular nationalist forces on the other. Why do not political scientists get at the root of the problems ? Bipan Chandra says that the Indian National Congress followed the politics of compromise between the Muslim and Hindu communalists. As a result of this, the Congress could not launch a resolute struggle against communalism. No sustained campaign was ever started to educate the masses and to expose the real designs of the communalists. This weakness on the part of the main national party, says the author, gave ample opportunity to the communalists from both sides to strengthen their respective position. Bipan Chandra's book has been welcomed as a major contribution to the study of communalism.

A survey of recent social science publications also brings to light the subject of development of weaker sections. G.D. Kabra in his book, "*Development of Weaker Sections*" tries to explain why more than three decades of planning on the part of the government has failed to bring about any appreciable change in the condition of the weaker sections of the society. The relationships between the bureaucratic organization on the one hand and the beneficiaries on the other has been examined from the points of view of the various administrative constraints and theoretical assumptions. The 'segregation approach', which favours separate institutions for the weaker sections, and the 'configuration approach', wanting ways and means to make the existing institutions more efficacious have been analysed. The manner in which innovations are accepted by the people at the grassroots has been examined by the author. The analysis of the socio-economic background of small and marginal farmers reveals that they find themselves unable to take advantage of the bank loans and other facilities because of meagre resources of land and animals, monsoon hazards, lack of irrigation supplies and scarcity of fodder for animals. The writer suggests that there should be steady improvement in the relationship between the officials and the beneficiaries, with a clear change of attitude on the part of the officials. A related book on rural poverty entitled *Direct Attacks on Rural Poverty : Policy, Programmes & Implementation*", by Prabhu Ghate tries to analyse some of the economic, socio-cultural and administrative constraints which come in the way of the anti-poverty programmes. Our experience is that unless the social science books are readable, interesting and useful, they stay in the racks only to be dusted every now and then. □

BIRLA INSTITUTE OF TECHNOLOGY

MESRA : RANCHI

(A Deemed to be University)

ADMISSIONS—1988

Bachelor of Engineering and B. Pharm. (4-Year) Degree Course

Entrance Examination for admission to (1) Bachelor of Engineering (4-Year) Degree course in Civil, Electrical & Electronics, Mechanical, Electronics & Communication, Computer and Production Engineering, and (2) B. Pharm. (4-Year) Degree Course in Pharmaceutical Sciences will be held on May 28 and 29, 1988 at the following centres :

Allahabad, Agra, Bhagalpur, Bhubaneswar, Bhopal,
Bangalore, Bombay, Calcutta, Chandigarh, Delhi,
Gauhati, Ghaziabad, Gorakhpur, Hyderabad,
Jamshedpur, Jaipur, Lucknow, Madras, Muzaffarpur,
Patna, Ranchi, Sindri, Trivandrum & Vijayawada.

provided sufficient number of candidates opt for the proposed centres.

Qualifications

For Bachelor of Engg. : I.Sc. or 10 + 2 or equivalent examination with Physics, Chemistry and Mathematics; for B. Pharm. with Physics, Chemistry and Biology. Maximum age limit 21 years on Ist October. THOSE APPEARING THIS YEAR AT THE QUALIFYING EXAMINATION ARE ALSO ELIGIBLE TO APPLY. Seats are reserved for SC/ST Candidates. The last date for receipt of completed application form is **31.3.1988.**

Application form can be obtained by post on pre-payment of Rs. 25/- by crossed Postal Order, payable to the Registrar, Birla Institute of Technology, Mesra, Ranchi. The request should accompany a self addressed and stamped envelope of size 26 cm. x 12 cm. bearing postage stamps of Rs. 1.80 P., clearly mentioning the Form required i.e. Bachelor of Engg. or B. Pharm.—as the case may be.

REGISTRAR & OSD

Indian Books on Science & Technology 1983-87

An Analysis of Library of Congress' 'Accessions List, South Asia'

Kamlesh Arora*
A.S. Rao**

Among several countries of the world, India has none too insignificant in place book production. It ranks 4th in Asia and 18th in the whole world. The total number of books produced by some of the leading countries of Asia and the world are given in the following table:

Rank	Country	Total No. of Books Produced
Asia		
1.	Japan (1983)	44,253
2.	Korea, Republic of (1984)	35,446
3.	China (1984)	34,920
4.	India (1984)	9,954
World		
1.	U.S.S.R. (1984)	82,790
2.	U.K. (1984)	51,411
3.	Germany, Federal Republic of (1984)	48,836
4.	Japan (1983)	44,253
5.	France (1984)	37,189
6.	Korea, Republic of (1984)	35,446
7.	China (1984)	34,920
8.	Spain (1984)	30,764
9.	Brazil (1982)	19,179
10.	Colombia (1984)	15,041
11.	Italy (1984)	14,312
12.	The Netherlands (1984)	13,209
13.	Switzerland (1984)	11,806
14.	Yugoslavia (1984)	10,918
15.	Denmark (1984)	10,660
16.	Hungary (1984)	10,421
17.	Sweden (1984)	10,373
18.	India (1984)	9,954

The figures given in the brackets are years for which the data is available. The source of information for the above table is the 'UNESCO Statistical Yearbook 1986'. The figures for U.S.A. are not reflected in the above table as the same are not listed in 'Unesco Statistical Yearbook 1986'.

Analysis

An analysis of the book production of a country is in a way a reflection of the efforts of that country to produce information and knowledge. With this premise, an analysis of the books published in Science and Technology during 1983-1987 in India has been carried out. The source for this which indicates the quantity and quality of book production in India could appropriately be the Indian National Bibliography. This is a monthly publication cummulated annually. But on account of production delay in bringing out the issues, it does not provide current data for statistical analysts. However the Library of Congress 'Accessions List, South Asia', lists monthly the acquisition of books produced in South Asian countries which are of interest to American Libraries to support programmes relating to South Asian studies. A fairly good number of books produced in a country are listed language-wise in the 'Accessions List, South Asia'. The books on Science and Technology form a considerable part of this list.

The main objective of this study is to indicate the total no. of Indian books published for the last 5 years (1983-1987), their distribution by subject groups and the U.S. interest in Indian books. The analysis restricts itself to books in the English language, as books in other Indian Languages in Science and Technology are few and far between. Secondary publications like catalogues, bibliographies, etc., Laws and Statutes, Reports of various adhoc commissions and legislative proceedings of S & T subjects etc., have not been included for the present study.

Methodology

Every issue of the 'Accessions List, South Asia' for the past 5 years was scanned and items listed there were identified and grouped year-wise and then under seven subject groups. The year-wise data is represented in the following table:

---

*National Science Library, Indian National Scientific Documentation Centre, New Delhi.

Year	Total No. of Books	S & T Books	% of S & T Books
1983	2736	477	17
1984	4074	629	15
1985	3360	462	14
1986	2827	383	14
1987	2490	415	16

The above Table shows total No. of books and Science and Technology books listed in the 'Accession List, South Asia' for the period 1984-1987. It also shows a fall in book production from 1984-1987 whereas the percentage of S & T books for these years has slightly increased. The above table has also been presented graphically in Fig. 1.

Books on Science & Technology which were produced during 1983-1987 have been grouped under various subject groups and the total No. of books for each group for the last 5-year period is also calculated. The above mentioned data is represented in the following Table :

Subject	Year					
	1983	1984	1985	1986	1987	Total
Science & Technology in General	13	56	26	14	19	128
Physical & Earth Sciences	48	92	65	81	76	362
Biological Sciences	48	92	83	73	39	335
Health Sciences	56	40	32	12	28	167
Engineering	105	132	62	53	61	413
Agricultural Sciences	126	146	156	115	103	646
Others	43	37	16	39	78	213

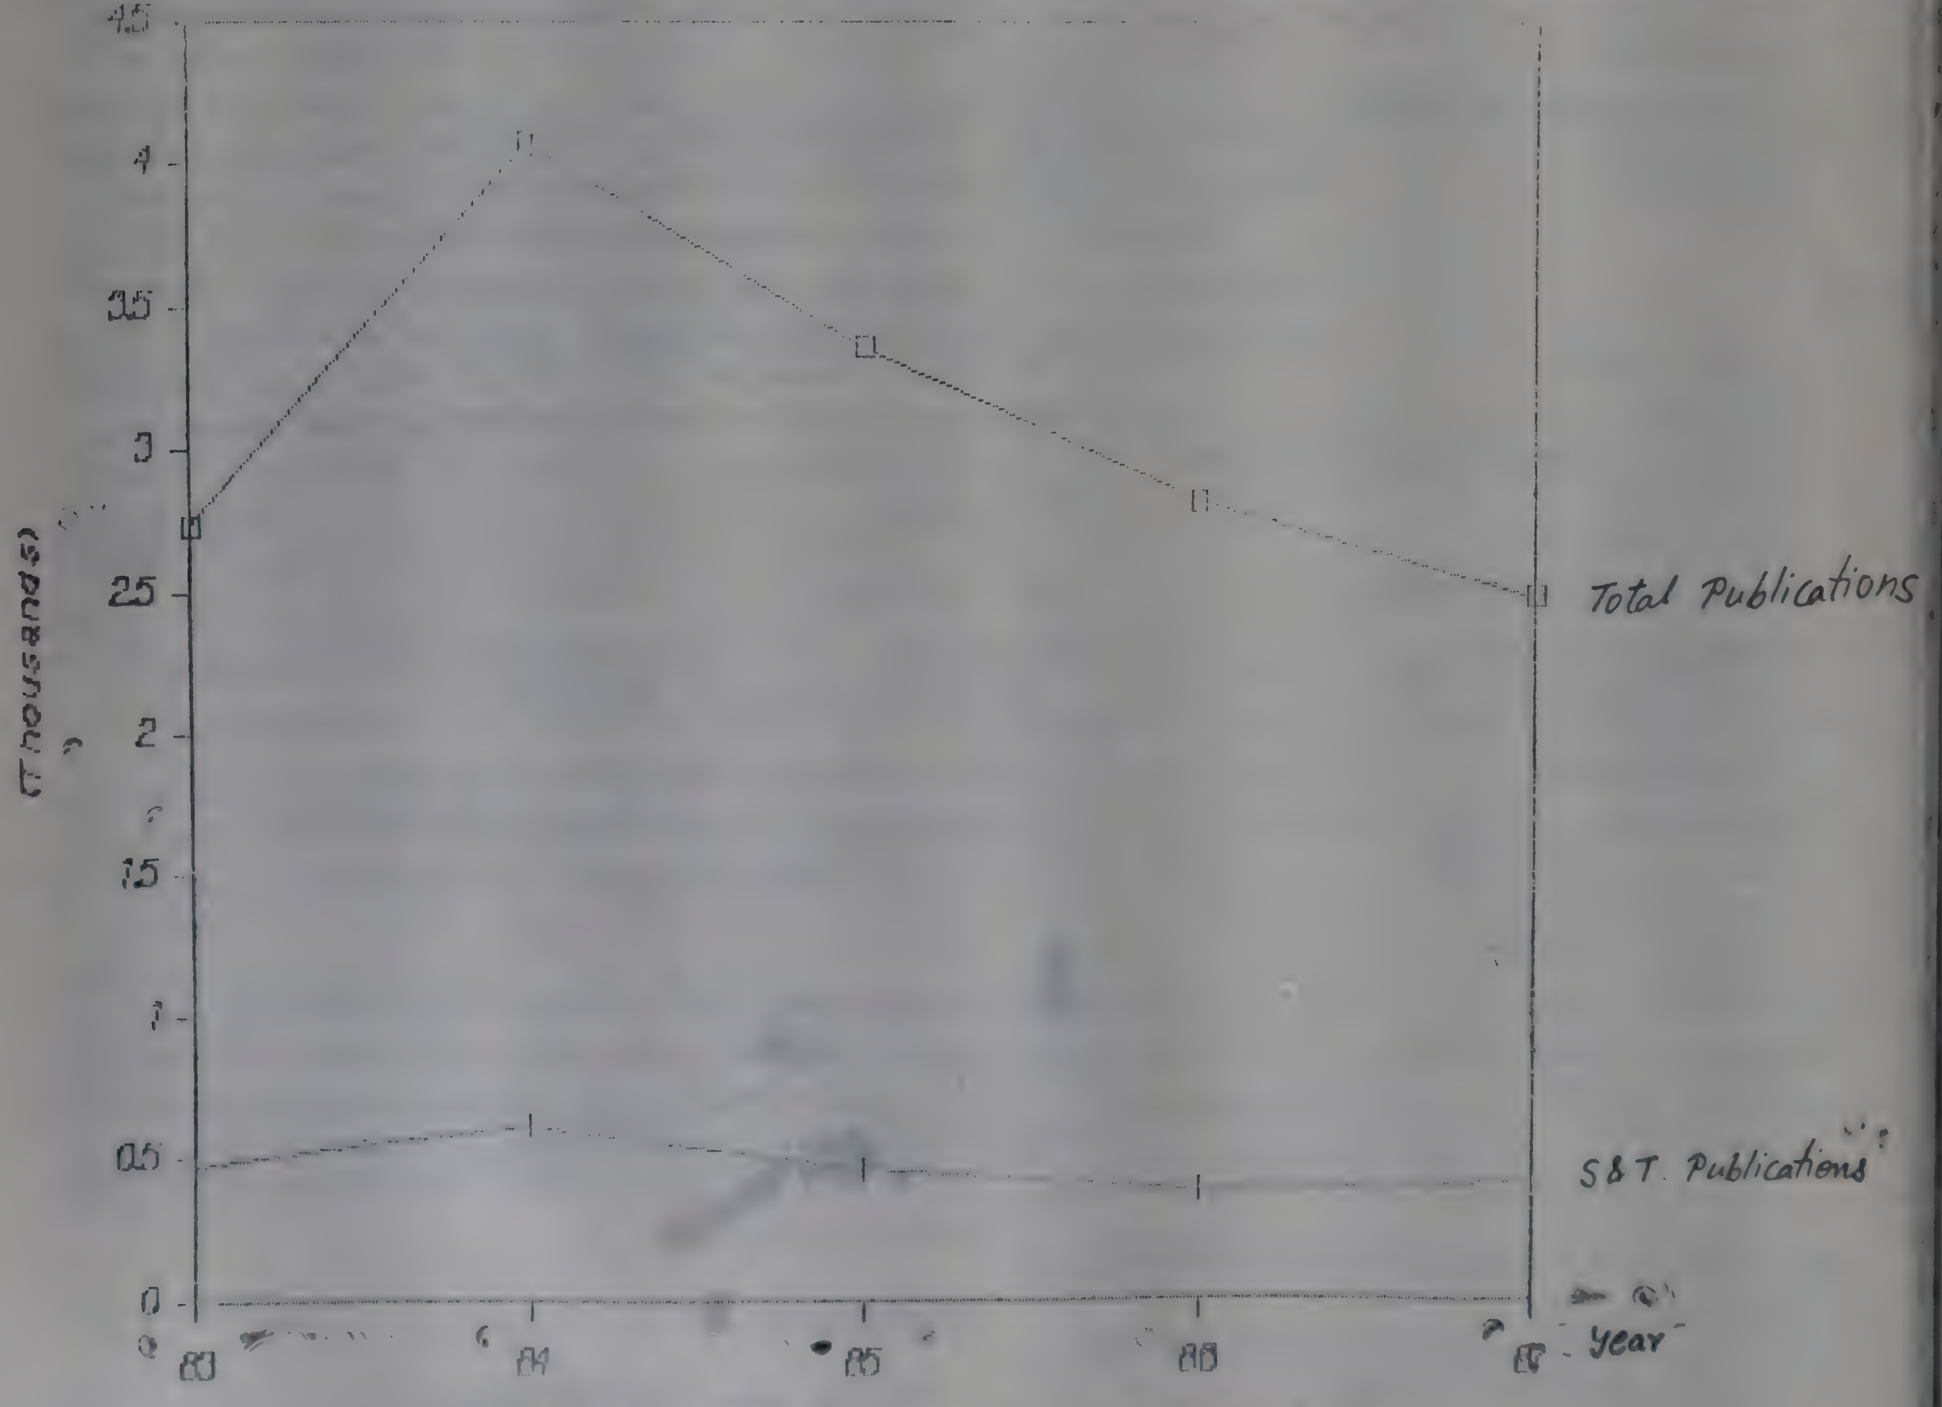

Fig. 1. Year-wise Breakup of Indian Book Production.

The above Table shows year-wise break-up of S & T books in 7 subject groups. Some subjects like Mangement, Rural and Urban development etc., which are accounting for a small percentage of total S & T publications have been grouped under 'Others' category. From the above Table it is clear that Agricultural Sciences are accounting for approx. 27% of the total S & T books, followed by Engineering books which account for 17%.

Observations

1. The study shows that the S&T publications form 15% of the total books listed.

2. Even though there is a fall in the total No. of books listed for the years 1984-87, the percentage of S & T books has slightly increased.

3. The Indian S & T publications are rich in Agriculture, Biological and Geological sciences.

4. Most of the S & T publications listed are about the resource mapping of India like flora and fauna of various regions, the mineral exploration, farming methods on various soil types and in different climatic conditions.

5. Although it is not reflected in the study we have observed that U.S. is also interested in procuring books on regulatory information of the Govt. of India and State Govts. from time to time on subjects like Wild Life, Forestry, Ground Water Resources, etc.

6. Some of the important S & T publications noticed during the study are given as a bibliography in Appendix 1.

APPENDIX I

Important Indian Books on Science and Technology published during 1983-1987

1. **Ali, Salim A.**
Handbook of the birds of India and Pakistan : together with those of Bangladesh, Nepal, Bhutan and Sri Lanka/ Salim Ali and S. Dhillon Ripley.—Delhi : Oxford, 1983—xlii, 737p.
2. **Banerjee, Brojendra Nath**
Bhopal gas tragedy : accident or experiment/Brojendra Nath Banerjee—New Delhi : Pacibus Pubs. and Dist., 1986—281p.
3. **Bhide, A.D.**
Solid waste management in developing countries/A.D. Bhide, B.B. Sunderesan—New Delhi : INSDOC, 1983—222p.
4. Biogas handbook.—Pilot ed.—Bombay : Tata Energy Research Institute Documentation Centre, 1982—133p.
5. **Bose, Jagadish Chandra, Sir, 1958-1937.**
Life movements in plants / by Sir Jagadish Chandra Bose—Delhi : B.R. Pub. Corp., 1985—x, 251p.
6. Computer simulation/edited by N. Seshagiri, R. Narasimha—Bangalore : Indian Academy of Sciences, c 1979—171p.
7. **Gopalachari, N.C.**
Tobacco/N.C. Gopalachari—New Delhi : ICAR, 1984—327p.
8. Growing focus on Antarctica/edited by R.C. Sharma.—1st ed—New Delhi : Rajesh Publications, 1986—xxxiv, 286p.
9. **Heptulla, Najma.**
India's progress in science and technology : continuity and change/Najma Heptulla—New Delhi : Oxford & IBH Pub. Co., c 1986.—xiv, 117p., [12]p. of plates.
10. History of astronomy in India/editors, S.N. Sen, K.S. Shukla—New Delhi : Indian National Science Academy, c 1985—525p.
11. **Iyer, K.V.**
Pollution control in industry/K.V. Iyer, L.R. Kumar Delhi : K.V. Iyer Assoc., 1986—xvi, [503]p.
12. **Jaggi, O.P.**
History of science and technology in India/by O.P. Jaggi: foreword by D.S. Kothari—Delhi : Atmaram, 1969.
13. **Kothari, D.S.**
Atom and self/by D.S. Kothari—Bombay : Bharatiya Vidya Bhavan, 1983—xv, 58p.—(Meghnad Saha Medal Lecture; 1978).
14. **Maheshwar Dayal, 1915—**
Energy today and tomorrow/Maheshwar Dayal—New Delhi : Publications Division, Min. of Inf. & Broadcasting, Govt. of India, 1983—102p.
15. **Menon, M.G.K.**
Technology for progress/M.G.K. Menon—New Delhi : Training Division, Dept. of Personnel and Administrative Reforms, Govt. of India, 1983—34p.
16. **Mukherji, Visvapriya.**
Jagadish Chandra Bose / Visvapriya Mukherji—New Delhi : Publications Divisions, Min. of Inf. & Broadcasting, Govt. of India, 1983—vi, 128p.
17. **Narlikar, A.V., 1940.**
Superconductivity and superconducting materials/A.V. Narlikar & S.N. Ekbote—New Delhi : South Asian, c 1983—xi, 294p.
18. Profiles in scientific research : contributions of the fellows—New Delhi : Indian National Science Academy, 1986—2v.
19. **Ramanna, Raja, 1925—**
A 15-year programme for nuclear power in India/Raja Ramanna—New Delhi : Indian National Science Academy, 1984—ii, 34p.
20. **Randhawa, M.S., 1909—**
A history of agriculture in India/M. S. Randhawa—New Delhi : ICAR, 1980.
21. Science, development and environment/edited by V.P. Agrawal, S.V.S. Rana—Mazaffarnagar : Society of Biosciences, 1987—iii, 332p.
22. Science in India : 50 years of the Academy/edited by C.N.R. Rao, H.Y. Mohan Ram—New Delhi : Indian National Science Academy, 1985—142p.

INDIAN COUNCIL OF AGRICULTURAL RESEARCH

Jawaharlal Nehru Awards for Outstanding Post-graduate Research in Agriculture 1988

The Indian Council of Agricultural Research invites applications from post-graduate students who have obtained their Ph.D degree during the year 1987 in the fields of Agriculture/Animal Sciences (including Fisheries) and home science for "Jawaharlal Nehru Award for Outstanding Post-graduate Research in Agriculture-1988". There will be ten prizes of Rs. 5,000/- each for outstanding research work of the following nature :

"Which may have bearing on finding a solution to any important national problem in the field of Agriculture, which is likely to have an impact on increasing the production or improving the quality of any important crop for human nutrition or animal productivity or increasing the technological efficiency of any process of economic importance connected with agriculture".

Candidates shall be required to submit the following documents through the Head of the Institute from where the thesis has been obtained :

1. A copy of the thesis submitted by them for the award of the doctoral degree.
2. A certificate from the guide of the candidate for Ph.D degree stating the extent to which the work is the candidate's own contribution.
3. 6 copies of the synopsis indicating precisely and in concise terms the work done by the candidate.
4. 6 copies of the bio-data with complete address for correspondence with telegraphic address if possibles.

The certificate awarded to the candidate for Ph.D. degree may also be sent. There is no prescribed proforma for applying for this award. Each candidate will be judged on the basis of the originality and the applied value of the investigations as revealed in the thesis submitted by him. In all matters relating to the award the decision of the Council shall be final and no correspondence on this account will be entertained.

Application with complete documents as mentioned above addressed to Sh. R. C. Mishra, Dy. Secy. (A), Indian Council of Agril. Research, Krishi Bhavan, New Delhi-110001 should be sent so as to reach on or before **31st March 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep State/Union Territory in the North Eastern Region, Ladakh Division or J&K State and Sikkim is **15th April, 1988**. The award winning thesis will be retained by the Council for record. In case the application is not accompanied by a copy of thesis and the required number of synopsis and bio-data, the application is liable to be rejected at the screening stage.

Hari Om Ashram Trust Awards for the Year 1988

Nominations are invited for the Hari Om Ashram Trust Awards for the year 1988. Three awards of the value of Rs. 10,000/- each in cash or kind or both are given every year for outstanding original research, fundamental or applied including inventions, discoveries etc. leading to results of practical value in any field or subject within the purview of research in agricultural sciences, forest farming and social forestry and animal sciences (including fisheries).

All scientists engaged in research in the fields of agriculture, forest farming and social forestry, animal husbandry and allied sciences in India shall be eligible for the awards. The results of research achieved/

contributions made during the five years preceding the year of the award shall only be considered for the awards. In the case of claims based on evolution of new varieties/strains, the final trials should have been completed within five years preceding the year of award.

Nominations can be made amongst others by Vice-Chancellors of agricultural universities or other universities having faculty of agricultural or biological sciences, Directors of Research Institutes including principles of agricultural and veterinary colleges, Presidents of scientific societies, academies and heads of the principal scientific establishments in the country.

Nominations for the awards should be supported by a statement of work, achievement accomplished or performed by the candidate who is being nominated and a reasoned justification for the nomination together with reprints of publications or other supporting data.

The last date for refeiving nominations for the awards is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eartern Region, Ladakh Division of J&K States and Sikkim is **15th April, 1988**. Five copies of the nominations on the prescribed proforma for the award should be sent a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhavan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self addressed envelope in the size of 27 cm x 12 cm. Applications/nominations received without five sets of reprints of publications are liable to be rejected at the scrutiny stage.

Dr. Rajendra Prasad Award for the Best Original Standard Works in Hindi on Agricultural including Animal Sciences and Fisheries—1988

Applications are invited for Dr. Rajendra Prasad award for the year 1988 for standard original books/manuscripts in Hindi on agriculture, including animal sciences and fisheries published/written between April 1987 to March 1988. Books written by more than one author can also be considered. Five copies of the books/manuscripts for the award may be sent in a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhavan, New Delhi-110001, latest by **31st March, 1988** in a prescribed form obtainable from him. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Region, Ladakh Division of J&K State & Sikkim is **15th April, 1988**.

In all matters relating to the award the decision of the Council shall be final and no correspondence on this account will be entertained.

Rafi Ahmed Kidwai Memorial Prizes for Agricultural Research for the Biennium 1986-87

Nominations are invited for the Rafi Ahmed Kidwai Memorial Prizes for Agricultural Research for the biennium 1986-87 carrying an amount of Rs. 10,000 (Rupees ten thousand only) in cash or kind or both, a citation and a certificate.

The award is given once in two years to Indian Scientists for outstanding research, fundamental or applied, including inventions, discoveries, etc. leading to results of practical value in any field or subject within the purview of research in agriculture, animal husbandry and fisheries, including agricultural, economics, agricultural statistics and nutrition. Only results of researches/contributions made during the five years preceding the year of award shall be considered for the award. It the case of claims based on evolution of new varieties/strains, the final trials should have been completed within five years preceding the year of award.

Nominations can be made amongst others by Vice-Chancellors of agricultural universities/general universities with faculties of agricultural or biological sciences, Directors of research institutes, including Principals of agricultural and veterinary colleges, Presidents of scientific societies and academies and heads of the principal scientific establishments in the country such as CSIR, BARC etc.

Nominations for the award should be supported by a statement of work, achievement accomplished or performed by the candidate who is being nominated and a reasoned justification for the nomination together with reprints of publications or other supporting data. In all matters, decision of the Council shall be final and no correspondence on this account will be entertained.

The last date for receiving the nominations for the award is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Region, Ladakh Division of J&K State & Sikkim is **15th April, 1988**. Proposals (in quadruplicate) on the prescribed proforma for the award should be sent in a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhavan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self addressed envelope in the size of 27 cm x 12 cm. Applications/nominations received without four sets of reprints of publications are liable to be rejected at the scrutiny stage.

Fakhruddin Ali Ahmed Award for Agricultural Research in Tribal Areas for the Biennium 1986-87

Nominations are invited for the Fakhruddin Ali Ahmed Award for agricultural research in tribal areas for the biennium 1986-87. Two prizes of the value of Rs. 10,000 (Rupees ten thousand only) each in cash or kind both will be awarded for outstanding original research carried out in the tribal areas in the field of agricultural sciences and animal sciences including fisheries.

All research workers engaged in research in agriculture, animal husbandry, fisheries and allied sciences in tribal areas (tribal areas for this purpose are those notified by the Ministry of Home Affairs, Govt. of India) shall be eligible for the award. The results of research achieved/contributions made during the five years preceding the year of the award shall only be considered for the award. In the case of claim based on evolution of new varieties/strains the final trials should have been completed within five years preceding the year of the award.

Nominations can be made amongst others, by the Vice-Chancellors of the agricultural universities or other universities which have a faculty of agricultural or biological sciences, Directors of research institutes including Principal of agricultural and veterinary colleges, Presidents of scientific societies, academies and heads of principal scientific establishments in the country such as Council of Scientific and Industrial Research, Bhaba Atomic Research Centre etc. Each nomination for this award should be accompanied by a detailed statement of work and attainments of the nominee and a reasoned justification for the nominations together with the reprints of publications or other supporting data. Also, a certificate of residence in the tribal area where the work has done obtainable from Head of the Institutes, should be appended. It is emphasised that the award is intended for recognising outstanding research carried out in tribal areas, and hence the scientist(s) concerned should have lived and carried out the research in any of the tribal areas notified by the Ministry of Home Affairs.

The last date for receiving nominations/applications is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Region, Ladakh Division of J&K State & Sikkim is **15th April, 1988**. Four copies of the nominations on the prescribed proforma for the award should be sent in a sealed cover marked 'Confidential' to Sh. R.C. Mishra, Deputy Secretary (A), Indian Council of Agricultural Research, Krishi Bhawan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self-addressed envelope in the size of 27 cm x 12 cm. Nominations received without four sets of reprints of publications are liable to be rejected at the scrutiny stage.

ICAR Awards for Team Research for the Biennium 1987-88

Nominations are invited for ICAR Award for Team Research for the biennium 1987-88. The award is given once in two years to interdisciplinary teams of research workers for outstanding research work in the field of agriculture including agricultural economics and statistics., animal husbandry and fisheries in the form of a scroll of honour and a medal to each member of the award winning team.

All scientists engaged in research in the field of agriculture, animal husbandry and fisheries sciences in India shall be eligible for the award. The award of each prize shall be made for notable and original inter-disciplinary research both fundamental and applied as reflected in books, monographs, papers or other forms of published account of outstanding research work, inventions or discoveries. In the case of contributions like new crop varieties or new breeds of animal at least 3 years' date on the performance of the strains will have to be provided. The results of research achieved/contributions made by the team should be during the five years preceding the year of award.

Nominations can be made amongst others by Vice-Chancellors of agricultural universities or other universities having faculty of agricultural or biological sciences, Directors of research institutes including Principals of agricultual and veterinary colleges, Presidents of scientific establishments in the country such as CSIR, BARC, etc.

Nominations for the award should be supported by a statement of the inter-disciplinary team work, achieved, accomplished or performed by the team which is being nominated and a reasoned justification for the nomination together with the reprints of publications or other supporting data. In all matters relating to the award the decision of the Council shall be final and no correspondence on this account will be entertained.

The last date for receiving the nominations for the award is **31st March, 1988**. The last date for candidates in the Andaman and Nicobar Islands, Lakshadweep States/Union Territory in the North-Eastern Ragion, Ladakh Division of J&K State & Sikkim is **15th April, 1988**. Six copies of the proposals on the prescribed proforma for the award should be sent in a sealed cover marked 'Confidential' to Shri R.C. Mishra, Deputy Secretary (A), Krishi Bhavan, New Delhi-110001. The copy of the proforma can be obtained from him by sending a self-addressed envelope in the size of 27 cm x 12 cm. Applications/nominations received without six sets of reprints of publications are liable to be rejected at the scrutiny stage.

THE FUTURE OF THE BOOK

S.S. Murthy*
V.K. Rangra**

The book is the most powerful medium which has revolutionised the thoughts and ideas of man and has played a pivotal role in the religious, social, economic and technological developments in the world. It has been a convenient mode of preserving facts and ideas and making them readily available to millions of readers. In its physical form, as commonly known and used, it is the printed matter on paper sheets held together and protected by a cover. But in fact, it is much more than that. Book symbolises ideas, and thought processes which the author wants to convey to its readers. The book has undergone changes over years, in its content, presentation of ideas and its physical form.

History

Let us consider how the book has changed in shape during several periods of time. Man first started writing with his finger on earth but the necessity to preserve the writing made him think of using clay tablets. Thus we find that in ancient civilization, the Sumerians, Babylonians and Assyrians wrote on clay tablets. Some of the clay tablets from the library of Ashurbanipal of Nineveh are still preserved in the British Museum. The Egyptians brought into existence the roll form of book using the papyrus reed which abounds along the river Nile. The word paper had its origin in papyrus as the two products resembled each other. In the 2nd century BC Eumenes II, King of Pergamus finding papyrus hard to preserve, introduced leather or parchment. This writing medium offered both of its sides for writing purpose and being flexible could be folded and stitched for proper handling. The roll form of book whether of papyrus or parchment measured about 16 ft. The roll was held in the left hand and unrolled with the right. It was wound on wooden handles and fitted with title tags and storage cases. Plutarch stated that 200,000 book rolls were transferred from Pergamene library to Alexandria as a gift from Antony to Cleopatra. The Romans made further improvements by using smooth wooden boards coated with wax and hinged on thongs at the back so that they could close and protect the writing inside. This was called Codex—a Latin word for book.

The Chinese wrote or incised on animal bones or tortoise shells. Although inscriptions were made on bronze, stone and pottery, the direct ancestry of Chinese book is traced to bamboo or wooden slips and silk rolls. Indians in ancient and medieval period used plam leaves known as tala patra and bhuraj patra. After the death of Buddha, the Tripitaka was first written on palm leaves. A detailed description of bhuraj patra book called 'Punthi' was given by Alberuni in his travelogue. Ashoka spread the message and teachings of Buddha as inscriptions on pillars and stopas.

Many of the medieval books made in monasteries and royal courts were richly decorated and profusely illustrated. A ninth century volume of the four Gospels available in the Pierpont Morgan Library in New York, had 327 gems and raised figures of hammered gold. A sixteenth century book Hamzanama runs into 14 volumes and had hundreds of illustrations which were considered to be the best of the Mughal paintings.

The paper, the most popular medium came later. It is believed to be invented by a Chinese called Tsai-Lun in 105 AD and by the sixth century it was put into common use. A famous book of 868 AD, called Diamond Sutra which is presently preserved in the British Museum is a roll book made up of seven sheets of paper pasted end to end.

To John Guttenburg of Mainz goes the credit of inventing printing, who produced between 1450-1455, the 42-line Bible which was the first printed book in the world. William Caxton who set up shop at Westminster, printed the first book in England in 1477 entitled 'Dictes or Sayengis of the Philosophers'.

Present Scene

The present book on printed paper has stayed for quite a long time with its tremendous growth rate. Prof. Allen Kent has estimated that there are about 30 million printed books (titles) in the world since the times of Guttenburg. According to Verner W. Clapp the world publication has been doubling every forty

---

Defence Scientific Information and Documentation Centre, Delhi.

five years during the last five centuries—doubling roughly three times as fast as the growth of world population. To overcome the problem of housing and transportation of the ever increasing bulk of printed matter and also to maintain secrecy in official records, the microphotography came into use to reduce the size of the documents. The first large scale use of microphotography was made for sending messages through pigeons as a carrier during the Siege of Paris in 1870. Through microphotography the book is miniaturised to take the form of microfilm, microcard, microfiche etc. A normal microfiche of size 105 mm x 148 mm i.e. A-6, contains 98 pages of text. An advanced version of microfiche called superfiche may contain as many as 1000 pages. A 100-ft microfilm roll holds about 1000 pages. A microcard may hold 100-120 pages of the original text. The micrographic material commonly known as microforms cannot be read through naked eye as we read books. Reading devices like microfilm/ microfiche reader are to be used for reading them. Modern information centres depend more and more on microfiche as an economic means of document preservation and supply. The National Technical Information Service (NTIS) of USA, the largest holder and supplier of technical reports literature, has in stock over 1.5 million documents in microform. A number of publishers are bringing out their publications in microform in addition to paper form.

A new device in microprinting was evolved by George Davies and Hedda Wertheimer in which the normal print size is reduced to 10:1 and is printed on PVC paper. The standard reader is a pair of wide coverage binoculars. By this process the Oxford English Dictionary was reduced from 13 to 2 volumes.

The book changed its shape and form to meet the needs of special readers such as the physically handicapped. The book appeared in Braille which the blind use extensively. Sometime back a team of Yugoslav scientists invented a book that talked. It was based on the system of transferring sound to paper similar to the one used in making talkies. The reader moves a device which looks like an ordinary pen over the text, the optically printed lines, are transmitted to a photoelectronic detector whose signals are intensified and then transmitted to a loudspeaker, transistor or radio set as desired.

The emergence of other information technologies like those of computers, has added new dimensions to the form of the book. The computer because of its advantages of large storage capacity, high speed of retrieval, fast manipulation of data, and the transportability of data to distant places through telecommunication networks, is now widely used as a mediu for recording and retrieval of information. Accordin to F.W. Lancaster who is the author of the concept o paperless society, the paper will cease to be th medium of storage and transfer of information an will be replaced by electronic media by the end of thi century. A large number of journals and referenc books are already being published in machine readabl media. Almost all important indexing/abstractin journals are now available in the form of computerise data bases and can be accessed online i.e. throug telecommunication networks.

Besides bibliographic databases, some of the full text databases like LEXIS (on legal system) is available online. The World Book Encylopdaedia comprisin ten million words is available online through computer network in Europe. Network subscribers i various advanced countries today have all kinds o books available on their home computers. The lates is Blind Pharoah a novel by Burke Campbell wh spent 62 hours composing it on his Apple III computer and made it available immediately over a electronic network. The Oxford English Dictionar along with its four supplements comprising som 22000 pages is being put on the computer.

Video technology because of its capacity to simultaneously record picture and sound, became mor popular for recording books especially the works o art. The video cassettes are ideally suited for thi purpose because of their size which is almost the sam as that of a book and their reading on TV scree through a Video Cassette Player (VCP). The H.W Wilson Company has brought out "American Storytelling" series in 8 video cassettes each of 30 minute duration.

Recently another medium combining the advantages of computer and video technology with vas amount of storage capacity has come into use in th form of Compact Disc. A version of this disc, calle CD-ROM (Compact-Disc-Read-Only-Memory) i getting more and more popular as a medium of storage and retrieval of information containing hig quality colour pictures and text. The common siz of a CD-ROM is 5¼ inches in radius and can carr about 30,000 pages of text. The CD-ROM syste comprises the CD-ROM drive, a personal compute with monitor and keyboard and an optional printer The Domesday book of William, the Conqueror o the Great Britain has been put in a CD-ROM system in the Domesday project. It contains over 50000 sti rame pictures with complete map coverage of the Great Britain at 1 : 50,000 scale, text, moving film sequence and sound. Some encyclopedias such as Grolliers Academic American Encyclopedia (21 vols), McGraw Hill Encyclopedia of Science and Technology (1987 edition) (20 vols) and other publications with large volume of data are being published on CDROM.

We have now seen how the book has travelled from clay tablet (CT) to compact disc (CD) every time adding new features. After the invention of microforms the printed book continued side by side. The extinction of the printed book cannot be visualised in the near future. The conventional book will survive the onslaughts of the electronic media. All these new electronic media require intermediate equipment for reading which causes strain to the eyes if read for longer periods. The book on the other hand is convenient to read without any equipment (except spectacles for some people). It can be read in arm chair, bed or in journey, and several books can be used simultaneously and compared. The most important factor in favour of the printed book is the convenience in reading.

From the point of usage the books may be broadly categorised into three types i.e. entertainment, reference and educational. The entertainment part may be best covered by video/television, while the reference publications (encyclopedias, handbooks, journals, etc.) by computerised databases and the educational publications specially textbooks and light reading material may continue to be in printed form.

In the developing countries where literacy is one of the most essential requirements in the national development, low-cost educational material will be needed on a large scale. There is no dispute about the role of television network in the spread of education, but the importance of printed material for the classroom and for reading in leisure cannot be taken lightly.

Future

The printed book is not going to vanish in the near future. It is going to stay. It may not be necessary to print the book through the conventional letter press when more modern systems for computer-based composing, offset printing and desk-top publishing are available, which will reduce the cost of book production and improve its quality. □

THE FUTURE OF THE BOOK

T.K.S. Iyengar*

Introduction

The automated library, individually profiled journals delivered electronically on demand, word processing, SDI-profiling, key-wording, multiplexing, telefacsimile devices, cable television, electronic : mail, speech synthesis, artificial intelligence, interactive videodisk systems, automated translations, online access thru satellites, holographic media and robotics have all come. All of these innovations share in common, a technology centred around the computer and telecommunications industries and their abilities to provide communication through media other than print or paper.

Whatever happened to that paperless Society wherein several forecasts made that it would evolve during this decade ? Certainly, Desktop computers have become more powerful, and useful, less costly, and more widely used. Inspite of these the paperless society has not come about. On the contrary, paper consumption has increased because most people still want to view and distribute computer-generated information on a hard copy. The traditional view that paper is an ideal medium for working with and transporting information still prevails. In the following pages an attempt is made to focus attention on future of the book and its survival despite the onslaught of the electronic media.

Development of Electronic Media

The rapid developments in the fields of electronics and telecommunications have changed already, and will change more, the way in which information will be generated, stored, distributed and used. The availability of relatively cheap electronic equipment for producing and consuming information, like word processing and type setting equipment, microcomputers, viditext, and the like and at the moment—more expensive ones like videodisk, will not only influence the way people get their information, but also the daily operations at the work floor and the Library. Library workers will have to learn to use the new tools, how to integrate them into their work, how to benefit from them. They will be confronted with user (un) friendliness of hardware and software, with (the lack of) standardisation in these areas, cost/benefit analysis of what they buy and the problem of choice which software on which machine with which information will best suit their short term needs, how does this choice fit in to the still going on new developments ? An immense task in the field educating people of these new tasks lies open.

While it is impossible to deal with the entire range of electronic media products, the following few may be considered as representative samples and they are briefly described here : optical storage; Data on Diskette/CD-ROM; Printing and Publishing Technologies; Desktop publishing; Electronic Composition and Micropublishing.

Optical Storage

The last two years have shown a tremendous development in the technologies of optical storage. A tidal wave of publications exists on these matters and the unsuspecting reader is likely to be baffled by the terminology in use—DRAW, WORM, CD-ROM, laser disk, etc. Are these mere slogans or do they really mean something ? Here is given a brief review of the current technology and then to concentrate on the possible uses of CD-ROM in libraries and documentation centres with some emphasis on those in developing countries. The future CD-ROM may even eliminate on-line access. We can forget about satellites and telecommunications when laser written CD-ROM database on silver diskettes are available.

Optical media can be divided into two main Classes : Digital and Analog. Further, there are three sub-classes for each main class : read only, write-once and erasable. With these distinctions every sort of optical medium can be classified as follows :

(a) **Read only Analog Disk** : These media, frequently called laser videodisks, are as such the oldest form of optical storage. The most common use of these disks is in the home-video market, although there are some sophisticated professional applications. An

---

Librarian, Indian Institute of Science, Bangalore.

example of the latter are the products of Laser-Data, which are published by companies such as Information Access Company, Bowker, LSSI etc.

(b) **Read only Digital Disks** : The best known example of this kind of disk is the compact Disk (DC), already well penetrated in the home audio market and now starting to become a candidate for mass storage of digital data (Compact Disk Read only Memory, CD-ROM).

(c) **Write once Analog Disks** : These disks are currently only used by products of video disks for mastering purposes, and are therefore irrelevant within the present context.

(d) **Write once Digital Disks** : These are disks which are often called by ominous names such as WORM or DRAW (write once Read many and Direct Read After Write) or ODDD (Optical Digital Data Disks).

(e) **Erasable Disks** : At the moment there are no commercial applications of erasable disks, although the industry is working hard to conceive the product. The predictions are that in about three years time they will be on the market. In contrast to the media mentioned so far, the erasable disk makes use of a form of a magnetic storage of informations; laser raises the temperature in the magnetic layer, thus changing the reflection.

Applications of CD-ROM in Libraries and Documentation/Information

Several applications of CD-ROM technology are on the market, and more are being developed or are in a test phase. Many applications are notably in the area of (bibliographic) databases. To give the reader an idea a short list of such applications is presented here.

Datexy produces a corporate information database. Digital Equipment Corporation (DEC) has brought several databases on the market (subsets of compendex, such as, aerospace engineering, electrical and computer engineering, chemical engineering; subsets of NTIS, such as, computers, communications and electronics; environmental health and safety etc.).

Silver platter, a well known company in this field produces psyclit, Eric, Pais, Embase, LISA etc.

Library Corporation has introduced bibliofile, a MARC—database with 1,400,000 records for catalogue-production.

Access Innovations together with Silver Platter introduced the NICEM-database (National Information Centre for Educational media), now known as A. V. online.

Whitaker has a test copy of British Books in print ready.

Derwent, together with the French company DARC have submitted a proposal for a database of chemical formulas on CD-ROM to the EEC.

The examples mentioned above are clearly in the field of database publishing. The list can be extended without effort to a much longer one, and now projects are being announced every month.

The application of Brodart Corporation is of a completely different nature. They have developed an online public catalogue which can be easily consulted with the aid of a 10-function keyboard.

Of course, a patriarch of the CD-ROM applications also exists : the Grolier Encyclopaedia. Very recently Sanshusha Publishing Company in Tokyo produced a dictionary of Science and Technology on CD-ROM in the Japanese, German and English languages.

Economic Viability of CD-ROM Applications

On the face of it CD-ROM seems to have made it. Nevertheless one can have doubts as to whether the above mentioned examples are economically viable for the library and information market. After a closer and careful look at what they really offer by way of their usefulness, it can safely be concluded that the CD-ROM is only suitable for larger libraries with a fairly healthy budget though it is obvious that the Lepac option could be a very serious competitor for the traditional COM-catalogue.

CD-ROM Vs Future of Book

What are the advantages of databases on CD-ROM for libraries and documentation information centres By the look of it : not many. The information presented is incomplete, because it is confined to a restricted field of Science and to a couple of years of publications, always missing initial investment in hardware amounts to several thousands of dollars. I short one has to conclude that CD-ROM is a freak of fashion.

However there are some reasonable applications in combination with online access, as opposed to instead of online access.

A library that performs many searches on online databases has the opportunity to prepare the online search with the aid of a CD-ROM version. In that way there are no communication-costs. If the search with the profile can be edited and stored the 'real' database can be searched online with this profile. The result : a very short, and therefore cheap search with fairly good results. A thorough cost-analysis will establish if this kind of application would be profitable for the institution. The online public access catalogue will also require a very thorough cost benefit analysis.

The other applications such as the encyclopaedia and the dictionary are not so subject to time. Such publications do not demand revision every month.

Data on Diskette

Commercially available data on diskette has become available only in the past few years. It does not appear to be used widely and may be used only as a temporary alternative between the current choice of online access by time-sharing or the future choices of laser disks. At present, duskettes provide useful alternative for database access.

For most of us, "online searching" is synonymous with accessing remote databases through time sharing systems. Our definition of searching is being broadened by improvements in data storage and the availability of microcomputers. Laser disks now allow us to store large databases locally without the problems associated with maintaining files of byte size. But commercial laser disk systems are still exceptional and expensive. As we wait for laser disk technology to mature, a familiar storage medium, the microcomputer diskette, will allow us to experiment with maintaining and searching commercial databases in house.

Commercial databases in diskette format have a number of advantages over the traditional dial up access format. These advantages include :

* Elimination of connect costs of time sharing systems.

* Accompanying software that allows extensive manipulation of the data or are designed to run with standard spread sheet and database management programs.

* Ability to purchase multiple copies for a nominal cost or make additional copies through licensing agreements. Multiple copies allow the data to be distributed to users.

* Database segmentation or taking a piece from a larger database. This reduces the need to down load information through dial-up systems.

Their disadvantages include :

* Limited storage capacity of the diskettes. The double sided IBMPC diskette, for example, holds about 350,000 bytes (roughly 100 typewritten pages). Of course, multiple diskettes can be loaded on to microcomputer hard disks.

* The need for IBM compatible microcomputers since most data on diskette is only for IBM equipment.

Desktop Publishing

Desktop publishing is a phrase coined by Paul Brainered of Aldus Corporation, publishers of Page Maker, the best selling page layout program for personal computers. A desktop publishing system consists of a personal computer using a program that allows you to display text and graphics elements on the screen, edit and move the different elements around, and print them out on a dot-matrix or laser printer. Most systems make use of laser printers, hard disks, and some use special scanners that convert drawings and photographs into digitally stored immages that can be incorporated in the document. The final print out is used as a camera-ready master for duplication. Some graphics shops use the laser output as a proof sheet before the master is type set on a Linotronic or other typesetting machine. Because the results are so impressive and comprehensible to computer novices and experts, this application has given rise to a new market for the computer industry.

Nobody talks much more about the paperless society, even with the increased use of computers. Printed material is still the most common means of communications for many organisations. You and your library will be judged by the reader of each brochure, letter, or memo, exclusive of content.

Librarians know the substance is not lacking in what they publish, but sometimes the form needs more enhancement. If you want to be remembered in a positive way, you can't send out an important report printed on a dot matrix machine. Until this year daisy wheel printer was acceptable, but now the ente has been raised; people expect laser output for quality work. If you print down loads from sessions in draft format, consider the impression the same material will make if it looks typeset. An expensive report from a consultant carries more weight if produced on a laser printer. It is not claimed that it will take less time to write than a document produced the old way, but it will print more quickly and have more impact on your client, or the reading public.

Micropublishing—Microfilm/Microfische Technology

Changes in publishing methods were foreshadowed by the promoters of the project Intrex at the Massachusetts Institute of Technology. In all probability the major publishers will be able to supply copies of most of their publications in Microform and it is highly likely that this form will replace book acquisitions. They also predicted that journal publishers would publish reprints of articles using the microfiche medium. Libraries, it was thought, would buy these microform reprints only of the articles they wanted and would not continue to bind and retain complete volumes of learned journals. Hardware Microfilm/Microfische readers are available. This has to be related to users psychology.

Fascimile transmission online, based on computer access to micro-form, would be the norm. Obviously we have gone only some of the way along with this route. No economical method has been found to interconnect machine based library systems so as to provide guaranteed rapid access to the full text of documents by electronic means. There are some monograph publications available in printed paper formats with microfiche editions as the alternative. Secondly, some new publications appear only in microform. Thirdly, some reprints appear only in microform. Fourthly, there are some periodicals available at choice in microfiche or paper. Fifthly, there are journals with the full text available only on microfiche. Finally, there are online services retrieving from abstracts in computer storage and some of these have source document capability retrieving from microfiche storage. If we look at each category of micro publications to be found in libraries, we can discuss the merits of each for particular purposes. Yet the print media remains.

Impediments in the Use of Electronic Media Products

Technology diffusion may be hampered by more than one factor : industrial secrecy, military secrecy, and the high cost of technology acquisition are well known factors. New design and production ideas developed in small firms may remain unknown—except in a small circle because the entrepreneurs, especially in developing countries, may not have the experience, or the whereto promote and disseminate the know-how. Users of technology regardless of their geographical location, level of development, and particular needs are often found to be unaware of the existence and/or the value of technological knowledge that can be of practical use. This may be partly due to the inadequacy of the information handling systems and partly due to the potential users not being adequately prepared to make the best use of the system and services. And often users lack confidence in the technological information systems, sources and services.

The technological information services available suffer from the exclusiveness in that it may be largely oriented to meet the needs of the elite group of Academic specialists or those using sophisticated or capital intensive technology, etc., leaving out the needs of the rural/urban poor of developing countries. This factor becomes all the more important in the context of the current reorientation of development programmes to the disadvantaged sections of the society.

A worrying feature of the current scene is that work on programmes and data resulting from computer activities in different institutions are not, in many instances, compatible. The need for standardization commands urgent attention. It is unlikely that our well established book holdings and printed records will be profoundly affected in a short time.

Indian Scenario

Like many other countries and regions of the world India is also experiencing profound change in its scientific, industrial and cultural life as a result of the introduction of the computer and related information technologies.

Right from the very beginning modern technology seems to have been developed for the developing countries. In most cases the technology is only used in the developing countries after a few years, unfortunately often in the form of 'castoffs'. For this reason i seems necessary to pay some attention to the potentia advantages of CD-ROM for developing countries. CD

OM will be highly effective especially in a country e India. Why aren't our computer manufacturers/PC bricators bring in this technology? What all we need a disc drive suited for CD-ROM optical discs. many databases are available in CD-ROM silver atten laser discs. We can cut down cost of telecomunication links of accessing these databases for which D-ROM discs are available. Why should we invest oney on getting SDI-Tapes when they are available n CD-ROM? Institutions such as NISSAT, UGC ould do some rethinking on this. Online access, that o dedicated line, is very costly for our country. When e same is available in CD-ROM. Sometimes one gets feeling that what we do in Indian Information Science academic exercise only and not service oriented.

Taking a necessarily broad view of the problems acing developing countries in the field of information echnology, the following list will be applicable.

(a) Infrastructural problems, such as, lack of good ommunication facilities; a badly working telephone etwork, no access to satellite communication etc., ven if we want to.

(b) A shortage of skilled labour, in the traditional fields of library and documentation as well as in the field of computers and telematics; no suitable storing facilities for documented information. Lack of coordination between Computer Scientists and Librarians. In other words, more hardware oriented computer specialists would like to take up library jobs.

Information Needs of Developing Countries

D.M. Davies in an excellent article deals with the phenomenon of appropriate information technology. He says amongst other things that developing countries do not have a need for access to the large database from the developed world because the local literature production is not incorporated in these databases and the language in use is not the language of the country itself.

Many projects on information, including in developing countries, have failed because the technology was not adopted to the needs and possibilities of the country. There are however possibilities to introduce modern technology in developing countries provided.

1. It is based on the true needs of the country.

2. It is built from the bottom upwards, which means concentrated on what is available in the right language and there are trained personnel available.

If the picture sketched in the preceding paragraphs is matched to the CD-ROM technology the only conclusion that can be drawn is that developing countries, in particular have to be very careful in introducing this technology, not only because of the costs involved but especially because of the information contents of the products announced so far. There are, of course, possibilities regarding local database production and distribution (*cf.* the Lepac-option of Brodart). A very thorough cost benefit analysis has nevertheless to be made.

It would therefore be a very sensible step if within the framework of UNISIST, one or more trial projects would be set up to test the capabilities of this technology for the developing countries. Only in this way can the true merits of the CD-ROM technology be tested objectively.

On the Survival of the Book

Since at present the printed book can reach a large audience, far larger than any of the new technologies, perhaps this is a good and legitimate use of the printed word. It is difficult not to be sympathetic to this defence. It is not an argument whether to use candles or electricity. It is estimated that over 90% of the capacity for generating, communicating and utilizing information and knowledge, especially in the fields of science and technology, rests with a small number of technologically and industrially advanced countries (some 30 countries with over dollar 8000 per capita income and sharing 35% of the world population burden) and, therefore, developing countries (about 20 countries with less than dollar 500 per capita income and sharing over 60% of the world population burden) have to purchase the knowledge and know-how in the form of books, periodicals, reports, patents, training, expertise and commodity imports : that is, Third World countries have operated at no less a disadvantage even in terms of the traditional information system. It might equally be argued that with the growth of satellite communications this planet will be more equitably spanned.

It has to be noted that the technology and applications of CD-ROM are still in their infancy though the child is growing rapidly and is clothed more and more in ready-to-wear garments. The problems arising from the many incompatible formats of video-tapes and recorders are being avoided in the field of CD-ROM through the energetic standardization activities of the parties involved. Compatibility seems to be warranted. A price decrease might be a result, though it is not very likely in the first two years.

Libraries and Information/Documentation Centres need to be very careful, however, in embracing this new technology. Profound investigations into the relative costs and benefits should be carried out before any decision has to be made. Let us look at the following table :

The Book	Computer Data Bases
1. Relatively low density of data storage.	1. Higher density of data storage.
2. Very portable except in large numbers.	2. Portable, but needs careful handling.
3. Will survive most environments, although life depends on quality of paper, binding, etc.	3. Subject to deterioration and even erasure in some environments.
4. Can be read without intermediate equipment (except spectacles).	4. Needs additional equipment to convert to format suitable for human reading
5. Can be read in an armchair, a desk, in the bed, or wherever convenient.	5. Ease of reading depends on this equipment and its accessibility. Reading must be conducted in an upright sitting position at the computer terminal unless printed text is generated. Computer terminals must be connected to other equipment and are not generally regarded as portable comparing two or more data-bases or parts thereof, the mains flicking between two sets of text on the screen.
6. Several can be used simultaneously and compared.	6. The ease with which this can be accomplished depends on the system.
7. Can be scanned in order to judge whatever is covered in the following few pages, and to review the plan of the book.	7. Additional terminals would naturally facilitate readier ' comparison. Scanning is possible, but usually must be sequential and thus ca be slow.
8. Diagrams and illustrations can be used to amplify and elucidate points.	8. Diagrams are sometime available with graphi facilities, but picture ca not be faithfully repro duced.
9. Can be a work of art, with both a tactile and visual appeal.	9. Computer terminals ar distinctly limited in thi respect. All efforts a improving display of te are rooted in functionali

Also, there has been relatively little progress in th areas of statistical and linguistic analysis of natura languages for meaning. There have been some advance in automatic indexing but there are no theoretica structures formulated yet characterising words and thei interaction with context to the extent that parapharasing may be computed. Computers are not yet equippe to deal with meaning. Now then, what do we do whe scripts of several languages are involved. Softwar technologists have to do this home work rather tha writing books on programming.

Conclusion

The literature generally reflects the conclusion tha conversion to paperless systems will require society t be more resilient. Has computerization produced a ne vulnerability for society? And are individual member of society able to absorb large disruptions withou grave and lasting societal consequences ? The answer t this question is that modern societies, at least the United States, appear to be resilient and adaptable to th new technologies. Hence the electronic media at leas for the present may not be suitable to developin countries, especially India.

Specification for an ideal information storage an retrieval device —it should be portable, able to functio in any environment, require no power supply and b immediately usable with no warm-up; it should hav high information storage capacity and retain the information indefinitely without degradation or possibilit of accidental erasure; file access should be instant an random and it should be possible to mark up, annotat or make manual corrections to text.

There is no electronic media which meets this specification, nor is there likely to be in the foreseeabl future. On the other hand, there is a non-electric devic which fully meets the specification and has done so fa over 500 years, since the invention of printing, that is of course, the book. □

LIBRARY OF THE FUTURE

S.M. Dhawan*

Presently libraries are passing through an exciting hase of transformation under the impact of inforation technology. The machine readable databases, nline retrieval, microforms, amazing storage capacies of CD-ROM disks, etc. are some of the key ontributions which have had their impact on library rvices. Libraries in UK, USA, etc. are adopting ew technologies for developing information disseminaion systems, and providing services unimaginable, npractical in the past. Although the impact of new chnology is not seen as much in India, the libraries re in for a change and cannot escape its onslaughts. f the trend continues what kind of transformation vill it bring about in the decades ahead. Whether lectronic publishing will replace the book, whether achine readable databases will replace abstracting ervices, whether libraries would still exist as wareouses or become active information centres, or what hanges will new technology bring about in users' nformation seeking behaviour. These and many nore such questions are boggling the professionals, lanners, and thinkers in the field.

In order to visualise the future of the library let us irst look into the applications of information technology, viz., computers, telecommunications, micrographics, and reprographics to the library field.

Online Services

Online information retrieval systems, which first came into existence around 1970 with the introduction of RECON (Remote Control) system by NASA (National Aerospace Scientific Agency) in USA, demonstrate the tremendous potential computers hold for libraries. Retrieval through computerised databases, the counterparts of abstracting and indexing services, had proved so useful that within a span of 10 years the number of databases rose to 400 and of online service including RECON to 59. By 1987 the total number of databases is estimated at 3369 and of online services to 528. Online database industry owes this fast growth to advantages inherent to online retrieval systems. They are tremendously fast. Computers have the capacity to search relevant information from a large store of bibliographic data in seconds. They eliminate physical handling of bulky volumes of printed abstracting and indexing services and also eliminate the labour of personally visiting the library many times. A computer search is more comprehensive and accurate. Computers provide more access points than the corresponding abstracting services in print format. The retrieval software provide boolean logic facility which is unique to computer systems and unimaginable in a manual search approach. It is useful in improving precision and recall in information retrieval. Online services allow users to retrieve information from remote terminals however far they may be located from the central processor. The printouts are neatly produced according to desired format without errors which normally occur in reproducing references manually. It is a lot cheaper to obtain information online services than assembling libraries from a scratch.

Networks

Advances in telecommunications have opened up entirely new vistas in information dissemination. The mix of satellite and computer technologies have produced communication networks which have made long distance communication, across countries, a reality. The most commonly used networks are ESANET, EURONET, TYMENET, and TELENET. There are still many more. It is through such networks that communication link is established between online vendors such as DIALOG, BRS, ESA/IRS and the remote terminals located across different countries. Broadcast transmission has added yet another dimension to information dissemination by introducing teletext services whereby text and graphics stored in a computer database are displayed on television screen. The information is broadcast on television channels. But it is only one-way communication intended for wide public use, carrying information of broad public interest. Its typical examples are Teletext (India), Ceefax (UK), Oracle (UK). Using telephone lines

---

**National Physical Laboratory,*
New Delhi-110012

interactive information service, called videotax, has also been introduced successfully. Like teletext, videotex also shares a common database but it is much wider in scope and volume. A user gets connected to the computer database on his telephone line. Unlike teletext he can call any page on his television screen. A typical example of videotex is Prestel (UK). It contains vast amount of information on topics ranging from business interests, tourism, travel, weather, governmental information to recipies. Prestel also has a 'Gateway' system which puts a user in touch with external databases using its Prestel terminal.

Electronic Publishing

The information technology has also affected the publishing industry. The publishers have started using computer-based-text processors for editing and producing camera-ready copies in order to bring about efficiency and quality in their productivity. But these developments pertain to paper based publishing industry in which paper is the prime medium of message. However information technology has provided an alternative to printing the text. It is now held as computerised data and distributed as electronic mail. Would-be-user views the text on a VDU and takes out a printout, if necessary, on a local printing device attached to the VDU. Input to, and output from an electronic mail can be also from word processor or facsimile machine. However the transmission of electronic mail requires a telecommunication network. Videotex is also a form of electronic publishing because it allows a user to retrieve information from 'electronic reference book' which otherwise is known as computerised database. Even the databases such as INSPEC, NTIS, COMPENDEX, CA SEARCH are considered as the electronic abstracting journals of Science Abstracts, GRA & I, Engineering Index, Chemical Abstracts respectively. Instead of reading a page here the user retrieves a particular reference using the retrieval software.

Microforms

In addition to micropublishing media (the combination of computer, telecommunication and display technologies) progress is being made in the use of two other media for publishing as well as information storage : microforms, and video tapes and discs. Microforms offer a convenient method of storage, retrieval, and display of images recorded on microfilm or microfiche. A 6" x 4" microfiche card can store 60 to 13000 images depending upon the reduction ratio deployed. They provide the much needed answe for storage problem. Video tape and video disc ar also compact storage media. A vedio disc is such compact storage medium that two copies of the entir Encyclopedia Brittanica (44-million-word text) can b stored on one $5\frac{1}{4}$" disc. It offers a totally ne capability for users of small personal computers t have personal ownership, direct access, and contr of massive databases.

Document Delivery

Information technology has been applied to docu ment delivery. Documents are distributed either a electrically coded images, as computer print-outs, or a computer produced microfilm. The distribution o documents on paper is aided by high quality, fast xero machines. The electronic methods use telex, telete facsimile transmission.

Library of Tomorrow

It may be observed that information technolog offers new ways to store information compactly (exam ples are magnetic storage, microforms, video discs new facilities for rapid transmission over long distance (examples are TYMNET, TELENET); and new capa cities for manipulation of data on computers. Declin ing costs of computer hardwares and proliferation i softwares are increasingly making computer techno logy within the reach of small libraries. Comparin with the past we find that libraries are now bette equipped to organise, manage information systems, t overcome storage problems, geographical and languag barriers to communication, problems of informatio scatter, multidisciplinary nature of information, infor mation explosion and information overload. Obviousl information technology has contributed a great deal t libraries. One may also conclude that library develop ment is linked to developments in industry, and librar future will therefore depend upon new strides comin forth in information technology.

Basically transformations in library functioning ar anticipated in following areas :

—media of message communication ;

—technical information processing ;

—information dissemination ;

—compact storage devics ;

—new management approaches such as organisin library systems, information dissemination sys tems, coordination and cooperation in sharin resources ;

—faster document delivery systems;
—new focus in library education;
—new library building designs;
—new user approaches to seeking using information;
—new preservation activities.

Lancaster had predicted "we are already close to the day in which great science library could exist in a space less than 10 feet square". Dr. Raj Reddy in his convocation address at IIT Bombay visualised the possibility' of an 'electronic library' where it would be possible for anyone, anywhere in the world, to reach and read any document at a cost less than a cup of coffee. Does that mean that the book in print format will disappear ? Deniel J. Boorstin, Librarian, Library of Congress discussed this issue in his report 'Books in Our Future'. Examining the new trends he concluded that "technology is not a threat to the book" but cautioned that "we must enlist new technologies with cautious enthusiasm". Continuing further he warned that it would be fatal to take, extract, remove book from our lives. But luckily it is impossible because of enormous investments which libraries, institutions, and individuals have made in books. The basic characteristics of books offer even more compelling reasons to expect the book to remain a "fertile resource" in the decades ahead. The convenience of book, its independence of outside power sources, its unique individualism, its mobility, and exportability are not likely to be replaced. If electronic publishing and electronic mail systems have threatened the existence of book in print format, computerised databases have threatened the existence of secondary journals. A study conducted for the International Council of Science Unions—Abstracting Board (ICSU/AB) in this regard concluded that online services have so far had negligible effect on sales of print products but there is a great uncertainty about the possible impact in next five to ten years. National Federation of Abstracting & Indexing services (NFAIS) was equally concerned about the future of abstracting services. It reported in its study a decline in the subscriptions of printed products of abstracting services, but observed that this decline is not due solely and primarily to the availability of parallel online databases but to many economic factors. It points out that print and online services have independent markets and there is no couse-effect relationship between the two as it normally appears to be. One may conclude that printed products of secondary journals would have a place in future. Even going by the past experience one may also draw the same conclusion because new technologies have generally served to facilitate our life, change our life style, but they hardly replaced the existing ones. For example microfilm did not replace printing; telephone and telegraph did not replace personal communication; typewriter did not eliminate handwriting; the railway, the car, the aeroplane did not supersede the human technology of moving around.

A new style of library functioning is therefore percieved. Inhouse library functions and procedures will be performed on computers; the card catalogues replaced by database; more retrieval from online services; greater emphasis on coordination and cooperation between libraries; growth in conceptual and communication networks; greater use of library resources; greater capacities for meeting user demands; greater clientele; better, effective and efficient services. Library collection would be a mix of printed products, video products, computer files, and microform products; greater emphasis on acquiring, using, sharing, storing documents on microfilms, videoforms. Library education would have revised curriculum, more emphasis on new technologies, new skills. Above all, the profession would gain respect, recognition, and due place in society. Emphasis in professional duties and responsibilities would shift to online searching; assisting users in the exploitation of information resources; more of document delivery; developing databases for local materials; selecting and indexing portions of literature from a highly specific point of view; improving intellectual accessibility of information resources; assisting, developing, promoting conceptual networks for resource sharing; advising on databases, indexing policies, procedures, vocabularies, searching strategies, etc. Computerised databases would become useful tools for research in bibliometrics, scientometrics, literature analysis.

In addition to printed products, video products, microform products, the library of tomorrow would possess equipment and devices such as computers, online terminals, teletex machines, fax machines, video players and display systems, microfilm reader-printers, photocopiers. It would command interactive communication facilities for transmission of data, text, graphics.

In a nutshell, new technologies will add on new facilities, and the existing ones would also continue. It is the user who will decide which facilities would flourish more than the others.

The library of tomorrow would become an information center in true sense and its guiding principle would be "information (and not the book) is for use". ☐

BIRLA INSTITUTE OF TECHNOLOGY

MESRA : RANCHI

ADMISSIONS—1988—M.B.A. (2-Yr. Full-time & 3-Yr. Part-time)
M.C.A. (3-Yr. Full-time & 4½ -Yr. Part-time)
Post-Graduate Degree Course

Applications are invited for admission to the following Post-graduate Degree programmes for the academic session commencing August 1988.

(i) **M.B A.**—(Master of Business Administration)
2-Year Full-time Course and 3-Year Part-time Course.

(ii) **M.C.A.**—(Master of Computer Applications)
3-Year Full-time Course and 4½-Year Part-time Course.

Admissions will be made through an Entrance Examination which will be held on Sunday, May 29, 1988 at 9.00 a.m. to 11.00 a.m. for M.C.A. and 1.00 p.m. to 3.00 p m. for M.B.A. at the following Centres :

Allahabad, Agra, Bhagalpur, Bhopal, Bhubaneshwar, Bangalore, Bombay, Calcutta, Chandigarh, Delhi, Gauhati, Ghaziabad, Gorakhpur, Hyderabad, Jamshedpur, Jaipur, Lucknow, Madras, Muzaffarpur, Patna, Ranchi, Sindri, Trivandrum and Vijayawada.

Centre for PART-TIME Course will be at Ranchi only.

Eligibility

(i) For M.B.A. (2-Yr. Full-time) course : University Degree with atleast 50% aggregate marks in Arts/Science/Commerce and 60% marks for graduate in Engineering/Technology/Agriculture.
(ii) For M.B.A. (3-Yr. Part-time) course : Same as of (i) above and further the candidate must have two years experience in supervisory capacity in any firm or organisation of repute.
(iii) For M.C.A. (3-Year Full-time) course : University Degree with atleast 50% aggregate marks, with Maths, or Statistics as one of the subjects at the Degree level.
(iv) For M.C.A. (4½-Year Part-time) course : Same as of (iii) above, and further the candidate must have two years experience as executive in any firm or organisation of repute.

22½% seats are reserved for SC/ST candidates.

Those appearing at the various qualifying examinations are eligible. The selected candidates will, however, be required to produce the qualifying examination result by the end of August, 1988.

Application forms can be obtained by post on pre-payment of Rs. 25/- only by crossed Postal Order, payable to the Registrar, Birla Institute of Technology, Mesra, Ranchi. The request should accompany a self-addressed envelope of size 26 x 12 cm. affixed with postage stamps of Rs. 1.80 paise, clearly mentioning the form required i.e. MBA or MCA—as the case may be.

The last date for receipt of completed application form is **April 10, 1988**.

LIBRARY OF THE FUTURE

A POINT OF VIEW

Sewa Singh*

Introduction

To try to make prediction is quite an unrewarding activity, hence waste of time, but at the same time, it is difficult to resist the temptation too. Having accepted the invitation to speculate on the appearance of library of the future, an attempt is made in the following paragraphs to peep into the years to come, though fully aware that the likelihood of its being wrong may be greater. This is because we base our prognostications on the past, which is otherwise considered to be prologue to future, but past itself being imperfect and incomplete not much of the future activities can be based upon past.

Impact of Technology on Libraries

It is an acknowledged fact that the new technology has already had its impact, *inter-alia*, on libraries in the western world. They are becoming more and more information-conscious society where information is regarded as a powerful resource.

As a result of extensive computer application in almost every human endeavour, the American librarians visualise 'library-in-a-desk' and the 'paperless information system'. According to Taylor, the time is not far off when, with further technological developments, the traditional concept of the library will 'wither away, their historic duties done'. Now these are very bold predictions. One might immediately conclude that by the turn of the century in the year 2000 the libraries and librarians will be completely redundant. Lancaster, however, believes that this will be possible because online terminals are increasingly being used in the libraries. The users are also, particularly in the west, buying their own terminals and they will not have to come to the library of tomorrow physically. He feels that the library may be by-passed as an institution and may remain only as archive of the printed records of the past.

Many libraries in the western world have already introduced computers and automated some of their house-keeping jobs such as cataloguing, serials, circulation, acquisitions, etc.; some are in the process of automating these operations : while many are taking into account the socio-economic considerations and feel that incentive for change must come from the users. Nevertheless, there is no denying the fact that they have gone a long way in this direction.

They have already produced substitutes of the conventional book, that is, new form of documents such as microfilm, microcard, microfiche, etc. These collectively are known as microform publications.

The computer and the other like-machines have relieved the librarians of the routine jobs like preparation of the order letter, issuing reminder, issuing chaser, etc. which consume lot of time when prepared manually. The computers have obviously saved that much time which could well be utilised for intellectual jobs.

Thus the tools of the new technology such as word processors, mini and micro-computers, very large scale computers, have displayed great potentialities in fast storage and retrieval of information. These have revolutionised the concept of storage of information during the last 20 years or so and are proving a boon to the librarians in reducing the pressure of space which has been a major problem. This is, however, necessitated by the changing information scenario where the users need information quickly for immediate consumption.

Another major impact of the new technology has been in the area of information transfer. Here, communication technology has great potentialities and it has achieved impressive results in recent years. Further, satellites can also be used for the fast transfer of information from one end to the other. Many computer-based document delivery systems have also been developed for quick supply. The online bibliographic databases have further enhanced the possibilities of quick and easy access to the documents. Through online searches the concept of universal resource sharing has become a reality. The libraries now need not acquire everything, they can rather, through the

---

**Reader & Head, Department of Library and Information Science, Guru Nanak Dev University, Amritsar.*

computer network, depend upon the resources of other libraries.

Similarly, there are non-interactive systems through which information could be transferred to the VDU or the television screen.

Meanwhile, electronic databases have also been developed all over the world. So much so that some databases have also been developed especially for libraries which can either be searched by the librarian or the user. We can therefore agree with Lewis that 'librarianship of the databases is coming'.

Another major development of the new technology is the 'electronic journal' and other 'electronic publications'. The printing industry is already adapting to changing technology. By making use of microfiche synoptic journal publishing is becoming popular which gives only synopsis or extended abstracts of scientific articles. Microform publications have become commonplace. In future, however, authors, particularly in S & T, can send their text directly through their PC or the terminal to the publisher; and time will not be far off when electronic dissemination of information could be made possible. The Third Wave of Alvin Toffler thus begins a truly new era—the age of the de-massified media as described above. So both generation and dissemination of information electronically will usher in the 'paperless information system' in the society of tomorrow.

Changing Face of the Libraries

As a result of the application and transfer of new technology to the libraries, there will be a total face-lifting. The computer and other technology is not being applied as an end but as a useful means to provide more efficient and effective services and enhance the credibility of libraries among the users. In the years to come there is likely to be a more demanding and much more knowledgeable body of users. They would be more information-conscious. The computer will be used not as panacea, but as a tool for quick retrieval and supply of information not only from the sources of one's own library, but also from a neighbouring library. Here, computer networking will come to the aid of librarian as well as user. He can even enter into a dialogue through his terminal with the computerised information system of the library and ask for any information he is interested in to be displayed on the screen of his terminal.

The library of the future will have in its store talking books, sound recordings, video cassettes, films, floppy discs, microfiche, microcards, biochips, etc. The catalogue of these libraries might be stored on optical disc. The librarians of tomorrow would provide information on how to use collections by tape recordings and voice synthesisers. The stacks will not be manned by the attendants, rather by Robots who would collect and reshelve materials on the stacks. Robots might also be put in the circulation section for issue and return of the documents. They might even serve as janitors and control the entry and exit points.

These would change the face of the library of the future completely as it would be transformed into an electronic library. In such a library the users might not be received with the mysterious 'Mona Lisa' smile: they would instead feel the cold of the machines all around.

Library Scene in India

During the last 40 years the total population of academic, public, and scientific and technical libraries has increased rapidly. There are about 160 university libraries, about 5600 college libraries, hundreds of public libraries, and the number of scientific and technical libraries is also reasonably good. They are also following modern library techniques in order to give better library services to their clients.

The Indian librarians have also started to catch up with the new technologies. The use of computers and other electronic gadgets in some scientific and technical libraries is being attempted. Such organisations as BHEL, INSDOC, BARC, DRTC, NAL, SENDOC, NISSAT, SAIL, TISCO, etc. are making use of computer technology. Some of them are also collaborating with international organisations for creating their own databases.

The reprographic technology has already made a big impact in information transfer and document delivery system. Most of the S & T libraries and university libraries possess reprographic equipments and supply photocopies of any document to the users.

Many S & T libraries have gone a long way from the traditional services to the latest services in the form of computerised bibliographic services like CAS, SDI, etc. Some of these libraries have been automated a couple of their house-keeping jobs like circulation control, serials control, acquisition, production of current awareness, services etc.

INDONET is already there and the National Information Centre is to develop ASIANET soon. The otentialities of INSAT-IB are also being planned to e reaped for improving the computer networking.

imitations

There are some obvious limitations in spite of the icture as portrayed above. These are : (i) insufficient nanpower to handle the new situation and new nvironment in the libraries. Library and Information Science education in India though changing, is not upto he mark regarding the imparting of knowledge about iew information storage and retrieval techniques; ii) lack of computer culture, and even lack of library ulture. Without developing satisfactory library ulture, a computer culture can not be evolved; (iii) we also have financial constraints. There are costs of nstallation, providing terminals and peripherals, cablng, air-conditioning, maintenance, materials, and so on.

But this is not going to stay for ever. In future times, skilled manpower will be made available. Library culture and computer culture can also be created and developed so as to make the library a catalyst of social and technological change. We have already borrowed and adopted such American cultural symbols like the jeans, bubblegum, discotheque, rock 'n roll music, fast food, aerobics, etc. This indicates that no matter how the traditionalists try, there is no stopping the tidal wave of this kind of western culture.

Conclusion

Indian librarians are also not averse to the change and the impact of computer technology, etc on libraries. The fact that they are thinking and talking of new technology indicates some change in attitudes. They really want to equip their libraries with modern equipments, the boon of new technologies. And quite recently, the Indian Library Association for its 33rd All India Library Conference had fixed "Modernisation in Libraries" as the theme for the Seminar, which amply demonstrates the need of the hour. As we prepare ourselves to be ushered into the new century we need to give new shape, new look to the services in the libraries of the future in the light of the techniques heralded by advances in new technology. ☐

UNIVERSITY OF DELHI

LIST OF THE UNIVERSITY PUBLICATIONS

Sl. No.	Name of the Book	Author	Price
1.	Naturalistic Ethical Theory	Dr. V.K. Bhardwaja	Rs. 35.00
2.	Politics and Prejudice	Sh. O.P. Bakshi	Rs. 45.00
3.	Surat and its Trade in the Second Half of the 17th Century	Dr. O.P. Singh	Rs. 50.00
4.	Social Conditions in 18th Century : Northern India	Dr. Pushpa Suri	Rs. 58.00
5.	Self-Determination from Bifra to Bangladesh	Dr. J.N. Saxena	Rs. 25.00
6.	Some Contemporary Meta-Ethical Theories	Dr. Ved Prakash Varma	Rs. 45.00
7.	Control Over Public Corporations in India	Dr. Ramesh Chandra	Rs. 90.00
8.	Patriotic Songs on Bengali Literature	Dr. Gita Chattopadhyay	Rs. 65.00
9.	Export Marketing on India's New Manufactures	Dr. Sri Ram Khanna	Rs. 240.00
10.	Shah Abdul Latif and His Times	Dr. S.M. Jhangiani	Rs. 140.00
11.	Concept of Welfare State	Dr. M.M. Shankhdhar	Rs. 60.00
12.	Red Signal to Smokers	Dr. D.K. Rao	Rs. 32.00
13.	Second Languages English	Dr. Syngle	Rs. 35.00

SANJAY GANDHI POSTGRADUATE INSTITUTE OF MEDICAL SCIENCES (SGPGI)

Post Box 375, Lucknow, India 226 001

SGPGI is being developed as an apex (tertiary) referal centre for superspeciality medical care, postgraduate education and organised basic and clinical research. The Institute has been chartered to function as a University and centre of excellence for providing medical care, education and research of high order, such as is available in few centres in the country.

This project is conceived to evolve in phases. In the first phase six specialities are being developed : Neuro-sciences, Cardiac-sciences, Renal-sciences, Gastroenterology, Endocrinology, Genetics and Immunology. These six specialities would start functioning by March 1988, with an envisaged 300 beded hospital by the year end. The capacity of the hospital would expand to 600 beds by the year 1990 and to 1800 beds by the end of the third phase.

Each speciality is being developed as a comprehensive centre combining medical, surgical and basic sciences disciplines. In addition departments of Pathology, Microbiology, Radio-diagnosis, Nuclear Medicine, Radiotherapy and Anaesthesiology are developed to provide necessary support to all the specialities. The main hospital and ancillary services are being equipped with the latest and modern investigative facilities. Clinical, experimental and basic research will be an integral part of each department.

The Institute will provide post-doctoral training to medical and non-medical doctors. In case of medical doctors the training will lead to the degree of DM or McH in respective areas. Besides, the Institute will enrol students for Ph.D. programmes and also provide training facilities in nursing and medical technology in speciality areas.

The guiding force behind the spirit of the Institute is the moto that : 'Research enhances vitality of teaching, teaching lifts the standards of service and service opens new avenues of investigation'.

LIBRARY OF THE FUTURE

D.R. Kalia*

One may wonder whether techonological development would affect the resources and services of the Library of the Future. In so far as the philosophical *raison d'etre* of the library as a social organism is concerned, no change is likely to occur. A library shall for all times to come continue to have its main objective of making the sources of knowledge available to the user for his education, information, recreation, aesthetic appreciation and research.

No technological development in the field of electronics and satellite communication can supplant the virtues of a book. The so called Electronic Book shall never be able to replace the book, primarily because of the convenience of its use. The book can be easily carried and read anywhere, any time, without any aid. An electronic book which has not yet been marketed, will have a capsule of the size of corn which may contain upto 500 pages of the text of a book and will be activated on a portable Reader. The text will be read on the screen of the Reader. For the use of the electronic book, the light will have to be subdued during the day when there is bright sunshine. Whether such a book could be conveniently read in an aeroplane, a train or a bus is yet to be experimented with. The video-cassette projected on a TV screen is no substitute for a book either, because of its immobility.

It might astonish some to know that widespread use of radio, cinema, TV and video-cassettes have in no way reduced the incidence of use of libraries. They have no doubt encroached upon the time of the student for study at home. However, the first phase of the craze for TV and video-cassettes seems to be over, as much less time is being spent on this source of entertainment, both by children and adults. The VCRs are being sparingly used in homes. Sometimes they are not used for weeks together and those who possess them regret having bought them. A retired person whose vision and hearing are not impaired may be viewing TV or video-cassettes for long hours. But this is not of much consequence as they were spending only a part of their leisure time on reading and that has not ceased.

The paperless library envisioned by some is nothing but a flick of imagination. Convenience of use of a book is going to prevail for all times to come. A synthetic material may one day be used in place of paper but book is going to retain its present physical form. This is what commonsense would suggest.

Illusions of Computerisation

There is a widespread belief that computerisation of library operations is a panacea for all the ills afflicting the libraries. No. computer has yet been invented and equipped with imagination. It has only a memory. What distinguishes the Hemo Sapiens (Human beings) from other species is their intellectual curiosity, congnitive faculty and their ability to communicate through articulate languages. These capabilities of a human being cannot be taken over by any other species or a man made machine. Computer can do what it is instructed to do but instructions are the product of human mind. The computer only carries them out. The errors that one can commit manually, are also committed while putting in the data and it has to be counter-checked by a human being even after the computer has detected and rectified the errors. Computer is only a time saving device with greater accuracy. It certainly adds to efficiency but not in every situation.

The components of a library are physical plant (building, furniture and equipment) and reading material. Library staff is a physical link between the reading material and the user. Library management is meant to optimise the utilisation of human, material and financial resources possessed by a library. A computer can certainly help in automating the procedures involved in book selection, ordering, cataloguing, serial control, circulation and recovery of overdue books. In addition, it can generate subject bibliographies, documentation lists and retrieval of stored information either online or through a printout or both.

No computer can exercise judgement in selecting books, nor can it find out the subject of a book. This is to be done by the library staff. If the profile of a reader and his needs are fed into a computer, it can only match the material with the needs. But it can exercise no judgement in the choice of titles. The

---

Editor, CLIS Observer and Director, HKM State Library, Government of Orissa, Bhubaneswar-751001.

matching is done by the computer mechanically either through the keyword or the descriptor or the class number. Whatever material is available will be listed or displayed on the terminal. The choice will still be exercised by the reader himself as to what is relevant to his needs.

All catalogue entries are to be made by the librarian according to the cataloguing rules through the terminal. Cataloguing rules cannot be put into the computer in the form of instructions as it cannot exercise judgement in the application of the rules.

The librarians are taking as much time to classify and catalogue a book in computerised processing as they did while doing them manually. But once the Main Entry is fed into the computer it can automatically generate further entries by author, title and subject. This is where a tremendous amount of time and labour of the library staff is saved.

I have myself been fiddling with computers since 1968. Once we got the computer facility, we discovered that most of the cataloguing entries were substandard and each book had to be recatalogued and until that was done manually, we could not make use of the computer facility. It was also discovered that many Class Numbers had been wrongly assigned and if there were five copies of a book, each had been placed under a different Class Number. Rectifying the class numbers of a large collection was a herculean task in which the computer was of no help. Yet another problem was to match the class number with the descriptors and prepare class index entries. Though the computer could do it but very detailed study had to be made. The books were all the time on the move and to locate them amounted to weighing the frogs. Many books had been stolen or sent up for binding or were overdue or withdrawn from circulation. It was impossible in an open access system to locate each and every book on record for rectification and rewriting of booktags.

After putting in all the date in computer about books found missing and taken as stolen, books sent up for binding, books withdrawals from circulation and books lent out, we could still not find a large number of books, because the readers had hidden them in different places and there was always a time lag between the reader hiding it and our locating it through shelf rectification.

Identifying, whether a particular book is available in the library, with the help of a computer is one part of the job, but how to make it available to the reade is another. The efficiency of a library is judged by reader by the time taken in making the book availabl to him and not by simply identifying it through th computerised catalogue. Computer is of no help i locating a book physically.

In the case of index entries of articles fed into th computer, so long as those pertained to library holdings the article in demand could be located. In case we did not have it, it took too long a time, to get i from other sources. This exasperated the reader. W also discovered that comprehensive subject bibliographies did not satisfy the reader, because a large number of the titles included in them were not availabl in our library and we failed to borrow them fron other libraries as inter-library lending in India wa not well organised. The readers made a mockery o our preparing subject bibliographies and documentation lists.

We also discovered that after having compute facility, we could not reduce our staff and the amoun of money spent on computer, its maintenance anc operation was extra and it was much more than wha we had anticipated. When we had our own computer the problem was in finding and retaining a good programmer, who had become a scarce commodity.

In case, we depended upon the services of a centralised computer facility, most of the time its services were not available or it was out of order or electricity supply had failed. It took too long to train the library staff in computerisation and once they acquired the skill, they deserted us for better opportunities.

My purpose in pointing out all these difficulties is not to decry the use of computers but only to caution the overenthusiasts. They should go in for computerisation and bibliographic databases only after they have set their house in order. There is light but only at the end of the tunnel. They should first rectify the class and catalogue entries before going in for computerisation. To start with only large libraries should opt for it and the smaller ones should have a centralised computer facility. It is of no use computerising circulation system in a library where number of books lent out per day is very small. Similarly, computerisation of book selection and acquisition is of no use in a library with a small annual intake of new books. It is better to share a common computer facility for these purposes, if one exists.

If any evaluative study is made of all the libraries

India which have gone in for computerisation, one uld have a mixed reaction about the virtues of mputerisation of library operations. Writing arti-es on computerisation and delivering speeches is uch easier than making a success of computerisation a library. There are many slips between the cup d the lip than what a novice would think of. With-t pre-planning one might burn his fingers and may en incur displeasure of the user.

The author and the publisher are the producers of ooks; the library is the preserver and promoter; and e user is the consumer of the end product. These ree constitute the trinity of knowledge industry. the trinity library is the Kingpin as it provides a ide and stable market for books. The bookseller is art of the marketing process.

The library of the future is not going to be hurt s much by technological development as by quality f writing, book production and its pricing. Ninety er cent of the hard cover are purchased by libraries, ecause the books are so highly priced these days that nly a few individuals can afford to buy them. Library udgets are not worked out on the basis of the number f volumes to be added in a year. To absorb the infla-ion, the number of volumes to be acquired in a year hould be multiplied by the current average price, and that would determine the book-budget of the library. But the actual practice is to make an adhoc provision, without taking into account, the number of volumes to be acquired and their cost. Consequently the libraries are buying fewer books, whereas the demand for them is on the increase with the spread of education, expansion of knowledge and emergence of new disciplines. Most of the libraries are failing to keep their runs of back files up-to-date for paucity of funds.

In fact, the real danger lies in the phenomenal increase in the cost of library service. The price of every element (building, furniture, equipment, books, journals and staff salaries) has spiralled so high that even developed countries are finding it difficult to maintain their libraries at optimal level of adequacy. The developing countries are in a much worse situation.

Conclusion

The library of the future is not going to be basically very different from what it is today. This makes its position secure. It may acquire new dimensions with improvements in printing technology, printing material and automation. New technological developments will promote the use of printed word but not supplant it. ☐

COLLEGE OF NURSING

CHRISTIAN MEDICAL COLLEGE & HOSPITAL

LUDHIANA, PUNJAB-141 008.

Applications are invited from candidates for the following course commencing in July, 1988. Prospectus and application forms may be obtained from the Principal, College of Nursing, Christian Medical College and Hospital, Ludhiana, 141 008 on payment of Rs. 30/- bank demand draft made out to the Christian Medical College & Hospital, Ludhiana. In category 1 only female candidates are eligible. In category 2 applications from male candidates are also invited.

1. **B.Sc. Degree—four years course in Nursing** : Candidates must have passed Pre-Medical or 10+2 with English, Physics, Chemistry and Biology or an equivalent qualification recognised by the Panjab University, Chandigarh.

2. **M. Sc. Degree—two years course in Nursing :** Candidates must be a holder of B.Sc. Nursing Degree with 60% pass marks and three years experience.

Clinical Subjects :

(1) Psychiatric Nursing
(2) Maternal & Child Health Nursing

Last Date for Receipt of Application :
For Category 1 : July 1st, 1988.
For Category 2 : April 2nd, 1988.

RUSH FOR LATEST TITLES FROM USSR

(Also Available more than 1,000 Titles in English, Hindi, Urdu, Punjabi in the Stalls of Soviet Books At 8th New Delhi World Book Fair)

What's What in World Politics : A Reference Book
HB with Jacket, PP : 462, 15x21 cm, Rs. 12/75

Political life in the present-day world is intricate, tempestuous and diverse. A variety of terms is used daily in the stream of reports appearing in newspapers, on the radio and television. What these terms mean, what is behind the events, what role is played in the world by international organisations and alliances, what is happening in the flashpoints of the world—these and many other questions are answered in this book of references. Its compilers produced brief but conclusive explanations of the various aspects of world politics.

The USSR's Activities in the UN for Peace, Security and Cooperation : 1945-1985
HB with Jacket, PP : 336, 13x21 cm, Rs. 10/-

Compiled by experts in international affairs, this book deals with the USSR's vigorous and consistent work in the UN to preserve and strengthen peace and to make that universal organisation an efficient instrument of collective security.

The October Revolution and the East
by Yu. M. Ivanov
PB, PP : 160, 13x21 cm, Rs. 3/-

Drawing on extensive factual material, this book traces the evolution of the role of the working class in the revolutionary struggle of the peoples of the East after the October Revolution in Russia and analyses the tendency towards the conversion of the proletariat from a social force awakened for political life by the national bourgeoisie into the leader of the national liberation revolution.

The World Energy Problem
by I. Kozlov and V. Pominov
PB, PP : 232, 10x16 cm, Rs. 10/-

This book reviews the energy situation in the world and looks into the origins, current state and prospects of the global energy problem under different social systems.

The Origin of the Human Race
by V. P. Alexeev
PB, PP : 360, 11.5x20 cm, Rs. 9/25

This book is an attemp to take as full account as possible of the latest findings and data, and to modify general conceptions in accordance with them, but at the same time to avoid burdening the text with petty details and to maintain a smooth presentation and paint a whole, integrated panorama of primaeval history.

A Contemporary World History : 1917-1945
by V. Alexandrov
HB with Jacket, PP : 718, 13x21 cm, Rs. 21/75

The book is meant for a wide circle of reac people who are interested in the problems of cont porary world history.

The Developing Countries Social Structure
by Alexei Levkovsky
PB, PP : 178, 12.5 x 20 cm, Rs. 4/-

This book provides an exhaustive insight into social and class structure of developing countrie contrast to economically developed capitalist sta the effect of that motely structure and shifts in it on the main classes of the transitional society; and way the old social strata are superseded by new one

The USSR and International Economic Relations
(A collection of Documents on the USSR's stand the Restructuring of International Economic Relati and the Establishment of a New International Eco mic Order)
HB with Jacket, PP : 494, 13x21 cm, Rs. 19/-

This collection includes documents on the fore and foreign economic policies of the USSR.

Albert Einstein's Philosophical Views and the Theory Relativity by D. P. Gribanov
HB with Jacket, PP : 262, 13x21 cm, Rs. 12/-

This book presents the first integral treatment the philosophical views of Alber Einstein and th influence on the origin and interpretation of the theo of relativity.

Population and Socio-Economic Development
(A Collection)
HB With Jacket, PP : 190, 13x21 cm, Rs. 7/-

The book analyses theoretical questions of the rel tionship between social progress and population dev lopment, methodological problems in applying t systems approach to interdisciplinary research in demographic processes, and shows the importance population studies for the theory and practice of pla ning socio-economic development in the developi countries.

The Steep Steps : A Journalists Note
by Yuri Zhukov
HB with Jacket PP : 436, 13x21 cm; Rs. 16/-

The author, journalist and writer, describes he about the rapid development of the young Sovi Country in the 1930's and at the beginning of 1940 about the sources of the Soviet peoples' victory ov the Nazi invaders in the Second World War.

me and Punishment
F. Dostoyevsky
with Jacket, PP : 576, 13x21 cm, Rs. 22.50

The novel was conceived by Dostoyevsky during exile in Siberia.

Its theme was focal in all his writings : the fate of ne-tenths of mankind morally crushed by the society his times.

axim Gorky and the Literary Quests of the Twen-th Century
Alexander Ovcharenko
B with Jacket, PP : 320, 13x21 cm, Rs. 14/75

This volume by Alexander Ovcharenko, the well-own Soviet literary critic, reveals the vital and endur-g significance of the great writer's work.

other
Maxim Gorky
B, PP : 408, 13x21 cm, Rs. 15/-

Maxim Gorky's "Mother" has been enormously popular with Soviet and foreign readers for many decades. It has been published in large editions and translated into many languages.

Envoy of the Stars
by Ashot Arzumanyan
HB with Jacket, PP : 232, 13x21 cm, Rs. 11/-

This book is about Academician Victor Ambartsuman, an outstanding astrophysicist, President of the Academy of Sciences in Armenia, Director of the Byurakan Astrophysical Observatory, in recognition of whose services to world astronomy, thirty foreign academies, Scientific Societies and universities have elected him as an honorary member.

Russian for Tourists
by V. G. Kostomarov and A. A. Leontyev
PB, PP : 184, 11x16 cm, Rs. 7.50

This second, revised and enlarged edition, with illustrations, is for busy businessman and lazy tourists.

BOOK FAIRS AND LIBRARIES

N.B. Inamdar*

Books and Modern Media

Books are the records of civilization. Till the ecent development of mechanical means of communication, the written word has been the single most important factor in the intellectual development of mankind. In an age when new electronic channels of communication are taking hold, the question being heard is : Will the book survive ? The television set and the computer epitomize the electronic challenge to books and publishers and libraries.

But in spite of the rapid strides made by the electronic media, books remain an essential input for individual fulfilment and national devèlopment. The increase in the world output of books, not withstanding modern technologies, provides testimony of the fact that all these fascinating machines are complementary to, and not substitute for, book and the printed word. The essence of book, unlike other forms of communication, is that it is a personal and cooperative experience between the reader and any author from any period of recorded history.

Undoubtedly, a modern library is expected to provide access to records, tapes, films, lectures, concerts and online computer searches, but books are their most dominant and visible offering. For many years, books will continue to be published by tens of thousands, bought by hundreds of millions. They will remain highly familiar objects and popular media of information and knowledge in libraries.

However, libraries face many problems regarding acquisition and availability of books. It is in this context that the role of 'Book Exhibitions' and 'Book Fairs' becomes important for libraries.

Libraries & Book Development

The year 1972 was declared by Unesco as the International Book Year. An important document that was published during the period was 'Charter of the Book'. This charter was the outcome of intense deliberations by an International Committee comprising booksellers, authors, composers, documentalists, librarians, translators and publishers.

The ten articles of this charter cover all aspects of books and their relevance to the quality of life. According to articles 7 and 8 the libraries are national resources for the transfer of information and knowledge for the employment of wisdom and beauty. They occupy the central position in the distribution of books, the promotion of reading habits, the providing of lifelong education, and economic, social and cultural progress of the communities. The charter stresses the importance of library services by establishing a network of libraries. It specially highlights the need for rural libraries in developing countries. It is recognized throughout the world that the libraries are effective instruments for human resource development.

During the 40 years of India's independence, not adequate attention was paid to development of libraries. Inspite of the fact that the Library Advisory Committee appointed by the Government of India in 1957 and subsequently constituting of the Working Group on libraries by the Planning Commission in 1964 and valuable suggestions and recommendations made by them, there are only 5 States in India which have network of public libraries based on library legislations.

Similarly ambitious schemes of educational expansion are often thwarted in the absence of a corresponding growth of libraries and book industry. Our new educational policy lays thrust on universalization of elementary education, diversified vocationalization, continuing education and functional literacy, open universities, correspondence courses, etc. These objectives could be realized only when adequate support and due attention is paid to development of libraries and books.

The National Adult Education Programme introduced by the Government of India in 1978 with a huge outlay of Rs. 600 crores, does not earmark any amount for libraries. Similarly library services in schools and colleges at present are meagre and rudimentary. Proper expansion and improvement of these services will help in raising the quality of education at comparatively small cost. There need be a planned and well organized relationship of the library systems with producers and distributors of books. It is the duty of the State and Central governments to promote such linkages.

University Librarian, Osmania University, Hyderabad-500 007.

Despite the handicaps and constraints described above, Indian publishing since the independence has come a long way. India today publishes 20,000 titles a year in English and 18 Indian Languages covering a variety of subjects. It ranks seventh in the world of International publishing in terms of titles and third in the production of titles in English language. 80% of these books are purchased by libraries. Therefore, libraries' concern for availability of quality and relevant publications is obvious.

Extension Services in Libraries

Libraries not only collect books and other graphic records, but devise and plan various activities that help in promotion and use of books by readers and inculcate reading habits in them.

The introduction of extension work in libraries is one such activity. This work aims at reaching group of people, who might be otherwise unaware of the library and its services. The extension activities differ from library to library. They generally include 1. Lectures and Film Shows, 2. Reading circles, 3. Discussion groups, 4. Story hours for children, 5. Play and Poetry reading groups, 6. Seminars, and 7. Book exhibitions.

Book Exhibitions

The new books are brought to the notice of library members by displaying book jackets and arranging book exhibitions under the sign 'New Arrivals'. Also catchy captions like 'Book of the Day' 'Book of the Week' 'Book of the Month' are used for books' displays. These devices certainly help in promotion of book reading.

Special and topical exhibitions are organized coinciding with important national and international events, like UN Day, Human Rights Day, International Literacy Day, World Health Day, etc. Similarly on the occasion of Republic Day (January 26) or Independence Day (August 15) book exhibitions are arranged taking out related books from the racks and arranging them in an attractive manner. All such book exhibitions, provide readers visual impression and promote the use of materials lying on the racks unused. These type of book exhibitions help in implementing the following laws of Library Science, vigorously. (1) Books are for use, (2) Every reader his/her book, (3) Every book its reader, and (4) Save the time of the Reader.

Libraries also ask leading publishers/booksellers to arrange book exhibitions in libraries and thus hel students, faculty, and researchers in knowing abou new and scholarly publications. These exhibition also imbue the book sense among the users c libraries.

Libraries believe in the slogan "Catch Ther Young" and organize, particularly, in public an school libraries, display of childrens' books.

Book Fairs are nothing but extension of the boo exhibitions and librarians and libraries are beneficiaries of such fairs to a great extent.

Book Fairs and Libraries

The idea of Book Fair has its genesis in Leipzi Fair which was introduced in the early part of th 19th century. It was originally annual gathering o booksellers, publishers and printers to settle thei accounts. This practice continued until the Worl War II. In the year 1949, Frankfurt Book Fair wa held for the first time. This Fair is considered as a successor to Leipzig. It is very important Book Fai at the international level and is organised every year It gave impetus to the movement of book fairs. Now book fairs are held at different levels; international regional, national, city, etc.

As the publications kept growing, the idea of book fairs got popular. Publishers all over the world were interested in finding outlet for their publications. The extraordinary growth of the book fairs during the past 25 years can be attributed to the internationalization of publishing industry. There are now about a dozen countries with Book Fairs as annual events and another dozen which have experimented with them. Every year several new ventures are made in this direction. The growth of book fair as an institution in international publishing shows no signs of slowing down.

Book Fairs are sponsored or supported by organisations, institutions, associations, etc. The significance of such fairs lies in promotion of literature and culture of a nation as well as fostering better understanding among the people and countries of the world. Books are most vital food for the human mind and human spirit. They strive constantly shaping and moulding the minds of millions and hold humanity together and bring mankind closer in search of its own identity. Book Fairs create and promote a world society of bookminded people; the objective and mission libraries strive at.

Important International Book Fairs

The following Book Fairs have achieved great importance in recent years. A brief description of each of them is as follows :

Frankfurt Book Fair

It is attended by publishers, authors, literary agents, librarians, booksellers and distributors from all continents. It is the biggest book show in the world. The 1986 Fair had its theme "India—change and continuity" and a total number of 6000 books and journals in as many as 14 languages of India were displayed by Indian publishers. An equal number of books published on and about India in other countries were also exhibited. About 7000 publishers/booksellers took part in 1986 Fair. Frankfurt Fair offers best opportunity to the men in book trade for negotiating listing rights, translation rights and co-publishing rights.

Association for Asian Studies

This is an important professional society. It serves the needs of scholars of Asian studies in different parts of the United States. During their annual meetings book fairs are arranged regularly.

London Book Fair

This Fair was started in the year 1971 and has become one of the major book fairs in the world. Books in English covering various subjects are exhibited. It provides a good forum for establishing useful commercial contacts for the participant publishers and booksellers from all parts of the world.

Moscow Book Fair

This is one of the biggest Book Fairs held biannually. Major publishers from all over the world display books in different languages.

Beijing Book Fair

A considerable number of foreign publishers participate in this Fair. This Fair enables Chinese readers to have a better understanding of trends in science, technology, economy, education and culture in other countries. During the Fair the Chinese and foreign publishers negotiate co-publishing arrangements to develop scientific, technical and cultural cooperation and strengthen friendship among peoples of the world.

Pesta Buku Malaysia

This Fair is held every year. In addition to the publishers and distributors from Malaysia, the foreign publishers participate at this fair through their South East Asia offices located in the region.

Singapore Festival of Books

The renowned publishers and distributors all over the world take part in this annually held book fair.

New Delhi World Book Fair

It started in 1972 as a gift of 'International Book Year' declared by UNESCO. This book fair is held every alternate year. Leading publishers from Pakistan, Bangladesh, Nepal, West Asia, Europe and United States of America participate in this Fair, which provides excellent opportunity to the bookmen to quench their knowledge thirst. The librarians from all over India visit the fair in great numbers and buy books selecting from among thousands and thousands of books displayed. The leading personalities of the publishing world visit this fair. This provides an opportunity to the Indian publishers and book distributors to build contacts and negotiate about different matters relating to book trade and book production.

International fairs are also held regularly in Belgium, France, Argentina, Italy, Switzerland, Poland, United States of America, Zimbabwe, Spain, Yugoslavia, Baghdad, Phillipines and Egypt.

The important role of Book Fairs is that they make possible for book lovers to see under one roof such vast collection of books. The readers are influenced and become bookminded and reap the benefits of reading books. Book Fairs are great catalysts in changing the attitudes of community towards reading; the cause most dear to libraries and librarians.

Book Selection and Book Fairs

In addition to World Book Fair at New Delhi, the fairs are held in India annually at Calcutta, Madras, Bangalore, Bombay and Hyderabad. On all such occasions, the publishers and book distributors bring and display their recent and scholarly books. The wholesalers representing a number of leading publishers throughout the world participate in good numbers and display huge stocks of books. The importance of such book fairs is enhanced by participation of government sponsored autonomous organisations like, National Book Trust, Childrens Book Trust, Sahitya Academy, NCERT, Association of Indian Universities and quite a few research institutions of national importance.

Book selection is the first task of the librarian. The three main factors involved in selection of books are : Books and other library materials, (2) Readers, and (3) Funds available. These factors are ever present irrespective of the type of the library. Their interplay has resulted in a fundamental enunciation by Melvil Dewey, "The best reading for the largest number at the least cost."

As the books multiply to unmanageable proportions, judicial selection becomes very important. Demand by readers, value of materials and the objectives of library will be guiding factors. The selection should be impartial and serve as vehicle to instruct, teach and recreate.

The educational background and experience of author, reputation and reliability of publisher, treatment of the subject matter, style of presentation, accuracy and uptodateness of information and data, and physical features like typographical layout, design, appendices, glossaries and indexes, etc. are some criteria that are applied for evaluation of books before they are selected for the libraries. Publishers' catalogues, national and subject bibliographies and book reviews in journals, no doubt help libraries as selection tools. But the opportunities provided by the book fairs for the selection of required materials are much more advantageous. The variety and the volume of materials available for selection is unparallel.

Acquisition of Books in Libraries

The efficiency of acquisition programme in any library depends on librarian's having intimate knowledge of all agencies relating to book trade; publishers, wholesalers, booksellers and a number of government agencies and autonomous bodies involved in promotion and production of books. It is noticed that library science schools in Indian universities have not paid adequate attention to this very important aspect of librarianship. There is not much interaction between library and publishers/booksellers/associations. The formation of Good Offices Committee at the central level is a positive step in this direction but not adequate to cover all nuances of book acquisition.

There is a tremendous increase in book publishing in India after independence, both by private sector and government agencies. The annual output of book is about 20,000 in all the 15 languages of India including English. But it is seen that proper disseminatio of information about these publications is absent This hampers the rhythm of acquisition schedule. Th librarians always feel lost when they are asked t procure books of specialised nature for which ther are no direct trade channels in India. Ironically sometimes they go in for foreign publications when equall scholarly books of high standard have been produce in India.

Book fairs provide unique opportunity to the librarians to get first hand knowledge about the book trad and thus overcome these shortcomings.

Developing Special Collections

The university and special libraries will be focussin their attention in acquiring books relating to specialised areas like nutrition, medicine, genetics, etc. It i seen that there are very few publishers and bookseller that have paid attention to this aspect of libraries needs. The librarians have to take chances by contacting a number of booksellers, sometimes without an success. There are very few publishers like Wilson an Bowker (US), Whitaker (UK), Elsevier (Europe), an NTIS (US) to whom librarians can look confidentl for acquisition of reference books, books on scienc and technology and technical reports.

A widely represented book fair at international o national level will be a great boon for libraries i building specialised collections.

Books in Indian Languages

This is another area where librarians do not posses adequate knowledge. Out of the 20,000 annual boo production in India, 55% relate to Indian languages The bibliographical control of these publications is no satisfactory. In the bargain the libraries miss goo books produced in Indian languages. Almost all state have taken up programmes of book production in thei respective state languages through Academies an encouraging other scholarly agencies.

A special display of books in Indian languages i organised during the World Book Fair. Also th translations of some of the standard titles in othe Indian languages are exhibited. This is very importan aspect for libraries in as much as the states have adopted the respective state language as a medium of instruction in schools and colleges. These languages ar being used very widely in official matters also.

ildrens Books

All public libraries have children's corners. Besides here are exclusive libraries for children like Bal Bhavan n Hyderabad. There is a great need of having attracive books in all such libraries. Attempts are being nade in India through NBT, CBT, NCERT and some rivate publishers to produce childrens books in nglish and Indian languages. But the total annual utput has not exceeded 500 titles.

Design, contents, style and language of children's ooks needs special attention. The librarians and uthors who are interested in working in this field will e amply benefited by visiting book fairs, where hildrens books from all countries are displayed. cience and technology books for children that are roduced in Russia and displayed during the World Book Fair need special mention. They are quite attracive and inexpensive. Some of these titles could be asily translated by the librarians and authors having ngenuity and imagination.

Book Grants and Book Fairs

It is typical of India that book grants are released owards the end of the financial year. This upsets the rhythm of acquisition of library materials. Added to that the procedure requires that the library should spend the grant before the end of the financial year. The natural result of this is that the librarians do spend the money and procure books but at the cost of quality and relevance. In all such cases World Book Fair held in the month of February could be visited by the librarians and allotted grants used more profitably. They will have ample choice to select the materials from among the great number of books displayed under one roof. Any other book fair held during the month of March will also be helpful in buying useful books within the stipulated time.

Seminars and Workshops

Lectures, seminars, workshops, etc, are the essential part of the book fairs. The librarians should be invited to all such programmes. In fact, it will be of great use and interest if these programmes are jointly organised by library and book trade associations. The exchange of ideas and contacts built during such meetings will be of mutual benefit.

There is an intimate connection between book trade and libraries. Both of them have the common objective of promoting the welfare of the society through medium of books. Book fairs provide a unique opportunity to libraries and people in book trade to have meaningful interaction. □

Spiralling Prices And Library Budget

V.B. Nanda*

Introduction

Richelieu said that 'finances are the nerves of state', a 'lever of Archimdes', when firmly set gives power to move the world. Given unlimited financial resources and free hand, any library shall endeavour to acquire every book and journal printed anywhere in the world and thus build its collection to formidable proportions. But like the philosopher's stone, such ideal situation does not exist anywhere.

Libraries all over the world suffer from financial famine, which of course, is more severe in the developing countries. With the present financial instability the world over, libraries in the developing countries are the worst hit by the financial famine. On the one hand new educational institutions with libraries as their essential components are being established in large numbers, on the other, the financial resources of the government and funding bodies have dried up or are in process of drying up. In India, whenever any calamity or emergency hits the nation, the axe of economic cut falls upon the educational budget and in that process library finances are the first casualty.

The financial problems faced by the libraries, especially in our country, are manifold. The fast expanding boundaries of knowledge and proliferation in publishing have made it difficult for the libraries to keep pace. The prices of books and subscription rates of journals have been increasing at a very high rate. The financial resources of libraries have been shrinking. Where the budget cut has not been enforced, the rate of increase in the budget which varies from 3 to 5 per cent is not sufficient to keep the present rate of addition of books and maintenance of the current subscription list of journals. With the expanding universe of knowledge and widening horizons of research, the demands upon the libraries have become enormous which they are not able to meet. In India, while the growth of the academic libraries have become stunted, the public libraries are at the verge of turning into stinking pools of books. In this light, we study here the spiralling problem of price rise of books and journals and how best we may counter the same.

Book Production

In spite of proliferation of knowledge, the actual production of books has decreased the world over. After World War II, the faculty and the scientists have been caught in a net called 'publish-or-perish' and there was a boom in publishing. Though today many bright authors do not get published or are waiting in the wings, the book production has developed into a purely professional-profit-oriented-business. Gone are the days when scholars would build their personal libraries by purchasing two penny 'Everyman's Library' or 'World Classics' series and feel proud of their personal collection. Today, even in the U.S.A., any lover of books wanting to build his personal library shall have to wait for a year or two till the publishers consign their unsold stocks to the super markets and general stores for disposal at throw-away prices. Then watchful eyes would collect the books of choice for addition to the personal library.

These stocks of unsold items are also sold to the book trade in the third world countries where these are unscrupulously sold as 'new' at the printed price. In India, this game has been played successfully by the Trade to the disadvantage of the unsuspecting libraries. From this single fact it will be seen that there has been a change in orientation of the publishers after the World War II. Their only aim is to price the books very high and make profit by selling a limited number of copies to the libraries at home and then unload the unsold stocks elsewhere with a 'who cares' attitude.

A reference may also be made to the multi-tier book pricing schedules of foreign publishers, where books called EEE, ELBS and like editions, are priced low for sale in foreign markets. Sometimes there are prices in two different currencies to offer advantage to the trade only. If the publishers cannot make profit in their own countries, how can they survive by reducing the price to half or so in foreign markets ? Most of the time one finds xth edition in economy price only after its subsequent (x+1)th edition has come in the domestic market. This trend has implications for the third world countries which are the only losers in the long run.

Clive Bingley has identified the following two

**Librarian, Jawaharlal Nehru University, New Delhi.*

main reasons about the sharp rise in the book prices during the last two decades : (1) progressive underpricing of books over the long period of time before World War II, and (2) the concurrent decline proportionately in publishers' profits. He further says that it was before the 1950s that the books were under-priced in comparison to the high cost of production and distribution, and this realisation dawned upon the trade only when the book production industry was in the grip of a stock boom. The book publishing industry is a very high-capital-investment industry and cannot afford to keep the stocks of unsold books. Richard Blackwell too, supports the view of Bingley. The result had been that the number of copies published came down with profits going sky high in the 50s. The trend continues till this date. The average price of an ordinary book has gone up hundred times when compared to the price in the year 1939. Tables 1, 2 and 3 shall support this view.

Table 1 : Production

Country	1979	1980	1981	1982	1983	1984
USA	88721	86377	76976	46935	53380	41380
UK	41864	48069	42972	48307	51071	51535
W. Germany	59666	64761	56568	NA	NA	NA
India	11087	13148	11582	10649	NA	NA

Table 1 shows that in the USA, production of books had gone down during 1979 and 1984 period. In the UK, it had gone down during 1979 and 1981, but in 1982 it caught up and in 1984 exceeded the 1979 mark. In Germany it rose in 1980, but declined in 1981. In India, it increased in 1980, but came down in 1981 and subsequently in 1982 the overall trend in book production was downward.

Table 2 : Average Prices of Books in UK
(Cut-off Year 1971-72=100)

Year	Ave. Price in £	Index
1971-72	3.70	100.00
1972-73	3.33	90.00
1973-74	3.33	90.00
1974-75	3.50	92.00
1976	4.99	133.00
1977	5.93	160.00
1979	10.81	292.00
1982	14.29	386.00
1983	13.61	367.00
1984	16.51	445.00

Table 2 shows that average unit price of book i the U.K. taken as 100 in 1971-72 rose to 445 in 198

Table 3 : Average Prices of Books in USA
(Cut-off Year 1966-69=100)

Year	Ave. Price in $	Index
1966-69	8.77	100.00
1971	13.25	151.00
1972	12.99	148.01
1973	12.20	139.01
1974	14.09	160.07
1975	16.19	184.06
1976	17.39	198.03
1977	19.22	219.02
1981	26.63	300.01
1982	30.34	345.00
1983	31.19	350.01
1984	29.81	340.00

Table 3 shows that if the average unit price wa 100 in 1966-69, it touched 340 in 1984.

In case of Indian books the random samplin shows that if the price of a book was Rs. 30 in 197 it is Rs. 200 in 1987. This is about seven time increase in price and has become difficult to absorb b any library.

The Indian Scene

In the Indian context, one would like to refer t the problems faced by the libraries. Mr. Khushwan Singh has said that the only sufferer in the game o book production is the author. His is a subjectiv statement. In fact the libraries are bracketed wit authors as the sufferers. The Indian book trade ha followed, in matter of pricing, the ways of thei brothers abroad. Their concern for quality is totall missing. The eye is only on the libraries. The whol production and the pricing of book is oriented towards its sale to the libraries alone. In this gam the readers, who otherwise would be tempted to purchase books for their personal use, have been totall alienated because of high price of the Indian books Thus if on the one hand many promising authors d not get published, or get cheated if at all published on the other, the libraries' budgets have become insufficient to meet the bill of adequate book purchase.

The Indian book industry has not made any effort which it otherwise should have done morally i.e. t price the books reasonably so that an average citize may have strength enough to purchase. If mor ies of a book at reasonable price are thrown for e in the market, there would be more readers, more es, more educational and intellectual development the society, and more profit for the publishers. is fact has been totally forgotten by the Indian ok Publishing Trade.

The Indian scene is not different from the scenes the U.K. and the U.S.A. from the commercial int of view. We have noticed from Table 1 that e book production, numberwise, has gone down in the three countries. Perhaps in the coming years may see increase in book production in India, but e situation in matter of price vis-a-vis libraries and aders is not likely to change until and unless some vareness in concerned quarters takes place or the vernment come down heavily upon the Book Publi- ing Trade. Of course, the government and the mi-government organizations have been publishing d selling books at a price which in all cases is arly 1/4 of the price otherwise fixed for the same ok by the book trade. The hegemony of the book ade and the red tape in the government departments ive been such that many good government and semi- overnment publications are sometimes not able to ll well and reach the public. For this also, some volutionary changes are required.

But the Indian publisher is held at ransom by the ndian bookseller who is unmindful of the needs of e reading public because the aim is huge profit only. he Indian publishing industry could be counted on ngertips. In some cases the publishers are the book- llers too and enter into barter deals among them- lves. This is not conducive to the book industry. the pricing schedules are not standardized and the ook prices not drastically cut and brought to a asonable level, there will be no support from the ading community. The libraries with their shrinking nancial resources shall soon cease to be the sole ource of support to the book trade.

The very qualily of reading material published in ndia also leads the industry to print fewer copies. his is also one factor for the price of the book to be igh, making it virtually impossible for the average eader to purchase. Another factor is the low capacity f the average Indian reader to purchase a book for is own use. The inflation and the consequent higher ost of living have made the individual's resources imited. High price acts as a disincentive to indivi- lual to purchase books. All these factors have affected general readers, who prefer newspapers and popular magazines to the serious reading of higher intellectual content. Whether it is an academic institution or general public, we need libraries to keep our academic programmes going on and our masses provided with means of self-education. But the book production cannot survive upon the libraries alone. The publishing trade shall therefore have to be economically self-supporting and for this published price shall have io be standardised in a logical way to suit the pockets of the individuals as well as institutions in the interest of both, the trade and the society.

Production of Periodicals

The periodicals form the backbone of research programme in any subject or discipline. They are the primary source of information and are valued the most. The periodicals therefore have preference over books. Proliferation of periodicals has been such that in 1987-88 we have 70,800 periodicals listed in the Ulrichs' International Periodicals Directory against 40,000 listed in the same Directory in 1969-70.

Table 4 : Growth of Periodicals

(Cut-off year 1966-69=100)

Year	No. of Periodicals	Index
1969-70	40,000	100.00
1971-72	60,000	150.00
1977-78	60,000	150.00
1983-84	64,800	162.00
1987-88	70,000	177.00

Table 4 gives a clear picture of rise in periodicals published in the world. As compared to the book production, which has a downward slope, the periodical publications have risen to 177 with 1969-70 figure taken as 100. This increase in number of periodicals shall have to be read in conjunction with increase in their subscription rates.

From Table 5 (on next page) it will be seen that subscription rates of journals have increased by leaps and bounds and have totally upset financial management in the libraries the world over. The annual rate of increase in library budget in India is 3 to 5 per cent which comes to 51 to 85 per cent during 1970 to 1987. But the journals' subscription rates have increased six times during 1970-1987, which even the libraries in the U.S.A., called the Land-of-Libraries, are not able to afford. The publishers argue that increased costs of labour and material have forced them to hike the subscription rates. But Robert L. Houbeck Jr. asks whether the production costs in publishing industry have really gone up by four times faster than the general inflation rates in the U.S. He further cites the U.S. Deptt. of Commerce report on the American magazine industry that the rise in prices of paper and postage had been 'moderate' enough for the publishers of journals to balance the subscription rates with 3 to 4 per cent annual increase. This is a just argument and is in line with budgetary increase of 3 to 5 per cent as admissible in India and elsewhere in the world.]

Table-5
Selected Journal Prices, 1970-1987
(In U.S. Dollars)

Journal (Publisher)	1970	1975	1978	% Increase 70-75	% Increase 75-87
Sciences					
Biochimica et Biophysica Acta (Elsevier)	$495	$1551	$3882	213%	150%
Coordination Chemistry Reviews (Elsevier)	25	136	745	444	448
Inorganica Chimica Acta (Elsevier-Sequoia)	26	235	1918	804	716
International Journal of Theoretical Physics (Plenum)	26	135	395	419	193

U.S. Consumer Price Index	$116.3	$161.2	$338.3*	39%	110%

*Based on 1986 CPI (328.4)+1987 inflation of 3%

Source : J. of Acad. Libnship v. 13(4) : 1987, p. 215

In fact, publishers of both the books and the periodicals have taken the customers i.e. the libraries for granted and have been changing during the last 2½ decades, about as much as the customers would pay. Since the customers have not grudged these payments, the price hike has been a regular phenomenon and has reached the proportion that has become impossible to bear today.

Proposed Remedies

Robert L. Houbeck Jr. has pleaded for aggressive librarianship and advised the publishing trade to absorb the costs and not take the libraries for granted. True, we have paid as far as we could pay. But now we have reached the tether's end. The following measures are therefore proposed for consideration of all concerned :

1. The funding agencies should ensure that the libraries are given adequate funds to maintain the acquisition programmes, namely, regular inflow of books and maintaining current subscription lists of journals at all costs.
2. The academicians, intellectuals, users of the libraries and all book-lovers should acknowledge and support the 'citizen's right' to purchase books at a reasonable price and organize a 'Consumer Movement'. The public opinion thus created shall force the publishing trade to realise the importance of publishing more copies at less price so that they have their rightful profit and the public has access to the printed word. This is the only alternative which is in the interest of all.
3. The resource sharing by the libraries is a very very important topic which has been discussed all over the world. But the results have not been satisfactory. A fresh thought shall have to be given, and ways and means devised. The accounts and audit rules shall have to be relaxed. The Telecommunication Department shall have to permit the online arragements between the libraries and the databases to cross the public roads unhampered. The libraries shall have to wake up to the knocks of the 21st Century and start upon automation at once and assist in creating databases at focal points on regional and national levels. A full volume could be written on this issue. A proposal on this issue from the Haryana Agricultural University has also been pending before the AIU.
4. The rising subscription rates have given another thought, that is, we may draft a national policy and subscribe to the costly abstracting and indexing services on national and regional levels only, feed them in the data bases and permit online access to the user libraries. The city of Delhi need not purchase multiple copies of Biological Abstracts, Chemical Abstracts and the like.
5. An idea which is advanced by the Faculty is that the journals have two-tier pricing system— a higher price for the libraries and a lower

price for the individuals. The faculty members may therefore register a subscription in their individual names but the parent body pays, and the journals when received by the individuals, are passed on to the libraries. This shall affect enormous saving and ease the financial stringency. This shall also make the publishers see the reason.

6. Another remedy is that the libraries having a book and journal budget of Rs. 10 lac and above start Bookshops of their own and force the Trade on their own or through government channels to extend Trade Terms to these Bookshops. The Bookshops then sell books and journals to the libraries and also to the faculty and the students at a 'no profit no loss' basis. Some of the librarians have called this venture as a 'fall from professional ethics'. One should not forget that the question of 'ethics' is equally applicable to the Publishing and Book Trade. The Indian Rupee in the name of 'managed floating' have depreciated considerably. In December 1986 the rates, were 'Rs. 100.00= U.S.$7.6 = U.K.£5.2 = D.M.14.8=Yen 1214', while in December 1987 the rates were 'Rs. 100 = U.S $7.8 = U.K.£4.2=D.M.12.5=Yen 965'. The Rupee vis-a-vis Dollar seems stable. But it has floated down considerably in matter of other currencies. In such circumstances, how are we to stretch our Rupee to purchase or subscribe to adequate number of books or journals ? The Bookshop is one strong answer to this problem. The experiments at the Universities at Pantnagar and Hisar and now at the JNU have shown a marked success of this venture.

7. The publishers of books and journals too have a remedy to the problem of rising costs in their own hands. The annual trend increase in cost of materials and labour has been around 3 to 5 per cent during last about two decades, but the increase in price in case of books and journals is six to seven times. It is obligatory upon the Trade to acknowledge the right of the people to have free access to the printed word. They should therefore rise to the occasion, check the price-rise and help the people read more. This shall obviously and ultimately prove to their advantage.

The old saying, 'it is the speaking wheel that gets the grease while the silent one is thought to be working well' holds good here. The librarians and the libraries have remained silent enough. Now is the time to raise the voice and demand the right of masses to the printed word at reasonable price. □

UNIVERSITIES HANDBOOK—1985-86

Salient Features

—Contains information covering all the Indian Universities including agricultural universities, institutes of national importance (including IITs) and deemed to be universities on following heads of information :

- Officers & Deans of Faculties;
- Library & Research Facilities;
- Scholarships and Fellowships;
- Academic year—last date for admissions and the approximate dates of examinations;
- Courses of Studies;
- Minimum requirements for admission to each course, duration and the subjects of study for each course;
- Names of Professors and Readers/Assistant Professors together with their academic titles department-wise;
- Names of Colleges together with names of Principals and Heads of Postgraduate Departments in Colleges;
- Statistics on examination results.

—Introductory chapter on overview of the University System in India.

—Map showing location of universities.

INDIAN STATISTICAL INSTITUTE

ADMISSION NOTICE 1

Session : 1988-89

Applications are invited for the following courses/fellowships for which duration, values of month stipend/fellowship and eligibility conditions are briefly described below. Further details and other conditio are available in the prospectus. Selection of candidates is based on academic record, written tests and inte views.

1.1 **Bachelor of Statistics (Hons) :** *Duration* : 3 years; *Stipend*: Rs. 250 ; *Eligibility* : Successful completion of 10+2 years of secondary education (or equivalent thereof) with Mathematics and English.

1.2 **Master of Statistics :** *Duration* : 2 years ; *Stipend*: Rs. 400 ; *Eligibility*: 3-year Bachelor's degree with Statistics and Mathematics as full subjects or equivalent qualification, obtained after twelve years of secondary education. Those without Statistics, but having outstanding mathematical ability, may also be considered. Holders of Statistician's Diploma/Senior Diploma of ISI are eligible for admission to the second year of the course.

1.3 **Master of Technology in Computer Science :** *Duration* : 2 years; *Stipend* : Rs. 1000 ; *Eligibility* : Master's degree in a relevant subject or Bachelor's degree in Engineering/Technology or equivalent qualification and knowledge of relevant topics of Physics and Mathematics.

1.4 **Post-Graduate Diploma in Statistical Quality Control and Operations Research :** *Duration* : 15 months ; *Stipend*: Rs. 1000; *Eligibility* : Bachelor's degree in Engineering/Technology or Master's degree with Statistics or Mathematics up to graduate level or recognised research/other work in Statistics.

2. **Junior Research Fellowships:** *Fellowship*: Rs. 1000. The Institute conducts research in many areas of Mathematics, Statistics and Economics and offers fellowships for Research Courses in these subjects leading to registration for Ph. D. degree of the Institute. Details are available in the prospectus. The Institute also offers fellowships in other research areas. Eligibility conditions for the fellowships are given below :

2.1 **Research Courses** leading to Registration for the Ph. D. degree : *Eligibility* (i) A good acader record with M.A./M.Sc. degree in Mathemat Statistics, Economics or Econometrics or (ii) o standing mathematical maturity with B.A./B. degree with Mathematics or Statistics or Econ mics as the main subject.

2.2 **Fellowships in other Research Areas :**

Group A : Several areas of Computer S ence which include Analysis of Algorithms, A ficial Intelligence, Computer Communicat Network, Computer Vision, Digital Commu cation, Fault Tolerance, Image Analysis, Para Algorithms and Processing, Pattern Recog tion, Testable Design, VLSI Architecture. *Eli bility* : (i) A good academic record with M.Sc. equivalent degree in Physics/Mathematics/Sta tics or (ii) B.E. or equivalent degree or M.E. equivalent degree in Electronics/Computer S ence/Electrical Engineering.

Group B : Dynamical Meteorology, Hydro namic Stability, Statistical Theory of Turbulen Viscous Flow, Sediment Transport and Theo of Dispersion. *Eligibility* : (i) A good acaden record with M.Sc. or equivalent degree in Ph sics Mathematics/Statistics or (ii) B.E. or req valent degree in Mechanical Engineering.

Group C : Quantum Mechanics and Quantu Field Theory, Nuclear and Particle Physics, S tistical Physics, Cosmic Ray Physics and Plas Physics. *Eligibility* : (i) A good academic reco with M.Sc. or equivalent degree in Physi Mathematics/Statistics preferably with Physics Mathematics at the graduate level.

Group D : (i) Stratigraphy and Sedimen tion and (ii) Stratigraphy and Palaeontolo *Eligibility* : A good academic record with a M ter's degree in Geology/Applied Geology/Ge

logical Sciences and capability of undertaking field work.

Group E : Urban Human Biology/Biological Demography. *Eligibility* : A good Academic record with a Master's degree in Anthropology with specialisation in Physical Anthropology.

Group F : Advanced techniques of analysis in Demography, Stochastic models in Demography, Family Planning Programme Evaluation. *Eligibility* : A good academic record with a Master's degree in Demography/Statistics/Economics/Sociology with Mathematics/Statistics at the graduate level.

3. **Certificate/Diploma Courses on Operation and Programming of Automatic Data Processing Equipment** : *Duration* : 1 year for certificate and additional 1 year for Diploma if one attains a specified standard in the Certificate Course. *Tuition Fee*: Rs. 200 per year, no stipend. *Eligibility*: (i) Age below 25 years on 1.4.88, (ii) Bachelor's degree or equivalent with Mathematics as a subject at higher secondary (10+2) level and (iii) acquired typing speed of 25 words per minute.

All courses/fellowships are offered in Calcutta. In addition, courses **1.2** and **2.1** are offered in both Delhi and Bangalore.

Besides stipend/fellowship there is also a suitable annual book allowance for all courses except 3. Hostel facilities are available. Selection tests for the courses/fellowships will be conducted at a number of centres. Candidates who have completed or are due to complete the qualifying examinations before 1 **July 1988** may also apply. This date may be relaxed by the Institute in case of candidates with outstanding academic record and performance in the selection tests and interviews. Candidates should satisfy themselves that they are eligible for admission to the course or for the award of the fellowship for which they apply. If at any stage it is found that a candidate does not satisfy the eligibility conditions or the information furnished in the application is incorrect, the application will be cancelled. Prospectus and application form can be obtained from the **Dean of Studies, Indian Statistical Institute, 203 Barrackpore Trunk Road, Calcutta-700 035**, by paying an amount of Rs. 15/- by cash (between 11.00 a.m. and 2.00 p.m. on working days between Monday to Friday) or by crossed postal order/bank draft payable at Calcutta in favour of "**Indian Statistical Institute**". Postal orders must contain the name and address (in block letters) of the sender. Money orders and cheques will not be accepted.

Last Date for receiving requests for Application Forms : 7 March 1988
Last Date for receiving completed Application Forms : 28 March 1988
Date of Selection Tests : SUNDAY, 15 May 1988
Tentative Dates of Interview : 20 June—30 June 1988

TATA INSTITUTE OF FUNDAMENTAL RESEARCH

HOMI BHABHA ROAD, BOMBAY-400 005

Advertisement No. 1/88

ADMISSIONS FOR RESEARCH LEADING TO PH.D. IN MOLECULAR BIOLOGY

The Molecular Biology Group of the Tata Institute of Fundamental Research admits, each year, small number of Research Scholars for pursuing basic research in modern biology. The Research Scholars work towards a Ph.D. in one of the following areas :

Molecular genetics, recombinant DNA, molecular parasitology, epithelial membrane transport, differentiation and development, neurogenetics and behaviour, neurochemistry and neuroanatomy.

Students with a good Master's degree in any branch of Biology, Physics, Chemistry, Mathematics or Engineering with a strong interest in Biology are eligible for admission. Students who are appearing for their Master's degree examination in May/June this year may also apply.

Research Scholarships carry an initial monthly stipend of Rs. 1800/-. The appointments are made for a year at a time but are renewable upto a maximum of 5 years. Candidates called for interview from outstations will be paid $1\frac{1}{3}$ railway fare each way by second class (not air-conditioned) and a sum of Rs. 35/- as halting allowance for the day on which they are interviewed.

A small number of applicants to the Ph.D. programme will be invited to work in the laboratory for a 6-week period during May and June. Please indicate in your application whether you would like to be considered for this. Selected candidates will be paid a stipend of Rs. 600/- per month and return second class rail fare from their place of residence to Bombay and if required will be provided with hostel accommodation costing about Rs. 200/- per month. Those who will not be staying in the hostel will be paid stipend Rs. 400/- per month.

How to Apply :

Prescribed application forms may be obtained by writing to the Administrative Officer (Establishment), Tata Institute of Fundamental Research, Homi Bhabha Road, Colaba, Bombay 400 005 alongwith a self-addressed stamped (Rs. 1.80) envelope of approximately 25 cms x 12 cms. The last date for receiving applications in the prescribed form is March 15, 1988.

ON BOOKS

Baljit S. Grewal*

What we learn from the book of nature, we book o atune the coming generations. A good many oned people, from different times and climes, have essed their views on books, as per their experies, which read as follows :

1. Books are light houses erected in the great sea ime.

—E.P. Whipple

2. Books are those faithful mirrors that reflect to mind, the minds of sages and heroes.

—Gibbon

3. A good book is the best of friend, the same ay and forever.

—Tupper

4. Some books are to be tasted; others to be llowed; and some few to be chewed and digested.

—Bacon

5. Without books, God is silent, justice dormant, ural science at a stand, philosophy lame, letters mb, and all things involved in darkness.

—Bartholini

6. Books are the legacies that a great genius ves to mankind which are delivered down om generation to generation, as presents to the sterity of those who are yet unborn.

—Joseph Addison

7. The past but lives in written words; a thousand es were blank if books had not evoked their ghosts d kept the pale embodied shades to warn us from shless lips.

—Bulwer

8. Books are masters who instruct us without ds or ferules, without words or anger, without bread money. If you approach them, they are not asleep; you seek them, they do not hide; if you blunder ey do not scold; if you are ignorant, they do not ugh at you.

—Richard de Bury

9. The books we read should be chosen with great care, that they may be as an Egyptian king wrote over his library, "The medicines of the soul".

—Paxton Hood

10. There was a time when the world acted on books; now books act on the world.

—Joubert

11. There is no worse robber than a bad book.

—Italian Proverb

12. Bad books are like intoxicating drinks; they furnish neither nourishment, nor medicine—both improperly excite; the one the mind; the other the body. The desire for each increases by being fed—both ruin; one the intellect; the other the health; and together, the soul. The safeguard against each is the same —total abstinence from all that intoxicates either mind or body.

—Tryon Edwards

13. The best of a book is not the thought which it contains but the thought which it suggests; just as the charm of music dwells not in the tones but in the echoes of our hearts.

O.W. Holmes

14. We are liable to be corrupted by books, as by companions.

—Fielding

15. Books are but waste paper unless we spend in action the wisdom we get from thought.

—Bulwer

16. Books, like proverbs, receive their chief value from the stamp and esteem of ages through which they have passed.

—Sir W. Temple

17. A good book is the precious life-blood of a master-spirit embalmed and treasured up on purpose for a life beyond.

—Milton

18. When a book raises your spirit and inspires you with noble and manly thoughts, seek for no other test of its excellence. It is good, and made by a good workman.

—Bruyere

---

ean of Students, Punjabi University,
atiala-147002.

19. In books, it is the chief of all perfections to be plain and brief.

—**Butler**

20. Books are men of higher stature; the only men that speak aloud for future times to hear.

—**Barrett**

21. He that loves not books before he comes to thirty years of age, will hardly love them enough afterward to understand them.

—**Clarendon**

22. A book is a garden, an orchard, a storehouse, a party, a company by the way, a counsellor, a multitude of counsellors.

—**H.W. Beecher**

23. Most books, like their authors, are born to die; of only a few books can it be said that death hath no dominion over them; they live and their influence lives for ever.

—**J. Swartz**

24. Books should to one of these four ends conduce, for wisdom, piety delight, or use.

—**Denham**

25. A great book that comes from a great thinker is a ship of thought, deep freighted with truth and beauty.

—**Theodore Parker**

26. To use books rightly, is to go to them for help; to appeal to them when our own knowledge and power fail; to be led by them into wider sight and purer conception than, our own and to receive from them the united sentence of the judges and councils of all time, against our solitary and unstable opinions.

—**Ruskin**

27. A bad book is the worse that it cannot repent. It has not been the devil's policy to keep the masses of mankind in ignorance; but finding that they will read, he is doing all in his power to poison their books.

—**E.N. Kirk**

28. The silent influence of books, is a mighty power in the world; and there is a joy in reading them known only to those who read them with desire and enthusiasm. Silent, passive and noiseless though they be, they yet set in action countless multitudes, and change the order of nations.

—**Giles**

29. If a book comes from the heart it will contrive to reach other hearts. All art and authocraft are of small account to that.

—**Carlyle**

30. Every man is a volume if you know how to read him.

—**W.E. Channing**

31. The first step to knowledge is to know that we are ignorant.

—**Robert Cecil**

32. The more you practice, what you know the more shall you know what to practice.

—**W. Jenkin**

33. Every branch of knowledge which a good man possesses, he may apply to some good purpose.

—**C. Buchanan**

34. Scientific knowledge is constantly changing. A discovery of one year receives confirmation the next or is thrown aside.

—**James T. Adams**

35. The end of all knowledge should be in virtuous action.

—**Sir P. Sidney**

36. Real knowledge in its progress, is the forerunner of liberality and enlightened toleration.

—**Brougham**

37. The word knowledge, strictly employed, implies three things viz., truth, proof and conviction.

—**Whately**

38. Pleasure is a shadow, wealth is vanity, and power a pageant, but knowledge is ecstatic in enjoyment, perennial in fame, unlimited in space, and infinite in duration. In the performance of its sacred offices it fears no danger, spares no expense, looks in the volcano, dives into ocean, perforates the earth wings its flight into the skies, explores sea and land contemplates the distant, examines the minute, comprehends the great, ascends the sublime—no place too remote for its grasp, no height too exalted for it reach.

—**De Witt Clinto**

39. True wisdom is to know what is best worth knowing and to do what is best worth doing.

—**Baljit S. Grewa**

40. Library is an everblossoming garden from where the seekers of knowledge gather the honeyed sweetness of life.

—**Baljit S. Grewa**

Responsibilities to Future Generations

The advancement in science and technology has made significant contributions to economic well-being of people. Increasing industrialization and urbanisation and excessive exploitation of natural resources have however adversely affected ecological balance and the capacity of land to support growing population. The intergenerational equity of options exercised by the human kind is seriously threatened by new genetic, nuclear and other technologies, new capacities for ecological change and certain socio-economic phenomena such as large scale underdevelopment and inequalities. All these impinge on the well-being of future generations, and the diversity of options available to them. Their interests are not represented in the decision making process of the present generations, or in the content of development programmes at all levels.

It is therefore desirable to preserve cultural and national heritage of mankind to protect the interests of future generations. With a view to sensitizing the economic and social planners, scientists, educationists and experts on environment, a regional conference on 'Responsibilities to Future Generations and their Environment (RFGE)' was organised at the Asian Institute of Technology, Bangkok from January 12-18, 1988. The Conference was jointly sponsored by the United Nations Educational, Scientific and Cultural Organisation (UNESCO), United Nations Environment Programme (UNEP) and International Environment Institute (IEI). The deliberations of the Conference were conducted under the chairmanship of Y. Fukushima (Japan) and Mr. G. Gunatillike (Sri Lanka) with Mr. M. M. Ansari (India) and Mr. D. Gayawali (Nepal) as rapporteurs of various sessions. The delegates from a number of countries and International agencies participated in the Conference.

In his opening remarks, Dr. Tony Macelli, Director, International Environment Institute, Malta said that one of the major objectives of the Conference was to clarify the interests of future human generations and to stimulate the world community to act to promote these interests explicity and actively. The concept of responsibilities of present generations to future generations is a logical complement to the universally respected norm of the common good of the human species, and the important concept of the common heritage of mankind. The participants at the conference emphasised the need for establishing a network of relations between individuals and institutions so as to promote the interests of future generations.

The Declaration adopted by the Conference and the programme of action suggested by the participants are as follows :

Declaration

Development and environment are the contexts in whice we may identify the interests of future generations. Without claiming that a single world-view or formulation can be shared in detail by everyone, we have come to the following consensus about the need for an alternative vision of environment and development, that would protect nature and the interests of present and future generations.

The environment consists of the non-living and living natural environment, the human-built physical environment, and the socio-cultural environment. Up to now, development has been the changing of parts of the overall environment in an attempt to secure a better human life, at least of certain groups or categories of people. That is, development has been an attempt to change the world for the sake of human well-being, the fulfilment of human potential.

However, from the ecological insights of modern science, and from observation of the environmental and human effects of human technologies, it is clear that the environment is part of man, and man is part of the environment. The image of the environment as something which is to be overcome through development is now clearly an inadequate image, and must be replaced by more holistic paradigms. Man-environment harmony is crucial, and must be maintained whenever the form of this harmony is altered in development.

A major indicator of human potential is the amount of available options and decision-making capacity of persons and collectivities in respect of their own life. They use these options to meet their basic needs and to develop their human potential in their own way.

However, humans are observed to have a biological, emotional, psychological, and spiritual orientation to collective living and endeavour. Thus, another indicator of the fulfilment of human potential should be seen to be the extent to which persons are able to fulfil themselves by contributing to each other's welfare and enrichment. Such a paradigm of human life would tend to ultimately favour the achievement of more harmony between individual and society. Social justice, of course, is one of the prerequisites for social harmony.

Harmony of the single man-nature system, personal and societal autonomy, and available personal and social option; and social solidarity, are thus indispensable elements which must be preserved or be improved in true development. These elements may then be used fore valuating whatever purports to be human development. The same considerations also suggest that the universal human values which people actually hold, within the diverse cultural traditions of humankind are respected in genuine human development.

Since economic and environmental development has been an attempt to promote human development, it must therefore be judged a failure when it does not pass the tests of diversity of available options, increased autonomy of persons and groups, promotion of human solidarity, and respect for universal human values. If we also accept the need for man-naure harmony; then the failure of many past development processes is even more clear.

Various significant processes in the environment, in the human species itself, and in the man-environment interface extend through time-periods that are long compared to the life of any one human generation. Some of these processes are the result of human action, and these are irreversible, and reduce available options for future generations.

Thus, development attempts are mistaken or shortsighted when they lack an intergenerational perspective and an intergenerational responsibility, such that the criteria already mentioned can apply also in the future: diversity of available options, human autonomy and solidarity, and respect for cultural values. The time-perspective for development must include future generations.

The criteria are here understood to relate to intragenerational values, but as applied to future generations affected by development attempts of the previous generations. They render illegitimate, for example, actions today that are bound to increase or maintain inequality among people of some future generations. However, the essential unity (e.g. felt unity, genetic unity) of the human species through time, requires that the required solidarity be also intergenerational, i e. between generations. Present generations contribute to their own human fulfilment when they feel and implement in action their solidarity with future generations. Similarly, the necessary autonomy should be also enjoyed by each generation, or each group of contemporary generations, who should not be subject to restrictions of options imposed by previous generations.

Also, because of the interconnectedness of many of these long-term processes, not only is the man-against-nature paradigm just as mistaken intertemporally as it was intratemporally, but also the consequences of holding it are likely to become catastrophic given enough time. Only a paradigm of man-nature wholeness and harmony is appropriate to guide an intertemporal perspective about life and development on planet Earth. This harmony may, and will undergo transformation while still remaining a harmony.

We conclude that development activity of present generations must inescapably follow a new vision, one with a long time-perspective encompassing present generations and future generations. The new vision insists on the preservation and enhancement of options, and autonomy. It also insists that present actions should promote justice and solidarity within the present generations, within future generations, and between present and future generations. The vision must be based on a changing harmony between man and nature.

We therefore affirm our own concern for present and future generations, and reflect the growing public concern that the interests of future generations should be protected. We believe the possibility of having a world for future generations that is more secure, more substainable economically and environmentally and richer in quality of life. For the realisation of this possibility we urge the present generations to design new approaches to promote and carry out the required transitions essential to a planet that is at the same time sustained and renewed and enhanced. These include:

—a demographic transition to a stable population;

—an energy and resource-use transition through technologies which rely on nature's "income" and not depletion of its "capital";

—a transition to patterns of human settlement which promote rural-urban harmonay;

—an economic transition to sustainable development and an equitable sharing of its benefits within and between countries and regions;

—an educational transition to a comprehensive and integrative understanding of the world and of human knowledge and wisdom;

—a cultural transition to a world or harmonious cultural diversity;

—a political, economic, and educational transition to a peaceful word without weapons of mass destruction;

We hold that simultaneous exis-
ce of poverty and opulence
stitutes an environmental and
nan threat extending to future
erations.

We urge that popular re-exami-
ion of values and lifestyles be
ouraged and broadened so that
it can be undertaken with an awareness of realities that concern the life of the planet today and that of the time of our children's children.

Programme of Action

In order to promote a value system that would be mindful of the interests of the future generations it is felt that a set of actions at the regional level as well as the international level must be initiated.

It is also felt that these actions must reach a broad spectrum of the the community that would facilitate the promoting of such a value system. The communities are :

—teaching community
—community based organizations (CBOs) and non-governmental organisations (NGOs)
—mass media
—religious communities
—artistic communities
—legal and judicial communities

Dr. Agrawala Takes Over

Dr. Surendra Kumar Agrawala
; taken over from Dr. Jagdish
rain as Secretary of the Asso-
tion of Indian Universities on 6th
bruary, 1988.

Born at Bilgram in District
rdoi (UP) on 18th January, 1929,
. Agrawala did his M.A., LL.M.
m Lucknow University. He was
arded a fellowship for Post-
aduate studies (LL.M) the Har-
rd Law School, USA. He
llowed it up with an LL.D. degree
m Lucknow University. A bril-
nt scholar, Dr. Agrawala claimed
old Medal for standing first at the
.M. examination and was awar-
d the Banerjee Research Prize for
st research work done in 1962 for
s LL.D. thesis.

A popular and devoted teacher,
taught law at Lucknow Univer-
y (1953-62), Aligarh Muslim Uni-
rsity (1962-65) and University of
ona where he headed the Univer-
y Department of Law from 1965
1985. He was adjudged the Best
niversity Teacher by the Govern-
ent of Maharashtra in 1978-79.
e took up the Vice-Chancellorship
f the Agra University in Novem-
er 1985 which he has relinquished
to take over as Secretary of the Association of Indian Universities.

A legal luminary, Dr. Agrawala was a member of Bar Council of India Legal Education Committee for two terms, a member of the Governing Council of Indian Law Institute, member of the first Academic Council of the National Law School of the Bar Council of India, and a member of the Executive Board of the International Association of Legal Science, The Hague. He has been on the Editorial Board of the Indian Journal of International Law and the Editorial Board on Constitutional Law of the Bar Council of India Trust.. He has been the Convenor, University Teachers Research Group of the International Law Association (Indian Branch) as also of UGC National Advisory Panel of Law. He was nominated as the National Lecturer in Law by the UGC in 1976-77 and was also called upon to deliver the K.M. Munshi Memorial Lectures in 1985 by the Indian Law Institute.

Dr. S. K. Agrawala

A widely travelled person, Dr. Agrawala participated in a number of international conferences, seminars and colloquia in Thailand, Greece, Nigeria, Nepal, The Netherlands, West Germany and USA.

He has published 7 books, over 30 research papers and has contributed to over a dozen anthologies.

Dr. Agrawala brings to his new office a rich resource of wide and varied experience. We welcome him and hope that under his stewardship, the Association will not only consolidate its present activities but also add new dimensions to its services to the Member Universities. □

Regional Strategy

The network which is designed for the Future program should be linked through personal and institutional means with networks on alternative development strategies.

In the very first phase of the program a set of state-of-the-art studies should be prepared concerning the responsibility to future generations in countries selected on the basis of diversities of culture and development levels.

The resulting studies must be synthesized by an interdisciplinary, group identified by the network to indicate strategies and modes of action for enhancing responsibility to future generations applicable to the diverse societies within the region. Some form of this interdisciplinary group should be involved with designing the methodology and framework of the state-of-the-art studies.

This material will be made available to the groups concerned with the future as identified above for dialogue, feedback, action and interaction.

International Strategy

In order to help raise the world consciousness regarding the long-term dangers to future generations, the IEI secretariat, together with the appropriate UN organizations, is to commission studies on the long-term hidden dangers in the present path of development in the scientific and technological fields as well as in forms of social organization. These studies must again be be disseminated among the communities in a way that will encourage further dialogue.

UNESCO, UNEP and IEI must encourage the active examination of paradigms in disciplines as they relate to the future and emerging trends. For example, in economics, some of the beliefs and practices that need re-examining from the prespective of the future generations are : B/C analysis and the discounting of the future, national accounting which values GDP rather than physical quality of life indicators, financial income rather than the richness of life, and the accounting system which does not distinguish between the output that comes out of renewable and non-renewable resources as well as the durability of capital over time. Such items can be found in most of the other disciplines too. In such studies special sensitivity must be shown to the interdisciplinary and integrative aspects of the disciplines to correct the adverse effects of specialization and fragmentation of human knowledge.

Concurrently with the above, some specific thematic studies should be carried out such as the schooling system of the fut
future modes of communicat
and the effect on social organ
tion, technologies facilitating dec
tralization, the future relations
between the built and the natu
environments, and global mig
tion and the impact on cultu
diversity of the future.

UNESCO should support
introduction of courses and p
grams into the education system
sesitize the younger generati
regarding the responsibilities to
future generations.

For further information, or if
are interested in the global netwo
or if you can send relevant artic
and texts or suggestions—ple
write to Dr. Tony Macelli, Futu
Generations Network, I.E.I.,
Foundation for International S
dies, Old University Buildi
Valletta, Malta (telex 16
FOUND).

Harnessing Technology for Education

The Central Institute for Educational Technology (CIET) of the National Council of Educational Research and Training (NCERT) is reported to have undertaken the work of making the educational video programmes for the children. These programmes are expected to help in the realisation of the Government's goal of universalisation of primary education by 1990 for children up to 14 years of age.

The CIET, set up in 1984, is aided by State Institutes for Educational Technology (SIET) in six States, the Development and Educational Communication Unit (DECU) of the Indian Space Research Organisation (ISRO), and international agencies like the United Nations Development Pr
gramme (UNDP), UNESCO, a
the Asia Pacific Institute for Broa
casting Development (AIBD).

Set up for promoting an und
standing and utilisation of educ
tional technology for the spread
education, CIET realised that t
video programmes to be prepar
for children, most of whom we
from rural areas and non-Scho
going, had to be in their natur
locales and steeped in their o
culture. With this in view, t
SIET were established in the s
States, namely, Andhra Prades
Bihar, Gujarat, Maharashtra, Oris
and Uttar Pradesh covered und
the Satellite Instructional Televisi
Experiment (SITE) and the INSA
IB programmes.

The CIET initially provided he entire hardware to the SIETs, nd continues to provide the finance nd infrastructure like software nd training. However, most SIETs have now commenced production of their own programmes n their own language and culture. The programmes produced thus re beamed for six hours daily in hese six states.

DECU, formed in December 1983, has been engaged in aiding CIET in programme production, development and adaptation of video hardware, communications research, and training and was responsible for the production of science programmes for SITE.

The CIET invited experts of India for its in-country international training programmes under which six workshops have already been held in different parts of the country.

Super Conductivity Research Stressed

Prof. C.N.R. Rao who heads a special cell appointed by the Prime Minister to monitor research in super conductivity called for a greater investment in super-conductivity research which was a major task before national laboratories. He was delivering the Zaheer memorial lecture at the general plenary session of the 75th Indian Science Congress in Pune recently. Prof. Rao said the three major tasks were to make super-conducting materials of proper from and shape, find newer and better materials, and intensify research into this challenging field. He said research activities could be strengthened by universities as development of her superconductors would dramatically alter the quality of life.

Prof. Rao said among the applications were big magnets, levitation and nuclear magnetic resonance which had great relevance to modern medicine. India had to remain in the race for superconductivity as no other country will give it to us, he added.

Earlier he gave a detailed description of superconductivity, an important state of matter when materials do not offer resistance to passage of electricity or attain zero resistance. Prof. Rao detailed the experiments conducted by students at IIT Kanpur in the 1970s and at the Indian Institute of Science Bangalore.

Science Congress Recommends Mathematics Council

The platinum jubilee session of the Indian Science Congress held recently at Pune has recommended setting up of an Indian Council of Mathematical Sciences as a tribute to the great mathematician Ramanujam in the year of his birth centenary, to give thrust to the development of the subject. The Congress noted that mathematics education neglected so long needed priority attention. The Department of Science and Technology (DST) should be entrusted with the task of research in mathematics, hitheto the sole privilege of the Department of Atomic Energy (DAE).

The session also called for customs exemption for chemicals, biochemicals and other consumables required for research in educational research institutions.

It recommended that a National Institute of Physiology be set up to provide for researches of the frontier areas of rapidly advancing neuro physiology of behaviour and behavioural disorders and on the effect of electromagnetic field on human physiological aberrations. It added that such an institute could concentrate on the study of the influence of the mind in the healing processes through yoga and hypnotherapy indicating mind modulation over bodily processes.

The study of sports physiology for better performance in sports and athletics and up-to-date survey of the work on management of behavioural disorders has also been suggested.

Another national institute mooted is for psychology to promote sustained work in frontier areas identified as health, environmental sports, managerial psychology and inter-disciplinary and intra-cultural as well as cross-cultural understanding of the individual.

Educational infrastructure for Border States

A new scheme to strengthen educational infrastructure and provide job opportunities to people living in the border States of Gujarat, Punjab, Rajasthan and Jammu&Kashmir has been initiated by the Human Resource Development Ministry, Govt. of India. An amount of Rs. 200 crore has been earmarked for the scheme during the Seventh Plan.

The proposed educational programme is intended for the overall development in the border areas. In the current fiscal year, Rs. 25 crore is proposed to be spent on education under the Border Area Development Programme.

A sanction committee has been set up under the chairmanship of the Education Secretary to oversee implementation of the various programmes under the scheme. The committee includes representatives of the Planning Commission and the State Governments.

JNU Entrance Exam Accredited

The UGC has accredited the JNU Entrance Examination conducted all over the country for admission to M. Phil, M. Tech, Ph.D. programmes in the schools of Computer and Systems Sciences, Life Sciences, Environmental Sciences, Physical Sciences and the Centre for Biotechnology on par with the national educational testing (NET) examination conducted by the UGC for the award of junior research fellowship to candidates pursuing M Phil., M.Tech., Ph.D programme in various science disciplines.

The decision has been made in pursuance of the report of the high powered committee appointed by the Commission consisting of Prof. P. M. Bhargava, Director, Centre for Cellular and Molecular Biology, Hyderabad, Vinod Gaur, Director, National Geophysical Research Institute and Mrs Archana Sharma of Calcutta for evaluating the standards of the entrance examination conducted by the JNU in over 24 centres all over the country for admission to M. Phil, M. Tech, Ph.D.

The accredition granted by the Commission for the present was for a period of three years.

As a result of the accredition of the JNU entrance examination for these schools, the candidates, joining these programmes in the schools of Computer and System Sciences, Life Sciences, Environmental Sciences, Phyical Sciences and Centre for Biotechnology on the basis of their inter-se merit in the all India entrance examination conducted by the University would become automatically eligible for the award of Junior Research Fellowship of the UGC without their having qualified the NET examination conducted by the UGC.

Centre for Science & Technology

An International Centre for Science and Technology Education is proposed to be set up by the Government to encourage experiments in science and technology.

The ICSTE has already been registered under the Societies Registration Act and is expected to start its activities by 1989. It will have aresource centre, a media centre a computer centre, a laboratory and a workshop.

The Human Resource Development Minister, Mr. P.V. Narasimha Rao, who is the Chairman of ICSTE, has nominated the Educational Adviser (Technical Education) as Member Secretary of both the Society and its Governing Body.

The Centre will provide an international forum for contacts between educationists, scientists, planners and administrators. It will also promote exchange of national groups of teachers and researchers.

Consistent with the National Policy on Education which lays stress on research as essential component of higher education, the proposed Centre will provide the infrastructure for research and development in various institutions.

The Centre will cover educational institutions in the technical education system which offer undergraduate and postgraduate programmes, namely, the Indian Insti tutes of Technology, the India Institutes of Management, th Regional Engineering and Stat Government colleges as well other non-Government institutio and colleges approved by the Al India Council for Technical Edu cation.

Courses in Environmenta Science & Engg

The Centre for Environmenta Science and Engineering (CESE) a Indian Institute of Technology Bombay, has recently introduced short-term training programme fo its graduates, enabling the II engineers to emerge as traine environmentalists.

The new course will be conduc ted in cooperation with Pollutio Control Boards and various researc and development institutions.

The CESE also proposes t introduce a five-year integrate programme on Environmenta Science and Engineering (ESE) Entrants to this programme will b supported by interested industrie enabling industry projects to obtai an IIT-Industry interaction.

In order to focus attention o environmental issues and to creat awareness among technologists an scientists, some basic courses i environmental science and engi neering were initiated at the under graduate level in 1974. Later a inter-disciplinary M. Tech pro gramme was started in 1977 and doctoral programme in 1978.

Panel on Distance Education

The Government is reported t have set up a coordination counci to look into the policies and utilit courses to ensure that uniform ndards of distance education are aintained by the open universities.

The council, comprising the ice-Chancellors of the Indira andhi National Open University GNOU), three State open univer-ties and representatives of the overnment and the University rants Commission (UGC), has een mooted to avoid duplication f course materials and minimise e financial burden.

It is hoped that gradually GNOU will assume the role of a entral body coordinating and verseeing the activities of all the tate open universities.

UNESCO Award for V.P. Singh

Dr. Ved Pal Singh of the De-artment of Botany, University of Delhi has bagged the UNESCO/ ROSTSCA Young Scientist Award n the field of applied Microbiology nd Biotechnology for 1987. The ward has been presented to him or his work on calcium mediated macromolecular functions and growth of aerobic spore forming hermophilic actinomycetes--Ther-moactinomyces vulgaris.

The annual award is given by UNESCO Regional Office of Science and Technology for South and Central Asia to the young scientists or engineers below 35 years of age in the field of Informatics and Application of Computers in Scientific Research, Applied Microbiology and Biotechnology and New and Renewable sources of Energy.

Kautilya Award Scheme

Ministry of Planning, Govt. of India, have launched 'Kautilya Award Scheme' to encourage writing of original books of high order in Hindi on technical subjects relating to planning. The following awards will be made under the scheme :

1st Award (One)	Rs. 5000/-
IInd Award (One)	Rs. 3000/-
Consolation Award (Two)	Rs. 500/- each

Original books/manuscripts relating to planning, printed/written in Hindi may be sent, in prescribed form, for consideration for award. Only those books and manuscripts would be accepted which have not received financial assistance or subsidy under any other scheme.

Authors desirous of participating in this scheme should send their manuscripts/printed books by 31st March, 1988 positively.

Details of the scheme, prescribed form and other information may be obtained from : Deputy Director (OL), Planning Commission, Yojana Bhawan, New Delhi-110001.

News from Agril. Varsities

Seed-cum-Fertilizer Drill

The University of Agricultural Sciences, Bangalore, has designed a sowing implement namely seed cum fertilizer drill to overcome some of the problems in production of groundnut.

This newly designed seed-cum-fertilizer drill for groundnut, which has many advantages over the conventional implement, helps farmers to sow simultaneously four rows of seeds along with fertilizer.

The local method of sowing groundnut requires one bullock pair with one local plough and three men, one to handle the bullocks, one man for seeds and one man for fertilizer application. This method opens only one furrow. The total cost of sowing at the present rate works out to Rs. 60 a day and the team could cover only ½ hectare per day.

The newly designed seed-cum fertilizer drill for groundnut (shoe type) requires a pair of bullocks and three men—one to run the bullocks, one for handling seeds and one for fertilizer. The cost per day of sowing at the present rate comes to Rs. 60. As the area covered is 1.25 hectares a day, the cost of sowing works out to Rs. 43 only. Further, it helps in the correct placement of seeds and fertilizers in the soil.

The total fabrication cost of the seed-cum fertilizer drill (shoe type) is Rs. 500 approximately. More particulars of this seed drill can be had from the Chief Scientist (Agricultural Engineering) Operational Research Project for Dryland Agriculture, GKVK, Bangalore-560065.

Colic Surgery

A team of Veterinary Surgeons of the Punjab Agricultural University performed, for the first time in India, a surgical operation on a 20-year old pony mare for the treatment of colic (Impaction of colon). The surgery was performed under general anaesthesia. Abdomen was cut open and the impacted colon was emptied and suctured back. The mare recovered on 12th day after the operation.

"Colic" is caused by having pain in the abdominal region of a horse which invariably kills the animal. The disease which is very common in horse is due to one of the following conditions : impaction, tympany, twisted guts, volvulus, intussusception, etc. and urinary problems. This operation has opened new vistas in the field of Veterinary Surgery. Many costly horses can thus be saved which otherwise would usually result in death and great economic loss to the horse breeders.

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
February 10-14, 1988	Workshop on Science and Technology	To initiate a dialogue for the interaction of the Government, industry, institutes and to update the present technology.	Department of Astronomy & Space Sciences, Punjabi University in collaboration with the Punjab State Council of Science & Technology.	Prof. H.S. Gurm, Director, Department of Astronomy & Space Sciences, Punjabi University, Patiala-147002
February 18-20, 1988	Dalit Literature	To review and reassess the role and relevance of Dalit Literature in building an alternative perspective on Indian social, political and cultural life.	Centre for Soical, Studies, South Gujarat University, Surat.	Prof. S.P. Punalekar, Centre for Social Studies, South Gujarat University, Surat-395007
Feb. 29-March 2, 1988	Workshop on Internal Reorganization of English Honours Syllabi	To reorganize the English Honours syllahi to meet the specific needs of the students.	Department of English, Ramakrishna Mission Vidyamandira, Howrah	Mr. Sunanda Sanyal, Director, Ramakrishna Mission Vidyamandira Belurmath, Howrah.
March 10-12 1988	Nationalism : Problems and Challenge	To discuss different aspects of the development of nationalities during 19-20th centuries and their relationship with Indian nationalism.	Centre for Social Studies, South Gujarat University, Surat in collaboration with K.M. Munshi Centenary Committee, Gandhinagar.	Prof. Ghanshyam Shah Centre for Social Studies, South Gujarat University, Surat-395007
May 9-June 4, 1988	Summer Course in Analysis and Probability	Topics to be covered are Probability Theory and Stochastic Processes, Fourier Analysis & Functional Analysis.	Indian Statistical Institute, Bangalore Centre.	T.S.S.R.K. Rao, In-charge, Summer School 1988, Stat-Math. Division, Indian Statistical Institute, R.V. College (P.O.) Bangalore 560 059
May 18-20, 1988	Conference on Recent Advances in Mathematical Techniques and Applications	Topics proposed to be discussed include Mathematical Physics, Mathematical Methods, Bio-fluid Dynamics, Chaos, Stability and Turbulence	Dr. Y.S. Parmar Institute of Mathematical Sciences, Shimla.	Dr. J.R. Gupta, Organising Secretary, Dr. Y.S. Parmar Institute of Mathematical Sciences, Hainault, Shimla-171002
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis**	**University of Hyderabad in collaboration with the Indian Society of Andrology**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667**

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

REFERENCE AND RESEARCH TOOLS

BIBLIOGRAPHY OF DOCTORAL DISSERTATIONS

Invaluable reference for those seeking to register for a Doctoral Programme.

The bibliography is classified by subjects and covers all the disciplines in which a doctoral degree is awarded by the Indian Universities. Each entry gives complete bibliographical details, viz, name of the research scholar, title of the thesis, university/institute where the research was conducted, years of registration and award of degrees, availability note—where a thesis is available in the university library/department concerned/university office and the name and complete address of the guide/supervisor.

Comprehensive and exhaustive as the bibliography is not only reports the research being conducted at the university centres, but also includes research work done at the institutions of national importance, like the IITs, institutions deemed to be universities, like the Indian School of Mines, CSIR Laboratories as also the research establishments connected with ICAR and ICMR.

The bibliography is indeed a measure of the research output of the country.

(Telephones 5727770, 5721928) having realised that our National Technology Policy of "**Self Reliance**" can best be achieved by proper mix of indigenous technology and acquisition from outside on a planned basis and through further intensifying our mechanism for generating technology, absorption and diffusion and providing challenging opportunities for our young scientists and technologists undertook publishing of the marginally noted journals and serials which contain review and original research papers from scientists in India and abroad. Detailed prospectus for each serial and journal is available on application without any obligation.

After having developed a prestigious list of titles we now invite you to contribute findings of your research in the shape of original research papers to our journals. Your thesis, monographs, and symposium/workshops/seminar proceedings of high academic order, can be accomodated in our serials dealing with the discipline concerned.

Your contributions when received will be immediately forwarded to our editors and referees for their considerations and decision to accept these in any of our serials/journals to which they are best suited.

As regards our reprints of **Fauna of British India Imperial Gazetteer of India** and **Indian Studies Past and Present**, we have embarked upon an ambitious programme of bringing these land marks up-to-date by issuing supplement incorporating latest information after these were originally published volumewise. Therefore you are suggested to kindly decide the discipline of your specialisation and send us your biodata so that the same may be forwarded to our advisors for their corresponding with you and assigning appropriate topics in the relevent discipline.

ENDOWMENT SCHOLARSHIP PROJECT

During our life of last 40 years as suppliers of books and journals, we have been buying heavily back volumes of periodicals to cater the needs of University and Research Laboratories in India and, therefore, have accumulated good stocks of journals and reference books. Now we would like to dispose of as much materials as quickly as possible and hence our holdings are offered to the University and Research Laboratories under our **R.K.S.D.J. Endowment Scholarship Scheme**. According to the scheme **the proceeds of your requisition of back volumes of journals and books will be donated to your institute** after deducting 10% to meet the expenses of the trust **for investing in fixed deposit and the interest which accrues on the investment will be utilised for awarding scholarships** to the deserving students of your institute. The modalities of the Endowment Scholarship Scheme and the list of publications which are offered under the project will be supplied promptly on receipt of your request.

DEVELOPMENT PLANNING

The Indian Experience

SUKHAMOY CHAKRAVARTY

Eminent economist and adviser to the Indian government

This is the first book to provide a comprehensive review of Indian planning in the light of development theory and the debates on planning carried out in other countries. It deals with the experience of development planning as practised in India over the last thirty-five years. It explains the analytical consideration which went into the formation of India's development strategy and the modifications which were subsequently introduced in the light of experience. The author gives here a considerably expanded version of the Radhakrishnan Memorial Lectures delivered by him in 1985. Rs. 90

A SOCIAL AND ECONOMIC ATLAS OF INDIA

The first of its kind to be published the country, this is a major work of reference on India in the eighties. It provides a comprehensive picture of India's habitat, society and economy, and projects the social and economic scene in the nineties. The Atlas includes 248 colour maps, 360 colour charts and 142 tables. Its nine sections cover : land, people, climate, natural resources, infrastructure, produce, the tourist vista, national economy, and the international equation. Rs. 450

INDIAN COUNCIL OF MEDICAL RESEARCH

RESEARCH CAREER DEVELOPMENT AWARDS

The Indian Council of Medical Research has instituted a limited number of 'RESEARCH CAREER DEVELOPMENT AWARDS' from the year 1988-89 to provide young talented Scientists/Scholars with an opportunity to pursue their research interests in any institution in India, including the ICMR's own institutes. The basic eligibility criteria are :

(i) Scientists between the ages of 25 and 40 years who have completed doctoral or other equivalent professional training i.e. M.D. or Ph.D. and have a proven track record in the proposed field of research.
(ii) Applicants should be holding permanent posts.
(iii) The staff of the ICMR in the Headquarters Office or in any of the institutes of the ICMR are not eligible for the RCDA.
(iv) Applicants engaged in private practice will not be considered for the award.

Application forms and details of award can be had from the Director General, Indian Council of Medical Research, (Division of Administration-III), Ansari Nagar, Post Box No. 4508, New Delhi-110029. The last date for receipt of completed application form is **31st May, 1988**. Applications received after the closing date will not be considered.

इन्दिरा गांधी राष्ट्रीय मुक्त विश्वविद्यालय
INDIRA GANDHI NATIONAL OPEN UNIVERSITY

This University is going to start undergradu
programme in sciences including mathematics. E
perimental work being a vital element of any scien
curriculum, we are working to develop the same on t
lines of (1) Home Experiments, (2) Pre-set and Op
Ended Experiments (3) Interactive Video and Co
puter Programmes, and (4) Project Work. We are al
thinking of holding a workshop to design low co
experiments. Well tested experimental activities wi
desirable learning outcomes may be suitably inco
porated in our courses. Constructive suggestio
regarding innovative and creative experimental ac
vities in different fields may be sent to the

Director, School of Sciences,
C-4/16, SDA,New Delhi-110016.

Creativity and Non-Violence

Umrao Singh Chaudhari*

Martin Luther King used to say that Mahatma Gandhi was probably the first person in the history to lift the love ethic of Jesus above mere interaction between individuals to a powerful and effective social force on a larger scale. Gandhi preached and practised that the love that suffered was more powerful than the force that inflicted pain and suffering. For him non-violent insistence on truth was in fact a 'moral equivalent of war'. According to Gandhi an individual prepares himself for non-violent resistance on important issues not only by cultivating appropriate sentiments but also by daily discipline and control of his thoughts, words and actions.

Can non-violence and creativity go together ? The answer would be a big 'yes' and small 'no'. Considerable similarity exists between the characteristics of creative people, identified by the researchers, and those of non-violent outlined by Mahatma Gandhi. Based on sporadic and embryonic research, on the other hand, there are some findings which show positive relationship between creativity and aggressive behaviour. To me, these results are illusory and misleading, because creativity is not possible without living harmoniously and communicating truthfully. Researches, therefore, have to go a long way to resolve the riddle of relationship between creativity and aggression or violence.

Creative people are self-starting, confident, assertive and resourceful. Because they are confident they are also tolerant where there should be tolerance. Tolerant people are peaceful and cooperative. They are courageous too. They dislike domination and resist coersion and exploitation. A person who is able to engage in creative thought and action often faces some degree of misunderstanding, lack of communication and at times severe rejection by his contemporaries who are unable to grasp or accept the significance of his idea or discovery. A creative person possesses a sort of overwhelming passion for creation. On account of this driving force sometime some uneasiness or temper tantrums can be seen in the behaviour of a creative person. But, in no case this should be construed as a sign of delinquency or aggression. It has, perhaps, rightly been said that creative people can give up but they cannot give in.

Man and woman can create by planting seeds, by producing material objects, by synthesizing a piece of art, by transforming an idea, by loving each other, and by relating truthfully and harmoniously with others. In the act of creation man transcends himself as a creative, raises himself above the passivity and accidentalness of his existence into the realm of purposefulness and freedom. The act of creation presupposes activity and care. It presupposes love for that which one creates. How then does man solve the problem of transcending himself, if he is not capable of creativity, if he cannot love ? This question is answered by Eric Fromm : "The man who cannot create wants to destroy because in creating and destroying he transcends his role as a mere creature".

---

* *Reader, Department of Education, Devi Ahilya Vishwavidyalaya, Indore.*

Walt Whitman in his preface to the first edition of *Leaves of Grass* said : "We are all great poets, but only the greatest poets know it." Therefore, the creative persons who know or sense that they are creative like to express themselves, and to display their productions for others to see. The creative person then is on the assertive side. Consequently, his behaviour might give an appearance of little positive aggressiveness. But, this certainly is not an antisocial aggressiveness which hurts and harms other members of the society. Many a times, an artist or a creative person is rebuffed and frustrated by the paternalistic and militaristic attitude of the elders, teachers and persons in authority. Such attempts to bend him make him revolt and show counter agression. Mostly, these characteristics tend to go with outstanding creative personalities. E. Paul Torrance reported that children sometimes have some awareness of this social situation and display it in the stories they write.

Those who are genuinely creative are the people who enjoy sound mental health and face personal, interpersonal and other kinds of problems with poise and equanimity. They are ingenuous and altruist. They are fearless and upright. Their soul-force is awakened to resist attempts aiming at manipulation and domestication. Using Gandhi's words we can say that they are the butterflies who strongly believe that the freedom of the sky is better than the shelter of the cocoon.

A creative person is androgynous—a beautiful blending of both masculine and feminine traits. In F. Barron's study it was found that creative men possessed such traits as confidence, determination, ambition and power along with sensitivity, nurture, intuition and aesthetic sense. Integration of necessary sensitivity and intuition with purposive action and determination is conducive to creativeness. In other words, it can be said that a creative individual has the unique ability to unite the left (analytical) and right (spatial) hemispheric activities of the brain. Thus like a Gandhian non-violent person, he is a combination of both toughness and tenderness.

A variety of motivational factors such as compensation for inferiority, destructive impulses and self-actualization, regarded by some people as characteristics of the creative persons, are also thought to be related to delinquency. No doubt, studies have shown that some type of delinquent reaction is an attem to achieve substitutive compensation through deli quent activities. A.H. Maslow considered childre vandalism to be more often a destructive play mo vated largely by curiosity. Erickson also sees a co nection between adolescents' experimenting with fa tasy and reality and some delinquent behaviour.

The characteristics of delinquents do not seem be those of the creatives. It has been reported in so studies that delinquents scored lower on measures creative thinking than the non-creative delinquen This finding probably suggests that delinquents mig be conformative in nature, and also they might not able to find many ways to solve their problems. has also been evidenced that creative problem solvi technique increases creativity and decreases aggressi tendencies in the individuals. The creative childr show emotional stability, self-confidence, willingne to be self-critical and less anxiety ridden than no creative youngsters. Creativity is based on love a on the happy, guilt-free disposal of aggression socially acceptable channels. In the words of Ma low, psychological health and absence of psycholog cal defensiveness are the inner conditions for creat vity.

Creativity does not mean leaving the field free every expression of human nature. The ways invention and discovery also follow the course freely accepted discipline and intellectual standard Denying the role of discipline and rejecting all t rules and models is out of the question. Although the long run the discipline and rules most compatib with inventive faculties are those which an individu has perfected for his own use.

By nature, man seems to be torn between tw longings : security and adventure. Struggle is th nucleus of human life. But, struggle creates tensio and tension at times makes man behave in an aggre sive and violent manner. So, to conceive a societ which is completely free from violence will amount t asking for the moon. We can, however, aim creating a society in which aggressive tendencies man and woman are utilized for constructive an creative purposes, and the scope for their indulgin in violent and destructive behaviour is reduced to th minimum possible limit by ensuring an open climat in the institutions and organizations.

Private Initiative in Higher Education

A Critique on the Andhra Pradesh Model

D. A. Ghanchi*

ckground

In the post-independece period India has witnessed phenomenal quantitative growth of higher education. ere is a manifold increase in the number of institions, in the student population attending those stitutions, and consequently in the amount of money vested in the enterprise of higher education. This plosion has created many problems that need our tention.

As stated by Shri N. T. Rama Rao, the Chief inister of Andhra Pradesh, in his note circulated nongst the Vice-Chancellors who had gathered at yderabad for the 62nd annual meeting of the Assoation of Indian Universities in December 1987, Runaway explosion of higher education has resulted serious distortions in the educational system. Besides ffecting adversely the allocation of resources to the chool education sector, within the higher education ub-sector itself the distortion has resulted in an ver-emphasis of general education at the expense of echnical education.'' This is the experience of almost all the states in the Indian Union, and that has een the burden of the findings of several comnissions and committees that investigated the state of he art prevailing in the field of education during the ast four decades.

To remedy the twin distortions, viz., development of the higher education sector at the cost of the school education sector, and an over-emphasis on general education with a consequent neglect of vocational education, the Andhra Pradesh scheme proposes to encourage the private initiative in the form of a cooperative structure to supplement Government efforts in post-secondary school area, namely the + 2 stage of higher secondary or junior college education.

Assumptions

The main assumptions underlying the proposed scheme are as follows :

(1) People's involvement, particularly parents' involvement, in the management of higher education is likely to lead to an all round improvement in the system in its structure, contents, procedures, management, human relations, etc.

(2) The cooperative form of institutional management is likely to promote better economic health of the institution by introduction greater accountability on the part of all and at the same time ensuring profitability of the investment made therein.

(3) Because of the elimination of the traditional form of financial assistance by the State, the private manangement will enjoy considerable freedom of action in all spheres of operation, be it policy making, implementation of the policy, introduction of innovations, generation of resources and so on.

The Scheme

Based on the above mentioned assumptions, the scheme is to make shape asunder :

(1) A cooperative society will be formed with membership open to the parents of the students of the concerned junior college and to donors. The former will have voting rights but the latter won't.

(2) The junior college under the scheme will be located at the Mandal headquarters. Presumably, the college will be established by the cooperative society that will be formed by the parents of the prospective students and some donors. if available.

(3) The physical infrastructure of the college will presumably be provided for by the state government at the initial stage.

(4) The Executive Committee of the college will have wide powers to manage the college as an autonomous body. Only the annual report and the audited statement of account will have to be sent to the state government for information.

(5) The college will be a self-financing cooperative venture depending primarily on tuition fees and secondarily on private donations, and on returns on its investment like any other cooperative society in the economy.

Implication

The scheme, thus envisaged, signals a departure from the two major prevailing models of management,

---

**Pro-Vice-Chancellor, North Gujarat University, Patan, N.G.*

namely, the charitable public trust model and the private ownership model. The cooperative model advocated here is expected to combine the egalitarian aim of the former and the profit making approach of the latter. Unless there is a built in provision in the constitution of the proposed cooperative body for appropriate checks and balances, it is feared that it may be overtaken by the numerous evils that afflict the cooperative sector in the country.

Besides, it is the practices adopted and traditions formed through the operation of the constitution that would determine the efficiency and integrity of the working of the managerial mechanism. The nature of the composition of the managing committee comprised of parents is likely to be constantly fluid because of the floating student population, and hence, it is less likely to develop stable and durable framework and norms of management. No educational enterprise can sustain its health, strength and credibility in a climate of managerial uncertainty. To correct this, it would be necessary to provide for a stable managerial core consisting of parents, teachers, students and community representatives from different walks of life.

The college is to be a self-reliant economic entity for all its maintenance and development costs. There will be neither state funding nor any income from capitation fees. .The only source of income would be the tuition fees of students.

If the college is to be run entirely on students' fees, "a fair return on the capital invested" is to be ensured and a dividend is to be distributed from the profit (or euphemistically, the surplus), none but the children of the well-to-do alone will be able to join it, for only they would be economically well-off to pay the fees that will be flexible in the context of prevailing prices.

Such a proposition runs counter to the philosophy of equality of access to opportunities of education propounded in the NEP 1986. Therefore, a privision will have to be made for financial assistance by the state government or the managing body to the children of the poor, the deprived and the disadvantaged, particularly of the weaker sections of population in order that they may join the junior colleges.

The Executive committee of the management is to be vested with wide-ranging powers "to monitor, supervise and control the administration, to look into the discipline of the teaching staff, the non-teaching staff and the students, to review the functioning of the institution, to introduce new programmes of genera and technical study according to local needs and i consonance with the developments in science an technology, and to look after the over-all maintenanc and running of the various departments like th hostels, libraries, laboratories, play-grounds, etc."

These are the most vital functions of any management body of an educational institution. It is th quality of the educational performance of a corporat body that will ultimately justify its existence. In orde to ensure the objectivity, the relevance and the socia utility of every managerial decision, the criterion o decision making should not be "a fair return on th capital invested" in order to declare a dividend to th share holders, but should be a sound educationa outcome for the all round development of the personality of the student with a clear emphasis on th realisation of excellence in whatever he does in th pursuit of knowledge, understanding, skills and sterling character.

The withdrawal of the government from the field o junior college education and the consequent cessatio of interference in the management of the institution i a commendable feature of the scheme. However, wit the prospects of an expanding role of the +2 stage o school education, particularly that of its vocationa stream with its inevitable implications for the subsequent stage of higher education, no popular government can abdicate its responsibility of supporting this stage. Therefore, appropriate intervention strategy supported by adequate resources, must be evolved to help the cooperative experiment work successfully and effectively.

The concept of autonomy built in the cooperative model is decidedly praiseworthy. However, it will be necessary to build up a network of these institutions to ensure coordination *inter se* at the state level with the provision of an apex body with powers of accreditation, guidance, evaluation and control.

Conclusion

Let's see what it is in the Andhra Pradesh scheme that can commend itself for favourable consideration and, if found suitable to serve educational purposes, for adoption, albeit with appropriate adaptations.

(i) The scheme recognises the role of the parents in having their say in the matters of their children. And it is more substantial than a token association in the form of a nominal parent-teacher organisation. In fact, the parents will have a meaningful participation

lmost an exclusive capacity to guide the destinies
he junior colleges as well as of their children. This
challenging as well as self-fulfilling role for them.

(ii) The management committee has been endowed
h enormous powers to run the colleges. If it wields
m with imagination and foresight, understanding
sympathy, quality education would be a logical
duct of its labour.

(iii) There is a tremendous scope for making edu-
ion relevant to the needs of the community because
the freedom and ease with which the management
nmittees can effect change in curriculum, encourage
novations and promote excellence.

(iv) As the students have got to pay fees for their
tion, and their parents are to run the management,
re is an in-built assurance of greater commitment
and indentification with the goals of the institution
d fewer occasions for the type of student indisci-
ne we find in today's educational institutions charac-
ised by anonymity and alienation.

(v) Last but not the least, the scheme has elements
autonomy and social accountability in it. These are
e ingredients of building up future structures of hig-
r education in the country in order to foster initia-
ve and adventure in the field.

However, the Andhra Pradesh scheme has serious
nitations too. For example :

(i) On the face of it, one of the prime movers of
ne scheme is the profit motive even though it is
ought to be modelled on the cooperative principle
utting social service and welfare above economic gain
nd profit. This guiding force is likely to influence
ne decisions of the managing committee in the long
un while deciding about staff recruitment, develop-
nent plans, student services etc.

(ii) The idea of running an educational institution
xclusively on the income from students' fees is repug-
nant to the philosophy of egalitarianism in a country
whose 50% of population lives below the poverty line.
Even if the scheme claims to prohibit overt capitation
ees for admission, flexible tuition fees for the main-
enance of the college would be a form of covert capi-
ation fee and it would negate social justice.

(iii) The exit of the government from the arena of
playing an active role as the financial promoter and
pporter of education for its maintenance, let alone
its development, is not consistent with the constitutio-
nal obligations as well as moral commitment of a
government under democracy.

(iv) In handing over the entire management of the college to the parents alone, barring, of course, a few donors on the committee, if any, and in not including the teachers, the supporting staff, the vast community and numerous social agencies, the scheme unwittingly, emotionally though, creates a lopsided structure to manage the complex educational enterprise of a developing country. This remedy may prove worse than the disease of distortions N.T.R. has listed in his note.

(v) Finally, the scheme in the present form is nebulous and lacks an organised shape. It hasn't been stitched organically in the total canvas of our educational set up. At the most, it may be taken up for a try out on a pilot basis at a few selected places. The rest of the country should eagerly wait for its outcomes.

To conclude, it requires a rare moral courage to think of and propose an innovative idea in a social milieu that is known for its conventional ways of thought and action. N.T.R. has shown that courage through his note for which he deserves all admiration. ☐

Application of Zero Base Budgeting Techniqu to University Financial Administration

A Case Study of Amravati University

Sanjay Shankar Kaptan*

Introduction

The need for an effective budget procedure is increasingly apparent in both the industry and the government. All institutions must adopt to an environment in which the allocation of resources presents a continuous and constant challenge with decreasing corporate profits, rising costs and with the government increasingly facing a resource crunch. To effectively allocate limited resources a budget procedure must determine how the funds be spent ? This requires a type of budgeting procedure that would require us to identify and analyse what we are going to do, set goals and objectives, make the necessary operating decisions and evaluate changing responsibilities and work loads not after the budgeting process but during it, as an integral part of the process. This brings us to the concept of Zero Base Budgeting.

Zero Base Budgeting popularly known as Z.B.B., is not only useful for big private corporations or multinationals but charitable institutions and no profit organisations can also adopt such a technique for their budgeting needs. Another important reason for applying this technique in educational institutions like university is that almost all educational institutions face problem of paucity of funds. Their receipts and revenues are too short of their payments and requirements. Their various projects and demands cannot be fulfilled for paucity of funds. The traditional or incremental budgeting practice makes it impossible to rationalise expenditure, proper staffing pattern and allocation of funds and works. But by implementing ZBB technique all these problems can be solved to a considerable extent.

The Concept

Zero Base Budgeting is an operating, planning and budgeting process of more efficient use of limited resources in the pursuit of specified goals. The goal with any planning and budgeting process is to identify the output desired and the input resources required obtain it. This need not involve a reduction of penditure rather an increase of it might be the al native to the attainment of the desired goal.

The essence of Zero Base Budgeting is simply t an agency makes no reference to the level of previ appropriations in defence of its budget request. I a technique which complements and links the exist planning, budgeting and review process. It identi an alternative and efficient method of utilising limi resources in the effective attainment of objectives. is a flexible management approach which provide credible rationale for reallocating resources by foc sing on the systematic review and justification of funding and performance levels of current programn and activities.

Keeping this in view an attempt has been made draft a framework of action plan to introduce Zc Base Budgeting in university administration by und taking a case study of Amravati Universi Amarvati (M.S.).

Step 1—Defining Objectives

The university being an autonomous organisatic its structure demands that the objectives and missic be decided by the top or apex body, viz, Execut Council. The process of determining key results bei solely under the Executive Council it should deci the long term strategic objectives as well as res oriented short term objectives considering the requi ments, targets and other external factors affecting t University functioning. (Figure 1).

Step 2—Departmental Objectives and Missions

The University is basically an educational instit tion; naturally its focal point of activity is promoti educational and academic services. Hence the acad mic section becomes the major department. But th University being newly established one, there is a ope for development and establishment activities. e more attention goes to development section. efore long term objectives of all the departments d be decided by heads of the concerned depart- s and the top authorities in university jointly.

---

*Department of Business Administration and Management, Amravati University, Amravati.

he key results be decided by the authorities of niversity by deciding periodical targets. This be a short term objective in terms of manpower, , money and activities. There should be a proper dination for the key results to be achieved by the ersity and all the departments. For this purpose ultimate and short term objectives should be ly defined for each department.

3—Decision Units

The concept of decision unit can be applied in avati University as the process of departmenta- is well defined and designed, e.g, General Admi- ration Department, Academic Department, etc. ile implementing the idea of decision units, it must nentioned here that the every department acts as rt of the integral and continuous process of uni- sity administration. Therefore the decisions of the artment should always be in line with the main am. Hence the decisions should be classified as pendent and inter-dependent decisions. (Figure 2). Independent decisions are decisions which are en by the Head of the Department/decision autho- for the internal management of the Department do not affect any external activity, or functioning wo or more departments.

Allocation of responsibility and authority of ision should be done either by top authorities or Head of the Department in case of decisions affect- inter-department activities, affecting mainstream activities, and affecting a specific financial unit. In e of key matters it should be the responsibility of ad of Department or any competent authority, ich university administration deems fit. In case of tters related to internal management of the depart- nt or of routine nature the Head of the Depart- nt may use his discretion. The norms and criteria deciding rights and extent of assigning delegatory wers to the subordinates should be well defined and cided by top authorities.

ep 4—Classification of Activities

The main object of University administration is to velop the educational services and make them ailable to all those who demand it. Hence educational excellence is the main objective of university administration. Considering this, 'Academic Section' and 'Examination Section' are the main activity centres, whereas General Administration, stores and Engineering are the supporting activity centres to implement the plans and policies of the main activity centres.

Step 5—Restructuring of Activities

Amravati University being newly established, the classification and allocation of activities is well defined. But still considering cost trimming as an objective the Head of Department and Superintendent in consultation with the Registrar can redesign and classify the functioning of their department so as to avoid any waste of stationery, manpower, and other materials.

Allocation of activities can also be done in such a way as to save manpower by avoiding duplication of jobs, or by making proper classification of activities so that absence or non-availability of one of the staff members need not make others idle.

(a) Ordering of Activities

It should be used for continuous and flexible activities, especially within the department so that the priority of activities can be changed, as per its requirements such as some activities are seasonal or important in a specific time period or some activities have heavy work load in a particular situation/month. Staffing pattern and allocation of duties can be done accordingly to save time.

(b) Elimination of Activities

University administration being a continuous process, and especially when the university is understaffed, elimination process is not much applicable. But the concept can be brought into play to a certain extent in the following way. As stated above, there are certain functions and activities which are having heavy rush in a specific period and then they dry up. Hence the persons employed on such jobs can be conveniently transferred to other jobs in slack periods. It will be the responsibility of the Head of Department/Registrar to decide whether the particular activity has faded away or not and whether that person can be transferred or not.

(c) Merging of Activities

As stated above some activities can be eliminated in case of slack period. Similarly activities with low functional burden can be merged into a similar function and a person can be given these two jobs, and thus 'work activity area' can be enhanced. This function will also be decided by Head of Department.

Step 6—Alternative Methods of Performance

As university administration is bound by standard code, it is not possible to apply various alternative methods in practice so far as regular administrative practices are concerned. But wherever financing of various activities is concerned, the alternatives are possible end they can be implemented in following manner :

(1) Urgency, (2) Total requirements, (3) Methods of funding, (4) Substitute methods of performance, (5) Availability of funds, (6) Alternative models/techniques available, (7) Postponement of decision, and (8) Cost benefit analysis.

Step 7—Decision Package

Formulation of decision package involves all matters involving cost, funds and application of resources. Hence it is necessarily related to all matters where finance and funds are involved. Once the overall requirements of university, and all the requirements of all the other departments is considered, a master decision package can be formulated.

To formulate an individual decision package, the Head of Department can consult the Finance Section and other concerned so as to find various alternatives/substitutes involving different cost estimates and rank them. Here the idea of decision free can be applied. The authorities may choose any of the alternative as they feel fit considering its cost, utility and any other criteria.

Step 8—Minimum Funding Level or Zero Funding Level

The short term objectives of all the departments should be based on targets fixed in advance. The targets should be quantitative and be fixed by top authorities. University being a service institute, fixation of targets should be made by applying such criteria as is applicable to service organisation. Hence zero level funding can be made by applying a presumption that the department is going to offer only 1 unit of service, or the department is not to offer any service, hence it needs no funds. For every service/activity offered by the department or proposed to be offered it will be the Head of Department who justify the rationality behind it. Similarly every partment has certain minimum and basic functi which it has to perform once its existence is accept hence the minimum amount of funds to perform s functions must be treated as minimum funding leve

(a) Formulation of Incremental Packages

Once the best alternative/model/way to perf an activity/way is selected, the Head of the Depa ment can decide how the funds allotted be use stepwise process. That is, it may decide whether whole amount be spent in one go or it may be sp in instalments. After deciding the various alternati the Head of Department may rank them in the or of importance; with this ranking he can arranget expenses on each activity and also determine department.

(b) Mutually Exclusive Decision Package

Those decision packages which are independ and do not affect functioning of other departme and are at the complete discretion of the Head Department can be termed as mutually exclusive d sion packages.

Thus each department can submit its propos budgets considering the key results/targets expec from it in which the justification of funds and act ties will be properly made. The above mentio procedure will be applied by all the departments, thus individual budgets of each department will formulated. These then may be merged into a fina master budget. While preparing the master bud the top authorities may reshuffle all the decision p kages received from each department and again re range them in the order of priority or urgency sc to allocate funds and make a most efficient use resources.

Step 9—Final Ranking for Master Budget

The criteria of final ranking may be based following grounds :

(1) Can be the package postponed ?
(2) Can it be classified into two or more steps
(3) Should all the expenses be made in one i stalment or it can be divided into two or m stages ?
(4) The extent of availability of funds.

(5) The ultimate target for the period.

(6) The priority sectors and secondary activities.

A cut off line may be decided for every department to limit the grant of funds or allocation of funds so that all the departments may get a minimum funding level to carry on the basic activities. ☐

Training Programmes for University Administrators

The Centre for Work Study in Educational Administration of the Panjab University proposes to organise various training programmes for the officers and officials of universities and other educational institutions in India during the financial year 1988-89.

The programmes include (1) Management of Diciplinary Proceedings; (2) Computers in University Administration; (3) Records Management and Filing System; (4) Management of Accounts; (5) Inventory Management and Control; (6) General Management Development Programme for Superintendents/Section Officers; (7) Forms Design and Control; (8) Refresher Course for Assistants; (9) Writing Skills; (10) Innovative Approaches to Productivity Improvement in University Administration (for Registrars, Controller of Exams., and other Officers of the rank of Deputy Registrar); (11) Managing Examinations: Administrative Support; (12) 6-week Basic Course in Administrative Analysis and Improvement (Work Study/Management Services); (13) 13-week Advanced Course in Administrative Analysis and Improvement (Work Study/Management Services); and (14) Management of "Mass" in Hostels and Guest Houses.

Further details with regard to duration of the course, fee, etc. may he had from Shri Shital Parkash, Honorary Director, Centre for Work Study in Educational Administration, Panjab University, Chandigarh.

Studying Biological Rhythms

The Government of India has established a human isolation facility for study of biological rhythm at the Madurai Kamaraj University, Madurai. This 'National Facility' of the Ministry of Science & Technology, is a component of the 'Unit of Neurobiology & Mechanisms of Behaviour'.

This is the only facility of its kind in India and the sixth in the world (other such work and facilities are in the USA, UK, FRG, Switzerland and Japan). The facility consists of (1) comfortable, furnished living room with bath, kitchenette & toilet; (2) automatic body functions recording 'Solicorder' with Apple Ile PC; (3) 20 channel Esterline Angus Event Recorder A 620x; (4) ducted air-cooling. Human subjects spend 3 weeks—or more inside and are given all facilities excepting wrist watches, clocks, radios or TV. They are shielded from all 24 hour 'social' cues from the outside world.

Dr. G. Marimuthu, the first human subject entered the facility on Dec. 11, 1987 for a 3-week period.

The human circadian rhythms studies have great immediate relevance in preventive and general medicine, pharmacology, immunology, aeronautics, astronautics, psychiatry, military, navy, animal & plant breeding, etc. Much new knowledge of significance and vast intrinsic interest is expected to be generated from the results of experiments being performed by the scientists of the Department of Animal Behaviour in this unique 'isolation facility'.

Prof. M.K. Chandrashekaran is the Programme Coordinator of the Unit and the facility.

Research Methodology for Kannada Studies

The Kannada Department of the Bombay University recently organised a Seminar on Research Methodolgy for Kannada Studies, in collaboration with the Mangalore University's Kannada Department. The objective of the Seminar was to raise the level of research in Kannada Studies and also to introduce new devices in research methodology to the Ph.D. and M. Phil students.

Dr. R.S. Mugali, noted literary scholar, inaugurated the Seminar. He stressed the need for incessant and painstaking efforts in any research undertaking.

The following topics were discussed at the six sessions of the Seminar: New themes for Kannada research; Untapped resources of historical documents available abroad; Computer application to literary and historical research; Role of bibliographies and bibliographic research; Standardisation of Kannada terms in research methodology and of the symbols used in research writing; and Need for acquaintance of other disciplines such as anthropology, psychology, religion, architectural engineering, etc.

The Seminar was attended by 110 participants that included, among others, Senior academic and Heads of Kannada Departments from 14 universities from all over India.

Regional Workshop on Environmental Education

The Centre for Biology Education of the Madurai Kamaraj University recently organised a workshop on Environmental Edu-tion for training resource per-ns. Sponsored by the Centre for nvironmental Education at hmedabad, this forms part of the ationwide teacher training programmes under the National nvironmental Awareness Campaign. About 100 participants ttended the workshop.

The workshop was inaugurated y Dr. A. Gnanam, Vice-Chancellor, Bharathidasan University. In his ddress he stressed the need for a olistic approach towards environment and professional training. Dr. S. Krishnaswamy, Vice-Chancellor, Madurai Kamaraj University, who presided, spoke on the need for evolving simple and effective techniques for Environmental Education.

In the eight technical sessions various technologies that could be adopted for environmental education were introduced to the participants. Besides, they learnt methods like on-the-spot-studies, environmental camps, environmental games, and environmental experiments. An evaluation of the technical sessions was also made.

A slide-show-cum-lecture and an exhibition on Environmental Education was also arranged on the occasion.

Kannada Language Course at Gujarat Vidyapith

Shri Y.N. Nanjundiah, Member Secretary, Gujarat Water Resources Development & Sewage Board recently inaugurated the Kannada Certificate course in Gujarat Vidyapith. Speaking on the occasion he urged the Gujaratis to learn Kannada so that they could speak in Karnataka when occasion arises. Prof. Ramlal Parikh, Vice-Chancellor, who presided, said that the purpose of the Language Centre is to strengthen National Integration by laying emphasis on our composite culture as expressed and preserved in our regional languages and literature respectively. The medium of instruction is therefore Hindi. Later, courses on Kannada literature through the medium of Kannada language will also be provided.

Developing Interview Facing Skill

A two-day training programme on Developing Interview Facing Skill for the students of the University was organised by the Department of Education, Madurai Kamaraj University. About 40 students attended the programme. Dr. R. Venkataratnam of the Dept. of Sociology inaugurated the programme.

There were lecture on Personality Assessment, Acquiring Self-confidence, preparing for the interview, etc. Besides a lecture-cum-demonstration in oral communication was given. Two Mock Interviews were conducted. Video cassettes on oral communication skills like greeting, introducing, asking permission, offering things, expressing likes and dislikes, etc. were also shown.

We Congratulate . . . .

Dr. M.L. Shahare who has been appointed as Vice-Chancellor of the Awadhesh Pratap Singh University, Rewa.

ASSOCIATION OF INDIAN UNIVERSITIES

CORRESPONDENCE COURSE IN EVALUATION METHODOLOGY & EXAMINATIONS

Applications are invited from college/university teachers for admission to Correspondence Course in Evaluation Methodology and Examinations at Basic Level, Intermediate Level and Advanced Level/ Special Professional Course. The duration of each of the three courses is six months. A personal 'Contact Programme' for three days is planned for each of the three courses. Universities/Institutions sponsoring candidates can meet the registration/course fees from out of unassigned grants by UGC.

Request for prospectus and application form accompanied by a crossed Indian Postal Order for Rs. 10/- drawn in favour of the Secretary, Association of Indian Universities and a self-addressed stamped envelope (Rs. 2/-) should be sent to the Project Director (Exams), Association of Indian Universities, 16 Kotla Marg, New Delhi 110002. Last date for receipt of application is **15th** March for non-sponsored and **16th March** 1988 for sponsored candidates.

News from Agril. Varsities

Paddy Transplanter

The prototype of a power and manually operated paddy transplanter has been developed by the Farm Implements and Machinery Unit, a wing of the Andhra Pradesh Agricultural University (APAU).

A boon to the farmers, the transplanter which can plant paddy seedlings is cost effective in operation, saves labour costs, time and provides equal spacing for the plants. The power operated transplanter, a seven row machine can plant two to three acres of paddy seedlings per day with the help of three persons. The machine saves about Rs. 350 per hectare in transplanting charges. It can be used for both conventional and mat type of nurseries. The machine costs about Rs. 5,000 each and the APAU is planning to manufacture 20 such ones for research purpose.

For the manually operated transplanter, 25 to 30 days old nursery was best suited and it can plant seedlings just by towing forward. Four persons were required to operate the machine and help in planting operation. The machine saves about Rs. 200 in labour cost per hectare. The transplanter costs half the price of power machine.

New Layer Released

The Punjab Agricultural University has released a new egg-type stock, "Satluj Layer" for commercial production. This stock has the annual production potential of 255-265 eggs (Hen-day basis) with an average egg weight of 54-56g. The age at sexual maturity is 160 days whereby peak production is at 28-30 weeks. Peak production touches 92 per cent and egg production remains above 80 per cent for more than 20 weeks. The laying house mortality is less than 1 per cent per month. The performance of the stocks at various RSLT throughout the country over years highlights the adaptability of these stocks to varied agro-climatic conditions.

This pioneer work on breeding egg-type stocks has been accomplished under the guidance of Dr. Dalbir Singh Dev, Dean, College of Agriculture of the PAU. It is claimed that since the country has been depending on the supply of Parents/Grand parents from the developed countries like U.S.A., U.K. and Canada, the release of such a promising stock is a major step towards self-sufficiency in egg production. This will save a considerable amount of foreign exchange.

All India Farmers' Fair

The C.S. Azad University of Agriculture and Technology, Kanpur will host an all-India Farmer's Fair and agricultural exhibition from February 26 to 28 at its Kanpur campus. The objective of the annual 'varsity fair', popularly known as 'Kisan Mela' is to provide on opportunity to the farmers to know the latest achievements in agricultural research and animal husbandry and also to find a way out of the constraints in transfer of technology.

Sports News

Punjabi and Calicut Varsities Emerge Champions

The host, Punjabi University, Patiala retained the first position in the men's section of the 48th All India Inter-University Athletic Meet which concluded at Patiala recently. Panjab University, Chandigarh and Guru Nanak Dev University, Amritsar finished 2nd and 3rd respectively.

In the women's section, Calicut University maintained their stronghold for the 4th year in succession with a tally of 57 points. The second and third positions went to Nagpur and Gandhiji Universities respectively.

Punjabi University's Balkar Singh was adjudged the best athlete in men's section while Gurmeet Kaur of Guru Nanak Dev University bagged the top honour in the women's section.

As many as 7 new records were created during the Meet. In the 5000 Metres and 10000 Metres race for women which were introduced in the Inter-University Athletic Meet from the current year, new records were established by A. Bhoyar and A. Rotey, both from Nagpur University. Gurmeet Kaur of Guru Nanak Dev University, mritsar created 2 new records in he Shot Put and Javelin Throw vents in the women's section. Harpreet Kaur of Punjabi University, Patiala created a new record n the Discus Throw event. In the Men's section, 2 new records were created; one by Sadasnan M.P.. of Kerala University in Broad Jump and the other by Mohan Lal of Punjabi University in 20 K. Metres Walking event.

Delhi Varsity Claims Rohinton Baria Trophy

Delhi University has won the Rohinton Baria Trophy. In the finals of the Inter-University Cricket Championship which concluded at Madras in the last week of January, 1988, Delhi defeated Bangalore University with a margin of 511 runs. The scores were : Delhi 172 and 734 runs, Bangalore 103 and 292 runs.

Inter-University National Youth Festival—1988

A Report

A five-day Inter-University National Youth Festival (IUNYFEST) was organised by Amravati University in collaboration with the Punjabrao Krishi Vidyapith (PKV) at Akola from 25-29. January, 1988. Sponsored by the Association of Indian Universities (AIU), the Festival was attended by 908 students and officials from 39 universities all over the country. The participants were selected from the four zonal youth festivals held earlier at Aligarh Muslim University, Aligarh; Bombay University, Bombay; Manipur University, Imphal; and Madurai Kamaraj University, Madurai. Patna University was adjudged as the overall champion while Amravati University was declared as the runners up.

Prof. Ram Meghe, Minister for Education, Maharashtra, inaugurated the festival by lighting the traditional lamp to the accompaniment of a Prayer. The Choir of the Amravati University presented the welcome song. All the participants were then administered a pledge by Dr. K G. Deshmukh. In his welcome speech, Dr. Deshmukh recalled how the first Inter University National Youth Festival (NAMYFEST) was launched in 1985. He exhorted the participants to make the National Youth Festival a grand success.

Shri Gulam Nabi Azad, M.P. was the special guest of honour on the occasion. In his speech, he called upon the youth to be self reliant rather than dependent on Govt. for solving the problems before the nation. Such youth festivals help bring about coordination and mutual understanding among the young people from different regions of the country, he add.

Delivering the inaugural address Prof. Ram Meghe expressed the hope that Youth Festival of such a magnitude will be helpful in carrying knowledge to the rural India and keep pace with other developing countries. It is very effective forum for exchanging of ideas among the young people who are the citizen of tomorrows' resurgent India, he said.

Shri Vasantraoji Dhotre, Minister of State for Cooperation, Maharashtra, presided over the function, and expressed great happiness and pride over Amravati University and the Punjabrao Krishi Vidyapith, hosting the great natural event jointly. For him the Youth Festival was a rare event of great national importance.

Freedom fighters and other elite of the area graced the occasion.

Dr. V.N. Shukla, Vice Chancellor, Punjabrao Krishi Vidyapith proposed a vote of thanks. The inaugural function came to a close with the singing of PASAYADAN, by Manisha Deshpande and national anthem played by the police band.

January 26, being the Republic Day, was celebrated with the participation of students, officials and 150 Freedom Fighters invited for the occasion. Full throated shouts of 'Long Live the Indian Republic', echoed in the skies, as the tricolour National Flag went up.

The cultural events began at the Bal Gandharva Rang Manch, with Classical Instrumental Solo (percussion) and Classical Vocal Sc Performance on Tabla by Suc Pande of Patna University d spontaneous applause from audience. This event was foll ed by the Classical Vocal (Sc with Amardeep Singh (Guru Na Dev University) singing 'Ra Todi'. Other participants we Vandana Shirodkar (SNDT Gujri Todi, Maitrayai Das (G hati)—Shuddha Kalyan, I. Sha (Andhra)—Kalyan, and Shri Vi Deshpande (Nagpur)—Bilas To Performance of Vilas Deshpan and Vandana Shirodkar was higl appreciated by the audience.

At the same time, when Bal Gandharva Rang Manch w overflowing with melody, anotl band of creative artists was enga ed in the Raja Ravi Verma Hall, displaying their skill and talent "On the Spot Painting". T chosen theme, of course, w National Integration.

The Quiz competition was org nised at Dr. Thakre Auditoriu Out of the seven teams which to part, four teams of Kerala, Agr Nagpur and Bhopal universiti qualified for the finals as a resu of a written test. These four tean comprising three participants eac competed for the final ranking. Th Bhopal University team comprisir the Rajiv Sarkar, Ganesh Naya and Manish Manke scored th highest.

At the Mime competitio silence proved more eloquent tha speech, and the artists strove tirel essly to stretch their histrioni abilities to perfection. Sparklin performances put up by the parti cipants of the universities of Jamm (Panchhi Ek Daal Ke); Aligar (Unity : a machine); Bharthidasa (National Unity); Rani Durgava (Ekta Saphalta Ki Kunji); an Nagpur (National Integration deserve special mention. The uni versities of Rabindra Bharati (Ma for Man's sake—a message of lov r mankind), Annamalai (Grow ore trees and protect the ecology d natural wealth of our mother- nd), and Patna (roti—depicting e sufferings of the starving people) mphasised the same theme with a ider connotation. The participants f the Rabindra Bharati, Bharati- asan and Patna Universities moved he audience to a rare emotional eight with their acting skill. The ligarh Muslim University team, resented the concept of unity in he most novel manner i.e. in the orm of a machine. The Nagpur University presented the idol of Bharat Mata an unmoving statue, but melting into tears of agony to see the infighting of her children.

The Collage participants assembled in the Raja Ravi Verma Hall. Collage is a style in the art of drawing a patch work using piece of colour paper, cloth, etc. The participants in this event were Prasantjit Sengupta (Rabindra Bharati), Khushwinder Singh Adhikari (Rajasthan), Shailesh Sawant (Bombay), Suman Gupta (Jammu), Iqbal Ahmed (Aligarh Muslim University), N. Murli Dharan (Madras), and Subodh Gupta (Patna). To see these artists at work was to see the sure hand of the master artists at work.

The most animating event of the day was the One Act play conducted at the Dr. Thakre Auditorium. The University of Manipur staged a Manipuri dramatic adaptation of Rabindra Nath Tagore's short story 'Hungry Stones depicting the miseries, Mother India passed through, in course of the struggle for freedom, which brought about social awakening. The uniqueness of this performance lay in the Manipuri touch lent to a Bengali story and the theme brought home to the audience through superb acting—language being no bar.

Shivaji University presented a Marathi Play 'Andharachi Bhitee', (Fright of darkness) written by Prof. Arvind Vishwanath Kulkarni, a local play-wright. It dealt with the problems of daily-life like unemployment, hunger, poverty and exploitation by the political leaders, etc. which made the common man feel insecure. The play offered a hope of resurrection even in the darkness. Maharshi Dayanand University, Rohtak presented 'Is prashna ka Uttar Do' (Answer this Question) a play depicting how the noble sentiments of sacrifice, patriotism, etc. prevailing in the pre-independence era, gave place to communalism, casteism and social evils such as bride burning, corruption, political exploitation, etc. The one Act Play 'Manav Mana Manthan' (the churning of human mind) by Jodhpur University showed how all efforts by foreign forces to distrupt the national unity are foiled when all the people of the country stand up as one man.

'Bhanwar' (whirlpool) by the Aligarh Muslim University, presented a veritable whirlpool of heterogenuous characters of diverse temperament but lunatics all...concerned deeply about the welfare of the country more than the so-called wise men. It is these inhabitants of the lunatic asylum that bring us reminiscences of the past and hope for the future. A very eloquent satire indeed on the people who only speak loudly about the welfare of the country.

'Koleyadolu Bale' (Maiden the sacrifice) by Mysore University was a dramatization of a folk tale of yesteryears which is a reality of today. Our education, our civilization and culture are all hollow when a woman goes a 'Sati' or a daughter in-law is sacrificed to a Goddess.

The Gauhati University's 'Brittar Bhitarat' (Inside the circle) was a farce, ridiculing different types of acting and was adjudged the best play.

The Bal Gandharva Ranga Manch was packed to capacity for the event of Group Dance/Tribal Dance. The universities that participated were Annamalai, Manipur, (Laibura), Kurukshetra (Fodia), Rajasthan (Chirmi), Patna (Holi), Bharthidasan (Kargham Nritya), Indira Kala Sangeet Vishwavidyalaya, (Bojoli), and Dayalbagh Edu cational Institute, (Holi). The last three drew prolonged applause. Folk Dance rendered by Dayalbagh Educational Institute, Agra was adjudged the best while Kurukshetra University bagged the second prize.

The Group Songs were presented at the Bal Gandharva Ranga Manch. All songs showed a rare combination of word and meaning, and melody, with which the whole atmosphere was charged. It touched the hearts, that swayed now to the tune, then to the rhythm, but always to the noble sentiment of patriotism and national integration. Indeed music is such an art which overrides all barriers of caste, creed, language, religion, etc., and welds the hearts together to raise before the mind's eye the image of Bharat Mata! This was what the Group Song event achieved when the young men and women poured out their soul in unforgetable melody. They belonged to the universities of SNDT Women's, Annamalai, Patna, Bhopal, Dayalbagh Educational Institute, Haryana Agricultural and Bharathidasan. The Group Song presented by SNDT Women's University was declared the best.

The Classical Dance event was organised at the Dr. Thakre Auditorium. It were indeed riots of colour as young artists presented Kathak, Manipuri, Bharatnatyam and Mohiniattam. Andhra University bagged the first prize in this event. Skit event was also held at Dr. Thakre Auditorium. The following items were presented: 'Kutte' written by Shrikant (Patna), 'Ekach Maleche Mani' by Kishore Morey (Amravati) 'Sati 'Pratha ke Virodh' (Marathwada), 'Doctor No' (Bharathiar), 'Panchhi kya Kahta hai?' (Agra), 'Soul of a National Poet' (Gandhigram), 'Nai Kiran' (Aligarh), and 'The Story of Heaven (Rabindra Bharati)

Another event was Group Songs (Western) held at the Bal Gandharva Rang Manch. The audience was enthralled by the Western music provided by Tata Institute of Social Sciences, Bombay and the universities of Pondicherry, Goa, Jammu, Kurukshetra, Manipur and Bharathidasan. The Bharathidasan was adjudged the best.

Smt. Pratibha Patil, Deputy Chairperson of Rajya Sabha, was the Chief Guest at the valedictory function. She eulogized the organizers for holding Inter-University National Youth Festival at such a gigantic scale. Shri P.K. Mishra, IAS, Director, Youth Affairs & Sports, Government of India con gratulated the participants an reminded the student community their responsibilities. Dr. K.C Deshmukh, Vice Chancello Amravati University thanked th participants for providing Akola wonderful cultural feast. A Colou ful Cultural Evening marked th conclusion of the Youth Festiva Folk Dances, Group Songs, Ligh Vocal and Instrumental Music wer a special treat of the evening.

Inter-University Youth Festival—1988

RESULTS

1. MUSIC

(a) **Classical Vocal Solo**

1. Andhra University, Waltair
2. SNDT Women's University, Bombay
3. Guru Nanak Dev University, Amritsar

(b) **Classical Instrumental Solo (Non-Percussion)**

1. University of Mysore, Mysore
2. Patna University, Patna
3. University of Bombay (Bombay)

(c) **Classical Instrumental-Solo (Percussion)**

1. Patna University, Patna
2. University of Kerala, Trivandrum
3. University of Jammu, Jammu

(d) **Light Vocal (Indian)**

1. Amravati University, Amravati
2. University of Jammu, Jammu
3. University of Kerala, Trivandrum

(e) **Western Vocal Solo**

1. Pondicherry University, Pondicherry
2. Tata Institute of Social Sciences., Bomba
3. Manipur University, Imphal

(f) **Group Song (Indian)**

1. SNDT Women's University, Bombay
2. Bhopal University, Bhopal
3. Bharathidasan University, Tiruchirapalli

(g) **Group Song (Western)**

1. Bharathidasan University, Tiruchirapalli
2. Goa University, Panjim, Goa
3. Tata Institute of Social Sciences, Bombay

2. DANCE

(a) **Folk/Tribal Dance**

1. Dayalbagh Educational Institute, Agra
2. Kurukshetra University, Kurukshetra
3. Bharathidasan University, Tiruchirapalli

(b) **Classical Dance**

1. Andhra University, Waltair
2. Patna University, Patna
3. Manipur University, Imphal
&
Bhopal University, Bhopal

LITERARY EVENT

(a) **Quiz**

1. Bhopal University, Bhopal
2. Agra University, Agra
3. University of Kerala, Trivandrum

4. THEATRE

(a) **One Act Play**

1. Gauhati University, Gauhati
2. University of Mysore, Mysore
3. Manipur University, Imphal

(b) **Skits**

1. Amravati University, Akola
2. Rabindra Bharati University, Calcutta
3. Aligarh Muslim University, Aligarh

(c) **Mime**

1. Nagpur University, Nagpur
2. Aligarh Muslim University, Aligarh
3. Patna University, Patna

5. FINE ARTS

(a) **On the Spot Painting**

1. University of Mysore, Mysore
2. Aligarh Muslim University, Aligarh
3. Amravati University, Akola

(b) **Collage**

1. Rabindra Bharati University, Calcutta
2. University of Rajasthan, Jaipur
3. Patna University, Patna

(c) **Poster Making**

1. Patna University, Patna
2. Manipur University, Imphal
3. Marathwada University, Aurangabad

(d) **Clay Modelling**

1. Amravati University, Akola
2. Rabindra Bharathi University, Calcutta
3. University of Kerala, Trivandrum

(e) **Cartooning**

1. University of Mysore, Mysore
2. Amravati University, Akola
3. Patna University, Patna

OVERALL CHAMPIONSHIP : Patna University, Patna

RUNNERS-UP TROPHY : Amravati University, Akola

BSET IN ITEMS

1. Dance	Dayalbagh Educational Institute, Agra
2. Music	SNDT Women's University, Bombay
3. Theatre	Aligarh Muslim University, Aligarh
4. Fine Arts	Amravati University, Akola
5. Literary Activity	Bhopal University, Bhopal

G. B. PANT UNIVERSITY OF AGRICULTURE & TECHNOLOGY

Pantnagar 263145 (District Nainital) U.P.

ADDENDUM

With reference to our Admission Notice published through the Columns of this Journal January 11 and February 1, 1988, this is to notify for information of all concerned that the minimum duration of the B.Sc. Ag. & A. H. programme offered at this University has been increased from 3 years to 4 years with effect from the academic session 1988-89. Accordingly, the maximum duration of this programme will now be 6 years. In respect of other academic programmes no change has been made.

O.S. Misra
REGISTRAR

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

RESEARCH IN PROGRESS

A List of Research Scholars Registered for Doctoral Degrees of Indian Universities

PHYSICAL SCIENCES

Physics

1. Panda, Shreemayee. *Laser Plasma interaction.* Delhi. Dr. M.P. Srivastava.

2. Saxena, Kanchan. *Ferroelectric liquid crystals.* Delhi. Dr. Rajrup and Dr. Subhash Chandra.

Chemistry

1. Arora, Om Prakash. *Special studies on transition metal complexes with O-N-B containing ligands.* Delhi. Dr. N.K. Kaushik.

2. Jacob, N.E. *Physico-chemical properties of high silica zeolites.* Shivaji. Dr. P. Ratnasamy.

3. Jha, Lakhanjee. *Corrosion chemistry.* Delhi. Dr. Gurmeet Singh.

4. Mann, Satwinder Kumar. *Studies of some unconventional oil seed of Himachal Pradesh.* HP. Dr. C. S. Pande.

5. Parsuna, C.S.S. *Synthesis of biologically active compounds.* Shivaji. Dr. S.N. Kulkarni.

6. Sharma, Narendra Kumar. *Determination of some commercial organic pesticides.* HP. Dr. B.C. Verma.

7. Sharma, Neelam. *Determination of some thiocarbonyl compounds and studies on their analytical aspects.* HP. B.C. Verma.

BIOLOGICAL SCIENCES

Anthropology

1. Kaule, Shyamal. *An anthropogenetic study of Talipes equinovarus in Sagar District, M.P.* HS Gour. Dr. A.N. Sharma.

2. Maheshwari, Manikant. *Epidemiology of premature greying of hair.* HS Gour. Prof. P.K. Shrivastava.

3. Sarkar, Rupsilata. *Age change : The morphology of hand phalangeal and palmar creases.* HS Gour. Dr. R.S. Bali.

Botany

1. Thomas, Jasy. *Studies on the variation in morphology, cytology and host specificity of different populations of the burrowing nematode in South India,* Kerala. Dr. P.K. Koshy.

Medical Sciences

1. Rajendran, R. *Epidemiological, biochemical, immunological and ultra-structural studies on pre-malignant and malignant lesions of oral cavity.* Kerala. Dr. P.I. John and Dr. D.M. Vasudevan.

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities.

PHYSICAL SCIENCES

Mathematics

1. Bandyopadhyay, Uttam Kumar. *Some problems of seismic waves in layered media.* ISM. Dr. A. Chattopadhyay.

2. Gopalsamy, S. *Mixed equilibrium hybrid finite element method for fourth order elliptic partial differential equations with variable coefficients.* IIT Delhi. Prof. B. Choudhary and Prof. P.K. Bhattacharyya.

3. Jain, Pragya. *Numerical methods for singular differential equations.* IIT Delhi. Prof. R.K. Jain and Prof. S.R.K. Iyengar.

4. Mishra, Purna Chandra. *The study of some two dimensional problems by complex variable methods.* Sambalpur. Dr. A.K. Das.

5. Subba Rao, G.V. *Translation complements of G-planes.* Osmania.

Physics

1. Rokde, Sadhana Vasant. *Development of lithium borate based glass system from solid electrolyte point of view.* Nagpur. Dr. (Miss) Kamal Singh.

2. Singh, Kamlesh Prasad. *Energetics of some complex ionic crystals.* Magadh.

3. Singh, Konsam Biren. *An investigation on the electronic transport properties of some thin metallic films.* Manipur. Dr. H. Nandakumar Sarma.

Chemistry

1. Dhar, Raj Kumar. *Kinetics and mechanisms of some oxidation reactions.* IIT Delhi. Dr. R. Varadarajan.

2. Ghosh, Jayanta Kumar. *Solid state thermal and photo chemical decomposition studies on fluoroperoxo and tetraperoxo complexes of transition elements.* IIT Delhi. Prof. G.V. Jere.

3. Ghosh, Mala Akhil Krishna. *Chelate polymers.* Nagpur. Dr. R.B. Kharat.

4. Janarthanam, M. *Binary and ternary complexes of dioxouranium (VI).* Anna.

5. Joshi, Yogendra Kanaiyalal. *Resinified ligands.* Baroda.

6. Kumar, Amal K. *Aryloxyacetic acids : Potential ligands for monomeric organotin carboxylates.* NBU.

7. Mehta, L.K. *Studies on heterocyclic compounds.* Saurashtra. Dr. (Mrs) H.H. Parekh.

8. Narkhede, Bhojraj Narayan. *Poly (vinyl alcohol) esters : Swelling by sorption.* Baroda.

9. Patel, Narahari. *A study on the catalytical behaviour of micellar systems.* Sambalpur. Dr. B.K. Sinha.

10. Poddar, Ranjan Kumar. *Formation and cleavage of cyclopropane ring systems and related studies.* NBU.

11. Rajeshwar, Dongara. *Physico-chemical characteristics of manganese chalcogenides and their activity for some model catalytic reactions.* IIT Delhi. Dr. L.D. Ahuja.

12. Rao, Pratima. *Physico-chemical studies on the organic complex of chromium peroxy-chromate.* Durgawati. Dr. C.V.P. Pillai.

13. Roda, K.P. *Studies on natural and synthetic drugs.* Saurashtra. Dr. (Mrs) H.H. Parekh.

14. Sachan, S. R. *Physico-chemical studies of liquid scintillators and their applications.* Baroda.

15. Swaminathan, Shankar. *Synthesis of biologically active molecules.* Baroda.

16. Venkateshwarlu, T. *The kinetics and analytical application of Hg (II) assisted formation of pentacyanonitro-sobenzeneferrate (II) and pentacyano 4-nitroso-N, N-dimethylanilineferrate (II) from hexacyanoferrate (II) and their equation.* Osmania.

17. Vijaya, Dasari. *New spectrophotometric methods for the determination of some pesticides.* Andhra.

18. Wali, Anil. *Some aspects of cycloaddition reactions, and A 13C NMR study of 1, 4-diaryl-1aza-1, 3-dienes.* IIT Delhi. Prof. R.P. Gandhi.

Earth Sciences

1. Sengupta, Bimal Jyoti. *Some mathematical study on geoelectrical methods.* ISM. Prof. B.B. Bhattacharya and Dr. B. Banerjee.

2. Tiwari, Krishna Chandra Onkarlal. *Hydrogeological framework of Heran River Basin, Gujarat State : A critical appraisal of its lithology structure and geomorphological features.* Baroda.

3. Varma, Dantuluri Deva. *Some aspects of texture, mineralogy and geo-chemistry of the Vamsadhara River sediments, East Coast of India.* Andhra.

4. Vastrad, Shantaveeraswamy Gavisiddayya. *Hydrogeological investigations of Gadag Schist Belt, Karnatak, India.* Karnatak. Dr. S.C. Puranik.

Engineering & Technology

1. Arora, Vijay Kumar. *Strength and deformational behaviour of joined rocks.* IIT Delhi. Prof. T. Ramamurthy.

2. Chatterjee, Biswapati. *The geometry of the 2 x 2 matt weave.* IIT Delhi. Prof. N.M. Swani and Dr. P.K. Banerjee.

3. Chinnaswamy, C. *Finite element analyses of gravity dam foundations with seams.* IIT Delhi. Dr. K.G. Sharma and Dr. A. Varadarajan.

INDIAN INSTITUTE OF TECHNOLOGY
MADRAS.

Advertisement No. II TM/R/1/88

IIT Madras is a higher technological Institute having ongoing collaborative programmes with leading Technical Universities of West Germany, France, USA and Australia. Apart from its regular academic programmes at Undergraduate, Master's and Doctoral levels, the Institute is actively engaged in Sponsored Research & Industrial Consultancy. As a central facility, the Institute has an IBM 370/155 and IPL 4443 main frame computing systems to cater to the needs of the various departments/centres/sections of the Institute. A new computing facility consisting of a Siemens 7580-E time sharing system with 16 mb of memory and 80 terminals has been installed and commissioned recently in a specially designed building.

Applications are invited for the following Faculty/Scientific positions in various Departments of the Institute in the pay scales noted. The scales of pay given are likely to be revised. The figures given in parentheses against each category are the approximate gross emoluments including HRA at the minimum of the present scale of pay.

1.	**Professor** Rs. 1500-60-1800-100-2000-125/2-2500	[3825.50]
2.	**Assistant Professor** Rs. 1200-50-1300-60-1900	[3390.50]
3.	**Senior Scientific Officer Grade-I** Rs. 1200-50-1300-60-1900	[3390.50]
4.	**Lecturer** Rs. 700-40-1100-50-1600	[2242.95]
5.	**Senior Scientific Officer Grade-II** Rs. 700-40-1100-50-1600	[2242.95]

The posts of Lecturer and Senior Scientific Officer Gr. II are reserved for SC/ST candidates. If suitable candidates are not available the posts will be treated as dereserved.

Posts are permanent or likely to become permanent. Besides pay, posts carry allowances and retirement benefits as per Institute rules. Higher initial pay is admissible to exceptionally qualified and deserving candidates. Candidates called for interview wil be paid first class railway fare from the place of their duty/residence to Madras and back by the shortest route as per Institute rules.

Qualifications & Experience

Professor

1. A good academic record with Bachelor's or Master's degree in the relevant area. A Doctorate degree in any of the specialisations mentioned or closely related area is **essential**.
2. 10 years experience in the field of specialisation prescribed, of which at least five years should be in teaching and/or research [for Engineering, Humanities & Social Science Departments/Centres].

   10 years experience in the field of specialisation prescribed, of which atleast five years should be in teaching at postgraduate level [for Science Departments/Centres].
3. Research work of good quality published in journals of repute.
4. Experience in guiding research.

Assistant Professor

1. A good academic record with Bachelor's or Master's degree in the relevant area. A Doctorate degree in any of the specialisations mentioned closely related area is **essential**.
2. 5 years experience in the field of specialisation prescribed, of which at least 2 years should be in teaching and/or research [for Engineering, Humanities & Social Science Departments/Centres].

   5 years experience in the field of specialisation prescribed, of which atleast 2 years should be in teaching at postgraduate level.
3. Research work of good quality published in journals of repute.
4. Experience in guiding research.

ior Scientific Officer Grade-I

Bachelor's degree in Engineering/Master's degree in Science with 7 years relevant industrial/research experience.

OR

Master's degree in Engineering/Ph.D. with five years relevant industrial/research experience.

cturer

1. A good academic record with a Master's Degree in Engineering in the relevant area.

   OR

   Doctorate degree in Science or in Humanities & Social Sciences in the relevant area.
2. Two years industrial/research experience in the related fields.

Senior Scientific Officer GR. II

Bachelor's Degree in Engineering/Master's degree in Science in the relevant area with two years relevant industrial/research experience.

OR

Master's degree in Engineering/Ph.D.

Departments and Fields of Specialisation

1. Applied Mechanics

For Professor/Assistant Professor :
- Fluid Mechanics

2. Chemical Engineering

For Assistant Professor/Lecturer :
- Transfer Operations
- Process Control
- Chemical Reaction Engineering

3. Chemistry

For Professor
- Polymer Synthesis characterisation and application
- Organic Molecular Re-arrangements and Transformations,
- Organic Photochemistry
- Radio & Radiation Chemistry
- Surface Chemistry and Catalysis

4. Civil Engineering

For Professor :
- Structural Engineering

For Assistant Professor/Lecturer :
- Computational Geomechanics
- Building Acoustics, Ventilation and Construction Management.
- Hydrosystem Modelling

5. Computer Science & Engineering

For Professor/Assistant Professor/Sr. Scientific Officer I/Lecturer/Sr. Scientific Officer II:
- Any area in Computer Science

6. Electrical Engineering

For Professor :
- Analog Electronic Circuits
- Control System Theory
- Digital Systems
- Power Electronics & Drives

For Professor/Assistant Professor/Lecturer :
- Optical Communications & Signal Processing
- VLSI Design & Computer Engineering
- Communication Engineering
- Robotic and Power Electronics

For Assistant Professor/Lecturer :
- Television Engineering/Image Processing.

7. Humanities & Social Sciences

For Professor/Assistant Professor :
- Industrial Engineering Design Supporting System

For Assistant Professor/Lecturer :
- Applied Economics
- Personnel Management
- English Language Literature
- Managerial Economics
- Marketing

8. Mathematics

For Professor :
- Applied Probability
- Fluid Machanics & Microhydrodynamics

For Assistant Professor/Lect
- Analysis
- Algebra

9. Mechanical Engineering

For Professor :
- IC Engines
- Production Engineering

For Assistant Professor/Lecturer :
- Refrigeration & Airconditioning
- Design & Handling
- Turbomachines
- Production Engineering
- Machine Elements
- Machine Tools

10. **Metallurgical Engineering**

For Professor :
- Physical Metallurgy

For Assistant Professor :
- Material Science
- Metallurgical Thermodynamics
- Non-destructive Testing

11. **Materials Science Research Centre**

For Assistant Professor/Sr. Scientific Officer I :
- Material Science/Powder Matallurgy/Solid State Chemistry/Solid State Physics

12. **Ocean Engineering Centre**

For Professor :
- Soil Fluid Structure Interaction

13. **Physics**

For Professor :
- Diffusion Studies Solids
- Applied Optics

For Assistant Professor :
- Applied Optics
- X-Ray Crystallography
- Low Temperature Physics (with experience in the area of superconductivity desirable)

For Lecturer :
- Optical Physics and Laser Optics

14. **Regional Sophisticated Instrumentation Centre**

For Professor :
- Molecular Spectroscopy

General Information/Conditions/Instructions

(i) For all posts, where Postgraduate qualification is prescribed experience means experience gained after Master's degreee.

(ii) The prescribed qualifications are minimum and the mere fact that a candidate possesses the same will not entitle him/her for being called for interview.

(iii) The Institute reserves the right to restrict the number of candidates for interview to a reasonable limit on the basis of qualifications and experience higher than the minimum prescribed in the advertisement.

(iv) The Institute also reserves the right of reje ing any or all applications without assigni any reasons therefor.

For Application form, please address the REC STRAR, INDIAN INSTITUTE OF TECHNOLOG MADRAS 600 036 with a self-addressed stamp (Re. 1.00) envelope (26 cm x 11 cm). Applicants requested to indicate clearly the post and discipl for which they wish to be considered. Persons in service of Government establishments and Pul Sector Undertakings should apply through pro channel. Indian Nationals abroad may apply plain paper with full details of educational qualifi tions, research experience and names and addresses three referees from whom reference letters may obtained.

Completed applications with a crossed non-refu able current Indian Postal Order of the value Rs. 7.50 (Re. 1.90 for SC/ST candidates) draw favour of the Institute payable at IIT Madras P. should be sent to the Registrar of the Institute.

The last date for the receipt of completed appli tions is 4th March 1988.

REGISTR

SARDAR PATEL UNIVERSITY

VALLABH VIDYANAGAR-388 120

Invites outstanding original research works merit, carried out during 1983 to 1987 in "Solid St Physics" from researchers of Universities or Instit deemed as Universities or Institutes of National Le for the award of a cash prize and a Gold Medal bo amounting to Rs. 5,000/- under "Hari Ohm Ashra Prerit Shri Harivallabhdas Chunilal Shah Resear Endowment" which should reach the University lat by 31-3-1988.

A speciman of application form and the terms a conditions can be had from the Sardar Patel Univ sity by sending a self-addressed envelope affixed w stamps worth Re. 1/- or in person.

REGISTR

INDIAN STATISTICAL INSTITUTE

ADMISSION NOTICE 1

Session : 1988-89

Applications are invited for the following courses/fellowships for which duration, values of monthly pend/fellowship and eligibility conditions are briefly described below. Further details and other conditions available in the prospectus. Selection of candidates is based on academic record, written tests and inter-ws.

Bachelor of Statistics (Hons) : *Duration* : 3 years; *Stipend*: Rs. 250 ; *Eligibility* : Successful completion of 10+2 years of secondary education (or equivalent thereof) with Mathematics and English.

.2 **Master of Statistics :** *Duration* : 2 years ; *Stipend*: Rs. 400 ; *Eligibility*: 3-year Bachelor's degree with Statistics and Mathematics as full subjects or equivalent qualification, obtained after twelve years of secondary education. Those without Statistics, but having outstanding mathematical ability, may also be considered. Holders of Statistician's Diploma/Senior Diploma of ISI are eligible for admission to the second year of the course.

1.3 **Master of Technology in Computer Science :** *Duration* : 2 years; *Stipend* : Rs. 1000 ; *Eligibility* : Master's degree in a relevant subject or Bachelor's degree in Engineering/Technology or equivalent qualification and knowledge of relevant topics of Physics and Mathematics.

1.4 **Post-Graduate Diploma in Statistical Quality Control and Operations Research :** *Duration* : 15 months ; *Stipend*: Rs. 1000; *Eligibility* : Bachelor's degree in Engineering/Technology or Master's degree with Statistics or Mathematics up to graduate level or recognised research/other work in Statistics.

2. **Junior Research Fellowships:** *Fellowship*: Rs. 1000. The Institute conducts research in many areas of Mathematics, Statistics and Economics and offers fellowships for Research Courses in these subjects leading to registration for Ph. D. degree of the Institute. Details are available in the prospectus. The Institute also offers fellowships in other research areas. Eligibility conditions for the fellowships are given below :

2.1 **Research Courses** leading to Registration for the Ph. D. degree : *Eligibility* (i) A good academic record with M.A./M.Sc. degree in Mathematics, Statistics, Economics or Econometrics or (ii) outstanding mathematical maturity with B.A./B.Sc. degree with Mathematics or Statistics or Economics as the main subject.

2.2 **Fellowships in other Research Areas :**

Group A : Several areas of Computer Science which include Analysis of Algorithms, Artificial Intelligence, Computer Communication Network, Computer Vision, Digital Communication, Fault Tolerance, Image Analysis, Parallel Algorithms and Processing, Pattern Recognition, Testable Design, VLSI Architecture. *Eligibility* : (i) A good academic record with M.Sc. or equivalent degree in Physics/Mathematics/Statistics or (ii) B.E. or equivalent degree or M.E. or equivalent degree in Electronics/Computer Science/Electrical Engineering.

Group B : Dynamical Meteorology, Hydrodynamic Stability, Statistical Theory of Turbulence, Viscous Flow, Sediment Transport and Theory of Dispersion. *Eligibility* : (i) A good academic record with M.Sc. or equivalent degree in Physics Mathematics/Statistics or (ii) B.E. or requivalent degree in Mechanical Engineering.

Group C : Quantum Mechanics and Quantum Field Theory, Nuclear and Particle Physics, Statistical Physics, Cosmic Ray Physics and Plasma Physics. *Eligibility* : (i) A good academic record with M.Sc. or equivalent degree in Physics/Mathematics/Statistics preferably with Physics or Mathematics at the graduate level.

Group D : (i) Stratigraphy and Sedimentation and (ii) Stratigraphy and Palaeontology. *Eligibility* : A good academic record with a Master's degree in Geology/Applied Geology/Geo-

logical Sciences and capability of undertaking field work.

Group E : Urban Human Biology/Biological Demography. *Eligibility* : A good Academic record with a Master's degree in Anthropology with specialisation in Physical Anthropology.

Group F : Advanced techniques of analysis in Demography, Stochastic models in Demography, Family Planning Programme Evaluation. *Eligibility* : A good academic record with a Master's degree in Demography/Statistics/Economics/ Sociology with Mathematics/Statistics at the g duate level.

3. **Certificate/Diploma Courses on Operation a Programming of Automatic Data Process Equipment :** *Duration* : 1 year for certificate a additional 1 year for Diploma if one attain specified standard in the Certificate Course. *T tion Fee*: Rs. 200 per year, no stipend. *Eligibili* (i) Age below 25 years on 1.4.88, (ii) Bachelo degree or equivalent with Mathematics as a su ject at higher secondary (10+2) level and (acquired typing speed of 25 words per minu

All courses/fellowships are offered in Calcutta. In addition, courses **1.2** and **2.1** are offered in bot Delhi and Bangalore.

Besides stipend/fellowship there is also a suitable annual book allowance for all courses except 2. Host facilities are available. Selection tests for the courses/fellowships will be conducted at a number of centre Candidates who have completed or are due to complete the qualifying examinations before **1 July 1988** ma also apply. This date may be relaxed by the Institute in case of candidates with outstanding academic record an performance in the selection tests and interviews. Candidates should satisfy themselves that they are eligible f admission to the course or for the award of the fellowship for which they apply. If at any stage it is found th a candidate does not satisfy the eligibility conditions or the information furnished in the application is incorrec the application will be cancelled. Prospectus and application form can be obtained from the **Dean of Studie Indian Statistical Institute, 203 Barrackpore Trunk Road, Calcutta 700 035**, by paying an amount of Rs. 15 by cash (between 11.00 a,m. and 2.00 p.m. on working days between Monday to Friday) or by crocsed posta order/bank draft payable at Calcutta in favour of "**Indian Statistical Institute**". Postal orders must contain th name and address (in block letters) of the sender. Money orders and cheques will not be accepted.

Last Date for receiving requests for Application Forms	:	**7 March 1988**
Last Date for receiving completed Application Forms	:	**28 March 1988**
Date of Selection Tests	:	**SUNDAY, 15 May 1988**
Tentative Dates of Interview	:	**20 June—30 June 1988**

CLASSIFIED ADVERTISEMENTS

ALI YAVAR JUNG NATIONAL INSTITUTE FOR THE HEARING HANDICAPPED

KISHENCHAND MARG, BANDRA RECLAMATION, BANDRA (WEST) BOMBAY 400 050

(An autonomous Registered Society under the Administrative Control of Ministry of Welfare, Government of India).

Invites applications for the following posts as per details given below :

Sr. No.	Name of the Post		No. of Posts
1.	**Lecturer** : (i) Audiology (ii) Speech Pathology	—1 —1+1*	3 (one each for R.C. Delhi & R.C. Hyderabad).
2.	**Clinical Assistant**		6
3.	**Vocational Instructor (Welding)**		1
4.	**Staff Nurse (part time)**		1
5.	**Assistant Trainer (Sign Language)**		1*
6.	**Artist**		1*

* FOR UNICEF PROJECT

MINIMUM QUALIFICATION

For post at Sr. No. 1	: (i) & (ii) M.Sc. in Audiology/Speech & Language Pathology with 2 years experience or B.Sc. in Audiology & Speech Therapy with 7 years teaching experience.
For post at Sr. No. 2	: B.Sc. in Audiology & Speech Therapy.
For post at Sr. No. 3	: (a) S.S.C. or equivalent. (b) Certificate in the respective trade from recognised Institute. (c) Training in any Advanced Training Institute (A.T.I.) and Apprenticeship. 2 years experience as Instructor or 3 years practical experience in Gas and A.R.C. welding.
For post at Sr. No. 4	: Degree or Diploma in General Nursing and Midwifery. Experience of Rehabilitation nursing preferred.
For post at Sr. No. 5	: Graduate, preferably B. Ed. Conversant with English and one more major Indian Language and interested in working with the Deaf.
For post at Sr. No. 6	: G.D. (Arts) from a recognised School of Art. Experienced as illustrator in any recognised Institution.

PAY SCALES			TOTAL INITIAL REMUN.
Post at Sr. No.	1	Rs. 2200-4000/-	Rs. 2,036/- p.m.
Post at Sr. Nos.	2 & 5	Rs. 1400-2600	Rs. 1,877/-
Post at Sr. No.	3	Rs. 1200/- consolidated	
Post at Sr. No.	4	Rs. 900/- p.m. consolidated	
Post at Sr. No.	6	Rs. 1200-2400/-	Rs. 1,651/-

AGE

For post at Sr. No.	1	:	Not exceeding 35 years.
For post at Sr. Nos.	2,4,5 & 6	:	Not exceeding 30 years.
For post at Sr. No.	3	:	Not exceeding 28 years.

Applications giving full details such as Name in full, postal address, Date of Birth, Educational Qualification with Xerox copies of certificates, details of experience should be forwarded to the Director, Ali Yavar Jung National Institute for the Hearing Handicapped, Opp. Bandra Telephone Exchange. K.C. Marg, Bandra Reclamation, Bandra (W), Bombay 400 050, within 15 days from the date of advertisement. Incomplete applications will not be considered.

Note : Out of the total posts 4 will be reserved for SC/ST, Ex-servicemen. In the event that these candidates do not become available the posts will be filled up by others on year to year basis.

All the posts are temporary but likely to be permanent except UNICEF post which is for the project period only, the period of UNICEF Project will be minimum 1 year 3 months & maximum 3 years.

HIMACHAL PRADESH UNIVERSITY

"RECRUITMENT BRANCH" SHIMLA-171005

Advertisement No. 1/88
Dated : 29.1.88

Applications are invited (on prescribed form) for the following teaching posts so as to reach the **Section Officer, Recruitment Branch, H.P. University, Shimla-171005,** alongwith a crossed Indian Postal Order of Rs. 20/- (Rs. 10/- for SC/ST) payable to the Finance Officer, H.P. University, by **February 27, 1988.**

I. Professors : (Pay Scale : Rs. 1500-2500) in the following subjects of P.G. Centre:

Bus. Administration-1.

Public Administration-1 (Plan Post).

II. Readers : (Pay Scale : Rs. 1200-1900) in the following subjects of P.G. Centre :

Public Administration-1 (Plan post)
Statistics-1 (Plan post)
Journalism-1 (Plan post)
Computer Sciences-1 (Plan post)
Yoga-1 (Plan post)
Education-1.
Sanskrit-1

Chemistry-1 (Specialisation in Organic/Inorganic/Analytical/Physical Chemistry. Experience in experimental and theoretical spectroscopy will be preferred).

III. **Lecturers** : (Pay Scale : Rs. 700-1600) in the following subjects of P.G. Centre :

Statistics-1
Computer Sciences-1
Education-1
Chemistry-3 (Specialisation : One each in Physical, Organic, Inorganic/Analytical).

Essential Qualifications : Qualifications for all the posts are the same as prescribed by the University Grants Commission for Post-graduate classes.

Candidates already in service should send their applications through proper channel. An advance copy, however, may be sent direct.

Candidates called for interview will have to come to the place of the interview at their own expenses and bring with them their original research papers, degrees and certificates etc. for verification.

The University reserves the right to negotiate with suitable person or persons, if necessary, who may not have applied formally.

The University also reserves the right to fill up or not to fill up the post/s or to call only selected candidates for interview. The number of posts likely to be filled may vary.

Application form can be obtained from the **Section Officer, Recruitment Branch, H.P. University, Shimla-171005**, personally on payment of Rs. 5/- or by making a written request to him accompanied by self-addressed envelope of 23 x 10 cms. with postage stamps affixed worth Rs. 1.40 paise and a postal order of Rs. 5/- drawn in favour of the Finance Officer.

Note : (i) Applications received on plain paper, applications not in confirmity with the requirements as specified in the application form and applications received after the last date will not be entertained, and no correspondence will be entertained in this regard.

(ii) A person applying for more than one post should send a separate application for each post.

(iii) Other things being equal, preference will be given to the candidates belonging to the SC/ST for appointment to the post of Lecturer.

(iv) Persons those who have applied earlier in response to this office advertisement Nos. 6/86, 1/87 and 4/87 dated 25.11.86, 7.3.87 and 17.10.87 respectively, need not to apply again. However, they may send additional informations, if any.

A.R. Chauhan
REGISTRAR

RAJASTHAN AGRICULTURE UNIVERSITY

BIKANER CAMP : UDAIPUR

Advertisement No. 2/88

Dated : January 27, 1988

Applications are invited on prescribed applications form for the following posts in Teaching/Research/Extension on regular basis in the University. The application form and **Full details about qualifications as prescribed by the University** etc. can be obtained from Shri P.P. Mathur, Deputy Registrar, University Camp Office, Udaipur Pin-313001 on payment of Rs. 5/- through crossed Indian Postal Order payable to the "Comptroller, Rajasthan Agriculture University, Camp Udaipur" alongwith a self-addressed envelope of 27 cms. x 12 cms. size bearing Postal Stamps of Rs. 2.20 only and send the application form duly completed in all respect to the Registrar, Rajasthan Agriculture University, Bikaner upto **10th March, 1988.**

Those candidates who have already applied for these posts in response to previous advertisement No. 11/86 dated 27.12.86, 1/87 dated 29.1.87 and 3/87 dated 17.6.87 issued from Sukhadia University, Udaipur need not to apply again, but they should please send their fresh Bio-data (one side typed) on plain paper to update the same on the above address.

Pay Scale: Rs. 1500-60-1800-100-2000-125/2-2500.

1.	Director Research (Vety. & Animal Science)	1
2.	Associate Director Research (Vety. & Animal Science)	1

Associate Professor : Pay Scale : Rs. 1200-50-1300-60-1900.

1.	Animal Breeding and Genetics	1
2.	Child Development	1
3.	Farm Machinery and Power Engineering	1
4.	Animal Production	1

Assistant Professor : Pay Scale : Rs. 700-40-1100-50-1600.

1.	Animal Breeding & Gen.	2
2.	Animal Production	5
3.	Vety. Medicine	2
4.	Livestock Production & Management	1
5.	Home Management	1
6.	Farm Machinery & Power Engg.	1
7.	System Engineer (Computer Application)	1

General Note

1. Number of posts may be **Increased or Decreased.**

2. Application forms received after the expiry of the last date may also be considered at the discretion of the Vice-Chancellor.

3. 16% posts would be reserved for Scheduled Caste and 12% for Scheduled Tribes, subject to general suitability.

4. A higher start in the grade may be considered for exceptionally qualified candidate.

5. The University Reserves the right not to fill up post(s) advertised.

REGISTRAR

DR. YASHWANT SINGH PARMAR UNIVERSITY OF HORTICULTURE AND FORESTRY

SOLAN

CORRIGENDUM

In continuation of Advertisement No. 10/87 published in The University News on 21-12-1987, it is hereby notified that candidates having M.Sc. Forestry/M.Sc. with AIFC with consistently good academic record may also apply for the post of Scientist (Forestry) in the Scale of Rs. 1200-1900 appearing at Sr. No. IV (6) of the advertisement. The last date for receipt of applications for this post is hereby extended upto **7-3-1988.**

B.S. Nainta
REGISTRAR

HARYANA AGRICULTURAL UNIVERSITY
HISAR

Advertisement No. 1/88

Applications are invited for following posts on the prescribed proforma obtainable from Assistant Registrar (Faculty), Haryana Agricultural University, Hisar by sending self-addressed unstamped envelope size 23 x 10 cm. alongwith Indian Postal Order of Rs. 2/- in the name of Assistant Registrar (General). Candidates already in service must apply through proper channel. Applications, complete in all respects, accompanied by a fee of Rs 20/- for posts at Sr. No. 1 to 19 & 45, Rs. 15/- for posts at Sr. No. 20 to 44; Rs. 10/- for posts at Sr. No. 46 to 61,63; and Rs. 5/- for posts at Sr. No. 62 in the form of Indian Postal Order in the name of Assistant Registrar (General), Haryana Agricultural University, Hisar, payable at HAU Post Office, Hisar, should reach the Registrar by **9.3.88 (23.3.88** for candidates residing abroad). Incomplete applications and those received late will not be considered. Benefit of Contributory Provident Fund and Leave etc. admissible as per University rules. The applicants must possess prescribed qulifications and experience on the last date for receipt of applications. However, those who have submitted their theses (Master's/Doctorate's level) by the last date of receipt of applications are also eligible to apply. The date of submission of thesis must be supported by a certificate duly signed by the concerned authority of the institution. They will be considered by the Selection Committee only if they produce the completion certificate of Master's/Doctorate degree at the time of interview. The envelope containing application must be superscribed as "APPLICATION FOR THE POST OF—————————"

1. **Professor of Eminence in Agricultural Economics (Sir Chhotu Ram Chair)** (One) : Eminent Scientist of National and International repute with distinct and productive record of work in the discipline of Agricultural Economics.

2. **Professor (Forestry)** : (One) : **Essential** : (i) Second Class B.Sc./B.Sc. (Agri.)/B.Tech/B.E.; (ii) Second Class A.I.F.C. (Assoc. Indian Forest College/ Master's degree in Forestry or equivalent; (iii) Ph.D. in Forestry; (iv) Ten years experience in Forestry out of which 5 years should be in the rank of Associate Professor or equivalent. **Desirable** : Experience of post-graduate teaching and guiding research in Forestry.

3. **Professor of Family Resource Management** : (One) : **Essential** : (i) Second Class B.Sc. (Home Sci.); (ii) Second Class M.Sc. in Home Management/Family Resource Management: (iii) Ph.D. in Home Science/Family Resource Management; (iv) Fifteen years experience of teaching/research/extension. **Desirable** : (i) Extension experience in designing rural field work; (ii) Capacity for organization as Head of Section or Dept. of teaching or research institute administrative experience.

4. **Professor of Animal Breeding** (Leave Vacancy upto 18.11.1991) (One) : **Essential** : Second Class B.V.Sc & A.H./ B.Sc. (Animal Science)/B.Sc. (Agri.)/ B.Sc. (Dairying); (ii) 2nd Class Master's degree with specialisation in Animal Breeding; (iii) Ph.D. in Animal Breeding/Animal Genetics; (iv) Ten years experience of teaching/research/extension in Animal Breeding/Animal Genetics and evidence of having conducted independent research in farm animal breeding in the form of published work in scientific Journals of repute. **Desirable** : Training in Biological Statistics.

5. **Professors of Physical Education** (Two) : (i) 2nd Class BSH & PE/B.A./ D.P.E./B.P.E.; (ii) 2nd Class Master's degree in Physical Education; (iii) 20 years experience out of which atleast 10 years should be as Associate Professor or equivalent in Physical Education. OR Ph.D. in Physical Education with atleast 10 years experience out of which atleast 5 years should be as Associate Professor or equivalent. **Note** : Persons having administrative experience as Principal/ Vice-Principal will be preferred.

6. **Professor, Computer Centre** (One): (i) Master's degree in Computer Science, OR Computer Applications; (ii) 10 years experience in Computer Science especially Computer Programming including 5 years at Associate Professor's level. **Note** : Qualifications including experience relaxable for candidates found otherwise outstanding.

7. **Scientist (Nematode Taxonomy)** : (One) (Reserved for Scheduled Caste) : (i) Second Class B.Sc. (Agri.)/B,Sc.; (ii) Second Class M.Sc. in Zoology/Entomology/Plant Pathology with specialization in Nematology/Nematology; (iii) Ph.D. in Zoology/Entomology/Plant Pathology/Nematology with specialization in Nematode Taxonomy; (iv) Five years experience in Nematode Taxonomy research/teaching.

8. **Research Scientist (Anaesthesia)** : (One) : (i) Second Class B.V.Sc. & A.H.; (ii) Second Class M.V.Sc. in Surgery; (iii) Ph.D. in Surgery; 5 years experience in teaching/research/extension in Vety. Surgery & Radiology. **Desirable** : Advanced training in Vety. Surgery.

9. **Nematologist**: (One) (Reserved for Scheduled Caste) : (i) Second Class B.Sc. (Agri.)/B.Sc. Hons (Ag.); (ii) 2nd Class M.Sc. in Nematology; (iii) Ph.D. in Nematology; (iv) Five years experience of Teaching / Research / Extension in Nematology.

10. **Scientist (Forestry)** : (One) (Reserved for Scheduled Caste) : **Essential** : (i) Second Class B.Sc./B.Sc. (Agri.)/B.Tech./B.E.; (ii) Second Class (A.I.F.C. (Associate of Indian Forest College); (iii) Second Class Master's degree in Forestry or equivalent; (iv) Ph.D. in Forestry; (v) Five years experience in Forestry. **Desirable** : Training experience in Forestry Education/ Research.

REGISTRAR

JAMIA MILLIA ISLAMIA
JAMIA NAGAR, NEW DELHI-110025

Advt. No. 12/1987-88, Dated : 4-2-1988

Applications on the prescribed form which can be had from the Registrar's Office on any working day between 10 : 00 a.m. and 12 : 00 Noon or by sending a self-addressed and stamped (Re. 1/-) envelope of 10 x 23 cms. are invited alongwith the crossed Indian Postal Order or Bank Draft of Rs. 7/- for posts No. 1 to 12 and Rs. 5/- for post No. 13 (Rs. 2/- for SC/ST candidates irrespective of grade) for the following posts so as to reach the Registrar by **1 : 00 p.m.** on **29-02-1988.**

Ability to teach in Hindustani, particularly Urdu is a desirable qualification for teaching posts and adequate knowledge of Urdu and Hindi is essential for non-teaching posts.

D A., C.C.A., H.R.A., P.F., Gratuity, Pension and other benefits will be given as per Jamia rules.

Relaxation in any of the qualifications may be made on the recommendation of the Selection Committee in exceptional cases.

1. Assistant Registrars (Rs. 700-1600 unrevised).

(1) Good academic record with at least second class (C in the 7 point scale) Master's Degree.

(2) At least 3 years experience in educational administration.

Educational qualifications may be relaxed in case of an exceptionally meritorious internal candidate holding bachelor's degree.

2. One Technician (Chemistry) Rs. 1640-2900 revised.

Essential

3 years Diploma in Electronics.

OR

Graduate with Chemistry at least 10 years experience in Sr. Lab. Assistant in the Chemistry Laboratory of a University or comparable institution of which at least 2 years in a post-graduation laboratory.

Desirable

Experience of handling UV—visible Spectro-Photometer, I.R. NMR and X-rays.

3. One Technician (Physics) Rs. 1640-2900 revised.

Essential

Diploma in Electronics/Elect. Engg./Mech. Engg. with experience of handling Physics Lab. equipment, repair and maintenance of Lab. equipment, in particular electronic equipment desirable.

OR

Graduate with Physics at least 10 years experience as Sr. Lab. Assistant in the Physics Laboratory of a University or comparable institution of which at least 2 years in a post-graduation laboratory.

4. Two Technicians (Biological Sciences) Rs. 1640-2900 revised.

(1) **Essential :** M.Sc. Zoology. **Desirable :** Expertise in dissection work and preparations of slides.

(2) **Essential :** M.Sc. Botany. **Desirable :** Expertise in the maintenance of culture room, and herbarium.

OR

Graduate with Biology and at least 10 years experience as Sr. Lab. Assistant in the Biology Laboratory of a University or comparable institution of which at least 2 years in a post-graduation laboratory.

5. One Cartographer (Rs. 1640-2900 revised).

Essential

B.A./B.A. (Hons.) with Geography and P.G. Diploma in Cartography, at least with second division.

OR

M.S./M.Sc. in Geography with Mathematical Geography at least with second division.

OR

Graduate with Geography and at least 10 years experience as Sr. Lab. Assistant in a Geography Lab. in a University or a comparable institution of which at least 2 years in a post-graduation laboratory.

6. One Survey Assistant (Geography) Rs. 1640-2900 revised.

(1) M.A./M.Sc. in Geography with at least second division.

(2) 2 years experience of handling survey instruments.

7. One Instructor in Mechanical Engineering (Heat Engine & Mechanical Drawing) Rs. 1640-2900 revised.

(i) Diploma in concerned branch of Engineering.

(ii) Two years' teaching/professional experience.

8. One Workshop Instructor in Electrical & Electronics (Rs. 1400-2600 revised).

Matric or Secondary School with Certificate in concerned trade awarded by NCTVT and three years experience in the concerned trade or Matric with seven years practical experience in the trade concerned.

9. One Microphotographist (Rs. 1400-2300 revised).

Degree in Science with Diploma in Photography or reprography from the National Archives of India.

10. Junior Engineers in Civil and Electrical (Rs. 1400-2300 revised).

(1) Certificate of 3 years' Diploma in Civil/Electrical Engineering from the recognised institution.

(2) Minimum two years field experience.

(3) Working knowledge of Urdu, Hindi & English essential.

11. Two Store Keepers (Rs. 1200-2040 revised) one each in Chemistry and Biological Sciences.

B. Sc. with Chemistry/Biological Sciences Diploma in Store Keeping or 3 years experience of Store-Keeping

12. One Steno-typist (Hindi) Rs. 1200-2040 revised.

Matriculate with proficiency in typing with a speed of about 35 w.p.m. and proficiency in short-hand with a speed of about 80 w.p.m.

13. Drivers (Rs. 950-1500 revised).

(a) A valid licence as a Driver.

(b) Professional skill in driving and motor mechanics.

Desirable

Adequate knowledge of Urdu and Hindi.

Note : (1) Candidates who have already applied for the posts of Asstt. Registrar (Advt. No. 2/1983-84); Technicians (Chem., Physics, Bio-Scs.), Cartographer, Survey Asstt., Storekeeper——(Chem., Bio-Scs.) Advt. No. 5/1986-87 and Driver (Advt. No. 6/1985-86) need not apply again. They may, however, submit the additional information, if any, to the undersigned stating the post, applied for, before the last date mentioned above.

(2) 12.5% non-teaching posts shall be filled from amongst members of the Scheduled Castes and 5% from amongst the members of the Scheduled Tribes.

(3) The number of vacancies given in the advertisement above are liable to be changed without notice by the Jamia.

Khwaja M. Shahid
REGISTRAR

PANJAB UNIVERSITY
CHANDIGARH
(Advt. No. 2/88)

Applications are invited for the following posts so as to reach the Registrar, Panjab University, Chandigarh along with postal orders of Rs. 10/- by **29.2.1988.** Fourteen days extra time is permissible to persons who have to submit their applications from abroad. (All the posts are at present in the old grades which are likely to be revised soon).

1. **Professors :** Rs. 1500-60-1800-100-2000-125/2-2500

Ancient Indian History, Culture & Archaeology-1; French-1; Gandhian Studies-1; Kalidasa Professor in Sanskrit-1; Lajpat Rai Professor in Political Science-1; Philosophy-1; History-1; Computer Science-1.

2. **Readers :** Rs. 1200-50-1300-60-1900

Ancient Indian History, Culture & Arch.-1 (Temp. but likely to continue); Chinese-1 (Deptt. of Central Asian Studies); German-1; Law-1 (Temp. but likely to continue); Labour Law-1; Punjabi-2; Philosophy-5; Physical Education-2; Sanskrit-1; Urdu-2; Sociology-2 (one permanent and one temporary); Music (Instrumental)-1; French-1; Public Admn.-1; Computer Science-4.

3. **Lecturers :** 700-40-1100-50-1600

Ancient Indian History, Culture & Arch.-1; English-1 (Temp. but likely to continue); History-2 (Temp. but likely to continue); Philosophy-2; Sanskrit-2; Punjabi-2 (one permanent & one temporary but likely to continue); Punjabi Lexicography Unit-2; History of Art-1 (Deptt. of Fine Arts); Law-3; Folk & Punjabi Drama-1 (Deptt. of Indian Theatre); Music-3 (Vocal-2; Instrumental-1); Computer Science-1.

4. **Trained Instructor in Drama Performing Arts-1 :** Rs. 700-40-1100-50-1600. (Deptt. of Indian Theatre)

5. **Research Scholars :** Rs. 800/- p.m. (fixed) with an annual contingent grant of Rs. 3000/-.

Ancient Indian History, Culture & Arch.-1; Central Asian Studies-1; Economics-1; Fine Arts-1; Gandhian Studies-1; Law-1; Physical Education-1; Political Science-1.

6. **Research Fellows :** Rs. 800/- p.m. (fixed) with an annual contingent grant of Rs. 3,000/-.
Gandhian Studies-2.

7. **Technical Assistant—Grade II-2** (Centre for Computer Science & Applications) : Rs. 825-25-850-30-1000-EB-40-1200-EB-50-1400-60-1580. (Revised).

The candidates who have already applied for the posts of Readers in Sociology in response to Advertisement, No. 2/87, need not apply again. Their previous applications will be considered.

NOTE : 1. The Vice-Chancellor could place before the Selection Committee names of suitable persons for its consideration along with the applications received in response to the advertisement.

2. It is not obligatory on the part of the University to call for interview every candidate who possesses the essential qualifications.

3. The number of vacancies may change.

4. The University may also prepare panels of suitable candidates for appointment against vacancies occurring within a specified period.

10% of the Scholarships/Fellowships will be reserved for Scheduled Castes and Scheduled Tribes candidates provided they fulfil the minimum qualifications laid down for the award of such Scholarships/Fellowships. In case qualified candidates are not available the reserved Scholarships/Fellowships wi be treated as unreserved. **The candidate for Scholarships/Fellowships whose result for the qualifying examinations are no declared by the closing date, may also apply. However, they must intimate their results (if otherwise eligible) to the concerned Department before the date fixed for selection.**

Candidates for the posts of Professors and Readers who do not possess a dectoral degree are required to submit 10 typed/cyclostyled copies of brief resume of their published work. The candidate has the option to fill this form in all respects on both sides and to attach 9 photostat copies thereof. The candidates are also required to attach ten copies of the list of their research publications with their 'Summary Biodata'.

15% posts of Lecturers will be reserved for the members of the Scheduled Castes and 7½% for the members of the Scheduled Tribes, but these will be treated as unreserved if no suitable Scheduled Castes/Scheduled Tribes applicant is available.

Persons already in service must route their applications through proper channel. They may, however, send an advance copy of their application, on the prescribed proforma, direct to the University. They will be allowed to present themselves for interview only on the production of a 'No Objection Certificate' from their employers. Incomplete forms will not be considered. Forms received after the due date are liable to be rejected unless the Vice-Chancellor condones the delay by a special order. Attested copies of certificates in support of qualifications for Matriculation/School Leaving, Graduation, Post-graduation examination as also for Doctorate degree, be attached to the application. Canvassing in any form will disqualify the candidate.

Application forms, along with detailed qualifications can be obtained from the Cashier, Panjab University, Chandigarh, personally, on payment of Rs. 2/- or by making a written request to the Assistant Registrar (Estt.), Panjab University, Chandigarh, accompanied by a self addressed stamped (worth Rs. 3.40) envelope of 23 x 10 cm and postal order of Rs. 2/- drawn in favour of the Registrar, Panjab University, Chandigarh.

Religion and Higher Education

T.S. Sodhi*

Education can have many a aim i.e. knowledge, occupational perfection, emotional maturation, personality development, socialisation, moral development, spiritual development, etc. etc. Moreover, aims of education have been changing with the passage of time in different societies. Out of the cities in ancient Greece, in one i.e. Sparta, the main aim of education was to make good soldiers, while in the other i.e. Athens, education gave more attention to democratic values of life. In Rome, the stress was more on the creation of welfare state than on the development of the individual. During Nepoleon's times, in France, the aim of education was the development of ethical values, within the framework of Christianity with an additional aim of loyalty to the head of the state. In U.S.A., during the first world war, education was meant to give moral and spiritual training to those who were to guide the destiny of the nation in the days to come. In U.S.S.R. the aim of education is the cultivation of Marxian consciousness. During Mao Tse Tung times, in China, the emphasis on education was to remove all traces of feudalistic and capitalistic values. However, it seems that development of personality and character, in restricted terms, continued to be of permanent value in all the educational systems. In India, during olden times, Brahmin education laid emphasis upon salvation or self-realisation. With the help of religion; under Buddhist influence 'satya & ahimsa' were fundamentals for education; during Muslim times schools taught to lead a pious and dutiful life; during the British period, the motive of educational system was more political so as to create a class of persons who were Indians in blood and colour, but English in tastes, morals and intellect. However, in free India, Kothari Commission wanted education to be related to modernisation, productivity and cultivation of social and moral values. A peep into the aims of education reveals that in India spiritual development occupied a respectable position in one form or the other. It is yet another question that it was done with or without the help of religion. The historical fact is that in India, it was done mostly with the help of religion and different religions placed emphasis upon different aspects of life.

What is Religion ?

In accordance with Chambers' Twentieth Century Dictionary, "Religion is belief in, recognition of, or an awakening sense of a higher unseen controlling power or powers, with the emotion and morality connected therewith ; rites or worship ; a system of such belief or worship; devoted fidelity; monastic life; a monastic order". Thus religion is the belief in, recognition of or awakening sense of a higher unseen controlling power or powers. This also makes a man enlightened. However, a man can become knowledgeable even without it and create things like Atom and Hydrogen bombs, which may bring the end of the world. In other words, one can become wiser even without religion and development of spiritual values. He can become a scientist with a strong value system or without any value system.

**Reader, Department of Education & Community Service, Punjabi University, Patiala.*

The Upanishadas laid down "May it (the knowledge of Brahman) project us together: May it nourish us together! May we together acquire energy (through our study) and may our study make us effulgent! May we not hate each other! Om'! Peace! Peace! Peace". This kind of knowledge, however can only be gained with the education of the spirit which fall within the realm of religion and leads to salvation. About such developments, The Bhagavad Gita laid down "Verily there exists nothing in the world purifying like knowledge. Even if thou be the most sinful amongst men, yet by the gift of knowledge alone thou shall go across all sins. As blazing fire reduces wood into ashes, so does the fire of knowledge reduce all Karma to ashes. I shall tell thee that supreme knowledge having known which the sages have attained the highest perfection". Similarly, about such a knowledge the Holy Koran laid down, "Read in the Name of God who creates, who creates men from a clot of blood. Read, and thy Lord is most generous. He, it is who taught man, What he knew not. He is who made for you the ears, the eyes and the heart to acquire knowledge. He created man and taught him expression". In line with it, Muslim scholars who attended the first world Conference in Muslim Education decided in 1977, "Education should aim at the balanced growth of the total personality of man through the trainings of man's spirit, intellect, the rational self, feeling and bodily senses. Education should, therefore, cater to the growth of man in all its aspects; spiritual, intellectual, imaginative, physical, scientific, linguistic, both individually and collectively, and motivate all these aspects towards goodness and attainment of perfection. The ultimate aim of Muslim education lies in the realisation of complete submission to Allah on the level of individual, the community and the humanity at large".

In the same way, Christ said, "Lay not up for yourself treasures upon earth, where moth and rust doth corrupt and where thiefs break through and steal. But lay up for yourself treasures in Heaven, where neither moth nor rust doth corrupt and where thiefs do not break through and steal. For where your treasure is, there will your heart be also. Sell all that thou hast and distribute unto the poor, and thou shall have treasure in Heaven. For what is a man perfected if he shall gain the whole world, and lose his own soul". National Council of Churches of Christ USA laid down about Christian education: "The objective of christian education is to help persons to be aware of God's self disclosure and seeking love in Jesus Christ, and to respond in faith and love, to the end that they may know who they are and what their human situation means, grow as sons of God rooted in the Christ community, live in the spirit of God in every relationship, fulfil their common discipleship in the world, and abide in the Christian hope".

Similar are the thoughts of Guru Nanak who said:

"The God-man utters the unutterable,
  becoming wise in the Wisdom.
He practises righteousness living in the
  midst of the family
He contemplates his Lord with Love and the heart,
And attains to God through (pure) conduct
  and the Word by Guru's Grace.
He is pierced through with the Word and,
  himself knowing, makes others to know.
And stilling his ego, he Meeges in God".

All this makes it clear that religion has more concern with the development of spirit than any other aspect of the personality. If it is concerned with the moral, ethical, aesthetic or even cultural sides of the personality, then these are subordinated to the spirit. There are ways and means to elevate the spirit. Different religions have shown the paths to this goal, which are almost identical. Anyway, our present system of education, has to a greater extent, failed to reach the development of spirit. It has ended at the lower level as has been shown in Figure 1.

Religion and Education

One can see that the aims of education and religion are identical so far as the development of spirit is concerned. However, religion always places the development of other faculties of man i.e. emotions and intellect in a subordinate position to it, whereas these faculties change their position in the hierarchy in all other types of education. For religion all knowledge is transcendental where as other schools of thought of educational philosophies, look into it from different angles. However, a common link between education and religion has been seen by almost all religions. Jesus said, "Be Ye therefore perfect even as your father which is in Heaven is perfect". Guru Nanak said, "Truth is great, but still greater is truthful living". Koran laid down, "Those who strive hardly in Godly path will certainly be guided by the Divine". Buddha wrote, "Ills never befall him, who clings not mind and body and is passionless". Gita emphasises, "He by whom the world is not agitated and who cannot be agitated by the world, who is freed from joy, envy, fear and anxiety—he is dear to me". Thus the fact is that all those who were religious were also educated and they established a link between the two. For them all religion was education. Thus, they were in favour of religious education. In this regard, Rousseau had said that object of education is not to make soldiers, magistrates or priests, but to make man and if such an education results in becoming a better citizen such an outcome is to be considered as a by-product of aiming at the improvement of his inner worth or an end in itself. However, there may be some educationists who do not believe that religion and education have the same aims. They may believe that moral, ethical, spiritual and cultural values can best be developed with the secular education. At times such an ideology becomes handy to multireligious societies like USA and India as many unhappy happenings have been experienced by them, which they attribute to religion, even when the fact remains that these had taken place because of the exploitation of religion. In India, it is laid down in the constitution, that religious education will not be imparted in the educational institutions where public funds have been invested. However, now the question being posed by those who have faith in religious education, is that during the last forty years when education has been developed and expanded without religion we have inbreeded more infightings, more degradations, more crimes and more corruption. The political system is dismal. The businessmen, the agriculturists, the bureaucrats, the politicians and so much so that even the teachers have become corrupt. Perhaps, there has never been so much of corruption in India, as is found today. Thus, even if it is admitted that religious education was harmful, more harm has been done by secular education to the masses. The thought is now again gaining ground that religious education needs to be introduced. It may apply some balm to the wounds of nation which has become so corrupt that people are losing faith in its capacity to keep India united. In many States, it is not the government which is ruling, it is the police which rules. Sri Prakaha Committee on Religious Education has chalked out the details for the school programme. We are mainly concerned in this paper with the programme of religious education in the system of higher education.

Place of Religion in Higher Education

It needs to be clearly understood that religion is not a panacea, that it will cure all the ills. However, if properly taught, it may help solve many of our problems. One of the objections to the introduction of religious education is the constitutional provision which stops us to do so. This can easily be done away with an amendment as our constitution has already been amended 57 times by now. It was perhaps why that all the education commissions i.e. University Grants Commission, Secondary Education Commission and Kothari Commission, had suggested and used the word moral education in place of religious education. The fact is that both types of education may or may not coincide with each other. Moral education needs to be looked from the point of view of the sanction of society when religious education will have the sanction of religion. In order to understand it in a better way we may try to know the hierarchy of values in Figure 1.

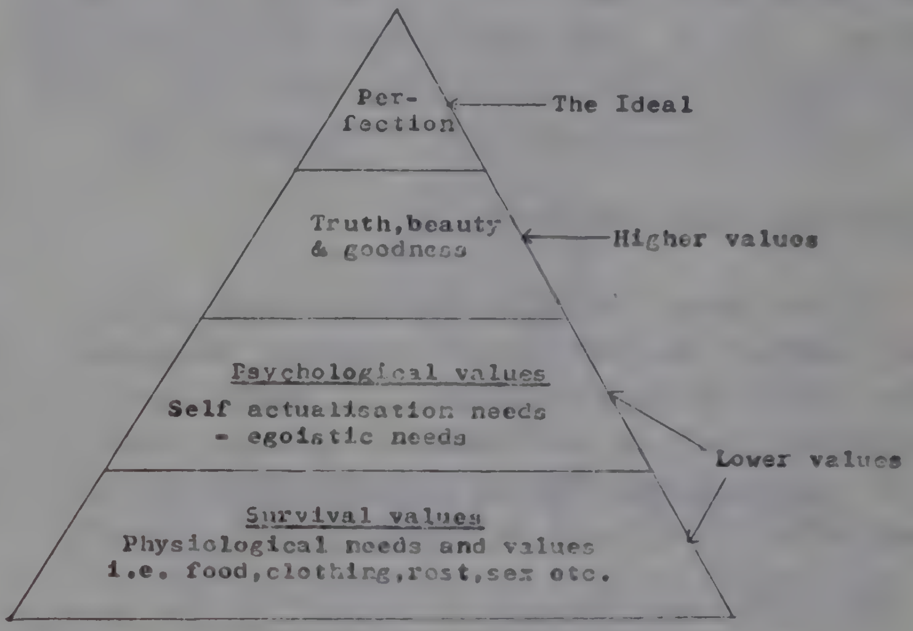

Fig. 1

The lowest are the survival values, which are also a must. If properly achieved, these can lead to higher values. However, many live only at this level. This level is common both in man and animals. Similarly higher than this are the psychological values, which again, if properly cultivated may lead to higher values. There may be very many who are developed only upto this level, which is a shade above the animal level. However, these too are values of a lower type. The higher values, when cultivated lead to ideal self i.e. salvation or mukti or heaven. It is also a fact that some end up with these values. However, if proper constraints are not applied the man is lost only in survival and psychological values. Similarly, one may be lost in higher values and may not achieve spiritual development and may end with moral development. All spiritual education is moral education, whereas moral education may or may not be spiritual. Some people argue that spirit can be developed with secular education. One cannot say that it is impossible but the possibility is remote. Religious education is, in fact, the royal road leading to the achievement of higher values and perfection. The objection of multi-religious society can well be settled by peeping into the value system and putting them in a scheme and hierarchy that differences are shuned and similarities are glorified. We have the model of the educational system of U.K., which solved many of her problems of discipline and development by teaching religion in schools as laid down in the Education Act of 1944. In fact, the remedy of our social, cultural, administrative, political, educational and development ills seems to lay in religious education. It may not solve all the problems, it is expected that it will help to a considerable extent. However, the way it was in existence before the partition may create more problems than solving, if each denominational institute teaches its own religion. In such a system the emphasis is on the glorification of one's own religion in comparison with others. This approach has already played a havoc with our society and is not to be appreciated. We will have to find ways and means to introduce it in a systematic and scientific way.

Introducing Religious Education

We can learn a lot from the West where comparative religion programmes or religious education is often given in secular schools i.e. public as well as denominational, on the basis of agreed syllabii in U.K., Australia, the Federal Republic of Germany and Sweden keeping in view the following two principles :

(a) Religious education is required to be taught in all the schools.

(b) They have varied religious and non-religious groups represented in the society with enough adherents in the major groups to threaten political disorder if a single religious doctrine was imposed on the students in schools.

During the Second World War, many of the ills of juvenile type, disturbed the value system of that society which was corrected to a considerable extent by introducing religious education in schools by the Education Act of 1944. In U.S.A. and Canada, the hippy movement, to a large extent is due to the lack of religious faith or one may say due to the gap created in the intellectual and spiritual development, by their total educational system.

We can draw a cue from it and introduce comparative religious education as a subject of study at undergraduate level. At the first instance it should be an optional subject to be taught only by those who have their M. Phil. or Ph. D. degrees in Comparative Religion. Departments of Comparative Religion be established in all the universities in which equal emphasis should be given to all the religions.

One thing more to be taken care of is that religious education needs to be introduced not only in the formal system of education, but in non-formal system as well as informal system also and ways and means worked out so that religious conflicts be avoided. By and by efforts be made to give command of religious places of worship, to only highly qualified persons and not to half baked persons knowing single religion. All such teachers as well as preachers be enlightened with the knowledge of other religions.

1. **Departments of Comparative Religion** : In every campus the Department of Comparative Religion should be so active that it should not only do research and find out ways and means to build up a common platform for all the religions, but do the extension work also in such a way that it should affect not only the persons in the department but outside the department also. The important days like birthdays and martyrdom days should be celebrated so that the narrow values and parochial thinking is done away with. All this is to be organised in such a way that broader and higher values, leading to perfection are established. For example, it needs to be made clear to all that Guru Gobind Singh never fought against Muslims but he did so against oppression and tyranny. It was a matter of chance that India was being ruled by Muslims at that time and most of such actions were done by them. However, there are instances that when tyranny came from Hindu kingdoms of hills, he opposed that also and waged a war against them.

2. **Quality Literature** : Universities and other bodies of academic nature should produce high quality literature i.e. books and journals on comparative religious education and libraries should be enriched with such material. The government should give liberal grants for the production and improvement of such literature.

3. **Daily Prayer** : Every institute of higher education should start with a prayer everyday and attendance should be compulsory. However, the programme should be made so interesting that all should love to attend it.

4. **Academic Courses** : Varied types of certificate, diploma and degree courses in comparative religion should be started in correspondence courses, open universities, comparative religion departments and departments of education, philosophy and sociology so that the insight is developed to aim at spirit along with morals.

5. **Multimedia Approach** : All techniques of non-formal education i.e. T.V. radio, libraries, films, film

strips and video libraries should be exploited to spread the message of comparative religion. It is heartening that the programme entitled 'Ramayana' being telecast by Delhi Doordarshan has earned respectability among the masses. Such programmes need to be encouraged.

6. **Teaching and Evaluation** : The scheme of teaching religion in institutions of higher learning by arranging morning classes, evening classes and sandwich programmes be encourgaged. However, the evaluation system be different. It should aim at value development rather than getting marks in the examination.

7. **Participatory Sermons and Study Groups** : Another innovative method could be in which more active learning takes place. It can be the participatory sermon in which the students may respond to the questions posed by the teacher of religion during the sermon. It may take the shape of teacher/student dialogue during the sermon or may follow the sermon as an open discussion, debate or panel discussion.

8. **Student Centred Projects** : The areas of interests and problems of the students at different stages of education and in different disciplines be identified. On this basis the teacher can formulate religious education projects by identify passages from different religious scriptures and also stories of religious leaders, saints and Bhagats so that conflicts in the minds of the students is resolved. This technique is mostly used in Sweden.

9. **Social Action Programme** : Social service is one of the essential components of religious education. This can effectively be combined with the teaching of religion in four ways :

(a) Classes can be held in the places of religious worship or colleges and universities but taught in a new way i.e. cognitive learning.
(b) Social service as is given in Mandirs, Gurdwaras and Churches be popularised.
(c) Small intimate discussion groups (affective learning) be formed.
(d) Participation in issue-oriented movements (action involving learning) be encouraged. Schemes like NCC, NSS and Nehru Yuvak Kendras be made more effective by giving them religious colour.

10. **Dramatics** : These have since long been used in India for the celebration of Dussehra, Diwali etc. It is an effective way to teach religion. However, its traditional form can be creative dramatics, role playing, socio-drama and psycho-drama. In each of these the actors spontaneously devise their own speeches and actions in response to the behaviour of others in the play. Such dramatic forms can reflect daily life and thereby furnish the actors practice in ways of responding to real life decision-making demands.

11. **Multi-media Approach** : Examples could be discussion session, filmed interviews with important religious personalities, position illustrating personal and social issues, filmstrips and motion pictures. A Dutch based inter film organisation furnishes information about available films and ways in which these can be used in religious instruction.

12. **Radio and Television** : In India and abroad, both radio and T.V. are being used to educate the masses. However, there is a need for improvement so that it could be put to innovative and effective use. In USA during 1981 there were 36 television stations maintaining full time religious schedules, with some stations operating 24 hours a day. In India, it is being done on T.V. less frequently. However, radio is doing it in a more effective way. AIR Jullundur relays Gurbani every morning and Gurbani Vichar programme every evening.

Educational Personnel

Throughout the world religious education instructors are more diverse in their qualifications than are instructors teaching secular subjects. Teachers of religion range in background from those with advanced university degrees in theology and in teaching methodology to others who have had no teacher training and who held only a slight knowledge of religion. There may be diversified reasons for that in different societies. For example, in Netherlands lay persons teach in Sunday schools, regulars classroom teachers teach religion in primary schools, and clergymen or theologically trained laymen teach religion in secondary schools. There are different traditions of giving religious education with different religious groups in India. However, on the whole those who do religious teaching are not degree holders, but laymen having some knowledge of their own religion only. This is, in fact, the main cause of misdelivery of goods in the programme of religious education in India. In order to organise it on firm footings, first of all, comparative Religion Departments will have to be established in all the universities and the curriculum so framed that there is little chance of ideological clashes or neglects or misinterpretations. These departments should have not only M.A. classes but M.Phil and Ph.D. programmes also. Only those who have M.Phil or Ph.D. degrees should be allowed to teach comparative religion in college and universities.

Conclusion

We have, now for about 40 years, lived in a society which has no religious education programme in schools and colleges in a formal way. The result is clearly before us. We are leading towards intellectual development but moral, legal, ethical, spiritual and social degradation. The society is full of corruption. Not to talk of politics and bureaucracy, even teachers, doctors and so much so that clargymen are corrupt. The prices are rising daily, hypocrisy is on the increase, adulteration is the order of the day and even medicines are being adulterated. Less said the better for the social scene of India. In many States, there are disturbances and administration is reduced to police states. So much so that even places of worship have been used for political purposes without any ethical standards. The administration is so illogical that they attribute these features to religion and put all the blames to it, even when there is little chance of their being true. The situation seems to be similar to that of Guru Nanak days about which he has said :

> "The officers are corrupt, the kings are butchers. The religion is found nowhere. Falsehood is ruling and the moon of truth is visible nowhere".

The present education is leading us nowhere. The only way to save the Indian society from further deterioration is to introduce comparative religious education in schools, colleges and universities and to make a web of it in non-formal channels of education. However, caution will have to be exercised that real intellectuals with broader outlooks and higher degrees teach it so as to avoid the unpleasant happening which could to a greater extent be attributed to those who handled it without enrichment of knowledge of other religions. □

Frontiers of Science and Technology

The Indian Context

Prof. C.N.R. Rao, Director, Indian Institute of Science, Bangalore, delivered the Presidential Address at the Platinum Jubilee Session of the Indian Science Congress held at University of Poona. In a wide-ranging address charting developments in Chemistry, Advance Technology Materials and other frontier areas; discussing issues in higher science education and manpower training; and touching on the role of scientists, teachers, the Indian Science Congress Association and the Government in the development of science and scientific temper in the country' Prof. Rao observed, "We have to be leaders in science and technology to show that even poor countries of the world have much to contribute to society in the modern world and that science is not the prerogative of only the advanced and rich nations". We are pleased to publish excerpts of this very thought provoking address for the benefit of our readers.

Introduction

The topic is obviously important since we in India have decided to take the path of science and technology to ensure development of our society. We have no choice other than to be abreast with the most up-to-date developments in science and technology. We would, have to compete at least in some of the areas with the rest of the world, and at the same time identify those areas of special concern to us where, through the application of science and technology, we can make a signal contribution in solving the pressing problems, related to the needs of the common man. There is a third aspect of science and technology, where by virtue of certain geographical and other natural advantages, we would have to be world leaders; beneficiation of solar energy may represent one such area.

Some may feel that it is not necessary to worry about the frontiers of science and technology, if our main concern is to alleviate poverty and human suffering. But we should not forget that to take care of the health of the poorest amongst us, we require science and technology; to grow the food we require, we have to apply advanced science and technology. In order to find substitutes to our depleting natural resources and also to discover newer types of materials required for construction, electronics and for alternate sources of energy, we require advanced science and technology. It is for this reason that I believe that the frontiers of science and technology are of direct relevance to even the poorest country in the world. Particularly in a large ountry such as ours with a large population, we cannot possibly afford to depend on advances in science and technology obtained elsewhere and depend on other countries to provide the help we need.

Smaller countries would have small requirements; they would need small quantities of food, fertilizers, medicines and most materials. We, on the other hand, require large quantities of anything that we can think of. We can only compare ourselves to the larger countries of the world in terms of our needs. This places on us a special responsibility not only to our society but to science and technology itself. We have to be leaders in science and technology to show that even poor countries of the world have much to contribute to society in the modern world and that science is not the prerogative of only the advanced and rich nations. Unless we do so, our life will continue to be dominated by outside influences, and this would be very bad for us.

Applied Versus Basic Research

It would be appropriate here to comment on the unnecessary dichotomy between applied and basic research that seems to plague our scientific efforts. Many people have felt that we need to do mainly or only applied research in a developing country such as ours. I feel that this would be a poor way of doing science. I suggest that for sake of science and technology in the country, we stop using the terms "applied" and "basic" research from now on. Basic research is driven mainly by the aspirations of scientists who make discoveries; we could classify such research as discovery-driven research. There is the other kind of research, which we may call society-driven (or market-driven) research. Scientific breakthroughs come rarely in discovery-driven research, but once made, they lead to major innovations and quantum leaps in science and technology. Such research requires time, patience, perseverance and dedication, and results cannot always be predicted. The discovery of the electron is an old example of discovery-driven research. Lasers constitute a modern example of discovery-driven research. When the laser was first discovered, it was not expected to have great applications. Today, lasers are required in engineering, medicine and many other spheres.

Whether a country is rich or poor, lasers will be used in some way or the other. Once a major discovery is made, a considerable amount of applied research will have to be carried out to see that the result of the discovery become useful or lead to innovation.

Let us look at what I called market-driven or society-driven research. Here, the research is motivated by societal forces demanding certain products or innovations. For example, there may be a need for a specific type of high strength polymer or a special variety of hard material. Although the objectives are clearly spelled out, in order to make such a material one may have to carry out considerable fundamental research. Immaterial of whether research is discovery-driven or society-driven, it may require fundamental as well as applied work in order to give rise to innovations. It is only in limited instances that ready solutions to short-range problems are found by simply applying known principles or techniques. Applied and basic research are equally important components, and both required a high quality of mind. We cannot possibly have second-rate scientists for developmental work and first-rate scientists for fundamental work.

Let us look at another example. Today one can cover a given surface of a metal with a diamond coating. The principles are known. But to do this in the laboratory, it is not very straightforward. We have to understand the fundamental processes involved and only when the various parameters involved in the technique are mastered, can the application scientist or engineer think of applications. A similar situation holds for the high-temperature superconductors. We have discovered materials which become superconducting around 100 K. If this has to reach the common man in terms of innovations in electronics, transportation or power transmission, the effort required is considerable. It may take years of hard, innovative research to obtain meaningful results.

The Global Scenario

Today, science and technology are advancing at an extremely rapid pace. The pace is so fast indeed that we have to keep galloping just to remain stationary. The explosion of scientific knowledge is superexponential and to fully keep up with the literature is almost impossible. Under these conditions, can we compete meaningfully in the frontiers of science and technology from India ? Of course, there are many impediments due to the poor infrastructure, shortage of talented workers, oppressive bureaucratic practices and inadequate information systems. In spite of such limitations, we still have a chance, if we become more optimistic and approach problems with dedication. This does not mean that it is not going to be difficult to beat the pressures to buy foreign technology indiscriminately or to get world recognition in basic science. Even if one produces laboratory results of a quality comparable to the best, the world may not rightaway give the due recognition. The main point is that we just cannot afford to give up.

The view of India in the world has changed in the last few years. Most countries in the world (including the advanced ones) consider India to be a fairly advanced country in science and technology. This is not altogether a happy situation. This means that we can no longer behave like a "poor" country in science and technology. We have to really become good and competitive, at least to live up to this reputation. Otherwise, I am afraid that the reputation may not turn out to be a blessing and instead may become a burden.

Frontiers of Relevance

In addition to the obvious areas of Science and Technology, related to the pressing problems faced by the country in food, health and housing, the three areas of greatest importance for development are energy, transportation and communication. In these areas, we will have to do proper planning for the next decade or two and carry out all those aspects of research and development that are crucial to make progress. We are facing an energy crisis which is likely to continue for some years. Without proper communication and transportation, there will be no social integration in the country, which is essential for progress. I shall now talk about some typical frontier areas to illustrate what I mean by relevant research and development of the highest quality. The first area I have chosen is related to my first love, namely, chemistry.

Frontiers of Chemical Science : A Case Study

Chemistry, being a central science, provides the basic understanding that is required to deal with a large variety of needs of our society. Whether it is feeding and clothing our population, tapping new energy sources, improving health and fighting disease or finding new substitutes for the dwindling natural resources, chemistry plays a crucial role. Fundamental research in chemistry will be of great help to the future generations in coping with new and unexpected proplems and in answering their needs. Chemistry has been developing interfaces with other science such as physics and biology at such a phenomenal pace that the scope and structure of the subject keep changing continually. It is important to be on constant vigil not to miss opportunities to contribute to new directions and to apply chemical knowledge to answer newer challenges or obtain better solutions to problems.

The subject has grown explosively in the last few years. Chemists have synthesised over 8 million compounds. The doubling time in discovering new chemical compounds is now hardly 10 years, compared to 40 years in the 1940's thanks to new diagnostic tools as well as better unifying theoretical models.

Some of the most important frontiers of chemistry today are synthesis, chemical dynamics, catalysis, theory and computer simulation, chemistry of life processes and new materials. Let me briefly touch on some important aspects of each of these frontier aspects.

The ability of chemists to design and invent new families of organic and inorganic compounds has surpassed all expectations and the gap separating organic and inorganic chemistry is decreasing. Metallo-organic compounds of controlled reactivity, molecules with clusters of metal atoms, molecules mimicking biological systems are typical of interesting synthetic aspects today. Novel kinds of agricultural chemicals (including sex-attractants and insecticides) and those required for the health of animals (including humans) continue to be of great relevance.

Our understanding of chemical dynamics has increased in the last few years and is beginning to uncover the intricate mechanisms of complex reactions. There is considerable scope to investigate the chemistry of the atmosphere, photochemical transformations and the chemistry of propellants. Today we are able to examine very fast reactions occurring even in picoseconds. Laser chemistry and plasma chemistry and chemistry of materials under extreme conditions provide real challenges.

Catalysis has emerged to become much more important today because of our ability to design catalysts better and to "see" surface reactions directly by employing powerful instruments. This area includes not only heterogeneous and homogeneous catalysis, but also electrocatalysis, enzyme catalysis and photocatalysis. The study of surface and interfaces is now an important and integral part of chemistry.

Chemical theory has come of age and is able to predict the structure and behaviour of molecules as well as of large systems. Computer simulation and statistical mechanics are indeed areas of great promise. Computers will play an unprecedented role not only in carrying out marathon calculations on structure and reactivity, but also as storehouses of information which will minimize or eliminate much of routine measurements.

It is only in the last few years that chemistry is being recognised as an essential part of modern materials science. Whether they are materials related to new energy sources or polymers for use as structural materials, chemistry plays a key role. Let us not forget that chemistry is itself a materials science. The new high-temperature oxide superconductors are highly complex chemical systems; even making and processing the well-known "silicon chip" involves numerous chemical operations.

The relation between chemistry and biology need not be emphasised. Chemistry gave birth to many new areas of biology, including molecular biology. Much of the efforts in biology and bio-technology have major chemical components.

We need to give priority to work in the different research frontiers of chemistry mentioned earlier. There should be greater support to chemistry from industry. Let us not forget that most of modern industry has a strong chemical base and the progress of advanced countries has been mainly through their chemical industry.

Investment of government in chemistry-based R&D as well as industry (including materials) should be increased commensurate with their importance. Indian chemical industry is hardly 30 years old and is now poised for major growth and it is estimated that investment in this industry during the next 15 years may reach Rs. 700,000 crores or more (excluding down-stream processing industries for elastomers, fibres, plastics etc). It is crucial that we examine our priorities in areas such as fertilizers, petrochemicals, agrochemicals, bulk drugs, polymers, speciality chemicals and biotechnology, taking into account our renewable and non-renewable resource pattern. We have to train better chemists to take up challenging tasks in R&D as well as in education; we are short of talented chemists.

Advanced Technology Materials :
A Crucial Area for Progress

Advanced technology materials have made a tremendous impact on the quality of life of man. The prosperity of a country is almost directly related to the magnitude of use of these materials. In fact, we can employ the usage of advanced technology materials as an index of development; clearly, this index distinguishes the developed from the developing countries. The investment on materials industries in advanced countries in the last few years has been stupendous, the turnover of certain materials reaching astronomical proportions. The fastest growing industry today—and probably the most demanding one as well—is that related to materials. Unfortunately, advanced materials have not entered the markets of India and other developing countries. There is also little or no industrial efforts in this direction. Yet the same materials that have been responsible for the progress made in advanced countries are required to improve the quality of life in our country. After all, better transportation, communication and energy alternatives are the crying needs in India and in almost all the developing countries. Let us briefly review some of the important classes of advanced materials.

Polymers have undoubtedly revolutionized our life style. In the world today, the average per capita consumption is 11 kg (compared to a developing country like India where it is less than one kg). Composites made of plastics or reinforced plastics (FRP) are used widely. In the US, composites are used in transport and aerospace applications to the tune of 26% (compared to 5% in Inda). FRP is used to the tune of 850,000 tons per year in the US and 3,00,000 tons in Japan (compared to 6,000 in India). The use of FRP in automobiles and other modes of transportation is well known. High performance composites made by using strong fibres (C, B or aramid) are important new structural materials for aircraft and space industry. It is possible that future aircraft will use more than 50% of these composites. Automobiles are likely to use these materials in the future. The paramid (Kevlar) fibres (40% lower in density than fibre-glass) have already made a great impact on the aircraft industry. Carbon-carbon composites have also shown good results and increased potentialities.

Our main **energy sources** have been hydroelectric, thermal and atomic. In countries like, India, solar energy is available in plenty and throughout the year. The importance of making of materials for solar energy conversion is therefore obvious. Two means of beneficiating solar energy are photovoltaic or photoelectrochemical. For photovoltaic applications, silicon still remains the most viable material. GaAs and CdS are solar cell materials with special applications. For Photoelectrochemical cells, several oxide and chalcogenide semiconductors have been studied. An economical means of producing H_2 by this route is still not available. Electrochemical photovoltaic cells hold some promise.

Fuel cells (H_2 or CH_3OH) continue to be attractive as energy packages. Stabilized zirconia is a good oxygen solid electrolyte. We are yet to find a good proton conductor for CH_3OH fuel cells.

Hydrogen storage materials have been studied extensively. FeTi and LaNi are two of the candidates for this purpose. **Batteries** (or electrochemical cells) of various kinds have been produced or are being investigated. The most viable ones are still the lead-acid and NiCd batteries. For electric vehicles, the various possibilities are, Pbo_2/Pb, O_2/Zn, O_2/Fe, NiOOH/Fe and NiOOH/Zn. Miniaturized batteries (Ag—button or lithium for example) are being made; lithium intercalation in layered materials ($V_6 O_{13}$ or TiS_2) has proved to be effective for making Li batteries. Intercalation chemistry has indeed become a major area of study in solid state chemistry. Reversible electro-chemical doping of polyacetylene enables fabrication of a rechargeable battery.

Crystalline silicon has formed the backbone of much of **semiconductor electronics**. Its applications in computers and various devices are well known. As mentioned earlier, silicon is the only viable material to-date for photovoltaic energy conversion. Amorphous silicon, specially that doped with group III or V elements, seems to be on the threshold of becoming a good alternative in photovoltaic and other applications. By employing heterojunction structures with layers of amorphous SiC, over 10% efficiency has been achieved in large are structures. A number of II-VI and III-V semiconductors area used in electronic industry. Special mention must be made of GaAs and Al-doped GaAs which give high photovoltaic efficien-cies (> 20%). GaAs doped with III and V group elements are good light emitting diodes for optical communication (e.g. $GaAs_{1-x}P_x$). GaS itself can be made by CVD ($AsCl_3 + Ga$) or by the reaction of AsH with Ga and HCl. Hydrides of group V elements reacting with an organometallic such as $Ga(CH_3)_3$ is another method.

High-temperature **superconductivity** has been a dream of all scientists. This area has suddenly become promising because of the recent discovery of certain oxides of copper which show superconductivity above liquid N_2 temperature.

This is probably the biggest sensation since the discovery of the transistor. It was first found early in 1987 that oxides of the type $La_{2-x}Sr_3(Ba_x)CuO_4$ possessing the K_2NiF_4 structure show superconductivity in the region 20-40K. However, the Y-Ba-Cu oxhides exhibit superconductivity above liquid nitrogen temperature; these oxides are all related to the perovskite structure. There is no doubt that strategies will be developed to produce novel oxides and other materials exhibiting superconductivity at still higher temperatures (possibly at room temperatures). Undoubtedly, solid state chemists will have much to contribute to engineer such materials. Once superconductivity is found to occur at reasonable temperatures, levitation transportation would become practical. Power transmission and development of magnets (for MHD generation) would then be greatly revolutionised. Superconductors will be used widely in electronics (especially in computers).

There is a class of materials called the **ferroics** possessing two or more orientation states or domains which can be switched from one to the other through the application of one or more appropriate forces. These materials include ferroelectric and ferroelastic substances as well. Some of these (e.g., $LiNbO_3$) are important optoelectronic materials. Colour modulation and optical switching are facilitated by ferroelastic materials (e.g. GMo).

There is quite a likelihood that electronics will be replaced, at least partly, by photonics in the not too distant future. Replacement of the electron by the photon has tremendous consequences. Materials development for photonics is an area of great importance. It is noteworthy that methods of synthesis of some of these materials are crucial. Use of organic derivatives as precursors (e.g. oxalates, citrates etc. for the synthesis of PZT and PLZT or even $BaTiO_3$) is an example.

Photonics is likely to have a great impact on the future of computers, communications and laser technologies.

Fibre Communication has revolutionized modern communication practice. Generally, pure silica fibre is used for the purpose (140 megabits per sec. over 30 km distance without use of repeaters). Fibres made of heavy metal fluorides are now attracting considerable attention. For preparing high purity silica, the sol-gel route is used with hydrolysable organic derivatives such as tetraethoxysilane. The light sources used in fibre communication are generally Ga-As type III-V semiconductors (e.g., $Al_xGa_{1-x}As$, $Ga_xIn_{1-x}As_yP_{1-y}$); a variety of such laser materials are available for different types of applications.

The development of samarium-cobalt and related alloys was a major landmark in magnetic materials. Traditionally, ferrite materials have been widely employed in communication industry. In Japan and US alone, hard and soft ferrites are used to the tune of $600 million a year. The newest of the magnetic materials are Fe-Ni-B based amorphous alloys with high permeability, low magnetostriction and high mechanical hardness. The Fe-Nd-B system is the most powerful magnet known hitherto. These as well as the new superconducting materials will undoubtedly usher in a new era in the world of magnetic materials.

Other than the ferrites referred to earlier, a number of advanced ceramic materials are gaining increasing importance. Structural ceramics required for engine systems require high strength, low thermal conductivity, high thermal shock resistance, chemical inertness and other properties. Silicon nitride (Si_3N_4) has turned out to be a good material for high temperature applications; this can be made by many routes, including CVD and reaction bonding.

Sialon obtained by ingenious chemical substitution of Si and N by Al and O respectively is another such material; several modified sialons have also been studied. Toughened zirconia ceramics are used for thermal insulation in turbines etc., because of its low and constant thermal conductivity. Transformation toughened zirconia has also found useful applications. Some of the sensor materials (e.g., stabilizer zirconia is an oxygen sensor) also employ certain ceramic materials, mainly oxidic.

In the key sectors of communication, energy and transportation, almost everything seems to be of high priority. The relative priorities of materials would vary from country to country depending on the state of development. There are, however, some materials which are of immense importance universally—typical of these are the following :

Communication	:	Fibres Ferrites
Energy	:	Solar energy materials (Photovoltaic, PEC, etc.) Batteries Fuel cells
Transportation	:	Composites (FRP, etc.)

Research and development and success related to the above would benefit India greatly. There are some materials where R&D as well as applications will be possible in the near future only with considerable improvement of the infrastructure in science and technology. Typical examples of such materials are :

Superconductors	:	For electronics, power transmission, magnets and transportation
Advanced ceramics	:	For turbines and transportation
High performance composites	:	For automobiles, aircraft and space applications
Optoelectronic materials	:	For photonics

Even in these areas, once the technology becomes feasible, there will be widespread use everywhere, possibly with a time gap between the advanced and the developing countries.

We, in this country, will have to work out our requirements of the various advanced technology materials and keep a vigil on this fast-growing area. It may be advisable to have a national coordinating and monitoring body for R & D in materials.

Other Frontier Areas

We have to examine our priorities in all other frontier areas of physical, biological and earth sciences as well as in engineering and technology, but I shall not touch on these areas since I have no real expertise in them. I shall however mention one area of vital importance to us not only because it represents a frontier but also because we have a chance of being as good as anybody else in the world. It is the area of **Parallel Computing**. With the advent of inexpensive and powerful microprocessors, it has now become feasible to build a computer by inetrconnecting a large number of microprocessors. Such a computer, referred to as a parallel computer, can solve problems requiring intense computing. Parallel computers reaching supercomputer capability can be built at a modest cost. The speed of parallel computers can only be exploited if new algorithms tuned to the structure of these computers are developed. Research and development in this area is in its infancy all over the world and we have a good chance of becoming world leaders in software, with great export potential.

Issues in Higher Science Education

Much of the fundamental science in the country is carried out in our universities, and the state of our universities is becoming worse and worse with time. Citation of the work done in India or of the journals we produce has not been gratifying. Unless we do something about higher science education in our universities, there is little hope that science in our country will prosper. We cannot afford to forget that the future of science and technology will crucially depend on the products of our universities.

There is so much written about higher science education in the country that there is probably little new that one can add. Higher science education today presents a rather discouraging picture. There are serious complaints at all levels about the lack of responsiveness in the system. Academic activities are at a low ebb. Several factors of a complex nature have contributed to the present condition. Some of the factors are related to processes and pressures in our society, and therefore, reflect the social features prevalent in a particular region. However, there are several aspects where planners, administrators and teachers can do much.

We cannot consider the problems and challenges of higher science education without reference to the problems faced in school education. Inculcation of the scientific attitude in students is most essential in the early school years. It is also important that there is a proper vocational stream available at school level so that all students do not rush towards higher science and technical courses at college level. In spite of the various problems we are facing in science education it must be admitted that many good students still come out of our school system, and a good percentage of them do extremely well in scientific and technical professions. However, in a large majority of schools in the country, the quality of training and facilities are inadequate, and we have to bring them up to a reasonable level.

The common problems associated with undergraduate science education are well known. Undergraduate education is concentrated in colleges, many of which are under-equipped, overcrowded and poorly staffed. Laboratory and library facilities are generally inadequate; proper textbooks are not available. The level attained by a B.Sc. in India today is much inferior to that of a graduate in advanced countries. It is at the undergraduate level that there is a sudden gap in the quality of education. While there are some select centres where the quality of postgraduate science education is reasonable, similar undergraduate centres are not available for bright students who want to take up science. Undergraduate curricula are rigid even in the best of places. Combinations such as PCM and CBZ do not provide the necessary breadth or depth. The absence of flexibility has made it impossible for a good student to obtain sound, well-rounded training. For example, a physics student cannot study biology just as a biology student can never study mathematics or physics. We have to make flexible programmes available and ensure that all science students have adequate background in mathematics and biology. At best, we are imparting some information to students, but little knowledge or wisdom. Quoting Elliot, "Where is the wisdom we have lost in knowledge ? Where is the knowledge we have lost in information ?".

All those who take science courses at the undergraduate level are not necessarily going to be scientists. It is, therefore, important that we have at least two streams in science education—one of a general nature and another of a specialised nature (for those who want to be scientists). The absence of such specialised training opportunities is making our undergraduate science education not so meaningful.

In another 15-20 years, undergraduate enrolment may get doubled. Can we even duplicate the present facilities (however poor) ? Selectivity is obviously important.

We have to find ways of tapping the best talent in the country for science and provide the best possible training to talented students in selected institutions. Present efforts in this direction are inadequate.

Many of the problems mentioned with respect to undergraduate science education also hold for postgraduate education. There are too many institutions offering postgraduate education in science. Most of them are under-equipped and poorly staffed. I see no point in producing such a large number of M.Sc. graduates; the number of people trained at the Master's degree level should have some relation to national manpower requirements.

University departments are expected to carry out research. Although some good work has come out of the universities, it would not be wrong to say that most university departments have poor facilities. They are also short of highly qualified and motivated teachers. Now-a-days, research support to individual scientists is quite satisfactory. Institutional infrastructure is generally unsatifactory. Shortage of student accommodation and amenities, poor electricity and water supply are common. Unless the universities have sufficient strength to support higher education and research, the support we may give to individuals or departments would not yield maximum benefit. It is important that universities get more basic bread and butter funding. It should be psosible to give a reasonable percentage of research grants as overheads to universities, plan budgets allocated for science in the educational sector being too meagre for the purpose.

Even in an advanced country like the United States, people are concerned about the decreasing quality of instruments and other facilities even in the major universities in order to carry out advanced research in science and technology. Scientists in Britain are worried about the competitive capacity of their universities. We can imagine how serious our problems are.

We can make a large number of recommendations, but there would be nothing new in many of them. Many such recommendations would cost enormous money and it would be unrealistic to expect all of them to be accepted or executed. Some important action plans, however, would not require much money, but would rather require our determination to improve the quality of education. I list some of them here at the cost of some repetition. Admission to the science specialization stream should be made selective; students in the special stream in undergraduate education must get the best possible science education. A few model undergraduate science institutions should be supported in each state to attract students for science just as IITs and Regional Engineering colleges have been attracting students for engineering education. The facilities and capabilites of certain established major institutions (such as IISc, IITs, TIFR) should not be made responsible for the conduct of undergraduate examinations. Separate examination boards of groups of colleges should conduct these examinations. Textbooks in all subjects (at school and undergraduate levels) should be made available to students. Colleges must have several copies of textbooks in the reserve sections of libraries. Computer facilities and formal training programmes in computing must be made available in each major town or city, if not in each school or college, so that youngsters can get adequate training. Design and fabrication of instruments for teaching and research have to be promoted in a major fashion. Individuals and departments involved in instrumentation activity should get special support and recognition.

In view of the exploding frontiers of knowledge, better ways of training and re-training science teachers will have to be explored. Ways have to be found for attracting better scientists and engineers to the teaching and research profession. Support to select departments under the different programmes of the University Grants Commission should be enhanced. It would be desirable to support research units of outstanding individual workers on a long-term basis.

Manpower Training

We have a great shortage of manpower in many specific sectors of advanced science and technology in the country. This is even true of experimental physics, let alone areas such as computer science, turbomachinery, robotics and other branches of engineering. At the same time, we have a large number of unemployed or underemployed graduates (and even Ph.Ds). This mismatch in manpower training has to be tackled in order that we become competent in science and technology in the next decade. The highly trained manpower required by the year 2000 AD has to be produced now. We should not forget that the training we impart to students is extremely important because the young graduates of today are going to be the senior managers in the next 15 years or so. We in the universities, therefore, have a major responsibility.

Because of the absence of highly skilled manpower in crucial areas of science and technology, we should seriously consider deputing a reasonable number of young scientists abroad for short periods (of a year or less) for training in well-defined areas in properly chosen institutions. We should give them a guarantee that when they return after training, they will have a suitable job with professional challenges.

Role of Scientists

Where are we with respect to the frontiers of science and technology ? Have we done well? Are we world leaders in some areas? Common people ask why we do not have many peaks of excellence in spite of the high investment in science and technology in the last few decades. It is true that we have very few peaks of excellence both in terms of men and in terms of institutions. This is not because of insufficient funds and facilities alone. It is at least partly because of the rather depressing atmosphere that we scientists have created for ourselves while doing science. We easily compromise to mediocrity like in other aspects of life—and mediocrity breeds mediocrity. Tolerance of mediocrity is the biggest killer of good science.

It is true that even when we do good science, it is extremely difficult today to be known for any contribution in science, especially from a country like India. There seems to be an inbuilt prejudice against the work coming from countries like India. However, we cannot accept such a situation and stop trying to do the very best. We have to keep fighting the situation until this country and the scientists here find a place in the sun. We have a few scientists who, in spite of the problems in India, have struggled and fought the situation and have been noticed in the world; the number of such scientists may be small. We often talk of poor facilities, infrastructure, etc., but they alone cannot be responsible for the status of science since even in theoretical areas we have not done as well as we should have. We have had only one Ramanujan. I believe therefore that we have to look into some basic causes responsible for this state of affairs. This can mainly be traced to ourselves, namely, the scientific community. Only we scientists and engineers can usher in excellence in science and technology.

Those of us who are in the latter half of our careers have the responsibility to see that the future is secure for science. We have to encourage the right-minded young people and motivate them properly. We should see that they get the right facilities and encouragement. I am convinced that it is not merely salaries that attract young people to science. Opportunities to do good science and a proper working atmosphere are equally important. I do not think that I would be completely wrong if I say that we senior scientists have not done enough to see that the atmosphere is truly conducive for scientific work. We cannot just blame the government for all ills. When some of us talk discouragingly about science (and scientists) and we ourselves are most of the time depressed, I do not think that young people will get enthused to take up scientific professions. It is much better for them and more lucrative to sell soap than take the hard path of science. In addition to providing the right atmosphere, senior scientists have also to set an example in not compromising to mediocrity in everything they do.

Role of Teachers

Many of us scientists are also teachers. In my own career, I have thoroughly enjoyed teaching undergraduate and postgraduate students. I do not know if I have really taught something to my students, but I know that without them I would have not found my research purposeful. Young people around us not only keep us young and thinking, but also contribute new ideas and hard work. I have no doubt that the young Indian talent has contributed in a significant way to advanced scientific research in many parts of the world.

A teacher's influence on his students lasts for a lifetime. The influence is not limited to scientific activities, but encompasses many aspects of life. This is important since excellence of a person manifests itself not merely in scientific research. What remains in the student's memory and in his character is the stamp of personality of the teacher rather than the repertoir of knowledge. We generally assume that a teacher must be a master of some subject. While that is an essential quality, it is not the criterion that has been responsible for the lasting influence of many a great teacher on their students. I would like to quote from a talk given by Lord Ashby :

> "The chief quality that distinguishes a teacher is a determination and the skill to build bridges between the two generations, to establish a lively communication with the young. The commitment of a teacher is not solely to transmit knowledge; it is to transmit a tradition of scholarship, an attitude to phenomena, a particular style of integrity."

The fruit of learning, after all, is not a book but a man. I strongly believe that this message has much to do with many of the issues that we are concerned about.

Role of the Science Congress

The Science Congress itself has a major role to play in the scientific life of the country. It is one occasion when a large number of citizens interested in science gather together. We have to make use of this tremendous possibility to transform not only Indian science but also our society. We have to use the Science Congress to inculcate scientific temper in our society. The Science Congress would also provide an appropriate forum to inform the public of the various developments in science and technology. Students, teachers and citizens should attend Science Congress sessions to listen to lectures given by authorities in simple terms. In addition, it is also the time to discuss with young people and teachers regarding communication in science. Tutorial symposia, therefore, would be of great importance. The Science Congress should also be a place where voluntary science organizations meet annually and chalk out their programmes, share their experiences and plan for the future. It is my personal belief that it is only through voluntary movements that inculcation of scientific temper, promotion of literacy as well as health and welfare measures will become successful. Government at the Centre and in the States can only do so much, but I do not think that by just investing money in sectors such as education and health, we will get the desired results; the community has to gather itself and participate in people's movements in these essential areas.

In this Science Congress, we have tried our best to see that there is a subtle structural change in its organization. We have mainly plenary lectures in the general sessions in the first two days. Obviously no Science Congress can cover all the topics. We have therefore chosen some aspects of the frontiers of science and technology that are of importance today. There are many which have to be covered in the future sessions of the Science Congress. In addition, there are frontier symposia and tutorial symposia in the different sections. We have a session on science for peace; there will be a meeting of voluntary science organizations and also a symposium on science education. A special meeting has been arranged where Secretaries of some of the Government departments to contribute to the frontiers of science and technology in the country. I do not hope that the Science Congress will gradually become a major force in the country.

Role of Government

There is much for the Government to do in promoting the frontiers of science and technology. The various government agencies will have to take proper measures for supporting excellence and for adequately supporting the broad base required for carrying out research and development. We cannot have simple egalitarian principles applied to promote science. Funding in a routine manner is counter-productive. Science funding should not be governed by the whims and fancies of individuals or of government departments but should be based on a national policy. Something like a National Science and Engineering Foundation should probably be established in the country to examine how best we can fund scientific research.

The government has to eliminate, or at least minimize the tremendous bureaucracy in educational and research institutions. The oppressive bureaucracy in our institutions has been particularly frightening and has chased away many a good scientist from the path of science. True autonomy (especially in financial matters) has to be granted to our scientific and educational institutions.

In 1989, we celebrate Panditji's (Jawaharlal Nehru) birth centenary. It would be in the fitness of things if all the government departments, agencies and ministries dealing with science, technology and industry as well as our scientific and educational institutions (including our national laboratories) were to come out with carefully prepared perspective plans (for a 15 or 20 years period) which review their accomplishments, present status and future plans. The plans have to be prepared based on intensive discussions among all the working scientists in the organization. This exercise would also be useful to our 8th Five Year Plan. Furthermore, it would be the best tribute we can pay to Panditji.

Agony and Ecstasy

Let me close this address by placing on record my personal anguish. It is my belief that in fundamental science, the choice of a research problem mainly determines the quality of research. This is because, if one has a good idea, it is always possible to find ways of testing it. In fundamental science, one has to pick the right problem to be noticed. In applied science, we have to pick problems that yield most benefit.

The difference between first-rate and second-rate research is often very small, and a little more effort can transform second-rate work into first-rate work. However, many of us often prefer to do repetitive work for various reasons rather than do something novel or new. Even under these difficult conditions, those who have pursued with determination and doggedness have succeeded in producing work of quality. Many people ask, how is it that scientists in India cannot make a chance discovery which is great? Unfortunately, even to make a chance discovery, one has to be on the right path. We cannot make a great discovery by chance, if we are not already pursuing something important and significant.

Because we decide to compromise, many of us lose the confidence to pursue something difficult or of value to society. We become afraid of scrutiny and evaluation. Lack of confidence amongst senior scientists affects the attitudes of young people. The senior scientists have to lead the way by means of what we practise. We have to develop a better value system and improve communication amongst ourselves.

We cannot possibly forget that in this country we have had many great scientists of determination and courage who accomplished a great deal in science. We cannot think of better examples of men of science than Ramanujan, Raman and S.N. Bose. Raman was sure that he would win a Nobel Prize when he discovered the Raman Effect and, in fact, there is reason to believe that he was sure of it even much earlier. Raman published independent reaserch papers when he was still undergraduate student in Madras. S.N. Bose, shortly after his postgraduate studies, had the courage to send his research results to none other than Einstein for review. This example of courage of conviction is something that we have to emulate; it needed tremendous confidence to feel that the work he had done deserved the highest recognition. Einstein being what he was, recognised the genius of Bose rightway.

Much earlier to this, Ramanujan did something similar. Working as a clerk in a port trust, with no one to help and without a college education, Ramanujan felt that he had discovered something new working on "Orders of Infinity" and sent the result to Prof. Hardy at Cambridge. This led to a new era in Mathematics.

We have to do something to recognise talent at the right time, to nurture it and to protect people with talent. Men of talent are often subjected to considerable hardship and harrassment. It appears as though that to get results that are worthwhile, we have to toil beyond the call of duty.

I cannot possibly brush aside the agony one goes through while doing science in India, especially experimental science in educational institutions. It is extremely difficult to carry out experiments which are worthwhile. It is much more difficult to do experiments that catch the imagination of the rest of the world. This requires enormous effort but it is essential if we experimental scientists have to make a mark in the world. There is no other joy that I know of that is more overwhelming than the joy of a successful experiment planned by oneself. In this land of Karma, toil and sweat seem to be essential; even with toil and sweat, results are not assured, but without them nothing seems possible. We often have to struggle hard for little things and work against all odds, even without water and electricity. I realise that toiling hard in science may not be the best way to make money or earn a living, but I know no better way to live. One may ask whether I would recommend to young people to take up science as a profession. Yes, unhesitatingly I would. I believe that the thrill that I have experienced in doing science is worth sharing. The agony of doing science and the ecstasy when one accomplishes are both experiences that are worth cherishing.

Science has a simple faith which transcends utility. All men of science and probably men of learning have such a faith. The faith is that it is the privilege of man to understand and that is his mission. knowledge for the sake of understanding is the essence of our being. None can define its limits or set it's ultimate boundaries. □

Coordination Council for Distance Education

The Government of India is reported to have set up a co-ordination council to look into the policies and utility of courses to ensure that uniform standards of distance education are maintained through the network of open universities fast coming up throughout the country. The council, comprising the Vice-Chancellors of the Indira Gandhi National Open University (IGNOU), three State Open Universities and representatives of the Government and the University Grants Commission (UGC), has been mooted to avoid duplication of course materials and minimise the financial burden. According to Prof. G. Ram Reddy, Vice-Chancellor of IGNOU, it is hoped that gradually IGNOU will assume the role of a Central body co-ordinating and overseeing the activities of all the State Open Universities, the aim is to bring distance education under one umbrella.

Prof. Reddy said that IGNOU would ensure that the course material was prepared by one Open University was easily available to all others. Besides, with IGNOU as the coordinator of Open Universities, a student joining such a university anywhere would be free to opt for courses from other Open Universities. In other words, while a bachelor of arts degree requires 96 credits with a maximum of twenty subjects, credits attained in other Open Universities would be taken into account by the parent university in giving the degree.

Technology Park for Pondy Varsity

The Pondicherry University plans to set up a science and technology entrepreneurship park with the help of COSTED (Committee on Science and Technology in Developing Countries). The park will provide a link between academics and industry and would aim at developing expertise in the manufacture of medical equipment.

Dr. S. Radhakrishna, Scientific Secretary of COSTED, said such parks had come up in several places in the country, each of them specialising in a specific field, such as electronics, mechanical or chemical engineering or general electronics. The park would enable students and teachers to gain industrial experience and benefit industrialists by providing them information on the latest developments in science and technology. Central facilities, such as workshops, medical centre, lecture rooms and copying centres would be made available to the entrepreneur.

Dr. K. Venkatasubramaniam, Vice-Chancellor of the University, said the park was being modelled on the lines of those abroad. The park would be an enclave located near the university campus. Each entrepreneurial unit would be associated with one or a small group of academics from the university, who would provide the basic technical know-how. The land would also be provided by the university and the industry, in turn, would provide employment opportunities to students.

Indo-French Centre for Research

The Indo-French Centre for the Promotion of Advanced Research (IFCPAR), an Indian registered society, founded in 1985 to promote co-operation between India and France in advanced areas of fundamental and applied scientific research has recently identified thirteen priority areas for future long-term joint projects. The priority areas are : (1) Pure and applied mathematics; (2) theoretical computer sciences; (3) cellular & molecular biology/genetic engineering, bio-technology—applied to medicine and agronomy; (4) medical sciences—epidemiology, immunology, virology, development of new vaccines and new drugs, biomedical engineering (e.g. design of aritificial aids); (5) chemistry of natural products with special reference to biologically active compounds and agro-chemicals; (6) catalysis—science and engineering; (7) liquid interface science; (8) material science & engineering—advanced ceramics composites, polymers, etc.; (9) rare earths; (10) astrophysics and radio astronomy; (11) seismic data processing; (12) remote sensing applications, (ground water prospecting, forestry, etc.,); and (13) water treatment and distribution.

The project proposals are likely to be submitted and examined by mid 1988. It has also been decided that the selection and execution of future research projects will be based on scientific quality, continuity in a long term-perspective.

ISM Identifies Thrust Areas

Apart from the research work under various science and technology schemes as well as individual research work of teachers, the Indian School of Mines (ISM), Dhanbad has identified a few thrust areas like Computer Applications and Software Development in the Mineral Industry, Energy Management, Environmental Management including Data Generation, Remote Sensing and Sattelite Photo Interpretation, etc. The School has already entered in the area of software development with Coal India Ltd. Four areas have been identified, viz., (i) Production and

Operation Management in the Mines, (ii) Design of Drilling and Blasting Patterns, (iii) Study of Shovel Dumper systems in Opencast Production, and (iv) Ventilation Network Design System in the Underground Mines where the School is being entrusted to carry out the software development work. The capabilities of the ISM Computer Centre are also being augmented through procurement of imported additional system and peripherals. More number of PCs are being procured for different departments. Most of the departments of the School are having PCs for Students' training and research.

National Engineering Awards

The Institution of Engineers has honoured three engineers with national awards-1987, for distinguished contributions at the second Engineering Congress held at Hyderabad recently.

The National Design Award for 1987 in earthquake engineering was presented to Dr. Anand Swarup Arya of the Roorkee University in recognition of his meritorious contribution on research, development and design of earthquake resistance structures that help mitigate earthquake disasters.

In the field of Mining Engineering the award was given to Prof. Ajay K. Ghosh of the Dhanbad Mining School. Prof. Ghosh was instrumental in setting up of a central planning and design institute for coal industry and responsible for developing prototype jet piercing rockerdrill in collaboration with the Vikram Sarabhai Space Centre, Trivandrum.

The Rural Development Forum Award was presented to Dr. Arabindo Nath Bose, Adviser in Engineering, Indian Institute of Technology, Kharagpur for his contributions in developing processing techniques and equipment for commercial treatment of food materials.

IGNOU Offers New Courses

Prof. G. Ram Reddy, Vice-Chancellor, Indira Gandhi National Open University (IGNOU) said that the university proposed to offer B.Sc. courses from early next year. In addition, short-term courses in technology, library science, nutrition and child care as well as health would also be started the following year. He said emphasis would be on the science courses [and the existing study centres would be utilised for providing laboratory facilities. At present, there are seventy study centres and the number is expected to go up to one hundred soon.

IGNOU will also offer a diploma course in rural development and computer education by 1990. The training course for the Block Development Officers would ensure that the real philosophy behind the anti-poverty programmes is understood in letter and spirit.

Another new area is tribal education and IGNOU is to start some courses for the benefit of tribals. The National Institute for Educational Planning and Administration (NIEPA) is at present engaged in the task of identifying teachers education in tribal areas, particularly in Mizoram.

News from Agril. Varsities

Post Harvest Technology for Fruits and Vegetables

Dr. M.V. Rao, Special Director General of I.C.A.R., New Delhi inaugurated the 6th workshop on 'All India Coordinated Research Project on Post Harvest Technology of Horticultural Crops' at the Konkan Krishi Vidyapeeth, Dapoli on January 28, 1988. He said that there was an urgent need to check the losses accrued on account of lack of appropriate Post Harvest Technology by designing appropriate technology in every facet of post harvest. Referring to the ICAR network for post harvest research, Dr. Rao said that there were eight Post Harvest Technology centres in the country of which one was located at the Konkan Krishi Vidyapeeth. He acclaimed the achievements made in bringing about the self-sufficiency in foodgrain production but said that not much progress was made in increasing the yield of hill millets. He also stated that there was an urgent need of boosting the production of pulses and oilseeds. In this direction, the ICAR had sanctioned various schemes for raising pulses and oilseeds production. He further added that the Konkan region is adequately suited for oil palm cultivation particularly where the irrigation potential was developed. The research unit recently allotted for the Konkan Krishi Vidyapeeth should therefore make all efforts in developing suitable recommendations for cultivation of this new crop. He complimented the Konkan Krishi Vidyapeeth for standardising stone grafting technique for mass production of Alphonso grafts; evolving high yielding varieties of cashew for raising cashew production; evolving regularly bearer and free from spongy tissue

Ratna variety of mango and in promoting spices and aromatic crops' production. He pinpointed the areas which accounted for losses and said that research was needed in controlling pests and diseases; checking storage losses; developing cheap means of transportation, reduction in costs of cultivation of fruit crops for competing in the world market and checking losses in handling. For inculcating importance of the Post Harvest Technology among the farmers, Dr. Rao said that trained manpower in the field was urgently needed. He suggested that the industries that have been making good profits by adopting the new technology made available in the field should revert part of their profit in undertaking research and development work. This, he said, was being followed in most of the developed countries.

Dr. Kaul, Additional Director General (Hort.), ICAR, New Delhi briefly reviewed the work done in Post Harvest Technology in India and said that new centres were being opened at vatious places considering the potential. He said that the Indo-USAID project had identified the Post Harvest Technology programme as a priority programme. There is dearth of trained personnel in this field and he appealed the university authorities to form teams of suitable staff for training personnel in this vital area.

Dr. S.B. Kadrekar, Vice-Chancellor of the Vidyapeeth, in his presidential address, remarked that many people in the Konkan region have been engaged in preparing products like mango leather, mango pulp, dried kokum, refreshing drinks from kokum, cashew, apple, pickles, jams and jellys, etc. by traditional way. If these people are properly trained, it would be possible to establish a chain of small scale industries in the region which would give employment to the rural people especially women folk. He urged that the centre sanctioned for the university be adequately strengthened to meet the requirements.

Our 100 scientists, drawn from the Post Harvest Technology centres located in the country, attended the 3-day workshop.

Asian Conference on Mycorrhizae

Mycorrhizae, the beneficial fungi associated with the roots of higher plants, have tremendous potential in enhancing the growth of forestry species and in boosting the output of legumes, and they should be put to best use, said Dr. G. Rangaswamy, former Vice-Chancellor of the Tamil Nadu Agricultural University, Coimbatore while inaugurating the first Asian conference on "Mycorrhizae organised by the Centre for Advanced Studies (CAS) in Botany, Madras University recently. A lot more work need to be done on the usefulness of these beneficial organisms, both at fundamental and applied levels, he added. Mycorrhizae must be playing a crucial role in the nitrogen and carbon cycles, and a better understanding of their contribution to soil nitrogen will help scientists to perfect technologies for mass multiplication of these fungi. By doing so, the researchers will be doing a great service to the farmers, he said.

Mr. A. Karim Oka of the International Development Research Centre (IDRC), Canada, said inoculating the mycorrhizae in the soil to increase crop yields was a viable proposition, and the IDRC saw its beneficial effects in the afforestation programmes in Africa. The IDRC will soon establish the first Asian centre for mass multiplying the inoculum of endomycorrhizae in Pune, and also extend financial support for the regional network on mycorrhizae in the continent.

Our 150 scientists from all over

ASSOCIATION OF INDIAN UNIVERSITIES

CORRESPONDENCE COURSE IN EVALUATION METHODOLOGY & EXAMINATIONS

Applications are invited from college/university teachers for admission to Correspondence Course in Evaluation Methodology and Examinations at Basic Level, Intermediate Level and Advanced Level/Special Professional Course. The duration of each of the three courses is six months. A personal 'Contact Programme' for three days is planned for each of the three courses. Universities/Institutions sponsoring candidates can meet the registration/course fees from out of unassigned grants by UGC.

Request for prospectus and application form accompanied by a crossed Indian Postal Order for Rs. 10/- drawn in favour of the Secretary, Association of Indian Universities and a self-addressed stamped envelope (Rs. 2/-) should be sent to the Project Director (Exams.), Association of Indian Universities, 16 Kotla Marg, New Delhi 110002. Last date for receipt of application is **15th March** for non-sponsored and **16th March, 1988** for sponsored candidates.

the country and abroad attended the two-day conference.

Sand Dune Stabilisation Project

Haryana Agricultural University proposes to establish a national research project (N.A.R.P.) sub-station at Loharu as part of the sand dune stabilization project in the desert tract of Haryana. The objective of the project is to carry out research for stabilization of sand dune and protection and development of soil resources through appropriate afforestation and planting of suitable species of grasses in this area.

In view of the characteristics of this tract, the main research thrust of the project will be in the field of soil erosion by wind, farm forestry, pasture development and animal nutrition. Further details of the programme are being worked out for onward submission to the Indian Council of Agricultural Research (ICAR) which has sanctioned the project to the University.

AIU News

AIU at World Book Fair

Association of Indian Universities (AIU) arranged a collective display of AIU Publications and those of member universities at the 8th New Delhi World Book Fair organised by the National Book Trust from 5th to 15th February, 1988. The Fair was inaugurated by Dr. Shanker Dayal Sharma, Vice-President of India. Highlighting the importance of the books and the libraries, the Vice-President observed that libraries were more important than the universities; whereas a library could exist without a university, no university could exist without a library. He also pleaded that academics and the publishers should put their heads together to make available to students such well produced books that inculcated in them a love of reading.

Earlier, Shri Anand Sarup, Chairman, National Book Trust while welcoming the Vice-President and the guests to the inaugural function surveyed the role of the National Book Trust in the promotion of the reading habit in the country.

The World Book Fair that provided an opportunity to students, teachers and book lovers to browse books published all over the world attracted over 630 participants, including 71 from abroad. Around 4 lakh titles in English and other languages were displayed at the Fair.

The titles displayed at the AIU Stall were scholarly publications in the fields of Psychology, Sociology, Education, Politics, Economics, Public Administration, Literature, Agriculture, Engineering, Technology and Medicine. About 20 universities displayed their publications under the auspices of the AIU; notable amongst these were the Haryana Agricultural University, Telugu University, IIT Delhi, Gujarat University, Burdwan University, M.S. University of Baroda, Osmania University, Roorkee University, JNU, New Delhi, AIIMS, New Delhi, etc. The AIU Stall was visited by a number of academics, research scholars, librarians and students from various universities and institutions. Quite a number of them impressed upon the need for compilation of a consolidated catalogue of the publications of all the universities as also the desirability of making them available under one roof.

It is hoped that such universities as did not participate in the fair or put up their individual stalls will join AIU next time and enable it to offer a larger sampling of the scholarly university publications to readers, librarians and the book trade.

Sports News

Inter-University Judo

Delhi University Judokas reaped a rich harvest of 12 medals in the first All India Inter-University Judo Championship held recently at Laxmibai National College of Physical Education, Gwalior (Jiwaji University).

Guru Nanak Dev University, Amritsar with a tally of 8 medals and Amravati University bagging 6 medals finished 2nd and 3rd respectively in the three day meet.

Guru Nanak Dev University Judokas keenly contested Delhi University both men's and women's sections for the Gold tally. Both the teams took two golds each in men's section and three golds each in the women's section. Jiwaji University, the hosts, mustered only 4 Bronze Medals, two each in men and women sections.

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

RESEARCH IN PROGRESS

THESES OF THE MONTH

A List of Doctoral Theses Accepted by Indian Universities

BIOLOGICAL SCIENCES

Biochemistry

1. Chakkrabarti, Chandra. *Effect of sewage and sludge application on some enzyme activities and trace metal uptake in crops influencing their growth and yield.* Nagpur. Dr. P.V.R. Subrahamanyam.

2. Kamalkar, Prabhakar L. *Brain metabolism in health and diseases.* Nagpur. Dr. (Smt.) I.P. Vaishwanar.

3. Mitra, Prasanta Kumar. *Role of amlaki, Emblica officinalis Linn in experimental ulcer.* NBU.

4. Moideen Kutty, A.V. *Studies on amylase inhibitors of plant origin.* Mangalore. Dr. T.N. Pattabiraman.

5. Zahida Nasreen. *Functional significance of enzymes of glutamate and gaba metabolism in rat brain.* Osmania.

Botany

1. Bhoite, A.S. *Studies on salt tolerance of Aeluropus lagopoides Linn : A halophytic grass.* Bhavnagar. Dr. A.J. Joshi.

2. Bopaiah, A.K. *Cytological chemotaxonomical and in-vitro seed culture studies in some members of the sub-tribe cyrtopodiinae of the tribe cymbideae Pftizer (Orchidaceae).* Karnatak. Dr. K. Nataraj.

3. Chowdhary, Kuldip Singh. *Chemical weed control studies in medicinal and aromatic plants.* Jammu. Late Dr. S.N. Khosla and Prof. A.K. Kaul.

4. Divakar, K.M. *Cytoembryological investigations on certain orchids of tribe Epidendreae and Vandeae.* Karnatak. Dr. M.S. Channaveeraiah.

5. Ponnammal, N.R. *Studies on photosynthesis and productivity in quick growing trees.* Madurai.

6. Shrivastava, Jitendra Lal. *Ecological studies on the flora of Jabalpur Town and its neighbourhood.* Durgawati. Dr. M. Oommachan.

7. Trivedi, Alka Ben. *Study of toxic food contaminants and their spoilage metabolites.* HS Gour. Dr. S.C. Agrawal and Shri U.N. Joshi.

Zoology

1. Belliyappa, Geetha. *Studies on effect of biocides on growth and body composition of a few fresh water catfishes.* Bangalore. Dr. S. Ravichandra Reddy.

2. Bharathi, G. *Endocrine control of reproduction in female fresh water crab, Barytelphusa guerini.* Osmania.

3. Chauhan, M.S. *Histological and physiological studies on the pineal organ of certain teleosts under different environmental conditions.* Vikram. Dr. A.K. Pandey.

4. Mahalakshmi, V. *Studies on some biochemical and histochemical aspects in monogenetic trematodes—Thaparocleidus isotylus and Pricea multae.* Osmania.

5. Mishra, Neerja. *Studies on the nervous system and neuroendocrine components in some trematode parasites.* NEHU. Dr. (Mrs) Veena Tandon.

6. Mohammad Gulam Hussain. *Reproductive endocrinology of the male freshwater crab, Barytelphusa guerini Milne Edwards.* Osmania.

7. Nayak, Mangala Shankar. *Studies on the developing endocrine glands of the pigeon, Columbea Livia.* Karnatak. Dr. V.B. Nadkarni.

8. Pani, Suresh Chandra. *Aspects of ecological studies on tropical earthworms in irrigated agricultural system of Orissa, India.* Sambalpur. Dr. B.K. Senapati.

9. Parameshwar Rao, G. *Studies on some aspects of histochemistry of platyhelminthes.* Osmania.

10. Prem Badan. *Taxonomy and bionomics of treehoppers. (Homoptera : Membracidae) infesting shisham; Dalbergia sissoo Roxb in Jammu forest.* Jammu. Dr. Baldev Sharma.

11. Vijitha, T. *Studies on some aspects of protein metabolism and effect of antibelminthic drugs on cestode parasite, Stilesia globipunctata and host (Sheep).* Osmania.

Medical Sciences

1. Kamala, J. *Role of chromosomal proteins in the regulation of gene expression during cardiac hypertrophy.* Madurai.

2. Sharma, Shyam Sunder. *Arsho rog mein durnamantakvati evam kshar prayog kee karmukta.* Rajasthan. Dr. Ram Prakash Swami.

3. Sujatha, D. *A neuropsychological study of cognitive deficits in schizophrenia.* Bangalore. Dr. C.R. Mukundan.

Agriculture

1. Barooah, Ratul Chandra. *Effects of different levels of nitrogen and F.Y.M. on biological nitrogen fixation in maize, Zea mays.* HAU.

2. Bhopinder Kumar. *Studies on the standardization of nutrient ranges in apple.* YS Parmar. Dr. R P. Awasthi.

3. Kamla Devi. *Processing and utilisation of Lantana camara L. as a source of organic manure.* HP Krishi. Dr. K.K.R. Bhardwaj.

4. Krishan Kumar. *Phenotypic variability in almond collections at Ludhiana from Jammu and Kashmir.* PAU.

5. Rajinder Parshad. *Response of kinnow mandarin to nitrogen under different soil management practices.* YS Parmar. Dr. Jagmohan Singh Chauhan.

6. Saluja, Neeru. *Sericulture for rural development : Studies on mulberry, tasar and eri.* IIT Delhi. Prof. P. Vasudevan and Dr. Mira Madan.

7. Shashi Paul Dev. *Recycling of crop and plant wastes in improving crop yields, nitrogen use efficiency and soil properties.* HP Krishi. Dr. K.K.P. Bhardwaj.

8. Shrestha, Ananda Prasad. *Response of potato to nitrogen as influenced by irrigation and organic matter.* HP Krishi. Dr. R.S. Minhas.

9. Surrinder Kumar. *Genetics of some Physiomorphological and quality traits in Brassica napus L.* PAU.

INDIAN INSTITUTE OF SCIENCE
BANGALORE-560 012

Requires

Assistant Professor in the
Instrumentation and Services Unit (RIC)

Qualifications and Experience

Essential : Ph.D. in Science/Engineering or Technology with atleast 5 years post-doctoral experience in instrumentation work in the areas of analytical, electronics, optics thermal or other allied instrumentation.

Desirable : Experience in teaching and in organising short term courses; handling research projects/ schemes.

Emoluments : Rs. 5,055/- p.m. in the scale Rs. 3700-5300.

Details and prescribed application forms can be obtained from the Registrar, on request accompanied by a crossed Postal Order for Rs. 5/- (free of cost for SC/ST on production of Caste certificate from a competent authority) drawn in favour of Registrar, Indian Institute of Science, alongwith a self-addressed stamped (Rs. 5.40) envelope of the size 28 x 18 cms **on or before 7th March 1988.**

R(IA) 308-3/88 **Registrar**

INDIAN COUNCIL OF MEDICAL RESEARCH

Applications are invited upto **25th March 1988** for the posts of **DIRECTOR** in the following Institutes/ Centres :

(1) At the Regional Medical Research Centre, Bhubaneswar.

This Centre is engaged in scientific research related to diseases with high prevalence in the state of Orissa and neighbouring States with major emphasis on filariasis, malaria, leprosy and diseases prevalent in the tribal population.

Qualifications & Experience: Essential : M.B.B.S. with a doctorate in Pathology/Microbiology/Preventive Medicine or relatec disciplines with research experience of 15 years with original work as evidenced by publications.

Desirable : Administrative experience in responsible positions.

Job Requirements : It is a top research management post. The Director will have the overall responsibility of the Institute and for creating an atmosphere conducive to creative work. To promote biomedical research in the field of communicable diseases, to train technical manpower, and to interact with local health authorities to help solutions to their health problems in the region.

(2) At the Regional Medical Research Centre, Port Blair :

This Centre is engaged in scientific research in different aspects of diseases such as malaria, diarrhoeal diseases, nutritional aspect and Sero-epidemiology etc., with a multisectoral approach to study the health problems in general and of the tribals of this territory in particular. The Centre has well-equipped laboratories and other infrastructural facilities for conducting clinical and laboratory studies.

Qualifications & Experience: Essential : M.B.B.S. with a doctorate in Pathology/Microbiology/Social and Preventive Medicine/General Medicine or allied discipline with research experience of 15 years with original work as evidenced by publications.

Desirable : Administrative experience in responsible positions.

Job Requirements: The Director is expected to provide high level leadership in the identification, formulation and implementation of R&D programmes and projects of national importance in the above areas. He will establish rapport with academic and professional institutions and Govt. and international agencies dealing with the various related Research and Development aspects for ensuring multi-agency co-operation whenever necessary for fulfilment of the objectives of the Centre. He will interact with local and national health authorities in the formulation, implementation and assessment of the health problems in the Territory. He will have the overall responsibility for the working of the Centre within the framework of the ICMR system and for ensuring an atmosphere conducive to the creative work.

(3) At the Rajendra Memorial Research Institute of Medical Sciences, Patna (Bihar State)

This Institute conducts studies on the epidemiology, Clinical aspects, Immunology and Chemotherapy of Kala-Azar and also other related diseases. The Institute has excellent facilities for undertaking research in the above fields and is equipped with modern Laboratories and equipment. This Institute has a staff of over 100.

Qualifications & Experience : Essential : M.B B.S. with M.D./Ph.D.D.Sc. in Parasitology/Microbiology/ Preventive Medicine or related disciplines with 15 years research/teaching experience with original work as evidenced by publications.

Desirable : Administrative experience in responsible positions.

Job Requirements : It is a top research management post. The Director will have the overall responsibility of the Institute for creating an atmosphere conducive to creative work; to promote biomedical research in the field of communicable diseases, to train technical manpower and to interact with local health authorities to help in the solution of their health problems in the region.

(4) At the National Institute of Nutrition, Hyderabad

This Institute is engaged in research in Nutritional Sciences. The Institute has been responsible for initiating major research programmes in human Nutrition and has been an important training centre for medical and paramedical personnel. The Institute has acquired adequate modern equipment and other infrastructural facilities for conducting its activities.

Qualifications & Experience : Essential : M.D./ Ph.D./DSc. in any discipline in medical sciences or life sciences with research experience of 15 years with original work in the field of nutritional Sciences as evidenced by publications.

Desirable : Administrative experience in responsible positions.

Job Requirements : The Director is expected to provide high level leadership in identification, formulation and implementation of R&D Programmes and projects of national importance in the field of human Nutrition. He/She is expected to develop fruitful linkages with academic and professional institutions, Governments and international agencies. He will have the overall responsibility for the working of the Institute within the framework of the ICMR System and for ensuring an atmosphere conducive for creative work. The selected candidate is expected to take over as a Director from 31st August, 1988.

Salary/Conditions of Service : The scale of pay attached to the post is Rs. 5900-200-6700 plus allowances as per Central Govt. Rules and N.P.A. of Rs. 900/-p.m. for medical graduates only. Higher initial pay can also be considered. Free medical aid and leave travel concession are also permissible for the employee and his family as per Govt. rules.

Age: Below 50 years. SC/ST candidates allowed relaxation in accordance with Government of India Rules.

Educational qualifications relaxable in the case of candidates otherwise well qualified.

Benefits of pension admissible. Private practice is not allowed. However, non-practising allowance is admissible to medical graduates only as per rules of the Council. Applications complete is all respects should be sent to the Director General, Indian Council of Medical Research, Ansari Nagar, Post Box No. 4508, New Delhi-110 029. Applications should be accompanied with crossed postal order for Rs. 8/- (No fee for SC/ST candidates) made out in the name of Director General, Indian Council of Medical Research, New Delhi. Applications without postal order will not be entertained.

Candidates called for interview will be paid 1st class rail fare by the shortest route. No TA/DA is admissible for joining the post or on termination of appointment. Application from the employees working under the Central/State Govt./Semi Govt. and Govt. controlled undertakings should be sent through the employers and be received before the closing date alongwith the certificate that the applicant will be relieved within three months of receipt of appointment orders. Advance copies will be considered subject to the proviso that the certificate will be produced at the time of personal discussion. Applications received after the closing date will not be considered. At the time of interview they should produce "No Objection Certificate" from their employer.

The name of the post and of the Institute must be indicated in the application. Incomplete applications will not be entertained.

International Institute for Population Sciences

(Deemed University)

Govandi Station Road, Deonar, Bombay-400088.

FELLOWSHIPS IN POPULATION STUDIES

Applications are invited on prescribed forms for the award of FIFTEEN FELLOWSHIPS each of Rs. 500/- per month and tenable for a period of one year, for the Certificate Course in Population Studies conducted by the Institute which will commence from 4th July, 1988. Applicants seeking admission should have good Master's degree in any of the subjects: Statistics, Mathematics, Economics, Sociology, Social Anthropology, Psychology, Geography, Preferably with adequate knowledge of statistical methods. Those who are likely to appear or have appeared for M.A./M.Sc. examination in any of the above subjects and results are not yet announced may also apply. All the students are required to stay in the Institute's Hostel.

Two fellowships are reserved for Scheduled Caste and Scheduled Tribe candidates. In case suitable candidates are not available, they will be treated as unreserved.

Requests for particulars and application forms may be addressed to the Assistant Registrar (Academic) and should be accompanied by self-addressed envelope, atleast of 25 x 12 cms. with Rs. 2.20 stamp duly affixed. Closing date for the receipt of completed applications is **March 25, 1988**.

K. Srinivasan
DIRECTOR

Indian Institute of Technology, Bombay-400076

P.O. IIT, POWAI, BOMBAY - 400 076

Advertisement No. C-185/87-88.

Applications on plain paper are invited for the following permanent post at the Computer Centre of this Institute. Persons employed in Government/Semi-Government Organizations or Educational Institutions should apply through proper channel. The post carries allowances such as D.A., H.R.A., C.C.A., as per rules of the Institute which at present correspond to those applicable to the Central Government employees stationed at Bombay. Depending on qualifications and experience, a higher salary may be offered to deserving candidate.

A Fourth Generation Main-frame Computer System (Cyber 180/840) has been recently installed at the Computer Centre which looks after the computing requirements of the Institute and other Organizations. With the Cyber-180/840 Computer System, the Computer Centre is one of the most modern and sophisticated centres in India. In addition, the Institute has a number of mini and micro-computing facilities.

1. Systems Manager—One Post.

The incumbent will either be appointed in the pay scale of Rs. 1500-60-1800-100-2000 or Rs. 1500-60-1800-100-2000-125/2-2500 depending on the qualifications and experience of the candidate.

(The total gross emoluments on the minimum of the scale is Rs. 3,405/- approx. including House Rent Allowance. The scale of pay is likely to be revised shortly). Systems Manager will be responsible for the overall management of the Computer Centre and will assist the Head, Computer Centre in planning and management of the various facilities at the Centre.

Specifically, his responsibilities include :

(a) Supervision of all the operational and maintenance requirements of the Centre.
(b) Interaction with the Computer users.
(c) Regular performance monitoring and tuning of the system(s) available at the Centre.
(d) Software acquisition and installation.
(e) Software development and maintenance.
(f) Planning and conducting short-term courses primarily for the Computer users.
(g) Planning and preparing relevant documentations for the Computer users.
(h) Attending to any other duties/responsibilities as may be assigned by the authorities of the Institute and the Head of the Computer Centre.

The SYSTEMS MANAGER will lead a team of Software Engineers and Operational staff and he may be provided with accommodation on priority basis and on payment of licence fee as per the rules of the Institute.

QUALIFICATIONS

(a) M.E./M. Tech./B.E./B. Tech. in Computer Science or in any field of Engineering with good academic record.

OR

(b) M Sc. in Computer Science/Mathematics/Physics with good academic record.

EXPERIENCE

The candidate should have at least 10 years of relevant experience, out of which not less than 3 years should be in Systems Programming/design and at least 2 years must be in a supervisory position. Some exposure to the internals of a contemporary operating system is essential. Experience with a large time-sharing Computing facility is desirable.

Candidates who possess the requisite qualifications and experience may apply stating full name and address, date of birth, details of academic qualifications and experience with copies of certificates, testimonials, list of publications, if any, and the names of three referees with their postal addresses **to the Registrar, Indian Institute of Technology, Powai, Bombay-76 on or before 10th March, 1988** alongwith a crossed postal order for Rs. 7.50. Candidates belonging to SC/ST communities need not send a postal order.

REGISTRAR

CLASSIFIED ADVERTISEMENTS

UNIVERSITY OF DELHI

DELHI—110007

Estab. IV/112/88

Dated the 8th February, 1988

Applications in the prescribed form are invited for the following posts :

S. No.	Department/Unit	Post	No. of Vacancies	Special/Desirable Qualifications
1.	Central Office	Programme-Cum-Statistician	One	Experience of processing of Examination Work.
		Driver	(Panel to be drawn) Certain percentage of posts also reserved for Scheduled Caste/Scheduled Tribe/Ex-Servicemen categories.	A pass in Middle School standard.
2.	Chemistry	*Laboratory Attendant	Two (One reserved for Scheduled Caste)	Should have worked in a Laboratory.
3.	Computer Centre	*Key-Punch Operator	One (Reserved for Scheduled Tribe)	
4.	D.U. Library System	*Jr. Library Attendant	Panel to be drawn (Certain percentage of posts also reserved for Scheduled Caste/Scheduled Tribe/Ex-Servicemen categories)	Certificate in Library Science.
5.	Graphic Arts Centre	**Mechine Operator (One each for Micro-Filming & Process Camera)	Two (one each reserved for Scheduled Caste/Scheduled Tribe.)	
6.	Delhi University Guest House	*Room Bearer	One	(a) Should be able to total bills & collect cash from the guests outside office hours. (b) Should know cycling. (c) Preference for a person with basic knowledge of plumbing and electricity work.
		Cook	One	Should have specialization in Mughalai and Continental Cuisine apart from Indian dishes.

** Candidates of General Category may also apply.
However, their candidature would be considered only if no Scheduled Caste/Scheduled Tribe candidate found suitable.

7.	Hindi	*Hindi Assistant	One	
8.	Management Studies	Sr. Programmer	One	(i) Experience of participation in training programme in Computer related disciplines. (ii) Intensive experience in System and Programming on a third generation Computer System.

		Programmer	One	(i) Experience of participation in training programmes in Computer related disciplines. (ii) Knowledge of an assembly language.
		*Junior Computer/ Jr. Console Operator	One	—
		*Technical Assistant	One	Experience in Computer Programming will be preferred.
9.	University Science Instrumentation Centre.	*Technician Grade VII	Two (One each for Glass Blowing and Automobiles)	—
10.	Music	*Tanpura Players	Two (for a period of five years) (One reserved for Scheduled Caste)	(i) Degree / Diploma in Vocal Music. (ii) Persons having educational background will be given preference.
		*Sarangi Players	Two (One permanent and one for a period of 5 years). (One reserved for Scheduled Caste)	—
		*Tabla Accompanist	Two (For a period of 5 years) (One reserved for Ex-Serviceman)	1. Knowledge of other percussion Instruments like Dholak, Naal, etc. 2. Knowledge of Hindustani Music (Vocal/Instrumental) 3. Persons having educational background will be given preference. 4. Two years working experience in University/College/Recognised Institution / A. I. R./ Doordarshan.
		*Pakhawaj Player	One (for a period of 5 years).	
11.	Unit for Plant Cell & Molecular Biology.	*Senior Technical Officer	One (Temporary upto August 1988 but likely to continue on permanent basis).	—
12.	WUS Health Centre	*Pharmacist	Two (One temporary upto 13.12.88)	—

Scales of Pay for the Posts are :

Senior Programmer/Senior Technical Officer	Rs. 1200-50-1300-60-1900	) Pre-revised
Programmer/Programmer-cum-Statistician	Rs. 700-40-1100-50-1600	)
Junior Computer/Junior Console Operator/Technical Assistant/ Hindi Assistant.	Rs. 1400-40-1800-EB-50-2300	
Pharmacist	Rs. 1350-30-1440-40-1800-EB-50-2200	
Tanpura Player/Sarangi Player/Tabla Accompanist/Pakhawaj Player	Rs. 1320-30-1560-EB-40-2040	
Key Punch Operator/Machine Operator/Technician Grade VII	Rs. 975-25-1150-EB-30-1540	
Driver	Rs. 950-20-1150-EB-25-1500	
Cook	Rs. 825-15-900-EB-20-1200	
Laboratory Attendant/Junior Library Attendant	Rs. 800-15-1010-EB-20-1150	
Room Bearer	Rs. 750-12-870-EB-14-940	

All posts carry D.A., C.C.A. and H.R.A. etc. as admissible under the rules in force in the University from time-to-time.

Essential Qualifications For

Senior Programmer

1. At least a Second Class (not less than 50% marks in the aggregate) Master's degree in Mathematics, Statistics, Econometrics, Operational Research, Computer Application or Physics or atleast a Second Class (not less than 50% marks in the aggregate) Bachelor's Degree in Engineering from a recognised Institution, and
2. (i) Atleast 5 years' experience in Computer Programming at a recognised Institution.
   (ii) Knowledge of atleast one of the high level languages like FORTRAN, COBOL, ALGOL, PL/1 and extensive experience of developing programmes for complex problems.

   OR

   A Ph.D. Degree from a recognised institution in computer related disciplines like System Programming, Numerical Analysis, Artificial Intelligence, Theory of Computability and Theory of Formal Languages.

Programmer-cum-Statistician (Central Office)/Programmer (Faculty of Management Studies)

(a) Atleast a second class (not less than 50% marks in the aggregate) Master's Degree in Mathematics, Statistics, Econometrics Operational Research, Computer Application or Physics;

OR

At least a second class (not less than 50% marks in the aggregate) Bachelor's Degree in Engineering from a recognised institution;

(b) (i) At least two years experience in Computer Programming at a recognised institution.

(ii) Knowledge of any of the high level languages like FORTRAN, COBOL, ALGOL, PL/1

Junior Computer/Junior Console Operator

REGISTRA

COLLEGE OF PHYSICAL EDUCATION

NO. 2, LUDLOW CASTLE SPORTS COMPLEX, SHAM NATH MARG, DELHI-110054.

Ref. No. CPE/Advt./88/

Applications are invited for teachers in the Delhi Administration's sponsored College of Physical Education (University of Delhi), at No. 2, Ludlow Castle Sports Complex, Sham Nath Marg, Delhi-110054, for about six posts of Lecturers' level with the background and experience in the fields of Physical Education, Health Education, Medical Sciences, Sports Psychology, Yoga, Extension Services, English, Hindi, and allied sports disciplines. in the U.G.C. approved grades of the University of Delhi.

The applications on plain paper, complete in all respects (Qualification & experience), with bio-data details, and attested copies of certificates should reach the college office by **March 1, 1988** through Registered AD post or by hand.

Qualifications (Essential)

(A) An M.Phil. or a recognised degree beyond Master's level or published work indicating the capacity of the candidate for independent research work; and

(B) Good academic record with at least second class (C in the seven point scale) Master's degree in Physical Education from an Indian University or an equivalent degree from a foreign University.

Desirable

(A) Diploma or speacialisation in coaching a game or sport from a recognised institution, mainly in activities like Athletics, Gymnastics, Yoga, Basketball, Volleyball, Handball, Football, Hockey, Cricket, Badminton, Table Tennis, Tennis, Swimming, Weight Training, Rowing, and other sports recognised for participation in Olympic, Asian and Commonwealth Games.

(B) Participation at inter-university or inter-state sports competitions.

Provided that for a lecturer teaching yoga, a degree or diploma from a recognised institution will be essential.

Provided that, if the selection committee is of the view that the research work of a candidate as evident from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above.

Provided further that, if a lecturer in discipline other than Physical Education is required to be appointed in the Faculty of Physical Education, the qualifications prescribed for recuritment to the post of lecturer in the parent discipline will be insisted upon.

Provided **also** that, if a candidate possessing **qualifications** as at (a) above, is not available or is not considered suitable, the college on the recommendation of the selection committee may appoint a person possessing a good academic record on the condition that he will have to obtain an M. Phil. degree or recognised degree beyond the Master's degree within eight years of his/her appointment; failing which he/she will not be able to earn future increments till he/she obtains that degree or gives evidence of equivalent published work of high standard.

Explanation

For determining "good academic record" the following criteria **shall** be adopted:

i. A candidate holding an M. Phil. degree or a **recognised** degree beyond the Master's level should possess at least a second Master's degree; or

ii. A candidate not holding an M. Phil. degree or a **recognised degree beyond a Master's level** should possess high second class Master's degree and a second class in first degree (B.A./B Sc. B.Com.) examination;

iii. A candidate not holding an M. Phil. or a **recognised degree beyond a Master's level** but possessing second class Master's degree should have obtained a first class in the first degree (B.A./B.Sc./B.Com.) examination.

2. Persons having secured marks more than the mid point of the prescribed minimum marks for passing an examination in the second division and the prescribed minimum marks for passing an examination in the first division by a university shall be deemed to having passed that examination in the high second Class.

Note : Preference will be given to candidates with outstanding sports background of actual participation at International, National and Inter-University level competitions; NCC, NSS, Cultural and Adventurous sports activities; work in the organisation of International and National sports activities and research aptitude with practical research projects undertaken in fields like Sports Psychology, Sports Medicine, Physiotherapy, Sports Journalism, Health Education etc.

Dr. J.S. Naruka

In case, an applicant wishes to apply for more than one post, separate application for each post should be sent. Canvassing of any sort would disqualify candidature.

PLEASE SUPERSCRIBE THE NAME OF THE POST AND POST NUMBER ON THE TOP OF THE ENVELOPE AS WELL AS ON THE APPLICATION.

Incomplete and illegible applications are liable to be rejected.

Note

1. The University reserves the right to restrict the number of candidates to be called for the interview.
2. It would be open to the University to consider the names of suitable candidates, who may not have applied. Relaxation of age and any of the qualifications may be made in exceptional cases in respect of all the posts on the recommendations of the Selection Committee.
3. The University reserves the right not to fill up any of the vacancies advertised if the circumstances so warrant.

Advertisement No. 6/Admn./1987-1988

REGISTRAR

GUJARAT AGRICULTURAL UNIVERSITY

SARDAR KRUSHINAGAR-385506
DIST. BANASKANTHA

Advertisement No. 1/88.

Dated : 6.2.1988

Applications on prescribed form are invited for the following posts of principals of following Colleges in Gujarat Agricultural University. The candidates who fulfil the qualifications and desire to apply may sent their application forms alongwith six copies of authenticated bio-data through proper channel to the Registrar, Gujarat Agricultural University, Sardar Krushinagar-385506, Dist. Banaskantha.

Name of the Post and Pay Scale	College
1 : **Principal** Rs. 1500-60-1800-100-2000-125/2-2500 plus other allowances as per University rules with rent free accommodation.	(a) College of Agriculture. (b) College of Veterinary Science and A H.

Application forms alongwith details regarding qualifications, experience and other terms and conditions for above posts can be had from the Registrar, Gujarat Agricultural University, Sardar Krushinagar-385506, Dist. Banaskantha on cash payment of Rs. 2/- (Money order will not be accepted) or by sending crossed Indian Postal Order of equal amount issued in favour of "Comptroller, Gujarat Agricultural University, Sardar Krushinagar", alongwith the self-addressed enveloped (23 x 11 Cms.) affixed with Rs. 2.20 paise postage stamps.

The applications duly completed in all respects should reach to the Registrar at above address on or before **31-3-1988** invariably through proper channel alongwith Indian Postal Order of Rs 50/- in favour of Comptroller, Gujarat Agricultural University, Sardar Krushinagar, Dist. Banaskantha, Gujarat.

The candidates already in the services of this University may also apply through their respective officers in prescribed form with six copies of authenticated bio-data without Indian Postal Order. All candidates called for the interview will have to attend the same at their own cost. Kindly note the following instructions :

1. Incomplete application will not be considered.
2. The University reserves its full right to fill up or not to fill up any or all the posts and to give or not to give appointment to the candidates selected by the Selection Committee.
3. Canvassing in any forms will completely disqualify a candidate.
4. Selected candidate for above posts is transferable at any campus or college of the University and ask between Education, Research and Extension Activities/Project and he will have to resign from previous employment.

REGISTRAR

NATIONAL INSTITUTE OF HYDROLOGY

JAL VIGYAN BHAWAN
ROORKEE

Advertisement No. 1/88-NIH

Dated : Jan. 29, 1988

Applications are invited for the following posts in National Institute of Hydrology (A Govt. of India Society) Roorkee from Indian Nationals satisfying qualifications and experience laid down therefor :

Scientist 'E' : 6 posts in the area of :

Surface Water Hydrology	– 4 Posts
Drought Management Studies	— 1 Post
Drainage	— 1 Post

Scale of Pay

Rs. 3700-125-4700-150-5000. Total emoluments at the initial of the scale is Rs. 4155/- excluding H.R.A.

Age : Below 45 years

Qualifications : 1. High Academic Qualifications in Civil Engineering or Agricultural Engineering with specialisation in Hydrology or Water Resources, or equivalent.

2. Ph.D. Degrees desirable.

3. Experience in Field Problems, Corporate membership in professional Institutions desirable.

4. About 7 years experience in teaching, research, design or planning.

5. Proven ability of conducting and guiding research.

Note : 1. Persons selected can be appointed on duputation basis also.

2. Those candidates who have applied against advertisement No. 1/87-NIH dated Jan. 22, 1987 and No. 6/87-NIH dated September 1, 1987 need not apply again.

The above mentioned posts carry usual allowances as admissible under the Central Government Rules. Age will be relaxable for persons already in Service in the Institute and other Govt./Semi-Govt./Autonomous organisations as well as candidates belonging to SC/ST community, retrenched employees of Defence Services and physically handicapped persons, as per rules of the Govt. of India.

Age will be determined as on 15.3.1988 (for candidates applying against this advertisement).

Persons already employed in Govt./Semi-Govt./Autonomous bodies should apply through proper channel. Applications not forwarded through proper channel may not be considered.

Candidates applying for more than one post should use separate application form for each post and remit fees separately for each post.

Application forms may be obtained by 29.2.1988 from the Chief Administrative Officer, National Institute of Hydrology, Jal Vigyan Bhawan, Roorkee-247 667 (U.P.) by sending a self-addressed envelope measuring 23 cm x 10 cm. Application forms duly completed in duplicate with copies of all testimonials alongwith an application fee in the form of Indian Postal Orders of Rs. 8/- (SC/ST candidates are exempted from payment of fee) payable to the National Institute of Hydrology at the Roorkee University Post Office should reach the Chief Administrative Officer, National Institute of Hydrology, Jal Vigyan Bhawan, University of Roorkee Campus, Roorkee-247 667 (UP) on or before **15.3.1988.**

Job Location : Anywhere in India.

PONDICHERRY UNIVERSITY

128, RANGAPILLAI STREET
PONDICHERRY 605 001

Advt. No. 1/88

Dated : 27-1-1988

RECRUITMENT FOR FACULTY AND ADMINISTRATIVE POSITIONS

Pondicherry University, set up under Parliament Act No. 53 of 1985 invites applications in the prescribed form for the following faculty/Administrative positions in University Grants Commission scales of pay and allowances.

FACULTY POSITIONS

(a) Professors — In the University Schools of Management & Ecology and the Departments of Chemistry, Biology, Physical Education & Sports, Sanskrit and Nehru Professor in the Institute of International Studies.

(b) Readers — In the University School of Management, Departments of Chemistry, Biology, History, Physical Education & Sports, Sanskrit, ELT Centre in the Department of English and in the Institute of International Studies.

(c) Lecturers — In the University Departments of History, Biology, Physical Education & Sports, Sanskrit and in the Institute of International Studies.

(Note : in respect of the "Institute of International Studies : Those possessing equivalent qualifications in the disciplines/areas of History, Politics, Sociology, Area Studies, International Law, International Economics, Journalism are also eligible to apply).

(d) Librarian (Professor's Scale)

ADMINISTRATIVE POSTS

(a) Deputy Registrars
(b) Assistant Registrars
(c) Public Relations Officer
(d) Assistant Finance Officer
(e) Executive Engineer
(f) Assistant Engineer
(g) Assistant Horticulturist

Being a Central University, recruitment will be made by the statutory Selection Committees purely ON THE BASIS OF MERIT and ON ALL-INDIA BASIS.

Reservation

Reservation to candidates of SC/ST and physically handicapped as per Government of India rules.

How to Apply

Printed application forms alongwith details of qualifications and other particulars are available in the University office and will be sent on requisition.

Candidates who wish to apply for any of the faculty/administrative positions mentioned above may get the required application forms, etc., by sending a written requisition with clear postal address accompanied by Bank Draft or Indian Postal Order to the value of Rs. 10/- (Rs. Ten only) towards the postage and stationery charges, drawn in favour of the Finance Officer, Pondicherry University, Pondicherry 605 001 payable at Pondicherry.

All requisitions, however, should be addressed to the "Registrar, Pondicherry University, 128, Rangapillai Street, Pondicherry 605 001. (Each post needs a separate application and a separate Bank Draft or Indian Postal Order).

Last Date for Requisition of Application Forms

The last date for receipt of requisition for application forms with Bank Draft/Indian Postal Order for Rs. 10/- is **15th March, 1988.**

Last Date for Receipt of Filled Application Forms

The last date for filled up application forms to reach the Registrar, w Registration Fee as noted below **15th April, 1988.**

Registration Fee

Application forms duly filled w copies of certificates, testimonials e alongwith Registration fee for each p of Rs. 50/- (Rs. Fifty only) for all ca dates by Bank Draft on any Nationa Bank at Pondicherry or Indian Pos Order favouring the Finance Offic Pondicherry University, Pondiche should reach the Registrar on or bef. **15th April, 1988.**

Exemption for SC/ST Candidates fr any Fee

SC/ST candidates are not required remit any fee towards postage station charges of Rs. 10/- nor Registration f of Rs. 50. It is enough if such applica send attested copy of the SC/ST ce ficate alongwith the application.

Payment for Travel

Outstation candidates selected interview will be paid to and fro sec class fare by the shortest route.

CANVASSING IN ANY FORM WI BE A SERIOUS DISQUALIFICATI

Rs. 1.50

esident R. Venkataraman arriving in academic procession to deliver the Convocation Address at the University of Kashmir

G. B. Pant University of Agriculture & Technology

PANTNAGAR-263145, U.P.

ADMISSION NOTICE

A competitive entrance examination for selection of candidates for admission to the First Year of the following Academic Programmes will be held on Sunday the 1st May 1988, from 10 a.m. at Agra, Allahabad, Delhi, Hyderabad, Lucknow, Roorkee, Varanasi, Kanpur and Pantnagar Centres.

A—Bachelor's Degree Programme	**Minimum Eligibility Qualifications**	**Age**
1. B.Sc. Ag. and A.H. 2. B.Sc. (Forestry) 3. Bachelor of Fisheries Sc.	Intermediate Agriculture Science (Biology or Maths) from U.P. Board Allahabad or equivalent examination.	22 years on 30.11.88 (3 years relaxation for SC/ST/BC candidates only)
4. B. V.Sc. and A.H.	Intermediate Agriculture/Science with Biology from U.P. Board, or equivalent examination.	
5. B.Sc. Home Science (for girls only)	Intermediate Science (Biology or Maths)/Agriculture from U.P. Board, or equivalent examination.	

Candidates appearing in the above Board's examination in 1988 are also eligible to appear in the entrance examination provided their results are positively declared by 5th July 1988, otherwise they will stand disqualified.

B.—Master's Programmes in 44 Majors in the areas of:

1. Agriculture
2. Veterinary Sciences
3. Civil/Electrical/Mechanical/Agricultural Engineering
4. Basic Sciences
5. Food Sciences; and
6. Home Science

Minimum Eligibility Qualifications

Bachelor's Degree in Agriculture/Veterinary Sciences/Civil, Electrical, Mechanical, Aricultural, Engineering/Basic Sciences, (Physics, Chemistry, Maths, Biology) Home Science, as the case may be with 55% marks in aggregate or an equivalent OGPA from a recognized University with not more than one third division at High School or Intermediate level.

C—Ph.D. Programmes in 29 Majors in the areas of:

1. Agricultural Sciences
2. Veterinary Sciences
3. Agricultural/Civil/Electrical/Mechanical Engineering
4. Food Science; and
5. Basic Sciences.

Minimum Eligibility Qualifications

Master's degree in Agriculture/Vety. Sciences/Agricultural. Civil, Electrical, Mechanical Engineering/Food Science/Basic Sciences, as the case may be. in First Division from a recognized University with at least second class in Bachelor's degree and not more than one third division at High School or Intermediate level.

For full details, the Information Brochure and Application Form, prescribed separately for Undergraduate, Master's and Ph.D. programmes, can be obtained by sending an 'ACCOUNT PAYEE' Bank Draft for Rs. 10/- in favour of G.B. Pant University of Agriculture & Technology, Pantnagar on State Bank of India, Pantnagar Branch (Code-1133) or United Commercial Bank, Pantnagar, with a self-addressed envelope of 10"x7" size bearing postage stamps of Rs. 4.00 by Unregistered Parcel, or may be obtained on payment in cash at the Counters set up in the Admission Cell at Pantnagar.

Last Date and Examination Fees : 10th March 1988 with the prescribed Fee of Rs. 100.00 for Undergraduate Programmes and Rs. 100.00/120.00 (as the case may be) for P.G. Programmes. Applications delivered after 10th March 1988 but not later than 25th March 1988 must be accompanied with an additional late fee of Rs. 50.00 for Pantnagar Centre only.

NOTE

This is to notify for information of all concerned that the minimum duration of the B.Sc. Ag. & A.H programme offered at this University has been increased from 3 years to 4 years with effect from the academ session 1988-89. Accordingly, the maximum duration of this programme will now be 6 years. In respect o other academic programmes no change has been made.

Who Has Failed : The UGC, the Academicians or the Politicians ?

J.N. Kapur*

The University Grants Commission was given the responsibility for coordinating and maintaining standards in higher education in India. Though the standards in some sectors of higher education and in some institutions have risen, in general standards in higher education have neither been coordinated nor maintained. It is therefore obvious that the UGC has failed in its primary responsibility. The reason is also equally obvious The UGC was neither given adequate powers nor adequate funds to discharge the responsibility given to it.

Education was a state subject and every state government has the girht to start any number of ill-equipped universities and give these universities the right to give the highest degrees. The state governments utilized this right in full measure. New colleges and universities were started for serving the political interests of those politicians who happened to be in power. All educational norms were thrown to the wind in this process. The UGC looked as a helpless spectator. It could not stop the birth of the new universities. It could only ignore them or refuse to provide them funds. This could only ultimately harm the students of these universities and help the low standards of these universities to go down still further.

The UGC could also refuse to recognise the degrees given by these universities, but this may not have been effective as the state governments would have still recognised the degrees given by these universities and given jobs on the basis of these degrees.

If the framers of the constitution were really serious about standards in higher education, they could have given the UGC the powers of accreditation so that the UGC could give or take away the powers of giving any specified degrees from any university.

Perhaps the framers of the constitution, most of whom had made great sacrifices in the freedom struggle did not anticipate that the politicians of the succeeding generations will be willing to sacrifice standards in education for the sake of narrow personal or political gains.

The UGC could have still exercised the right of accreditation under its overall responsibility of maintaining and coordination of standards it was given by the constitution and then the matter could be settled by the Supreme Court.

The UGC however did not exercise this right and almost surrendered it by default. It may be that the UGC felt that it could exert sufficient pressure through its grants—giving powers or it could be due to its desire to avoid political confrontation. It is also possible that things were not so bad in the beginning and by the time the UGC realised the gravity of the situation, it was already too late to act.

Whatever may have been the intentions of the framers of the constitution, the successive central governments went on clipping the wings of the UGC. First prestigeous national laboratories were set up, outside the university system, with funds much larger than those given to

---

**Hony. Visiting Professor, IIT, Delhi and University of Delhi.*

the UGC, then IIT's medical institutes, IIM's and agricultural universities were set up outside the purview of the UGC so that the UGC could spend only 10-20% of funds for higher education and with these limited funds, it had the responsibility of maintaining standards for 90% of the relatively less motivated students. Even here it had the responsibility of complete funding of central universities, so that the funds at its disposal for the remaining universities responsible for higher education of the vast majority of students were very small indeed.

The UGC is a body consisting mostly of academicians and its advisory committees consist almost entirely of academicians. As such if there are any weaknesses, the academic community cannot absolve itself of the responsibility.

Thus the UGC, wanting to encourage research, insisted that every new lecturer should be a Ph.D. The academic communities of some universities responded by producing a large number of spurious P.h.D's. The UGC did not interfere because of its respect for the autonomy of these universities and the vested interests in these universities went on mass producing Ph.D's. Feeble voices were raised in some quarters against Ph.D. rackets but these were not strong enough to stem the tide of mediocrity.

It is the constitutional responsibility of the UGC to maintain standards. It is also the moral and professional duty of every academician to maintain standards. In fact everywhere in the world, the academic community itself discharges this responsibility very effectively. This is as it should be and the UGC or the government should not be required to interfere. Though in some universities, Ph.D. standards were maintained, in many others these were completely disregarded by powerful individuals and groups. The UGC's plan for raising standards was defeated by vested interests. The academic community only blamed the UGC for not being realistic enough to realise the powers of these vested interests in advance.

Similarly, the UGC introduced a Merit Promotion Scheme. It was a very laudable idea that no deserving teachers should stagnate in his position because no higher level positions were available. However the standards of promotion were to be same as those for regular promotions. Nevertheless what happened in practice was something which was not desired. Senior professors and vice-chancellors worked together in the special selection committees for promoting almost everybody who had spent a certain number of years as lecturers or readers irrespective of the teaching and research work they had done. Everybody went out of his way to be kind and generous to those who had stagnated in their positions; nobody bothered to see that quite a number of them had also stagnated in their knowledge. Few academicians bothered about the effect this policy of time-bound promotions would have on the psychology of good teachers and researchers. The following feeling spread widely: "Why should I teach well and why should I do research when I can get my promotion even otherwise. I can do my routine teaching with half of my energy, why should I not make some more money by using the remaining energy in some other work ?"

No educational system can perform well unless the system is so designed that every student and every teacher is motivated to put in his or her best efforts. Here due to the weakness of the senior academic community, whatever motivation was left was sucked out of the system.

Almost overnight the number of professors in the universities was doubled and professorship was immediately devalued. The percentage of professors in Indian universities became higher than in many British and American Universities. The experts and the vice-chancellors obliged persons in a big way and standards were thrown to the wind in the process. It appeared that everyone was interested in individuals and nobody was interested in the system.

There is no doubt that some of the persons promoted in the process richly deserved their promotions, but it is also equally true that many undeserving persons did also got promotions in this process. What is worse is that some of these persons will now sit in judgement over other younger persons.

A similar scheme of merit promotion operates in all foriegn universities all the time, but their promotions have to be earned the hard way. Every academician jealously guards standards and all promotions are made in an open manner. Here academicians demolished standards and blamed UGC for it.

The UGC should have refused to recognize promotions which were blatantly unjustified and should have laid down more strict high standards for further merit promotions e.g. all merit promotions could have been done at a national level. Instead of taking courageous steps, the UGC decided to withdraw the scheme. A good idea was defeated in its implementation by the academicians.

Similarly, the UGC launched upon a very good programme of improvement of faculty of undergra-

(*Continued on page 7*)

VOCATIONAL EDUCATION

K. N. Bhatnagar*

Lenin, speaking at the First All-Russian Congress on Education rightly said. "A school outside of life, outside of politics is a lie and hypocrisy". Almost a similar view was expressed by Prof. Yash Pal, Chairman of the University Grants Commission at the recent Conference of Education Ministers in New Delhi when he passionately reiterated that vocational training should be made a part and parcel of the entire educational process right from school to college and university stage, and should be intrinsically integrated with the educational system of the country as such.

The prestige of an educational establishment in Russia for example depends first of all on how strong its bonds are with life and consequently how well it trains specialists capable of bringing benefit to the people.

It thus becomes apparent that vocationalization of education is not to be seen as some stream, faculty or force added 'ab extra' to the existing courses in a school or a college system with a view to attracting students of weaker sections of society in the name of employability, or to the so-called less intelligent or mediocre students, but as a training of each and every individual of society, right from primary to university stage, to make him fit for the life he has to lead—each individual fit in his proper place like pieces in a perfect orchestra—ensuring a systematic and progressive 'individuation' of his moral, social and spiritual values, securing harmonious development of his personality to enable him to contribute his best to the society at large and thus become an integral and organic part of the social system, or the body politic.

Why Vocationalisation ?

As the present pattern of education in India has evolved out of a system existing in the 'British days', a few words regarding education in British India will not be out of place. In the initial period of subjugation, the primary aim of the 'rulers' was to fabricate a structure of education in India which could turn out 'clerks' or their equivalents who were so much needed for the bureaucratic functioning of the Government machinery. Mr. Arther Howell the famous British historian remarks, '.........Education in India under the British Government was first ignored, then violently and successfully opposed, then conducted on a system now universally admitted to be erroneous, and finally placed on its present footing.........' (A.P. Howell, Education in British India Calcutta, Government Printing, 1872. p.1). It was as late as 1902 that the Government launched serious inquisitions for the improvement of Indian education and since then successive Commissions were appointed by the Government of India which put forward valuable suggestions regarding the educational policy at all levels of instruction. The latest being—New Education Policy, 1986.

Despite, however, best efforts of the Government and the public, the pace of progress in educational reforms in general and vocationalisation of education in particular, has been minimal.

Some Latent Aspects

The reason for this appears to be two fold : First, we have so far achieved little success in formulating some concrete 'weeding methods' at the 'higher secondary level' so that at the secondary level that fraction of the student population which has little interest in higher education but receives it either aimlessly or to compete in some clerical examination is at once arrested and discouraged. To quote only one example from my reminiscences as a college teacher, I once asked some of my students in the class the reasons for their offering Science. I was surprised when most of them replied that they had done so only on the insistence of their parents who were aspiring to make them doctors or engineers without their themselves having any genuine interest either in Science or in the medical or engineering profession. The others told me that they had offered Science as it was very 'customary' to offer Science these days. Some of them no doubt replied that they were really insterested in Science because of its logical approach and rationality and they had little aptitude for more straight forward and easier subjects like history, Hindi, or economics. But the number of such students was very meagre.

Dwelling upon the problem of placement and selection of students to be admitted to colleges and universities in India, the 'Report on Examination

---

Deputy Secretary, University Grants Commission, New Delhi.

Reforms' (University Grants Commission) says, 'one of the most important causes of the wastage of 50 to 60 per cent in individual examinations in India is that universities admit many students who are ill-suited for higher education. It is, therefore, necessary to view the problem of admission to the Institutions objectively and think of it primarily in terms of academic and national needs and in relation to the availability of national resources. The present method of selecting students for admission does not operate to any great extent as a true selection for academic studies. Sir Francis Galton (U.K.) has emphasized differences between individuals and developed statistical methods for their analysis. Methods for precise measurements of psychological characteristics were contributed by William Wundt in Germany. Alfred Binet in France developed standardised measures directed towards identifying children of different levels of ability. On the basis of procedures used in Japan, the U.K., the U.S.A. and the U.S.S.R. the data used for college and university admissions can broadly be classified into the following types :

a. Secondary school performance,
b. Performance in entrance examination, interviews and oral examinations,
c. Performance in achievement and aptitude tests.

TABLE

Correlations between Admission Data and Final University Performance from Published Reports in UK & USA

Type of assessment	Country	University	Correlation and significance
Secondary School Assessment 1	U.K.	Degree	.14, .01
Secondary School Assessment 2	U.S.A.	4 year cumulative average	.46, .01
Aptitude tests	U.K.	Total Final Marks	.50, .01
Combined Criterion	U.S.A.	4 year cumulative Average.	.63, .01

1. *Based on Terminal Examination.*
2. *Based on Regular assessment of performance by teachers throughout the Secondary School Career.*

The data presented in the above table suggest that 'prediction of university success can be improved if the secondary school assessment (based, of course, on regular assessment of performance by teachers throughout the secondary school career) is amalgamated with aptitude tests when the correlation is as high as .63 at 1% level of significance.

Second, most of the educational institutions show stoic apathy towards dynamic reorientation and rapid vicissitudes, in accordance with the demands of the present age, in the educational curriculum and introduction of vocational streams as well as in the examination system so that the latter still remains a test of mere cramming power of students and not a test of their real ability and knowledge.

Speaking at the Central Institute of Education Dr. Julius A. Stratton of the Massachusetts Institute of Technology had some time ago said that the aim should be to intensify the educational effort and bring every home within its fold so that in all branches of national life education become the focal point of development. He did not agree at the same time that a university degree was everybody's birth right in a democratic country. Democracy offered opportunities for higher learning to all but only those with the necessary ability and initiative could avail of them.

Here, however, it is not proposed to deal with the organizational or functional details of 'modus operandi' of the 'weeding system' at the secondary level suggested above, but as 'the schools provide the base of university education and one cannot have sound university education in a country without a sound school education', it is pertinent to refer to an article to emphasize the 'importance of aptitude' for higher education the lack of which is eating up our education like 'gangrene' as reflected by the high percentage of failures in the First degree examination. The article, by an Educational Director of some attached institute of the Massachusetts University, stressed the importance of personnel with mathematical background in every department and showed the possibilities of changing the traditional mathematics curriculum at the lower stages so that students learn the more important items like calculus and graph and through it even the system of Real and complex numbers in still lower classes than they do now and in lesser period too, ignoring thereby the usual time-consuming mathematical drill. He was honest enough when he added that in countries like West Germany and Russia, which were making "tremendous advancement" in the field of science and technology, the mathematics syllabus and its teaching in particular, were different than that existing in France, U.K. and America. "Trigonometry, for example", says Marilyn Ferster in "New Mathematics in School—Science Service" has been a part of the school curriculum for 300 years. It was introduced because at that time educated men became either Sea Captains, ministers or surveyors. Knowledge of trigonometry and particularly the solution of triangle was essential for these professions. The Sea Captain used the principles involed in the solution of triangles to navigate, the minister to compute the date of Easter, and the Surveyor to stake out new land. Today the solution of triangle is no longer an important application of trigonometry. Radar and radio-beams assist in navigation, observatories compute the date of Easter, and the land has been staked out. What is important however is understanding the properties of trigonometric functions ? These properties have important applications in electrical engineering for example, and are also basic for understanding more advanced mathematics.

With logarithms too, the emphasis had shifted. Formerly they were taught as a tool for calculations. With the introduction of desk calculators this use for logarithms became obsolete. But the properties of logarithmic functions must still be taught because they are fundamental for understanding higher mathematics............Instead of Euclidean geometry in 10th grade, a combination of plane, solid and analytic geometry is presented. High School students are also introduced to vectors and they work with coordinate systems on a line, in a plane and in space.............. Dr. Patrick Suppes of Stanford University and his associates had introduced Kindergarten and first-grade children to the notion of a 'Set'. Although Dr. Suppes cannot yet evaluate the results of his experiments, he does believe that very young children can handle significantly more complex material than they are given in the conventional curriculum. Another very exciting programme is the so-called Madison Plan directed by Dr. Robert Davis of Syracuse University in which university professors teach the teachers who in turn teach mathematical concepts to their students. Fourth-grade children learn fundamental concepts of algebra through games and situations arising in the classroom rather than from standard textbook examples. Since 1946 Dr. Max Beberman of the University of Illinois has conducted his "discovery method" designed to lead elementary school children to discover basic laws of algebra by themselves. Dr. Beberman believes that conventional ways of teaching mathematics produce "rigid computers" when in fact young students could grasp abstract mathematical relationships'.

Kerala : A Case Study

Richard Aldington had said, "the true wealth of a country lies in its men and women". An educated, enlightened and disciplined population, is an asset for any country in the world. Let us make a brief case study of one of the States of India which has the highest percentage of literacy in the country, namely; Kerala. Similar studies can be made for other States of the country as well.

One-third of the State of Kerala is covered with forests. They supply timber, fuel fodder and a variety of other products. A number of industries such as furniture, paper, rayon, plywood, matches, resin and tanning depend on forests for supply of raw materials.

Next to Bihar, Kerala possesses the widest variety of economic mineral resources among the Indian States. The beach sands of Kerala contain monazite, ilmenite, rutile, zircon sillimanite etc. There are extensive white-clay deposits and abundant resources of mica, graphite, lime stone, quartz-sand lignite and other minerals of commercial importance.

About 55% of the population belongs to the agricultural class. More predominant next to agricultural occupations are cottage industries (mainly coir-spinning and handloom weaving), and cashew and coir factories.

There are perhaps more than 10.000 institutions of elementary, secondary and higher education in the State, including Junior technical and multipurpose schools. However, the number of schools offering courses in Foresty, Fisheries and other such courses to exploit forest and mineral wealth of the State, are almost negligible in the absence of concrete micro level planning for vocationalisation of education in the State. It is interesting to note, on the other hand, that for such matters as the determination of the actual number of faculty positions required in an institution abroad 2 Stage—3 Stage equilibrium Models and Markov Chain Model have been used.

It is thus apparent that vocationalisation of education should not be considered mechanically but with due regard to the concept, vision and philosophy of education.

RESEARCH FOR FARMERS

Musings on 18th Anniversary of HAU

Har Swarup Singh*

In view of the recent advances made in science and technology and the means of transport and communication, agriculture cannot be treated either as an isolated sector or as a haphazard profession depending on the vagaries of nature. We, at th Haryana Agricultural University (HAU), have been making concerted efforts to make the best use of the available facilities to provide a better quality of life for the farmer.

Since the inception of the University, the agricultural production in the State has increased manifold. The University has evolved improved varieties of foodgrains, vegetable crops and cash crops. Quality plants in the aromatic plants have also been identified and are being introduced in suitable growing areas of the State to improve the economic status of the farming community. The total cropped area of the State is about 58,260 thousand hectares of which cereals account for about 55 per cent followed by pulses (19%), cotton (5.65%), oilseeds (4%) and sugarcane (2.5%). Rapeseed and mustard are the most prominent crops among oilseeds which occupied about 94 per cent of the total area allocated under oilseed crops. The cultivation of vegetable crops is mostly localised around the citites/towns. So we plan to work on commercial farming around Delhi which is sorrounded by Haryana on three sides.

The foodgrain production has gone up 2.5 times in 1985-86 compared to the production in 1966-67. The corresponding increase in pulses, oilseeds and cotton has been to the tune of 1.2, 3.4 and 1.8 times since the inception of the State. These favourable production achievements in crop commodities could be attributed to the evolution of high yielding varieties, improved production technology, increase in irrigation facilities and efficient insect-pest control, besides the coordinated efforts made for adoption of the technology by the various state agencies and the hard labour put in by the virile peasantry of the State.

Haryana Agricultural University has so far released 70 improved crop varieties for general cultivation in the State. These include popular varieties of wheat (WH-147 and WH 291 of Mexican wheat), Barley, Gram and Kabuli gram; Manak of Arhar. There has been much emphasis on oilseeds too. Noticeable work has also been done in vegetable crops.

Adoption of Dryland Technology

Successful dryland agriculture is now possible through use of conserved moisture, water-shed management and adoption of dryland technology in the rainfed areas of the State. Certain varieties, namely, Moong MH 83-21 and S9, Guar IC 9165 and HG 72, cowpea 'Chirodi', Mustard (Raya) RH 7557, RH 7818 and Kranti, Gram Gaurav and Arhar variety (Manak) showed promise for yield in the dryland tract of the State.

Seeds/Sets and Seedlings/Saplings Production

The University produces nearly 20,000 quintals of breeder and foundation seed of various crop commodities for supply to central/state seed multiplying agencies. In addition, 32,000 quintals of sugarcane sets of improved crop varieties are raised and supplied to the seven sugar mills in the State for raising foundation seeds.

More than 70 thousand fruit plant seedlings and 50 thousand sapplings of social forestry plants are produced each year.

Socio-economic Studies for Rural Uplift

The University is conducting economic survey, economics of farm crops and farming systems, for the guidance of farming community in Haryana. The Department of Sociology has conducted various social and economic studies on the problems of dietary deficiency, malnutrition in children, pregnant and lactating women, particularly of low income group.

Research for better Animal Care

Animal Husbandry, an allied activity of agriculture has received special attention of HAU scientists. Researches in animal science, especially relating to cross breeding programme in cattle, sheep and goat have provided suitable serearch results in increasing the genetic potential of local breeds. The cross breeding programme has helped to bring about three-fold increase in milk yield, reduced the age of maturing at first calving and inter calving periods. Haryana holstein cross bred yielding as high as 31 litres of milk has been devoloped by HAU scientists. The University has one of the biggest animal farms with an assortment of various animals like buffaloes, pigs, goats, sheep, turkeys, ducks, Japanese quails and poultry for meat and eggs on which continuous research has given encouraging results.

---

*Vice-Chancellor, Haryana Agricultural University, Hisar.

The Veterinary Clinic provides 24 hour service for curing different animal diseases. The Clinic treats about 100 animals daily free of cost. For better health care of animals in general and of valuable cross breeds in particular, the HAU College of Veterinary Sciences, recognised as one of the best institutions of the country, has developed sound technology which has proved a boon to the veterinarians and farmers all over the country. Preventive and curative measures for some of the unidentified diseases in cattle like, degnalla, mastitis have been developed.

Educational Facilities

The University has the best facilities in terms of laboratories, equipment and teaching faculty. New Departments in the College of Agriculture such as Agro-Forestry, Agro-Meteorology have started teaching programmes at undergraduate level. In Home Science College, the Department of Home Science Extension Education has started postgraduate programme. The College of Basic Sciences and Humanities has added postgraduate programmes in Chemistry. The existing infrastructure at the campus of the College of Agriculture, Kaul has been upgraded. Plans are afoot to start some more departments such as : Department of Rural Development, Department of Environment, Department of Seed Technology, Department of Crop Physiology and Department of Post-Harvest Technology.

Recently, the University has shifted to the semester system.

Transfer of Technology

Undertaking the extension of agriculture, veterinary animal science, home science and other allied sciences to the rural people of the State, is one of the three major objectives of the University. The extension network of the University, which is most widespread and unique in the country, has been lauded at various forums throughout the country. More than 110 training courses are being organised every year for farmers, rural youth, defence personnel, rural and urban women and for the field staff of the State Department of Agriculture.

Farm magazines, folders, circulars and a large number of publications are issued regularly for the benefit of farmers throughout the State.

We endeavour to bring qualitative changes and necessary consolidation in making this University as one of the best, not only in our country but in the world. ☐

The UGC, the Academicians or the Politicians . . .

(*Continued from page 2*)

duate and postgraduate colleges. The academicians gave them Ph.D. degrees in narrow specialised areas without doing anything to improve their teaching capabilities. In fact in some cases, the UGC spent Rs. 50,000 or more to convert a good teacher into a frustrated teacher... The whole programme however helped the research programmes of many university professors, but it failed to meet the objective.

The UGC cannot maintain and coordinate standards by itself. Every member of the academic community has to be committed to maintaining these standards. If there are a few who do not want to maintain standards, the academic community should look down upon them.

Most politicians are out to exploit the educational system for their own narrow ends. They want to appoint vice-chancellors, principals, registrars and even professors who support them. They will also like to encourage teachers who are willing to organize students and teachers for supporting them. They do not mind if these teachers do not do their academic work at all.

The only defence against this can be the academic will of the academic community. The silent majority of the academic community has to defeat the designs of the vocal majority.

The educational system has to be restructured so as to introduce in it the basic element of motivation for every student and teacher. Hard and dedicated work has to be adequately rewarded, whether it is in studies, teaching or research. A public opinion has to be created which condemns in no uncertain terms, these practices which tend to lower standards. Unless action is taken now by everyone, future generations will not excuse us for our neglect. ☐

Convocation

Striving for Truth

"An average-to-good performance may result from quiet conformism. But excellence is made of different stuff. It comes from setting one's own standards for oneself, seeking to better oneself, striving for what may be called the truth of perfection and the perfection of truth'', reminded Hon'ble Shri Ramaswamy Venkataraman, the President of India while delivering the Convocation Address at the 13th annual convocation of the University of Kashmir. "Therein", he said, "lies the secret of all excellence". Excerpts

Learning is a continuous process. There can be no such thing as an end to the acquisition of knowledge. Beginning with the knowledge that is derived from books, learning then draws from actual day-to-day experience and experience is a school that has no terminal examination. Indeed, each day is at once a classroom and an examination. Therefore it is that India has long looked upon teaching as something beyond pedagogy. The ancient teaching tradition that has prevailed in India tells us that much more than the transmission of information is involved in teaching, much more than the collecting of information. To adapt the words of T.S. Eliot, information must lead to knowledge and knowledge must crystallize into wisdom.

Kashmir with its great tradition of scholarship, knows this well. Be it in Sanskrit or Persian or in its own mellifluous tongue, Kashmiri, this State has treasured the value of learning. Personalities and savants who lived here in ancient times such as the great Lal Ded, Nund Rishi and Habba Khatun were teachers in this essential sense. People came to them irrespective of denominational affiliations in search of that wisdom which helps development of one's personality, both inner and outer. These three outstanding personages helped countless persons not just to Know but to Be and not just to Be in the sense of merely Existing but in the sense of becoming progressively more and more Aware, more and more capable of perfecting one's knowledge and skills.

One's skills, acquired early in life, are thereafter placed continously on trial. Tests of one's endurance, calibre and training recur stage after stage in life. They constitute challenges which have to be met with equal earnestness, both individually and collectively.

The first challenge that I would urge my young friends to face is the personal challenge posed by Destiny to our inner resources as individual men and women, questioning what goes on around us, ever enquiring, and ever seeking. If you examine the major inventions and discoveries that have been made in human history, you will find that they were made because intellectuals questioned the obvious. Had not Newton questioned the falling of the apple, an age old occurrence. the Law of Gravitation, would not have been discovered. Had not James Wat questioned why the kettle whistled, the great invention of steam power would not have occurred. Therein lies the secret of all excellence. An average-to-good performance may result from quiet conformism. But excellence is made of different stuff. It comes from setting one's own standards for oneself, seeking to better oneself, striving for what may be called the truth of perfection and the perfection of truth. The highest fruits of research have resulted thus. Were it not for scientific research, bauxite would have remained clay and limestone, mere rubble.

University education has kindled your ability to question and to reason. It has given you the thirst for excellence ; please strive to quench it.

Plutarch in his famous *Lives* quotes Alexander as having said : "I assure you I had rather excel others in the knowledge of what is excellent, than in the extent of my power and dominion." Coming from Alexander the Great, that is a remarkable statement. But many a lesser mortal has also been guided by the desire for excellence. When we look about us, in the world of people who are far removed from eminence or power, we would be surprised by examples of sheer quality. Often unnoticed, these examples still make their own invaluable contribution.

If for instance I were asked t mention the three most outstanding categories of simple folk in India for whom the pursuit of excellence has been more than an interest and in fact, a way of life, I would say they are our artisans, our weaver and our musicians. There is n 'need' as such, functionally speaking, for the Kashmiri carver o walnut and chinar wood to go beyond making tables, chairs, boxe or the like. And yet he goes wel beyond his functional purposes t turn his products into works of sheer art. The Kashmiri wood carver's chisels have thereby created poetry on wood. Likewise, Kashmir's weavers could have remained content with rolling out lengths of fabric from any wool. But the Kashmiri weaver was not content with that. Assiduously, he spotted the smooth fleecy wood of the Kel goat and produced the *Pashmina* that has attracted the admiration of the world. The Kashmiri needle worker, likewise, could use his minute instrument to stitch and attempt nothing more. But, as we all know, he has used it, delicately and artistically, to embroider patterns of such aesthetic calibre as to be the pride of India and the wonder of the world. Here is sheer excellence in operation. And as for music, the third category of excellence that I mentioned, no examples need be cited other than that of the Kashmiri *Santoor*. I do not think there is a single instrument in India, which creates a world of subtle melody comparable to the *santoor*. Only a musician with an insatiable striving for the *maximum* aesthetic satisfaction could have thought of the *santoor*.

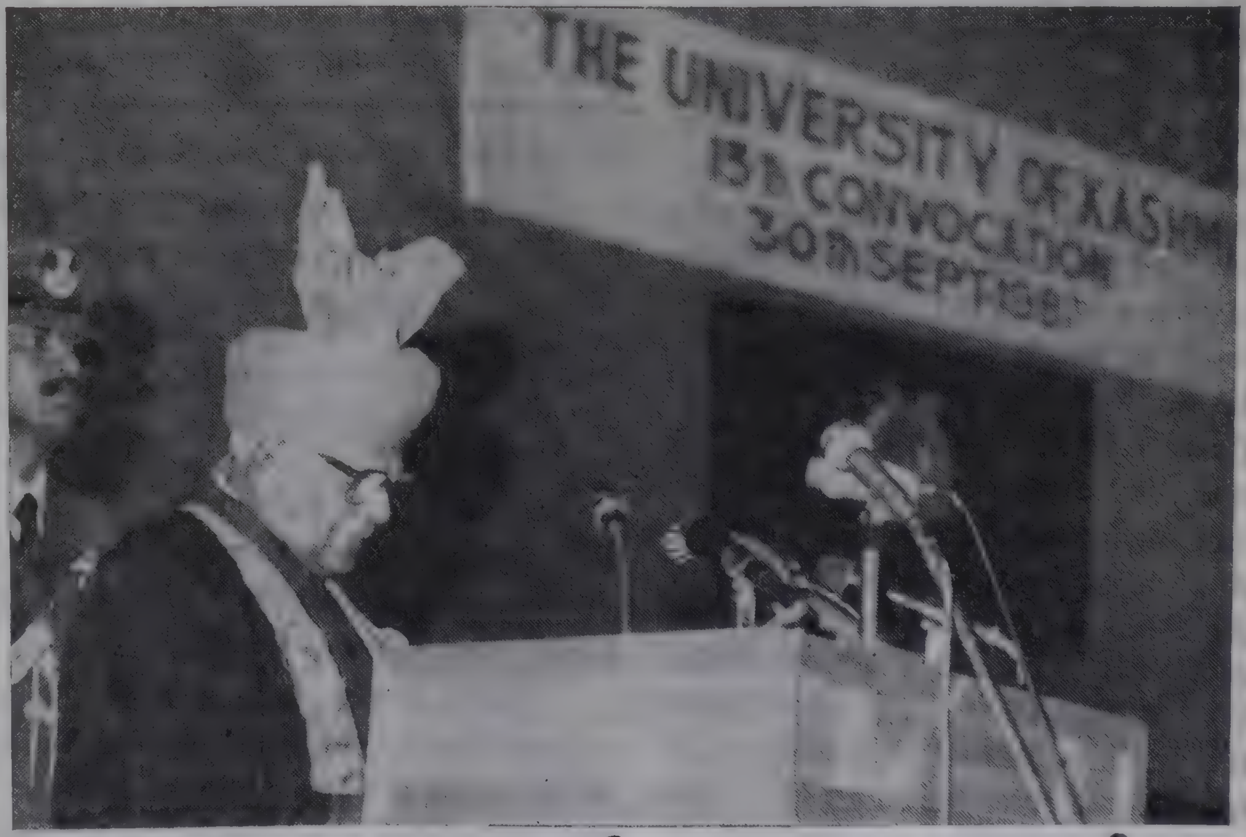
It is not the artist alone who seeks excellence. There is no vocation, be it ever so humble or prosaic, that cannot be performed excellently. The question that one needs to ask of oneself is : Am I giving of my best to the task undertaken ? As William Osler said : "The artistic sense of perfection in work is a much-to-be-desired quality to be cultivated. No matter how trifling the matter on hand, do it with a feeling that it demands the best that is in you, and when done look it over with a critical eye, not sparing a strict judgement of yourself." Any activity can be done well, or indifferently. One should always endeavour to do one's best and never reconcile to anything but one's best. It is unfortunate that more and more are growing indifferent to quality not realising that they do great harm to themselves.

A lowering of one's own standard, in terms of aspiration and endeavour, is the suicide of one's personality.

Ours is a great country with a rich heritage. Earlier civilisations in history like the Egyptian, Babylonism etc. have all disappeared from the face of the Earth, while the Indian civilisation persists inspite of all the turmoils which the country has gone through. The resilience of our culture has been so great that we have not only been able to withstand the onslaughts but even absorb the finer aspects of the waves that assailed us. The Buddhist doctrine of non-violence has become the national ethos of the country. Religions such as Islam and Christianity were not treated as hostile forces but welcomed and accommodated in early Indian History. We did not participate in the 'Crusades' or fight religious wars in our country. Resistance to invasion is not the same thing as wars between religions. It is precisely because of this distinct character of our nation that the Indian civilisation has survived and a distinct Indian culture evolved through the ages.

The diversity of our nation is an asset and has been an ally to independent thought. India has not imposed any pre-conceived, pre-determined models on thought. In the arts, the humanities and sciences, there is an infinite scope for new experiments; but these experiments in India can and must be founded on ethical and moral principles and on universally recognised truths of life. Each group in India, be it linguistic or religious or any other, is free to foster its own cultural forms and arts: but, it must at the same time try to learn from other cultures about the basic foundations of our *national* heritage.

The State of Jammu and Kashmir has, in this context, set a salutary example. Its three distinct areas : Jammu in which Dogri is spoken and where Hinduism flourishes; the valley of Kashmir in which Kashmiri is spoken and where Islam



Shri R. Venkataraman delivering the convocation address thrives; and Ladakh where Ladakhi is spoken and Buddhism is the religion, are a model of harmonious plurality. We have here a perfect example of what unity in diversity means. This State is a model for all others to see and emulate. The State of Jammu and Kashmir encourages nationalism and shows how community life can be meaningful, full of sweetness and light. When our social institutions grow in such an invigorating environment, processes like education can acquire vitality and find moorings consistent with the societal environment. In such a society we can look forward to the emergence of enlightened and enterprising individuals and of a vibrant and dynamic society that is seeking excellence through a national endeavour.

Let us, for a moment, cast a glance at some of the great gains of this national endeavour. We have transformed the backward and benighted agricultural India that it was prior to independence into a modern industrialised nation in the world. Thanks to the vision and foresight of Jawaharlal Nehru, heavy industries like steel, coal, aluminium and copper were started on a massive scale through the successive Five Year Plans. The manufacture of engineering goods, fertilisers, chemicals and pharmaceuticals and consumer durables followed as a corollary to the establishment of basic industries and the development of infrastructure. Thus, our industrial economy has strikingly diversified with manufacturing capabilities extending over a wide range of products, giving us the adaptability required for designs, structurals and machine tools. We can now state with confidence that India's industrial economy has reached the take-off stage.

India is equal to Europe excluding Russia in size. This part of Europe is artificially striving to achieve economic viability through the concept of the European Economic Community. Our resources are, of course, as unevenly distributed as in Europe. Our deposits of coal, iron ore, manganese, copper and bauxite, for instance, are concentrated in a small sector of Bihar, West Bengal, Madhya Pradesh and Orissa. Gypsum, lead and zinc occur only in Rajasthan. But our steel plants, cement factories and other industrial establishments using these resources dot the entire nation. This has been rendered possible because of the free movement of goods and commodities from Kashmir to Kanyakumari. In short we are an economic community and we are able to share and utilise the wealth of one part of the country in every other part. We have our pluses and minuses but these balance out at the national level. Mutuality compensates disparities.

In the early years of our Republic, States' representatives used to urge on the Centre to correct the regional imbalance and promote balanced regional development. The objective of planning in India is not only to utilise the resources to maximum advantage but to bring about balanced regional development so that the devil does not take the hindmost. It should be said to the credit of the planning process in India that a lot has been achieved in this direction though in view of size, population and utter backwardness of certain regions a lot more remains to be done. States which are backward have therefore much to gain from the centralised planning than the comparatively developed states in the country.

One of the principal objects of a University is to make better citizens out of common people. Virtues like tolerance, discipline, and law-abidance cannot be developed overnight but must be cultivated from a very early age in the schools and colleges. Indeed the history of civilisation is nothing more than the history of human endeavour to tame the primeval instincts of man and make him live in peace and harmony with his fellow men. If University education teaches one PATRIOTISM to sacrifice everything for the freedom and honour of the motherland; HUMANISM to regard every person, irrespective of religion, caste or creed as a brother; DISCIPLINE to perform one's duty to one's own satisfaction, it would have rendered yeoman service to its alumni.

ASSOCIATION OF INDIAN UNIVERSITIES

CORRESPONDENCE COURSE IN EVALUATION METHODOLOGY & EXAMINATIONS

Applications are invited from college/university teachers for admission to Correspondence Course in Evaluation Methodology and Examinations at Basic Level, Intermediate Level and Advanced Level/ Special Professional Course. The duration of each of the three courses is six months. A personal 'Contact Programme' for three days is planned for each of the three courses. Universities/Institutions sponsoring candidates can meet the registration/course fees from out of unassigned grants by UGC.

Request for prospectus and application form accompanied by a crossed Indian Postal Order for Rs. 10/- drawn in favour of the Secretary, Association of Indian Universities and a self-addressed stamped envelope (Rs. 2/-) should be sent to the Project Director (Exams.), Association of Indian Universities, 16 Kotla Marg, New Delhi 110002. Last date for receipt of application is **15th March** for non-sponsored and **16th March, 1988** for sponsored candidates.

Study English & Keep Abreast

Professor Yashpal, Chairman, University Grants Commission, (UGC) urged the students, especially those studying science and technology, to acquire proficiency in English in order to have an access to the wide knowledge which was fast growing outside the country. If this was not done, it would be a great disadvantage to students and also a setback to the work of standardizing books in Indian languages. He was delivering a valedictory address to the three-day seminar on "Need and availability of text books for higher education sector in India" jointly organised by the National Book Trust, UGC, Indian Council of Agricultural Research and Medical Council of India, as part of the 8th World Book Fair. He said that books on life sciences, agriculture and humanity subjects should, however, be written in Indian languages with Indian experiences.

Professor Yashpal was also critical of the existing examination system which, he felt, thwarted growth of knowledge among students. Tying up learning to the examination system by providing them knowledge "in a package" was a proscriptive measure which was not conducive to encouragement of original thinking. Students should be encouraged to acquire knowledge from whichever source it was possible and to benefit from it.

He also suggested forming a nucleus for writers to ensure adequate facilities and incentives for writing textbooks of high standard for the university students.

He called upon the universities to open cooperative book stores to ensure the supply at concessional prices reading material to the students.

Professor Rais Ahmed, former Vice-Chairman, UGC, said that the centre for production of knowledge would continue to be outside the country for a long time to come. We should therefore not cut off ourselves from these sources of knowledge by ignoring the study of English. Even countries like the Soviet Union, China and Japan were promoting the study of English to acquire knowledge from where it was possible.

He said that the huge stocks of unsold books in English and regional languages indicated bad planning and management resulting in waste of national resources. He said that only right kind of persons should be commissioned to write books in regional languages so that they could stand comparison with those written in English.

JNU Extension Lectures

The Jawaharlal Nehru University has organised a series of 30 talks for public on various major issues in comtemporary international relations at its City Centre beginning February 15, 1988.

These talks are organised every year and cover developments in almost all the areas of the world and all aspects of international relations—economic, political, social. The lectures focus attention on crucial issues and trouble spots and their implications for India and the mankind.

Organised by JNU's School of International Studies since 1967, the main purpose of these lectures has been to promote knowledge of international politics and India's role in the world affairs among those who have had no special opportunity of studying these problems. The specific topics change from year to year according to the changing situations in world affairs. The inaugural lecture delivered by Prof. M.S. Rajan on "India and the Super Powers" will be followed by lectures on topics which include the United Nations at the Crossroads, Disarmament and Development, the Significance of INF, Global Commons : Peace and Development, Nonalignment : India's Chairmanship, the new phase in Super Power relations after the Gorbachev-Reagan Summit and the Global System, Washington Summit and the Soviet-American Relations, Conflicts in West Asia, Japan's Defence Policy since 1976, Crisis in Southern Africa, Emerging Trends in Indo-US Relations, Indo-Sri Lankan Accord : Issues and Prospects, the Third World and the Gandhian Alternative, North-East Asia Today and the World and China : Some Recent Perspectives.

Senior faculty members who are expert in their respective fields would deliver these lectures.

Madras Varsity to Offer New Courses

The Madras University will soon introduce a number of "diversified" courses such as B.Sc. in Rural Development, Rehabilitation Science and Computer Applications. This was announced by Dr. A. Gnanam, Vice-Chancellor of the university recently. He said there were right now 10 traditional courses of study, which could be increased to 40. Highly diversified, technology and utility-based courses such as B.Sc. in Rural Development and Computer Applications could be introduced. He said, "I want to give opportunities to students to move horizontally. A student of English Literature should be able to take up Computer Science", he pointed out.

The Madras University would also increase the total intake in the courses by 15 to 20 per cent. The increase in the intake need not necessarily be in traditional courses like B.Sc. (Botany). It would be done through diversified courses.

Dr. Gnanam said he was also thinking in terms of greater mobility for students to go from one University to another. He, however, ruled out any increase in the number of colleges coming under the Madras University.

Dr. B. Ramamurthi, Syndicate member, endorsed Dr. Gnanam's views and said that inter-disciplinary changes should be made possible for the students. Diversified courses should be introduced. Medical technology course at the B.Sc. level was one of the most wanted courses. He pointed out that computer applications were finding increasing relevance in medical courses.

Deptt. of National Security & Strategic Sciences

The Jammu University is considering a proposal to open a Department of National Security and Strategic Sciences. To begin with, it is planned to start an undergraduate course, which will be followed by postgraduate and other courses of advanced studies in the field of defence sciences. However, the setting up of the department at the Jammu University is subject to the approval of the Government due to strategic location of the State.

Science & Technology Communication Course

Calcutta University, in consultation with the Department of Science and Technology (DST) proposes to introduce a course on Science and Technology Communication.

The DST has also decided to set up a national centre for studies on "severe storms" at the Calcutta University in collaboration with the Indian Meteorological Department. The centre will also make recommendations on the control measures to be taken in the coastal areas ravaged almost every year by cyclonic storms, apart from other studies on the subject.

Training Teachers for Special Education

A three-day national conference of deans and heads of department of education, on development of special educational units for disabled children, held in New Delhi recently has recommended that the University Grants Commission (UGC) may sponsor a special training course in collaboration with NCERT, for teachers in different areas of disability.

This is a step towards meeting the objective of the national policy on education which is to "integrate the physically and mentally handicapped with the general community as equal partners". The conference also recommended that the UGC or State Governments should provide at least one person for this programme since the UGC scheme had not included administrative staff for this programme.

Sri Padmavathi Varsity Plans New Courses

The Bar Council of India is reported to have permitted Sri Padmavathi Women's University to start bachelor's degree in law, of both five-year integrated and three-year degree course. The University also proposes to start from the next academic year a degree course in Pharmacy and Master's degree courses in Education and Communication Journalism. Other postgraduate courses planned are in Microbiology and Home Sciences.

According to Mr. B. Rangaiah Registrar, the University had urged the University Grants Commission (UGC) to sanction Rs. 1.5 crore to start a bachelor degree course in pharmacy and Rs. 25 lakhs for research work on women's development. He said that the university had also requested the UGC to release Rs. 1 crore for development of sports and gymnastics besides a stadium on the university campus.

National Associateship in Biotechnology

Bio-Technology National Associateships are available to Indian Nationals for conducting advanced research or undergoing specialised training in Indian research institutes/laboratories in the priority areas of biotechnology viz (i) Basic Molecular Biology, (ii) Microbial Genetics, (iii) IDNA technology, (iv) Immunology and Immunodiagnostics, (v) Animal Tissue Culture, Hybridomas and cell-culture based vaccines, (vi) Plant tissue-culture and viruses, (vii) Embryo transfer Technology, (viii) Peptide and Nucleic Acid Chemistry (Synthesis), (ix) Modern techniques in Industrial Microbiology and energy conversion, (x) Biochemical engineering, process optimisation and computer modelling, (xi) Bio-Informatics, (xii) Emerging areas.

The applicants should possess a Ph.D/M.D. degree or their equivalent in areas related to bio-technology, with outstanding contribution in areas of their specialization. They should hold regular position in research institutes and be actively engaged in biotechnological R & D work. Applications from persons working on temporary positions as research fellows or associates, etc. will not be considered.

The duration of the Associateship is 3 months to 1 year in India. Candidates who avail the associateship for a period of 6 months or more in India may also be granted an opportunity to work in a foreign laboratory for three months.

Candidates should submit their applications typed on plain paper (5 copies) in the format to be provided by the Principal Scientific Officer (MB), Department of Biotechnology, Block 2, 7th Floor, CGO Complex, Lodi Road, New Delhi-110003. The selected candidates will have to commence work under the award before March 31, 1988.

Dr. Appadurai named National Professor

The Union Government has appointed Dr. A. Appadurai, the renowned Professor of Political Science, as national research professor for a period of five years. Dr. Appadurai was the Founder Director of the Indian School of International Studies, which later merged into the Jawaharlal Nehru University and renamed as the School of International Studies. There are three national professors at present under the scheme of national research professorship instituted in 1949. These are Dr. V.K.R.V. Rao, Justice D. D. Basu and Dr. D. R. Rao.

News from Abroad

Commonwealth VCs Meet

University of Western Australia at Perth was the proud host to the Conference of Executive Heads of University Institutions of the Commonwealth on 4-5 February, 1988 and the 14th Quinquennial Commonwealth Universities Congress from 7 to 12th February, 1988. It was after twenty years that the Commonwealth Universities Congress met in Australia, the earlier being held at Sydney in 1968. It was a bappy coincidence that the University of Western Australia hosted the Congress in the 75th year of the Association of Commonwealth Universities as it itself was celebrating its 75th year of existence. While the Congress was declared open by His Excellency the Right Honourable Sir Ninian Stephen, Governor General of the Commonwealth of Australia, the Keynote Address was delivered by Mr. Justice Gordon Samuels of the New South Wales Supreme Court and the Chancellor of the University of New South Wales. Mr. Justice Samuels described Australian Government's plans to acquire enhanced powers to direct the universities and to abolish the Tertiary Education Commission as an act of unsound judgement that was likely to upset the academic equilibrium. He felt that it was not proper for the Government to become involved in the direct allocation of funds to universities as buffer bodies like the Tertiary Education Commission diminished tensions. He was, however, none too happy at the universities' reaction to demands for greater accountability, which he felt, was rather negative.

Over 700 delegates from all over the Commonwealth including about 70 Vice-Chancellors from India attended the Congress.

The general theme chosen for the 14th Congress was 'The Contribution of Universities to National Development'. This was discussed in seven topic groups each devoted to the themes : (1) The University as a Critic, (2) The University as a Knowledge Factory, (3) Universities and Continuing Education, (4) Universities and National Administration, (5) Universities and Culture, (6) Universities and the Social Impact of Technology, and (7) Universities and Rural Change.

Each of the sessions was marked by presentation of papers followed by lively discussions. Professor P.N. Srivastava, Member. Planning Commission and former Vice-Chancellor, Jawaharlal Nehru University, in his paper on 'Continuing Education with Special Reference to Science and Technology' observed that advances in Biotechnology, Information and Communication Technology will be the major contributors to economic growth in the next two decades. This will require substantial qualitative change in education, training and constant new skill formation at all levels. Continuing Education, therefore, will have to receive increased importance in our fast changing world, he added.

Prof. Bb. Krishnamurthy, Vice-Chancellor, University of Hyderabad in his paper on 'Roles of Regional Languages Vs English as Medium of Instruction in Higher Education in India', threw up a number of suggestions to demarcate the complementary roles of English and Indian languages in higher education to produce optimal results in terms of learning theories, cross-cultural models and national goals. 'Cultural Dimensions of the making of Modern

India' was the theme of the presentation made by Prof. N.S. Bose, Vice-Chancellor, Visva-Bharati. India, like many other Commonwealth countries, had inherited from the British some of their institutions and certain aspects of political life and belief, he said. The most important agency of modernisation was English education. A comparative study of the situations in India and Africa, or India and Third World countries will undermine the tremendous importance of historical traditions and bring out essential differences in the context of the great Indian leaders and thinkers, he added. Professor Devendra Kumar, Vice-Chancellor, Gandhigram Rural Institute in his presentation on 'The Challenge of Rural Development', referred to the growing urbanisation and its socio-economic concomitants and called for creation of small face to face communities to establish primary relations and to preserve environment and ecology. Universities could offer to meet rural challenges in developing small and better communities and economically purposeful and socially useful courses of teaching and generating new knowledge supplemented by prioritised list of rural problems for research and organising effective extension.

'Potential for Further International Cooperation of Universities in Research' was the subject of the paper presented by Dr. L.S. Srinath, Director, Indian Institute of Technology, Madras. While listing problems that beset international university cooperation in research and citing reasons for need of cooperation, Dr. Srinath called upon the Commonwealth universities to provide the motivating forces for effective cooperation. He felt student exchange programmes could provide an effective mechanism. Dr. B.B. Sundarsen, Vice-Chancellor, University of Madras made his presentation on the 'Role of Universities in Assessing the Impact of Technology upon Environment'. He said that models of development in industrialised countries when applied to low income and less industrialised countries have resulted in ecological disorder. University system should respond to environmental preservation and attune science and technology for enhancing the quality of life in its totality. Curriculum modification at all levels in science and technology streams, emphasising social relevance, cultural appropriateness, ecological impact and environmental awareness is required to sensitise individual groups and society, he added.

Mrs. Kamalini Bhansali, Vice-Chancellor, SNDT Women's University, presented a paper on 'Recent Developments in newly Industrialising and Developing Countries' in the Group on Universities and Continuing Education. Prof. Moonis Raza, Vice-Chancellor, University of Delhi, was one of the panelists in the Group on Universities and Rural Development. His presentation covered Design of landuse Management.

The programme was interspersed with social events that included visits to Murdoch University and the Curtin University of Technology.

The Congress ended with the presentation of reports by the Chairmen of various topic groups at the plenary session.

News from Agril. Varsities

High Yielding Varieties

The Kerala Agricultural University (KAU) has developed seven advanced high yielding cultures of rice, two hybrids of coconut, two cultures of pepper and one culture of cardamom suitable for cultivation in Kerala. These cultures are identified as advanced cultures for release for cultivation in the state.

The two rice cultures developed at the Rice Research Station, Moncompu, namely, Culture 93 and Culture 170, are capable of yielding over five tonnes per hectare. These short duration varieties can be harvested within 100-115 days. Culture 153-1 also developed at Moncompu is resistant to brown plant hopper, the major rice pest in Kuttanadu region. Among the 4 high yielding rice cultures developed at RARS Pattambi, the Culture numbers 745 and 796 are cold resistant and suitable for growing in the highranges of Idukki and Wyand districts during the second crop season.

The two coconut hybrids AO x GB and WCT x GB developed by KAU consistently showed excellent performance as compared to all hybrids involving GB other than LO x GB.

Two advanced pepper Cultures C-239 and C-331 developed at the Pepper Research Station, Panniyur has out yielded the widely cultivated pepper hybrid variety, Panniyur-1.

The PV-1 (Pampadumpara—Valayar Culture) Cardamom developed at the Pampadumpara Cardamom Research Station with elongate capsule each containing 21-24 seeds has already become popular in the cardamom tracts of the Idukky district.

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
March 10-12 1988	Nationalism : Problems and Challenge	To discuss different aspects of the development of nationalities during 19-20th centuries and their relationship with Indian nationalism.	Centre for Social Studies, South Gujarat University, Surat in collaboration with K.M. Munshi Centenary Committee, Gandhinagar.	Prof. Ghanshyam Shah, Centre for Social Studies, South Gujarat University, Surat-395007
May 9-June 4, 1988	Summer Course in Analysis and Probability	Topics to be covered are Probability Theory and Stochastic Processes, Fourier Analysis & Functional Analysis.	Indian Statistical Institute, Bangalore Centre.	T.S.S.R.K. Rao, In-charge, Summer School 1988, Stat-Math. Division, Indian Statistical Institute, R.V. College (P.O.) Bangalore 560 059
May 18-20, 1988	Conference on Recent Advances in Mathematical Techniques and Applications	Topics proposed to be discussed include Mathematical Physics, Mathematical Methods, Biofluid Dynamics, Chaos, Stability and Turbulence.	Dr. Y.S. Parmar Institute of Mathematical Sciences, Shimla.	Dr. J.R. Gupta, Organising Secretary, Dr. Y.S. Parmar Institute of Mathematical Sciences, Hainault, Shimla-171002
June 27-July 8, 1988	Short-term Intensive Training Programme on Abstracting & Indexing	To train the participants in the application of abstracting and Indexing methods and construction of an indexing language (Thesaurus).	National Institute of Small Industry Extension Training, Hyderabad.	Mrs. K. Subhashini, Course Director, NISIET, Yousufguda, Hyderabad-500045
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis.**	**University of Hyderabad in collaboration with the Indian Society of Andrology.**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667**
October 27-29, 1988	National Seminar on Statistics in Medicine, Health and Nutrition.	To discuss Data-Base and Analysis in Health and Nutrition—Present and Future.	Department of Statistics National Institute of Nutrition, Hyderabad.	Dr. K. Visweswara Rao, Organising Secretary, National Seminar on Statistics in Medicine, Health and Nutrition, Department of Statistics, National Institute of Nutrition, Indian Council of Medical Research, Jamai Osmania, Hyderabad-500 007

School of Planning and Architecture

(Deemed to be A University)

4 Block-B, Indraprastha Estate, New Delhi-110002

ADMISSIONS TO Ph. D. PROGRAMMES 1988-89

Applications are invited from persons of high academic attainment, who wish to study and research in the fields of Architecture, Urban Design, Architectural Conservation, Landscape Architecture, Urban and Regional Planning, Housing, Transport Planning, and Building Engineering and Management. Extensive Library and reference facilities are available in the School.

ELIGIBILITY FOR ADMISSION

The applicants for admission to the Ph.D. Programmes shall possess the following qualifications :

Master's Degree in Urban and Regional Planning/Housing/Transport Planning/Landscape Architecture/Urban Design/Architectural Conservation/Building Engineering and Management of the School or its equivalent from any other recognised University/Institution with a minimum of 60% aggregate marks.

OR

(i) Bachelor's Degree in Architecture of the School or its equivalent from any other recognised University/Institution with a minimum of 60% aggregate marks and five years' experience in teaching/research/profession (applicable only for Ph.D. in the field of Architecture); and

(ii) A Valid GATE Score

The Committee for Doctoral Programmes may, however, admit a teacher having the prescribed qualification with 55 per cent aggregate marks and has atleast 5 years' teaching experience in the relevant discipline.

SCHOLARSHIP

All scholars with a Master's Degree in the respective disciplines are eligible for scholarship of Rs. 1200/- per month.

Scholars with Bachelor's Degree in Architecture without GATE Score may be considered for the award of a scholarship after they qualify in the next GATE examination w.e.f. the date of the examination.

INFORMATION AND APPLICATION FORM

Details regarding Ph.D. Programmes minimum admission qualifications and other requirements are given in the Information Brochure and Ph.D. Programmes.

Candidates called for Viva-Voce will be paid travelling allowance for the journey from the Railway Station nearest to the residence/place of work and back by II Class Railway fare along the shortest route.

Indian residents abroad may apply directly with Bio-Data on plain paper. Foreign nationals are required to apply through diplomatic channels.

IMPORTANT DATES

1. Issue of application forms commences on : **01-03-1988**
2. Last date for issue of application forms against payment of Rs. 30/- in cash/demand draft in favour of the 'School of Planning and Architecture, New Delhi'
   (i) At School Counter : **25-03-1988**
   (ii) By Post : **23-03-1988**
3. Last Date for Receipt of Application Forms : **30-03-1988**

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

RESEARCH IN PROGRESS

JAWAHARLAL NEHRU UNIVERSITY

NEW DELHI

ANNOUNCEMENT FOR ADMISSION 1988-89

The University will hold Entrance Examination for admission to various programmes of study in the following 24 Centres on May 19, 20 and 21, 1988 :

Ahmedabad, Bangalore, Baroda, Bhubaneswar, Bombay, Calcutta, Chandigarh, Cochin, Dehradun, Delhi, Gauhati, Hyderabad, Indore, Jaipur, Lucknow, Madras, Madurai, Patna, Pune, Ranchi, Shillong, Srinagar, Varanasi and Vaiyawada.

Schools and Programmes of Study

1. School of International Studies :

(i) **M.Phil/Ph.D.** in International Politics, Organisation, Disarmament & Political Geography; Diplomatic Studies, International Legal Studies, International Trade and Development; South Asian, Central Asian, Southeast Asian & Southwest Pacific Studies; Chinese, Japanese and Korean Studies; West Asian, North African and Sub Saharan African Studies; American, Latin American & West European Studies and Soviet & East European Studies.

(i) **M.A.** in Politics (International Studies)

II. School of Languages:

(i) **M. Phil/Ph.D.** in French, German, Russian, Hindi, Linguistics & English, Spanish and Urdu and **Ph.D.** in Japanese, Persian and Modern Western Philosophy.

(ii) **M.A.** in English, Linguistics, Hindi, Urdu, Persian, Chinese, Japanese, French, German, Russian and Spanish.

(iii) **B.A. (Honours)** in Persian, Chinese Japanese, French, German, Russian and Spanish (with entry points both in 1st and 2nd year) and Modern Arabic (with entry point in 1st year only). Students successfully completing the 3-year B.A. (Hons) become eligible to seek registration to M.A. in respective language as at (ii) above.

III. School of Social Sciences

(i) **M.Phil/Ph D.** Programme is offered by following Centres which have their curricular and research work organised on interdisciplinary basis with a focus on some major problems of study. Centres: Economic Studies and Planning, Historical Studies, Political, Studies, Regional Development, Social Systems, Educational Studies (Psychology, Sociology, Economics and History of Education) and Social Medicine & Community Health.

(ii) **Master of Community Health (MCH/Ph.D.)**: Candidates holding MBBS with one year's experience after internship or Master's degree in Nursing with one year's experience in Community Health in Nursing.

(iii) **M.A.** in Economics, Geography, History, Political Science & Sociology.

IV. School of Life Sciences :

(i) **M.Phil/Ph.D.** in areas of interdisciplinary research: Genetic Engineering, Molecular Biology and Genetics, Biochemistry, Plant and Animal Tissue Culture, Developmental Biology, Cell Biology, Immunobiology, Neurobiology, Microbiology, Radiation and Cancer Biology, Biophysics, Photobiology Bioenergetics etc.

(ii) **M.Sc.** in Life Sciences: open to candidates from both Biological and Physical Sciences.

V. School of Environmental Sciences :

(i) **M. Phil/Ph.D.** in areas of interdisciplinary research: Physics, Chemistry, Geology, Biological Sciences and allied Sciences related to Environmental problems.

(ii) **M.Sc.** in Environmental Sciences with options for specialization in Atmospheric, Earth, Pollution Biological Sciences.

VI. School of Computer & Systems Sciences :

(i) **M.Tech., M.Phil/Ph.D.**: The School offers academic programmes leading to the degrees in diverse aspects of Computer & Systems Sciences.

(ii) **Master of Computer Applications**: (MCA) 3-year programme.

VII. School of Physical Sciences :

Ph.D. in Physical Sciences: Research and teaching in border line areas of Physics & Chemistry, the emphasis for the present being on topics of Chemical Physics, Condensed Matter Physics, Non-equilibrium Statistical Mechanics, Stochastic Processes & Nonlinear Dynamics.

VIII. Centre for Biotechnology :

Ph.D. Research areas: Cholera Genetics and Vaccines, Photosynthesis; Eukaryotic Gene Expression and Synthetic Oligonucleotides in diagnostics and protein engineering.

Reservation of Seats :

22½% (15% for SC and 7½% for ST) and 3% of seats are reserved for SC/ST and Physically Handicapped candidates. SC/ST and Physically Handicapped candidates passing the qualifying examination are eligible to apply irrespective of their percentage of marks.

How to Apply

Application form together with detailed Instructions including eligibility conditions can be had either personally on cash payment of Rs. 5/- per set or by post by sending crossed Indian Postal Order for Rs. 16.00 payable to JAWAHARLAL NEHRU UNIVERSITY, NEW DELHI for one set of forms and postage along with a self-addressed envelope of 28 cms x 20 cms size to

The Deputy Registrar (Admissions), Jawaharlal Nehru University, New Delhi-110067.

There being different forms for different levels of programmes, candidate should clearly indicate in the request as well as on the top of the self-addressed envelope the name of the programme for which the form is required. A maximum of three subject choices of the same level of programme could be given in a single set of forms.

Issue of Forms :

From February 10, 1988 to April 4, 1988
Last Date for Receiving Completed Forms : April 11, 1988

Note :

1. Candidates who are due to appear in the respective qualifying examination prescribed for eligibility for admission to a particular programme are also eligible to sit in the entrance examination as per conditions laid down in this regard. However in the event of selection, their admission shall be subject to their securing the prescribed percentage of marks in the qualifying examination and submission of all documents including final marksheet of the qualifying examination.
2. Announcement for admissions to Direct Ph.D. and Part-Time programmes will be notified separately in May, 1988.

Rohilkhand University Bareilly (U.P.)

DEPARTMENT OF BUSINESS ADMINISTRATION

ADMISSION NOTICE

MASTER OF BUSINESS ADMINISTRATION (M.B.A.)
TWO-YEAR (FOUR SEMESTER) FULL-TIME PROGRAMME

(Commencing from July 1988)

Applications are invited, on prescribed form, for admission to SECOND BATCH of Master of Business Administration Programme for the academic year 1988-89 commencing from July 1988.

Intake

The maximum number of students to be admitted is 30.

Eligibility

A bachelor degree of equivalent, in any field of knowledge from a recognised university or institute, shall constitute the minimum educational qualification for admission to the M.B.A. Course.

Selection Criteria

The students for admission will be selected purely on merit through an admission test, partly written (objective type—Aptitude Test) and partly oral (Group Discussion and Personality Interview). The written test will include English Comprehension, Numerical Ability, General Intelligence and General Awareness. Those candidates who qualify in the written test will be exposed to second phase of test, i.e. group discussion and personality interview.

Centres for Test

The written test will be conducted simultaneously at two centres, viz., Bareilly and Kanpur.

Date of Written Test

The written test will be held on Sunday, 15th May 1988.

Special Features of the Programme

The programme is highly innovative and placement oriented, dovetailed with most modern inputs an enables specialisation in the areas like Financial Management, Marketing Management, Personnel Managemen Production/Operations Management, Public Systems Management including Rural Development.

Top quality Faculty (full time and part time) drawn from top level institutions/organisations in India are in position.

Applications

The application form and information about the programme can be obtained on payment of Rs. 30/ from the cash counter of the university on any working day or by registered post on payment of Rs. 30/- through crossed bank draft payable at Bareilly, drawn in favour of the Finance Officer, Rohilkhand University Bareilly alongwith a self addressed envelope of size 11'' x 8'' affixed with postal stamps of Rs. 7.50. Th application forms by registered post would be sent upto 9th April 1988. The requests, for application for by post, should be made to the Professor and Head, Department of Business Administration, Rohilkhan University, Bareilly-243001.

Corrigendum to Advertisemrnt No. 1/88

With reference to our Advertisement No. 1/88 published in these columns on **15.2.1988**, some amendments may be read as under :

Sr. No. 4 : Professor of Animal Breeding : Undr sub-serial No. (iv) of the qualifications, out of ten years experience of teaching/research/extension in Animal Breeding/Animal Genetics, 5 years should be as Associate Professor or equivalent.

Sr. No. 8 : Research Scientist (Anaesthesia) : It is a Reserved post for Scheduled Caste.

Sr. No. 47 : D.P.E. : It may be read as School Lecturer (Physical Education).

Sr. No. 55 : P.T.I. : It may be read as School Teacher (Physical Education).

Note No. 7 : Those who have applied in May, 1987 for the posts at Sr. No. 5, Professor (Physical Education); Sr. No. 49, School Lecturer (Art & Painting Sr. No. 50, School Teacher (Geograp need not apply again.

Last date for receipt of applica for post at Sr. No. 4 is extended u **16.3.88.**

Other conditions remain unchange

School of Correspondence Courses

ANDHRA UNIVERSITY-VISAKHAPATNAM-530003

ADMISSION INTO B.A. AND B.COM. COURSES SUPPLEMENTARY BATCH 1987—'88.

The School of Correspondence Courses is inviting applications from the candidates residing in India for admission into B.A. and B.Com. degree courses for the academic year 1987-88 as **Supplementary Batch**.

The 1st Year University Examinations for these candidates will be held in September/October, 1988 and 2nd and 3rd Year Examinations will be held with a gap of one year each, thereafter.

	COURSE	ELIGIBILITY
1.	B.A. (Both English and Telugu media) with the combinations of Special Telugu, Special English, History, Economics, Politics, Public Administration, Sociology and Mathematics; 3 years duration.	Intermediate/P.U.C. or equivalent or pass in Entrance Examination conducted by this School.
2.	B.Com. (Both English and Telugu Media): 3 years duration	Intermediate/P.U.C. or equivalent or pass in Entrance Examination conducted by this School.

Applications will be issued from 1st March, 1988. Filled in applications should reach the undersigned on or before 31-3-1988.

Intending candidates may write to the undersigned by DESIGNATION for admission applications and prospectus by sending Rs. 10/- by Demand Draft/Money Order. The candidates may also remit cash at the cash counter in the School of Correspondence Courses towards admission application form and prospectus. Postal Orders and Cheques will not be accepted.

The prescribed application forms, and Prospectus are also available at our following study centres on payment of Rs. 10/- through demand draft: 1. Government College, Srikakulam; 2. M. R. College, Vizianagaram; 3. Mrs. A. V. N. College, Visakhapatnam; 4. Government College, Rajahmundry, 5. P. R. Government College, Kakinada; 6. Sir C. R. Reddy College, Eluru; 7. S. R. R. & C. V. R. Government College, Vijayawada; and 8. A. C. College, Guntur.

The School has no agents and takes no responsibility for the prospectus issued and the promises made for admission by any other institution.

N.B. : The applicants should clearly mention in their requisition that they require "Admission Application Form for Supplementary Batch 1987-88".

SPECIAL NOTE FOR THE SUCCESSFUL CANDIDATES IN B.A./B.COM. ENTRANCE EXAMINATION OF JANUARY, 1988 :

All the successful candidates in the B.A./B.Com. Entrance Examinations held in January, 1988 **need not apply for the admission application form** and prospectus for admission into 1st year degree course. The School will arrange to send the admission application form and prospectus along with the Marks statement-cum-Eligibility Certificate to such candidates. They have to pay an amount of Rs. 10/- **towards the cost of admission application form** and prospectus alongwith the prescribed tuition fee at the time of admission. However, the duly filled in admission application form alongwith the necessary enclosures including the Demand Draft/ M.O. Receipt towards prescribed fee should reach the School of Correspondence Courses on or before the prescribed last date.

UNIVERSITIES OF TOMORROW

B. Sheik Ali*

The future stands upon the past. I have a theory that demolishes the popular concept of time into past, present and future. There are no three tenses but only two, the past and the future. The present is only a fleeting moment poised between the past and the future, and it is gone even while it is being mentioned or thought about. A citizen's sovereignty lasts only a few seconds until the vote is cast. Looked at from a different angle, the present is only 15 cmts. of space and 30 seconds of time, the space where you stand on a precipice of time with never to be retrieved factors behind you and never to be known factors before you. What you would do in those 30 seconds determines the future. Your life is useless if you succumb to circumstances, and your future is bright if you make a mark. This is because the key to future is right now in our hands, which will slip off if we are not careful. We do need wisdom and knowledge for the right use of the key.

That key is higher education which would decide hereafter whether we deserve to exist with dignity or honour or we would be tied to someone else's chariot to do the beast's job. Unless we revamp our entire educational structure, we would be condemned to be the camp followers of others. Science and technology are developing so fast that our grandchildren, if not our children, would be in beeline for tickets to the moon, or at least for a joy ride in the space. In this exciting drama, what is our role would determine our future. The purpose of this paper is to say a few words about what sort of higher education we need to be at par with those who would control the nerve centre of all human progress and nature.

Building for future would first require the realisation that universities of tomorrow would not merely be information service centres, but powerhouses to ignite creative thought. Our main job would be to know how to provoke thought, and how to make our alumni a thinking machine generating new ideas. First we have to determine our objectives or the conceptual framework of higher education for the future. Those objectives should be not merely to preserve, acquire, disseminate and extend knowledge, but also certain other essential concepts such as : promote scientific and rational temper, preserve cultural traditions, inculcate basic human values, develop work ethics, train for living together, cultivate arts, broaden humanities, imbibe skills and enrich the quality of life. Let us remember what education or enlightenment is. It is the process of current generation guiding the future generation into the body of knowledge which is related to the experience of life. Education is the act of sowing the seeds of knowledge which should blossom forth on the horizon of human fellowship, a kind of training to make our youth live harmoniously and graciously with their own fellowbeings. Timeless values are ingrained in the rich experience of the past which should be reinforced with the experience of the present to pass it on to the future. We have to make our universities, the powerhouse of knowledge, the sanctuaries of our inner life, and the think tank of the people.

**Vice-Chancellor, Goa University.*

This could be done if we could manage to make our alumni cultured, creative and committed to resolve the crisis of present-day values. This crisis lies in the fateful alienation of our teachers and students from the realities of life, which has created a dichotomy resulting in the distortions of the methods and goals of national development. Our alumni have been too long cut off from the mainstream of life, as if living in an ivory tower, being lost in the theoretical and abstract aspects of knowledge. Consequently, knowledge is not being transmuted into power. Science remains theory without becoming technology. Look at Japan or even smaller countries like South Korea or Taiwan or Hongkong or Sweden or Switzerland. We have limitless number of scientists and yet we are so poor in technology that we are only in the assembling stage, and not even in fabricating stage, much less in inventing stage.

There is an international yardstick to measure creative genius. The entire sub-continent of nearly 1000 million people, including India and Pakistan, has produced only three Nobel Laureates during the last fifty years (Khurana, Chandrasekhar, Abdus Salam) and all of them outside India. A single university in USA, whether Harvard or Berkeley or MIT has more Nobel Laureates than India has ever produced. Even if you argue Nobel Laureateship is more in giving than in taking, the fact remains that in the history of science, technology and invention since the time of Newton, the number of Indians is so small that they could be counted on the fingers of a single hand. This is in contrast to what England or France or Germany or America or Russia has done, whose record runs into columns and columns of encyclopaedias. Is it not a point to ponder, and excite our consciousness that unless we are stimulated to revive our traditions of Paninis, Aryabhatas, Susrutas, Dhanvantries, Kalhanas, Ibn-e-Khalduns, Ibn-Rushds, Alberunis, Abul Fazls, Tagores, Ramanujans or Ramans, we would be pushed to the wall. What is required is a basic cycle of education by which linkages could be established between higher learning and outside world, which would widen our vision, and may lead to convert our intellect into a dynamo to generate creative thought.

Our universities of future would require scientific method of management. Those who are experts in this line would indicate that success would depend upon six important factors—planning, organizing, staffing, directing, controlling and coordinating. We have ideas but we fail in implementation. For implementation of our policies we would have to take into account the prevailing social value system, fixing top priorities, understanding the problems of the learning process, creating the necessary intellectual ecology, and providing adequate funds and infrastructure. This kind of planning would automatically demand dynamic leadership which defines the institutional objectives, determines the methodology of plan action, provides the strong will to achieve the goal, and implements the entire programme.

Our main job would be to create the necessary intellectual ecology in our institutions of higher learning, the right atmosphere and temper with a high degree of motivation not to be satisfied with anything but the best. The intention is to make our universities centres of excellence, but every step we take retards rather than accelerates that process. All issues that vitally concern the future would require team work. How to coordinate and bring about unity among the different segments of our structure has become a serious problem. Perhaps a full, free and frank discussion among the alumni on all aspects would be required. Such issues as how to make the system work more efficiently, how to improve decision-making process better and smooth, how to cut unnecessary cost, how to introduce innovative measures, how to motivate acceptance of a change, how to inject better work ethics, how to overcome inertia, which are all sensitive and crucial issues should emanate from below rather than imposed from above. Instead of entrusting the thinking process to small section at the top, it may be far better if the entire teaching community is involved in finding the solution to difficult problems. This body could tackle even more complicated issues such as what social, political, economic, cultural or regional factors impinge upon the successful functioning of our system, how to overcome them, and how to maintain steady tempo of progress.

A university is a social institution which has to interact with the society. Interaction may be helpful or harmful. Many elements may be interested in the growth of the university, but a small element is enough to hurt its interests. To have fifty friends is not enough, but one enemy is too much. What is desirable is a continuous analysis of the situation. The dynamic nature of education requires changes, flexibility and innovative measures, which would all be futile if all members do not effectively cooperate. It is in seeking this cooperation that interaction is necessary, but the whole operation must be performed with great care and skill, or else universities would become the pocket-boroughs of some vested interests. In the pull and push pressure of some forces, universities would become a machine with more brakes than wheels.

An area of legitimate activity of our universities in the future would be their linkages with industry, agriculture, business, banking, service agencies, research centres, development sectors and so on. In the West much of research is done by the universities for the industry which endows heavily for its projects. This is beneficial both to the university and the industry. It would be cheaper to the industry to get the job done at a marginal cost rather than set up the entire apparatus of research, and it would be beneficial to university whose main business is research, and whose survival would depand upon creative thought.

Autonomy and accountability should form the essential components of our future university system. Freedom of action, non-interference from any quarter, and only that much control from higher-ups as is absolutely essential to ensure well utilisation of grants would help our universities function well. Likewise, autonomy implies accountability. The power, trust and authority vested in a university should never be misused. A recent study has listed the issues that inhibit our growth. They are : rigidity in the system owing to lack of motivation in the structure; centralisation of decision-making; absence of correct data and information, lack of harmony at all levels; erosion in innovative ideas impeding growth; psychological resistance to change; lack of will and strength to implement the schemes; lack of understanding of the dynamics of the system; lack of skill to face the challenges and meet the complexities of the system; cumbersome and obsolete procedures of the system; external pressure, creating instability and nervousness; and absence of long term perspeetive plans. We have to find answers to these problems in order to liberate our universities from degradation.

These problems could be solved if we are sincere in removing the inhibitions. Suggestions for their removal would be : adopt updated rules, regulations, ordinances and statutes; decentralise power; modernize evaluation system, financial management, and administrative machinery; and introduce curricular reforms. Dr. Yash Pal has rightly said that revising our syllabi is making a dead body move in the grave. An observer has remarked that if anyone is interested in knowing how the British universities looked like a century ago, he has merely to go to any Indian university. No where mobility is so slow, so out-moded and so outdated.

21 MAR 1988
C.F.T.R.I., MYS

University system is a human management process, and not a push-button system. Hence an element of human approach becomes essential. It is strange that the type of unity and solidarity that exists at low level of human behaviour is absent at a high level. Bad social elements like thieves and goondas have a solidarity of their own but not two enlightened groups, whether of Professors or Doctors or Lawyers. In the university system where inter disciplinary approach is required, such harmony becomes crucial. High research, say in superconductivity, does require cooperation from different disciplines. Somehow in India nothing works without pressure, and if pressuse

is brought into this sector, the whole structure would collapse. It is the inner urge of the intelligentsia to overcome small considerations and work in team spirit which is wanted. Assigning definite role and responsibilities to well-defined units, identifying the exact areas of their collaboration, the flow of authority, control and co-ordination from an agency that commands respect from all, and more than all, the clear vision of the goal ahead which should subordinate all other considerations might motivate our scholars to achieve something substantial. Otherwise, what D.O. Elliot has said would come true. "You know nothing about politics until you have worked with academics. Nowhere is the political infighting so brutal and vicious, and the reason for that is that the stakes are so low". R.G. Ingersoll is constrained to remark that colleges have become places where pebbles are polished and diamonds are dimmed. It is also on record that an American teaching faculty was once described as a random collection of unpredictable academics united in a grievance over car parking. Our anxiety is that such a thing should not happen in India. Carefully laid down principles of work norms religiously observed by upper echelon would build up nice work ethics. Incentives and rewards, appreciation and acknowledgement of good service would pump up high spirits. Simplification of procedures and encouragement of a habit to solve problems rather than create problems would offer the necessary logistics to win the battle of excellence.

The crux of the problem for the improvement of our system is the ability to synthesise institutional goals with goals of the individuals. The trinity that functions in the university—the faculty, the alumni and the administration—pull in opposite directions. Certain teachers are genuinely interested in research, and others, in perks. We forget that happy people are those who are thankful for life's responsibilities rather than for its rewards and prizes. We forget also the fact that to be without some of the things we want is an indispensable part of happiness. In what circumstances Thomas Alva Edison or Ramanujam or Raman worked should be an eye opener to us to realise that a set of circumstances too favourable would rather hinder than help growth.

The most important requirement of a university staff of tomorrow would be sheer efficiency of action, whether it is planning, designing, operating, manufacturing, managing, training or teaching. What the country needs is the **productivity-oriented-efficiency**, and not **production-oriented-efficiency**. What we mean by this is that we should train our youth to be productive, creative, inventive and original rather than simply get absorbed in production oriented centres. Our best brains have gone abroad, and majority of them have done exceedingly well in production-growth of their employing agencies. This is not a happy situation. This brain drain has effected us in losing the best talents, and this talent is only playing second fiddle to master-brains abroad who exploit them to do all spade work. We are in a triple disadvantage. Our best talent is not available to us; they are helping someone else to get the credit; and we would have to look for ever to others for high-tech. The sooner our institutions of higher learning correct this imbalance the better.

In conclusion it must be said that the atmosphere today is surcharged with high currents of change in higher education, as our nation is seized of the situation. History tells us that progress depends upon three factors, knowledge, skill and devotion. Knowledge generates ideas, skill transmutes ideas into power, and devotion sustains the tempo of work. Nations have risen and fallen in accordance with their ingenuity to learn and improve. A small nation like Japan has become a marvel of science and technology. A country like India with immense potentiality to improve could doubtless be among the powers of the earth in invention and industry, and in knowledge and wisdom, if only we put our heart, mind and soul into it. Dr. Radhakrishnan is right in saying, "If India is to confront the confusion of our time, she must turn for guidance not to those who are lost in the mere exigencies of the pasing hour, but to her men of letters and men of science, to her poets and artists, to her discoverers and inventors. These intellectual pioneers of civilisation are to be found and trained in the universities, which are the sanctuaries of the inner life of the nation". Universities of tomorrow should not fail the nation. We must change our mind to change our world. Now and then, not often, destiny gives us a chance. Now is the time. Tomorrow would be too late. Human history has become more and more a race between education and catastrophe. If we miss the chance we would land ourselves in catastrophe. Goal of mankind is knowledge, not pleasure. Noblest men scorn delights and live laborious days. Knowledge too demands labour, where each conquest should be the beginning of a new venture. Let us hope that Our Universities of Tomorrow would rekindle in us also that spark of interest which will consume our entire being in the pursuit of knowledge. Let that tomorrow be today, right now ! □

National Apex Body And State Councils of Higher Education

Anand Sarup*

I

The concept of a National Body covering the whole gamut of higher education, cutting across different segments, in the interest of greater cooperation and consistency in policy and for developing interdisciplinary research between agricultural, medical, technical, legal and other types of professional education was mooted in para 5.34 of the National Policy on Education 1986.

This was spelt out in greater detail in the Programme of Action for the National Policy on Education 1986 in August 1986. It was explained in the Programme of Action that the existing lack of a coordinative mechanism is becoming a problem, *inter alia*, because new disciplines are emerging for which courses of study have to be evolved keeping in view the need for inputs from related disciplines. There is no forum to deal with this lacuna. In order to remedy this problem, it was proposed to establish an Apex Body at the National level for higher education to deal with policy aspects of higher education, undertake integrated planning and reinforce programmes of postgraduate education and interdisciplinary research. Further details spelt out in the Programme of Action are reproduced below :

> "For areas such as agriculture, medicine, engineering, distance learning, etc., separate bodies will be set up. These bodies structured on the lines of the University Grants Commission, along with UGC itself, will oversee all operational aspects of higher education. The details of the legislation and/or other means for the establishment of these bodies will be worked out. The major functions to be performed by the apex body would be :
>
> (a) to advise Government on Policy;
> (b) to coordinate activities of the other bodies in different fields;
> (c) to encourage interdisciplinarity and promotion of interfaces among different areas;
> (d) to allocate resources;
> (e) establishment and management of common infrastructures and institutions; and
> (f) coordination of policy concerning external academic relations."

While the preceding paragraphs describe the mechanism for the operation of the National Apex Body for Higher Education, these do not reflect the philosophical backdrop against which education as a whole, with all its sub-systems, has to be viewed. This aspect was discussed in an earlier document brought out by the Ministry of Education in August 1985 entitled: "Challenge of Education" which sought to define the role of the education system in totality, starting with an emphasis on its institutional character which went beyond its main function of imparting education to pupils. It was stated therein that "the system is expected to generate new knowledge in all fields within the reach of the human mind. In addition, it has to evolve principles, methodologies for the application of knowledge for benefitting society. It is also expected to provide knowledge and skills for solving the problems of development. It must also enable the students to develop an understanding and a perspective of the physical and social environment. Research and development and extension, therefore, have to be accepted as essential ingredients of the educational process".

The second role assigned to education emphasised the socio-economic well-being, competence and creativity of the individual and it proposed that education would result in achieving the following objectives with reference to individual participation :

(i) Physical, intellectual and aesthetic development of personality;
(ii) inculcation of a scientific temper and democratic, moral and spiritual values;
(iii) development of self-confidence to innovate and face unfamiliar situations;
(iv) creation of an awarencess of the physical, social, technical, economic and cultural environment;
(v) fostering a healthy attitude to dignity of labour and hard work;
(vi) a commitment to principles of secularism and social justice;
(vii) dedication to uphold the integrity, honour and foster the development of the country; and

---

**Chairman, National Book Trust, India.*

(viii) promotion of international understanding.

Besides promoting the development of the individual attributes described above, education was also expected to assume the responsibility for imparting knowledge about concepts and facts relating to different subjects and take steps for developing skills in the area of languages and communication as also nurturing interest in hobbies, games and sports. It was also meant to inculcate suitable habits in health care, mental application, management of time and conservation of physical, mental and emotional energy.

In relation to development and employment also, education was expected to have the specific role of equipping the pupils with competence, in terms of knowledge and skills, in various combinations, at different levels of understanding, relating to the opportunities of employment in the context of a particular pattern and rate of development.

Thus perceived, education becomes the main instrument for integrating individual into a social system and at the same time it also becomes the most effective means for equalising opportunities and reducing disparities between the human beings so as to ensure that a person belonging to any region, caste, creed, sex or economic starta would have a chance of developing his or her potentials to the full.

Since the interrelationship and the interdependence between different areas of knowledge, specially in applied fields and new disciplines, are wellknown there is hardly any need to argue for the need of a coordinative mechanism. It is also well-known that while the protagonists of individual sub-systems may go on laying emphasis on the separate identity and autonomy of their areas of concern, at the ground level the University system is characterised by a majority of bodies under whose umbrella, medical, engineering and agricultural colleges are functioning in large numbers. This disparity between the approach at the Central and State levels has resulted in structural anomalies because of which several institutions and many segments of the students and the teachers have been denied benefits which have become available to some others from one of these sub-systems at the national level. At the same time, individual institutions concerned with engineering or agriculture, with aggressive managers at the top, have been able to get assistance from the University Grants Commission as well as the AICTE or the ICAR.

It is expected that once an apex body gets established, some of the anomalies described above will disappear automatically. However, an Apex Body for Higher Education is necessary to realise the basic goals of education outlined earlier in this paper. We have no right to expect that public funds obtained from all starta of society should be employed for subsidising and sustaining a system of education whose products have no sense of identity with or commitment to a system of values which is relevant and necessary for the survival and development of this country. Only an Apex Body can rise above the narrow approaches to subject matter specialisations and address itself to policies, management systems, and other issues associated with value orientation. The National Policy on Education 1986 lays particular emphasis on value education and states that :

> "The growing concern over the erosion of essential values and an increassing cynicism in society has brought to focus the need for readjustments in the curriculum in order to make education a forceful tool for the cultivation of social and moral values.
>
> In our culturally plural society, education should foster universal and eternal values, oriented towards the unity and integration of our people. Such value education should help eliminate obscurantism, religious fanaticism, violence, superstition and fatalism.
>
> Apart from this combative role, value education has a profound positive content, based on our heritage national goals, universal perceptions. It should lay primary emphasis on this aspect."

It is hoped that when the apex body comes up, it will, besides being a mechanism for coordination, also become an instrument for realisation of the goals enunciated in the preceding paragraphs.

II

That there would be a State level planning and coordination of higher education through Councils of Higher Education was stated in the National Policy on Education 1986 and while presenting this proposition, it was also stated that the University Grants Commission and these Councils will develop coordinated methods to keep a watch on standards. This was later elaborated in the Programme of Action which recognised that there is, at present, no effective machinery for planning and coordination of Higher Education at the State level and further that there is also no arrangement for interface between the State Department dealing with Higher Education, institutton by institution, with the University Grants Commission. In order to fill this gap, it was proposed to set up State Councils of Higher Education as Statutory Bodies. The major functions of the Councils were to include :

(1) Preparation of consolidated programmes of higher education in each State.

(Continued on page 10)

Old Wives Tale ?

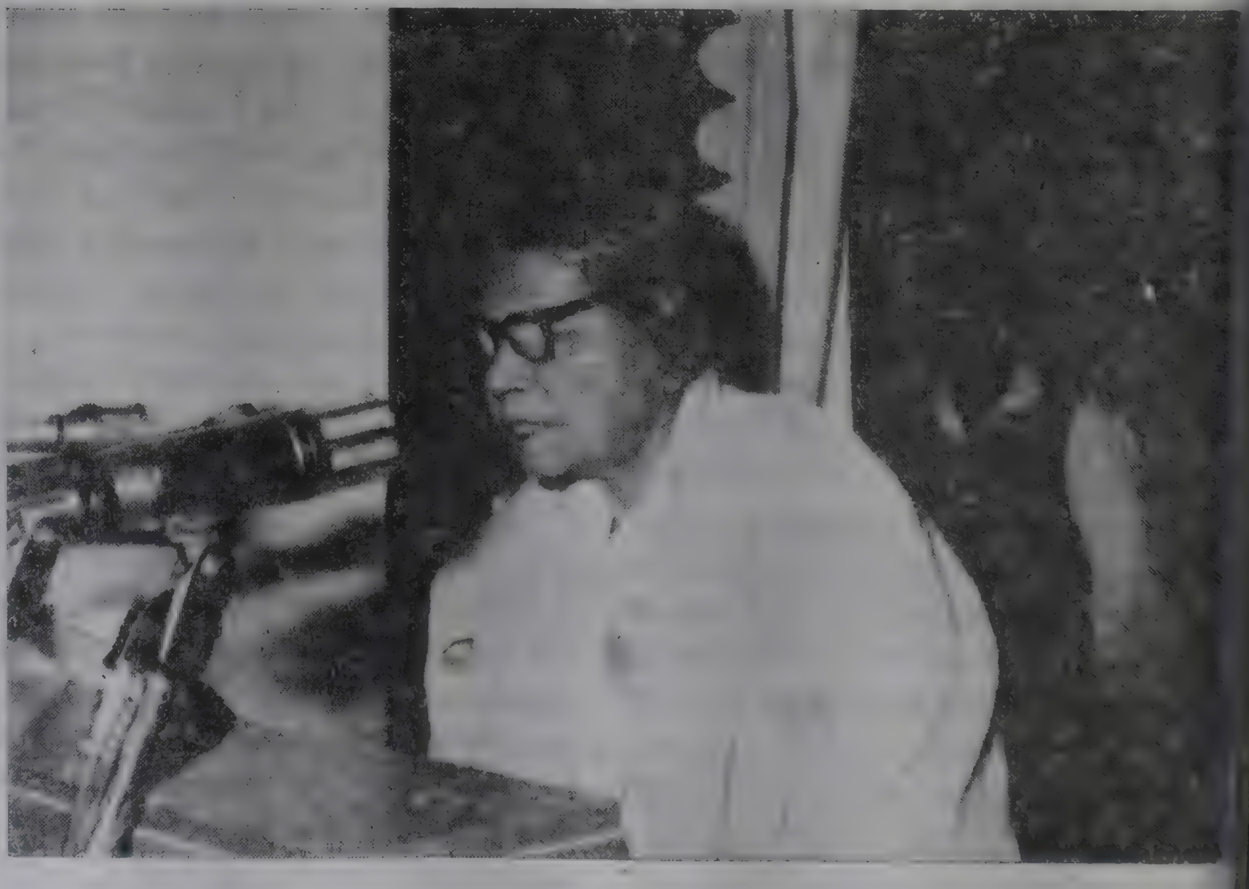
"Even today in some places girls are not wanted at any stage; when they are babies they are cast away, strangled or starved to death i.e. if they are not destroyed at the foetal stage; their education, when they do get a chance, is interrupted by the universal custom of marriage. In married life she has to endure cruelty of various descriptions, harsh treatment by a cruel or drunken husband or be burned to death by the inlaws in collusion with the husband for not bringing in a larger dowry, and if the husband pre-deceases her, she should not live to mourn but share his company at the funeral pyre", lamented Padma Bhushan Smt. Lakshmi N. Menon, former Minister of State in the Ministry of External Affairs, Govt. of India, and added, "If we think that all this is old wives tale, we are mistaken". Making a forceful plea for girls' education while addressing the 52nd Annual Function and Convocation of the Banasthali Vidyapith, Mrs. Menon said, "Education may not be a panacea for all evils, social and economic. But certainly quite a few problems are easy of solution if people know how to read". Excerpts

It is no matter of pride that our country holds a very low position in the matter of literacy. Among the 22 Asian countries, India holds the last place. And in India Rajasthan comes last, especially where women's literacy is concerned. According to the census of 1981 national literacy rate for women in India is only 24.88. This varies from state to state from 68 in Kerala to 11 in Rajastan. The relation between poverty and illiteracy and health has been pointed out by economists, sociologists and nutrition experts. But our Government thinks and our leaders have expressed the view that illiteracy is no bar to democracy. What is the Evidence? We have conducted 8 general elections involving millions of voters men and women. Most of them are illiterate and the elections were peaceful and the results not bad. Our people in the rural areas were characterised by our erstwhile rulers as placid, pathetic and contented and after 40 years of freedom our people are peace loving and contented and would willingly vote for the lantern, horse, tree and other equally ridiculous symbols because they are unaware of the broad issues before the country. Perhaps their thoughts and concerns are concentrated on the possibility of the next meal !

Our socialist democratic government has not yet fully realised that the real problem, that faces the country is the problem of hunger and poverty. We cannot get away by saying that our poverty is due to population. In every country manpower is intellingently utilised to eliminate poverty but this can happen only when the masses have a modicum of education. Other countries which came out of colonial rule after we did, are forging ahead by giving priority to mass literacy. When we are told that Ethiopia which began with a 14% literacy in 1982 is expecting to achieve total literacy by 1990, we are not impressed because we have democracy. Today all our expensive schemes, plans and programmes dry up in the desert sands of illiteracy and incompetence. Competence can come only with conviction and conviction arises out of understanding. When that is not present the result can only be chaotic waste of resources. Education may not be a panacea for all evils, social and economic. But certainly quite a few problems are easy of solution if people know how to read.

As it is, our educational system is like an upturned pyramid. The base, primary education, which should be strong and stable is weak and wobbly. Although we claim to be socialist, secular and democractic, our education system has none of the features we claim for it. It is socialism neutralised by reservation, discrimination based on caste, religion and community. In all admission and application forms caste, religion and state is a must. This is because of our policy of reservation for Scheduled Castes and other backward sections. The system is not democratic. Municipal schools which cater to the poorer (masses) sections are usually ill-housed, ill-equipped and ill-taught. There is no equality of opportunity. On the other hand, government and private managed schools are beyond the means of the poor and lower middle classes. We, in India are never tired of saying that the wealth of knowledge is the greatest of all wealth. Yet we deny that to our people; education has become elitist and it makes those who cannot afford strangers in their own country. Instead of equality, we have rank inequality at every level of education. Even though we have free primary and secondary education progress is painfully slow. The only solution to the problem seems to be the provision of minimum outlays required for achieving the constitutional goal of universal primary education. Today, the enrolment is as low as seven percent for girls in Rajasthan while, the all India level is as high as

75.5%. This of course does not take into account poverty which is responsible for heavy drop outs, social attitudes and tradition. Even today in some places girls are not wanted at any stage; when they are babies they are cast away, strangled or starved to death i.e. if they are not destroyed at the foetal stage; their education, when they do get a chance, is interrupted by the universal custom of marriage. In married life she has to endure cruelty of various descriptions, harsh treatment by a cruel or drunken husband or be burned to death by the inlaws in collusion with the husband for not bringing in a larger dowry, and if the husband pre-deceases her, she should not live to mourn but share his company at the funeral pyre. If we think that all this is old wives tale, we are mistaken. If we think that India has progressed to such an extent that soon we will be having computer in every village even if we don't have potable water; that we do kill cattle to eat and export meat and starve them while proclaiming India is a land of Ahimsa of the Buddha, Mahavira and Mahatma Gandhi, we are fooling ourselves. Notwithstanding all the education we have received and are still receiving, our life is enveloped in a thick fog of insincerity, dishonesty and cruelty. We have a habit of finding someone else for the responsibility of our mistakes and incompetence. We still blame Lord Macaulay for the system of education devised by him. Yet we have hardly done anything t. change the core of the systemo Lord Macaulay 's aim was to teach English to Indians so that the required number of clerks can be made available for the East India Company. He also wanted to turn Indians into Brown Sahabs. If the success of any scheme is the fulfilment of the objectives, Macaulay was remarkably successful in both, because, even after forty years of freedom, besides, appointing commissions and committees to make recommendations for reforming the system, very little has been done to overhaul the much maligned existing system. The recommendations were totally or partially ignored, or parts of them were added on to the prevailing system. Today education is in a holy mess—"the fault, dear Brutus, is not in our stars, but in ourselves if we are underlings". What have we done so far? More classes are added, new subjects are introduced without any consideration for the over burdened youngster who is relentlessly goaded to compete and become a rank holder. Is it because we have no faith in our ability to make a decision or afraid to make the break with the past ? A change even if it is from the worse to the better is inconvenient that is perhaps the reason why do we start institutions with great ideals and eventually change them into something which ultimately merges into the mainstream. I know of many an institution which has been started as innovative and experimental, and ultimately becoming the part of the system. Parents and students accept education as a government-job oriented venture. This education is very costly. It costs fifteen thousand to twenty thousand rupees to produce a graduate, four times as much for engineering and other types of professional graduates. The saddest part is that we never use our education to serve the millions who are deprived of even primary education. We use our education selfishly to amass wealth to climb the social ladder and to batten ourselves. Considering that three-fourth of the revenue is from indirect taxes, it is criminal to produce and increase the number of educated unemployed to satisfy the demand for engineers in the USA and doctors to run the British Health System. We sit complaining about brain drain. The tragedy is that the existing system remains practically uneffected. A number of subjects are introduced and learning by rote continues with little relevance to the conditions prevailing in the country or the



Smt. Lakshmi N. Menon delivering the convocation address.

requirements of personnel in the planned economy.

Once in Lok Sabha Acharya Kripalani reminded the members not to worry about the English language in India. As long as children talk of Mummy and Daddy English will remain in India. Today our children are sent to English medium nursery schools and learn to sing Ba Ba Black Sheep........., Twinkle Twinkle Little Star......... Other changes in the education system are glaringly contradictory to the ideals we profess. For example, first we have Doon School, then other public schools from Sanawar in Himachal Pradesh to Lovedale in Ooty, then the central schools professional colleges and academies, and now navodaya schools galore. I would call it a waste because the cost of producing a graduate is 80 times more than giving primary education to a child. So one graduate is denying the right to elementary education to 80 children. The cost is much more as we go into professional courses. One may well ask who are the tax payers meeting this expense. Since the revenue from indirect taxes is estimated as three forth of the total, all of us are tax-payers : the poorest who buys his daily ration as well as the rich who are perpetually involved in tax evasion cases. A radical change is not possible in India. The Indian behaviour in this as well as in all social reform matters, is peculiar. The instinct for borrowing and at the same time clinging to everything and not rejecting what is outworn and outmoded give rise to the conservative attitude and our attempts at educational reform can be expressed by these lines from Omar Khayyam "about it and about but ever more came out, by the same door wherein I went." Here we might pause to find out what really is the objective of girls education. Long years ago I was talking to Dr. P.K. Ray, the first Indian principal of the Presidency College, Culcutta. When I expressed regret that I did not study logic in my intermediate class, Dr. Ray, who had specialised in philosophy at the Edinburgh University, said, "you are unnecessarily worrying. A woman should train her emotions and not the intellect." Young as I was and inclined towards feminism, I thought he was wrong. About that time in the early thirtees there was quite a debate about differential curriculum for boys and girls. The D.P.I. of U.P. Mr. Mackenzie at a public meeting asked why girls should learn quadratic equations when it would be more useful and helpful if they learn to sing a lullaby. There was a battle of words in the Pioneer, a leading paper in Lucknow at that time. Since then the world has seen vast changes including the awakening among women, agitation by women for equality, the much 'maligned womens' liberation movementits rise and fall, and the failure of the American women to get the equal rights amendment approved by a two third majority of the state legislatures. However, it is true, in certain spheres, women as a class, may have qualities somewhat different those of men. But no generalisation is possible. It is said that a human being has more than 120 inclinations, tastes and talents. We have to deal with them by counselling and guidance so that they may not become misfits. Hence the end of all education for girls ought to be enlargement of her capacity for acquiring wisdom; wisdom being defined as a sense of values or the ability to choose between things that are worthwhile and those that are not. To make such a choice a human being needs a trained conscience to keep his behaviour on the rail and trained heart to teach the head to know its place and limitations, and trained powers of enjoyment. And of course, girls should be influenced by guidance and counselling when they make their choices. I believe that on the lap of wemen rests the future of the world; because women can better understand than men that peace and true freedom can be achieved only by way of love.

In a bisexual society human factor should not be under-estimated. Women are as important as men and they are all human beings. To be ignored or forgotten, illtreated or dishonoured is a bad reflection of the moral and cultural level of the community. It is not in jest that our scriptures have said so many nice things about women. They went to the extent of saying that the gods desert the hearth where women are not honoured.

A girl's education should be complete and must give her unlimited opportunities of development because a girl's life is unpredictable and discontinuous. Her life is one of constant interruptions, a conflict between social attitudes and individual interests. Anything might happen : she may be a beautiful singer and dancer, or both and her in-laws and husband may dislike both. She may be married to a rich businessman who may lose everything in speculation and she may have to face want and discomfort. The only way to face these challenges is to give her a good education which will enable her to face any eventuality.

I would like to say a few words about women's share in the eradication of illiteracy among them. To this day many people, parents and girls themselves do not know why they go in for higher education. Of course, all of them know the ultimate aim of girls education is marriage. Whether you fail or pass obtain rank in the University or Professional examination, woman by social opinion and attitude is predestined to marry. It is seldom, if ever we come across women who have deliberately rejected matrimony and devoted themselves wholly and completely for the pursuit of excellence in the professions. One often hears the complaint that the money spent on girls' professional education is wasted if she settles down to a married life. This is a one sided evaluation. I know of doctors who after medical education preferred to become journalists and farmers, engineers, hoteliers and professors who ended up as traders and businessmen. This condition of square pegs in round holes is the result of absence of guidance and counselling at the appropriate stage. But a woman who is educated is a great asset by becoming a better mother, better citizen and a liberated human being. I have no complaints if all educated women do not enter the professions. I recall an incident mentioned in Flexner's 'Universities : British, American and German'. Alice Palmer the wife of the President had never learned cooking but she was able to turn out a most delicious cake and Bridget, the maid who was looking on said 'this is what I call education, being able to do something without training'.

Earlier I had indicated the cost of primary education vis a vis higher and professional education. Those of us who have had the advantage of education should realise one thing. We owe a debt to our society because most of the funds come from the poor who do not know their entitlement and the denial to which they are subjected. A debt should always be honoured. We are told that three fourth of the revenue comes from indirect taxes.

Five years ago nine all India women's organisations decided that we should challenge the evaluation of the World Bank that by 2000 AD India will have the largest number of illiterates in the world. It awakened in our organisations a sense of our responsibility to work against this shameful state of affairs. Long ago in 1922 Gandhiji had said that mass illiteracy is a sin and a shame. We decided that by mobilising the goodwill of the nation, we should be able to achieve total literacy for women by 2000 AD. Hence we constituted an all India committee for the eradication of illiteracy among women. Now we are engaged in seeking public support to fight this menace of ignorance among our women. Government action is slow and is not commensurate with people's enthusiasm. We think that it is the bounden duty of all men and women, all boys and girls and schools and colleges to take a pledge to make atleast two other literate women. Where the Government finds the task difficult, we, the people, must show that there is nothing so effective or of permanent value as *janasakthi*. In conclusion, I would make a personal appeal to bear in mind our duty as citizens to our country and our concern for women who are usually and officially classed with the backward sections. ☐

National Apex Body . . .

(Continued from page 6)

(2) initial scrutiny of the development programmes of universities and colleges.

(3) assistance and advice to UGC in respect of standards.

(4) assistance to State Governments in determining the block maintenance grants.

(5) encouragement of the programmes of autonomous colleges.

(6) monitoring the progress of implementation of programmes and assessment of performance of institutions.

(7) advising the State Governments in setting up new institutions.

It seems self-evident that there my be no need for State Councils of Higher Education in States which have only a few universities. On the other hand, those States which have a large number of unversities need to have State Councils because, in the absence of these, the policy formulation function does not take place and instead ad hoc decisions are taken, institution by institution, resulting in those who already have getting more at the expense of the growth of new or not so impressive institutions in educationally backward areas.

Sometime an arugement is put forward that by setting up State Councils of Higher Education or an Apex Body at the national level, the autonomy of the new institutions might be curtailed. While there is every possibility of further curtailment of the autonomy of individual institutions, but it will not take place because of the setting up of these mechanisms. This will happen mainly because the basic concept of accountability has not been accepted by either educational institutions or various sections associated with them. Very few institutions have taken the initiative to develop criteria for performance audit. Almost nobody is raising the issue of social costs and individual benefits. In other words, "the business is continuing as usual". It will continue as such as long as these enclaves of agricultural, medical, engineering and general education continue to operate with a world view determined not by goals of education but by the subject matter of teaching.

It is only a set up like the National Apex Body which can take a holistic view of education and lay down appropriate procedures to bring about a qualitative change in the education system. Such a body will be able to do so because it will not be concerned with individual institutions or individual sub-sections of the educational system. ☐

The IQ Controversy

The Institute of Psychology of Jnana Prabodhini, Pune, recently organised a national seminar to discuss various problems related to the IQ controversy. Inaugurating the seminar, Prof. Devdatta Dabholkar, Ex-Vice-Chancellor of Poona University, observed that the IQ controversy, touched politics, economics, sociology and all the other social sciences. The international debate had so far been useful because it had helped clarify some of the concepts and highlight research issues. He said that the key to the solution of the IQ controversy could be found in the social role of the intellectuals. Referring to the ancient rishis and modern intellectual giants like Russel and Einstein, he remarked that the message of their life was that if one was endowed with superior abilities one did not get a superior right to rule but a superior opportunity to serve.

Dr. P.V. Sukhatme, President of Jnana Prabodhini, in his keynote address on the theme 'Man Environment Interaction' quoted evidence from his eight village project funded by the Department of Science and Technology and emphasised that a child is born with an innate capacity to learn and it is the responsibility of the school to provide the appropriate environment as a tool for achieving living standards suited to culture, needs and resources. He referred to the experimental work which showed that careful selection of environmental conditions at critical periods in the development of an individual could give a rise to a wide array of phenotypes so different that they appeared as if they were gene mutations. He concluded that man and environment synergistically interact to regulate man's behaviour within limits defined by their co-variance.

Dr. Kunnankal, Consultant, Ministry of Human Resource Development in his valedictory address observed that constant efforts were necessary to better utilise the intelligence by taking into account its social relevance.

The seminar was held in five sessions and the topics discussed included (1) Review of the IQ controversy; (2) IQ controversy in the light of various theories of intelligence; (3) Role of intelligence testing in IQ controversy; (4) Nature of Intelligence; and (5) Role of people of high intelligence in national progress.

Our 125 scholars from various branches of knowledge, namely, heredity, medicine, psychology, education, statistics, philosophy, ayurved and yoga participated in the seminar where over 30 research papers were presented.

UGC Funds for Labs and Libraries

The University Grants Commission (UGC) is reported to have decided to grant Rs. 2.5 lakhs to each eligible college and Rs. 20 lakhs to each university, for providing teaching laboratories, as they were essential for scientific study. According to Prof. Yashpal, Chairman of the Commission, this facility was being extended to the Universities by the Commission, although it is primarily the responsibility of State Government to look after them. The Commission, he said, had embarked on some major projects known as inter-university centres, for better interaction between students and teachers of different universities who would be grouped together under each centre. One such centre had been set up in Delhi for nuclear science and another at Pune with a giant radio wave telescope for astronomical studies.

Among other things, the Chairman said efforts were on to boost libraries in the universities and help them to acquire books and journals which had become costly. In this connection, he said, Rs. 7 to 10 lakhs would be paid to each university and Rs. 25,000 to each college.

Regarding setting up of sports complexes in universities, proposals to the tune of Rs. 200 crores had been sent for financial assistance to be spread over Seventh and Eight Plan periods. He said the Commission would soon start academic staff colleges for interaction of teachers and for better understanding of professional obligations under coordination. This is a place where teacher and taught would play a new role, he said. With regard to application of revised UGC scales to college teachers, the Chairman said Union Government would issue notification soon which would also bring in librarians and physical directors under its purview.

U.S. Award for Dr. Sengupta

Dr. P.R. Sengupta, former director of the North Eastern Regional Institute for Science and Technology, has been nominated for the University of Louisville Grawemeyer Award in Education for 1983. The award which carries a prize money of $150,000 is given in recognition of outstanding ideas in education, ideas that have the potential to produce significant improvements in educational practice or attainment.

Dr. Sengupta has designed an academic programme for technical education consisting of three successive modules of about two years each. The first module will end at the level of a technical vocational certificate, the second at the diploma level while the third module will lead to a bachelor's degree. He has also suggested that refresher courses of six months' duration each should also be conducted.

According to Dr. Sengupta each module will provide a terminality corresponding to an occupational level while at the same time providing an entry point to the next higher module in the academic programme, finally leading to a degree in engineering or technology after completion of the third module.

He has also suggested two separate sets of academic programmes for continuing education at the level of craftsmen, technicians and engineers which will consist of learning modules of six-to-twelve-week duration for updating the knowledge and information base in different fields of technology.

Postgraduate Courses in Psychiatry

Bangalore University proposes to start postgraduate courses in psychiatry from September this year. This was disclosed by Dr. G.N. Reddy, Director of the National Institute of Mental Health and Neuro Sciences (NIMHANS). He said, as part of its plan to participate in the national mental health plan, the NIMHANS had trained 130 doctors of primary health centres all over the State. He stressed the need to provide mental health care not only in hospitals but also in small health centres in rural areas.

Highlighting the increased responsibilities of institutions of its kind, Dr. Reddy said the NIMHANS was now entering a new phase of specialisation and research. He said the World Health Organisation was collaborating with the NIMHANS in research activities in various fields. The institute's collaboration with US agencies had also been extended by three years, he said.

New Syllabus in Economics

The University Grants Commission (UGC) will implement a new Indian-oriented curriculum in Economics at undergraduate and postgraduate levels from the ensuing academic year to make the subject more compatible with the country's present needs. The new curriculum was framed by two committees of experts from various universities as per UGC guidelines. According to Prof. R. Bhardwaj, Coordinator, Curriculum Development Centre (CDC), Bombay University, each course has been organised in a series of smaller modules, an integrated focus of which would form a specific paper under considerations. These modules, core as well as optional have been provided with a preamble, he said.

The U.G.C. established C.D.C. in 1985 to prepare model curriculum to make higher education a national investment.

Research Methodology in Geography

The Department of Earth Sciences, Manipur University, organised a two-week Training Course in

---

ASSOCIATION OF INDIAN UNIVERSITIES

notes that several misleading advertisements recently appeared in the newspapers in the name of the following institutions whose qualifications are not recognised in India :

International University of Missouri
University of East Gorgia
New Port University
Stanton University

These advertisements misrepresent the facts and create an impression that their courses are accepted by Indian universities. As these institutions are not listed in the accredited institutions of post-secondary education in their own country, the question of their recognition in India therefore does not arise. The advertisements appear for various correspondence courses in the field of management and allied disciplines, the titles of which are frequently changed to attract a large number of students. Local office contact in India is also changed from time to time.

Students, Teachers and others are welcome to seek information on the status of any university/institution from the Deputy Secretary (Evaluation & Information), Association of Indian Universities, AIU House, 16 Kotla Marg, New Delhi-110002.

Research Methodology in Geography from the 2nd to 15th February, 1988. The Training Course was inaugurated by Professor I.R. Babu Singh, Dean, School of Humanities, Manipur University while Shri E. Kunjeshwar Singh, Commissioner (Finance and Revenue), Government of Manipur, delivered the valedictory address. During the course of the training programme the participants, mostly college teachers and research scholars in Geography from Manipur and Mizoram, were exposed to the recent trends and research methods in geography and quantitative and cartographic techniques and problems of geographical researches with special reference to the north-eastern region.

Tokyo Award for JNU

The video film "Japanese Language Teaching in JNU" has been awarded the Special Educational Programme Prize in a video film contest held in Tokyo. Over 50 entries from 18 countries participated in the contest. The participating countries included China, Nigeria, Argentina, Indonesia, Saudi Arabia, Sri Lanka, Thailand and Singapore. The judges included eminent video experts from Japan Broadcasting Corporation (NHK), All Japan Radio, Television Engineering Services Corporation, Japan Telecom Engineering and Consulting Services, International Television Association, Japan and Sony Corporation.

The video film was produced at the Language Lab Complex in the School of Languages, jointly by Mr. A. Chattopadhyay and Er. V.K. Sahni.

Anna Varsity Water Resources Centre

The High Level Technical Committee on Hydrology (HILTECH) Ministry of Water Resources, Government of India, has identified the Centre for Water Resources of this University as one of the participating Organisations in the National Hydrology Project on Water Quality. A sum of Rs. 62.37 lakhs spread over a period of 5 years has been sanctioned for the University in this behalf The project envisages creation and strengthening of laboratories, staff, buildings, training and computer facilities for studying, the typical water quality problems.

The UGC has also identified the Centre for Water Resources to receive special financial support under the COSIST programme for strengthening postgraduate teaching and research in Ground Water Resources and Water Resources Management.

News from Agril. Varsities

Senior Arab Scientists Visit HAU

An 18-member delegation of senior scientists and administrators from 9 Arab countries, namely, P.D.R. Yemen, Somalia, Jordan, Morocco, Sudan, Tunisia, Libya, Algeria and Syria accompanied by Dr. Maharaj Singh, Dy. Director General (Education), Indian Council of Agricultural Research, New Delhi, visited Haryana Agricultural University recently. The purpose of the visit was to see the organisational structure, functions and programmes of the university and to study the various ways and means by which the agricultural institutions are able to boost the economy of the Arab countries.

The members of the delegation visited the constituent colleges, research farm, Animal farm, Seed Technology Laboratory and the agricultural museum of the College of Agriculture. They also held discussions with the Deans and Directors and the Vice-Chancellor, Dr. Har Swarup Singh, on the mutual cooperation of India and Arab countries and also the system of transfer of technology.

New Test for Theileria Diagnosis

Dr. A.S. Grewal, Professor of Immunology in the College of Veterinary Science of Punjab Agricultural University has developed a new and improved immunological test for the diagnosis of Theileria infection in cattle. The test is highly sensitive, specific, simple to do and adaptable to mass screening of blood samples in a shorter time. The test is based on the modern technology of Visual-Dot System of Enzyme-linked Immunosorbent Assay (Dot-Elisa) which is more versatile and economical amongst various ELISA systems. These characteristics of the test make it practical for the Tick Borne Diseases Research Team to undertake mass screening of blood samples from animals in the filed.

According to Dr. Grewal, the industrial significance and field applications of this test would be to provide information on incidence/prevalence of theileriosis in cross-bred cattle, buffalo and indigenous cattle; rate of occurrence of new infections from season-to-season; role of local cattle and buffalo as reservoir of infection for cross-bred cattle; assessment of demand and practical significance of Theileria vaccine for its control; monitoring vaccination trials in the field; correlation between infection and productivity of the animals.

Sports News

Freedom Forty Hockey Match

A match between Indian Universities Hockey team and a team consisting of former olympians was organised at Bangalore on February 14, 1988 to mark the fortieth anniversary of our independence. The underlying idea was to acquaint the young players with the techniques of the game employed by senior players in the yester-years. As expected the maturity of the former international players prevailed upon the dash of the youth and they clinched the match by a narrow margin of one goal.

AIU Library

Established in 1965, the AIU Library has acquired over the years a valuable collection of books and documents on Higher Education. Among the topics prominently represented are Educational Sociology, Educational Planning, Educational Administration, Teaching & Teachers' Training, Examinations, Economics of Education and Country Studies. Developing fields of Adult Education, Continuing Education and Distance Education, and Educational Technology are also well stocked. The Library is particularly strong in its collection of reports whether they are on the setting up of different universities or on the state of Higher Education. Files of Annual Reports of different universities are also maintained. Readers are kept informed of the latest acquisitions through our column 'Additions to AIU Library'.

The Library also receives about a 100 periodical titles on Higher Education. All these are Indexed regularly and a select list appears every month as 'Current Documentation in Education'.

Doctoral Degrees awarded during the preceding month are reported as 'Theses of the Month' while registrations made for such degrees are flashed as 'Research in Progress'. Bibliographies are also compiled and supplied on demand.

Research scholars and students of education are welcome to use these resources. The Library is open from 9-00 a.m. to 5-30 p.m. Monday through Friday. Access can also be had through Inter library loan for which requisition must be made through your Librarian.

UNIVERSITIES HANDBOOK—1985-86

Salient Features

—Contains information covering all the Indian Universities including agricultural universities, institutes of national importance (including IITs) and deemed to be universities on following heads of information :

- Officers & Deans of Faculties;
- Library & Research Facilities;
- Scholarships and Fellowships;
- Academic year—last date for admissions and the approximate dates of examinations;
- Courses of Studies;
- Minimum requirements for admission to each course, duration and the subjects of study for each course;
- Names of Professors and Readers/Assistant Professors together with their academic titles department-wise;
- Names of Colleges together with names of Principals and Heads of Postgraduate Departments in Colleges;
- Statistics on examination results.

—Introductory chapter on overview of the University System in India.

—Map showing location of universities.

Institute for Plasma Research

(An Autonomous Institute of Dept. of Science & Technology)

GOVERNMENT OF INDIA
Near Indira Bridge, Gandhinagar Highway
BHAT, GANDHINAGAR-382 424

ADVERTISEMENT No. 02/88

SENIOR ENGINEERING POSITIONS AT IPR

The Institute for Plasma Research has been recently established by the Department of Science & Technology as an autonomous research institute to lead the country's magnetic confinement high temperature plasma fusion research programme. A research device of the tokamak type, christend ADITYA is in the final stages of assembly and commissioning. The technical subsystem of ADITYA include large toroidal ultra high vacuum system; equilibria magnetic field coils, coil cooling system, thyristor converter equipments for DC power for magnetic computer based data acquisition and control equipments.

IPR is looking for competent and result oriented engineering staff to lead the various technical groups. The requirements are as follows :

Engineer SC/SB (Computer Software)

Tokamak "ADITYA" is to be completely operated and controlled under computer operated data acquisition and control system based on VAX-11/730 system and CAMAC based serial highway driver. The incumbent is expected to develop computer software in both higher level and assembler languages for the system.

Engineer SB (Mechanical)

The incumbent is required to possess adequate knowledge of commissioning and maintenance of Air Conditioning Plants and ensure prompt execution of the jobs incidental to and connected with this item of work.

Qualification and Experience

Engineer SC (Computer Software) : M.E./M. Tech./M.Sc. Engg Fresh with specialisation in Computer Software or MCA/B.E./B. Tech./B Sc. Engg/M.Sc.+3 yrs experience or B.Sc./Diploma Holder+9 yrs. experience. **Engineer SB** (Computer Software) : B.E./B. Tech./B.Sc. (Engg)/MCA fresh with specialisation in Computer Software.

Engineer SB (Mechanical) : B.E./B. Tech./B.Sc. (Engg) with specialisation in Air Conditioning and Refrigeration. Other things being equal experienced candidates would be preferred for all the above positions.

Scale and Pay

Engineer SC : 2200-75-2800-EB-100-4000 (Total Rs. 3036.00)

Engineer SB : 2000-60-2300-EB-75-3200-100-3500 (Total Rs. 2810.00)

Higher starting salary in the scale in exceptional cases may be considered. Institute offers excellent career opportunities to result oriented staff. In addition to pay and allowances, perquisites like contributory provident fund, gratuity, contributory medical scheme, LTC, subsidised transport and canteen facilities are admissible as per Institute rules.

Age Limit : 35 years.

General Conditions : Out-station candidates called for interview will be paid to and fro second class rail fare by shortest route, on production of satisfactory proof of journey. Those who are interested may send their typed application on plain paper in the following format in English along with the recent passport size photograph, duly pasted on the application alongwith attested copies of certificates in support of educational qualifications, experience, duties performed and salary drawn etc.

(a) Post Applied for :, (b) Name (in block letters), (c) Place and Date of Birth, (d) Age, (e) Marital Status, (f) Present and Permanent Address, (g) Qualifications, starting from SSC onwards, indicating exam passed, year of passing, division, percentage of marks obtained, subject, board/university, (h) Experience, indicating nature of work in detail, name of the organization period, scale of pay and total salary drawn, (i) Signature with date, directly to Chief Administrative Officer, Institute for Plasma Research on the above address, **within 15 days** of the publication of this advertisement, superscribing the envelope with advt. No. and the post applied for. Candidates employed in Govt/Quasi Govt/Public Sector Undertaking should forward their application through proper channel. The IPR reserves the right to reject any application without assigning any reason. Incomplete applications are liable to be rejected. No interim correspondence will be enterained.

MINISTRY OF DEFENCE

DEFENCE RESEARCH & DEVELOPMENT ORGANISATION

Openings for a Challenging and Rewarding Career in the Field of Defence Research and Development

The DRDO undertakes research and development projects for upgrading the technology to meet the multitudinous requirements of fighting forces of the country. Excellent career opportunities affording a challenge and rewarding work experience in different streams of disciplines exist. There are about 40 laboratories/establishments located all over the country equipped with latest R & D facilities. Labs are located in Delhi, Bangalore, Hyderabad, Pune, Madras, Bombay, Dehradun, Cochin, Vishakhapatnam, Balasore etc.

Applications are inivited for the following positions :
Scientist 'F' (Rs. 5100-6300)— 2 Posts

Item No. 1 Defence Research Laboratory, Tejpur (Assam) - 1 Post

The Director is required to provide scientific leadership to the laboratory engaged in research, design and development activities connected with high altitude agri-horticulture, animal husbandry, forestry, entomology, utilization of non-conventional energy sources and allied subjects. The scientist is required to coordinate and integrate the scientific, technological and developmental efforts of lab and its detachments located in remote and forward areas of Arunachal Pradesh and West Bengal (160 m to 3200 m above MSL). The Scientist should have proven ability in one or more of above fields and be able to inspire team efforts through his leadership qualities. The scientist should be able to interact with Agricultural Research Institutions/Universities and other R&D institutions in the country and have aptitude to work amidst troops and tribals in the Himalayas.

Essential Qualifications: (i) At least second class Master's degree in Agriculture/Horticulture from a recognised university or equivalent. (ii) Ten years' research/design/development experience in the field of agriculture/horticulture/forestry in temperate climate in addition to knowledge of crops breeding, production/processing and utilisation of non-conventional energy sources, of which 2 years should be in a responsible capacity, to guide teamwork in the above-mentioned areas at high altitudes. **Desirable Qualifications**: Ph.D. in Agriculture/Horticulture with specialisation in Vegetable crops.

Item No. 2 (Naval Chemical and Metallurgical Laboratory, Bombay)- 1 Post

Essential Qualifications : (i) At least second class Master's degree in Chemistry/Polymer Chemistry/Biology or Bachelor's degree in Metallurgical Engg. from a recognised university or equivalent. (ii) Ten years' research/design/development experience with proven R&D capabilities by way of patents/publications in reputed journals in one of the following areas, of which 2 years should be in the capacity of a senior scientist/R&D manager in a reputed research and development organisation: (a) In Electrochemistry with specific application in cathodic protection and electro-chemical techniques or in the area of fuel cells : OR (b) In polymer chemistry with emphasis on characterisation and technological application of special purpose polymers like graft co-polymers, IPN polymers etc. OR (c) In Marine Biology with special reference to growth of films and marine bio-corrosion of engineering materials; OR (d) In Physical/Mechanical metallurgy of steels, welding technology and corrosion of steels. **Desirable Qualifications**: Ph.D. in Chemistry/Polymer Chemistry/Biology or Master's degree in Metallurgical Engg.

Scientist 'D' - (Rs. 3700-5000/-) - 1 Post

Item No. 3 - (Defence Research & Development Laboratory, Hyderabad)- 1 Post

Essential Qualifications : (i) At least second class Bachelor's degree in Electronics/Electronics and Telecommunications/Computer Science/Electrical Engg. from a recognised university or equivalent. (ii) Eight years' research and development experience related to the design and development of computer hardware, digital systems, microprocessor-based systems and the development of software networking and data communications. **Desirable Qualifications :** Master's degree in Electronics/Electronics and Telecommunications/Computer Science/Electrical Engineering from a recognised university or equivalent.

Scientist - C (Rs. 3000-4500) - 11 Posts

Item No. 4 - (Defence Research and Development Laboratory, Hyderabad - 1 Post

Essential Qualifications : (i) At leas second class Bachelor's degree in Mechanical/Aeronautical Engineering or Master's Degree in Physics from a recognised University or equivalent. (ii) Four years research/design/development experience of Non destructive testing of composite materials by X-Ray Radiography and Ultrasonic techniques. **Desirable Qualifications**; Master's degree in Mechanical/Aeronautical Engineering or Ph.D. degree in Physics.

Item No. 5 - Computer Engg. (Defence Research and Development Laboratory, Hyderabad) - 3 Posts.

Essential Qualifications : (i) At least second class Bachelor's degree in Electionics/Electronics and Telecommunications/Computer Science/Electrical Engg. from a recognised university or equivalent. (ii) Four years' research experience in the design and development of Computer Hardware, digital systems, microprocessor based systems with knowledge of multiprocessor systems, Computer networking and data communications. **Desirable Qualifications :** (i) Master's degree in Electronics/Electronics and Telecommunications/Computer Science/Electrical Engg.

Item No. 6 - Electronics Engg. (Defence Research and Development Laboratory, Hyderabad) - 2 Posts.

Essential Qualifications : (i) At least second class Bachelor's degree in Electronics/Electronics and Telecommunication/Computer Science/Electrical Engg. from a recognised university or equivalent. (ii) Four years' research experience in the design and development of systems software for mainframe or microprocessor based systems. **Desirable Qualifications :** (i) Master's degree in Computer Science/Electronics/Electronics and Telecommunications/Electrical Engg. (ii) Knowledge of UNIX operating system and compiler design :

Item No. 7 - Electrical Engg. (Interim Test Range, Balasore) - 1 Post.

Essential Qualifications : (i) At least second class Bachelor's degree in Electrical Engg. from a recognised university or equivalent. (ii) Four years' research, design and development experience in electrical cable laying and terminal box design with cable jointing using heat shrink techniques and other related latest technologies. **Desirable Qualifications :** (i) Master's degree in Electrical Engg. (ii) Knowledge of cable test equipment and fault finding.

Item No. 8 - Physics - (Defence Science Centre, Delhi) - 1 Post

Essential Qualifications : (i) At least second class Master's degree in Physics from a recognised university or equivalent. (ii) Four years' research/design/development experience in the area of lasers of which one year must be in laser spectroscopy. **Desirable Qualifications :** Ph.D. in Physics/Lasers.

Item No. 9 - Radiation Medicine - (Defence Laboratory, Jodhpur) - 1 Post

Essential Qualifications : (i) MBBS degree - a medical qualification included in the First Schedule or the Second Schedule or Part II of the Third Schedule to the Indian Medical Council Act 1956 (102 of 1956). Holders of Medical qualifications included in Part II of the said Third Schedule should also fulfil the conditions specified in sub-section (3) of Section 13 of the said Act. (ii) Diploma in Radiation Medicine. (iii) Three years' practical experience in radiation medicine or radioisotopic applications.

Item No. 10 - Mechanical/Metallurgical Engg. (Naval Chemical and Metallurgical Laboratory, Bombay) - 1 Post

Essential Qualifications : (i) At least second class Bachelor's degree in Mechanical/Metallurgical Engg. from a recognised university or equivalent. (ii) Four years' research and development experience in the areas of solidification, structure-property correlation in cast irons and in the use of sophisticated equipment for micro-structural evaluation. **Desirable Qualifications :** (i) Master's or Ph.D. degree in Metallurgy/Mechanical Engg., (ii) Some published work in reputed journals in the above areas.

Item No. 11 - Metallurgical Engg. - (Naval Chemical and Metallurgical Laboratory, Bombay) - 1 Post

Essential Qualifications : (i) At least second class Bachelor's degree in Metallurgical Engg. from a recognised university or equivalent, (ii) Four years' research and development experience in the areas of phase diagrams, thermodynamics, heat treatment of steels and computer applications in Metallurgy.

Desirable Qualifications : (i) Master's or Ph.D. degree in Metallurgical Engg., (ii) Some published work in reputed journals in the above areas.

Scientist 'B' - (Rs. 2200-4000)—1 Post

Item No. 12. Physical Chemistry - (Interim Test Range, Balasore) - 1 Post (UR)

Essential Qualifications: At least second class Master's degree in Physical Chemistry from a recognised university or equivalent. **Desirable Qualifications :** (i) Ph.D. degree in Physical Chemistry, (ii) Experience in handling/development of software for instrumentations.

GENERAL CONDITIONS

1. Promotion Prospects : DRDO offers excellent opportunities for career advancement as Scientists. Result-oriented motivated scientists can look forward to promotions to following grades of scientists :

(i) Scientists 'D' : Rs. 3000-4500, (ii) Scientist 'D' : Rs. 3700-5000, (iii) Scientist 'E' : Rs. 4500-5700, (iv) Scientist 'F' : Rs. 5100-6300, Scientist 'G' : Rs. 5900-7300.

2. Age Limits : (i) For Scientist 'B' : Not exceeding 28 years. (ii) For Scientist 'C' not exceeding 35 years, (iii) For Scientist 'D' not exceeding 45 years, (iv) For Scientist 'F' not exceeding 45 years. Age is relaxable by 5 years in case of Govt. servants and those belonging to Scheduled Caste and Scheduled Tribes communities. Crucial date for determining age is 21 March 1988.

3. Method of applying: Neatly type-written applications should be sent to Director, Recruitment & Assessment Centre, Lucknow Road, Timarpur, Delhi-110 007, preferably by Registered cover, superscribed "Application for the post of Scientist—" "Item No.—" on plain paper in the prescribed format (reproduced below) accompanied by a crossed non-refundable Postal Order of the value of Rs. 8/- drawn in favour of Senior Accounts Officer, Recruitment & Assessment Centre, DRDO, payable at New Delhi. There is no fee for SC/ST candidates. Last date of receipt of applications is **21 March 1988.** In respect of candidates from Andaman & Nicobar Islands, Lakshadweep and abroad, last date of receipt of applications **7 April 1988.**

4. Method of Selection : A written test may be conducted for certain posts at selected places. No TA/DA would be admissible for this purpose. Persons called for interview would be reimbursed actual train/bus fare by shortest route limited to second class rail fare from the normal place of residence to the place of interview.

5. Only Indian nationals need apply.

6. Candidates should send two self-addressed unstamped envelopes of 23 x 10 cms alongwith the application.

7. One copy of recent passport size photograph should be pasted on right hand corner of the first page of application.

8. Attested copies of certificates/testimonials should be attached to the application form. Self attested copies will be accepted. NO ORIGINALS SHOULD BE FORWARDED.

9. Candidates will have to produce original certificates at the time of interview.

10. Incomplete applications or those received late will be rejected and no correspondence would be entertained in this regard.

11. In case SC/ST candidates are not available in requisite number, general candidates will be considered for the posts reserved for SC/ST.

12. Candidates Working in Government/Public Sector Undertakings/Autonomous Organisations must apply through proper Channel. They shall not be interviewed if they fail to produce 'No Objection' Certificate from their employer at the time of interview.

13. Prescribed essential qualifications are the barest minimum and mere possession of the same does not entitle any candidate to be called for interview.

14. Candidates desirous of applying for more than one post may apply separately for posts indicating Item No. of the posts.

15. Candidates on appointment will have the opportunity to carry out Ph.D. with external registration and may be sponsored for doing M. Tech.

16. Opportunities are also available for study leave for carrying out higher studies abroad.

17. DRDS Officers may be sponsored for training abroad.

18. Though initial place of posting is indicated against some of the posts, yet candidates have the liability to serve anywhere in India.

19. Handwritten applications will not be entertained.

20. Number of posts against each item is tentative and may vary.

21. All extra sheets used by the candidates MUST be duly authenticated by them.

22. Knowledge of French, German, Russian, Japanese and Chinese is a desirable qualification for all posts.

CANVASSING IN ANY FORM WILL MEAN DISQUALIFICATION

APPLICATION FORMAT

Application for the post of Scientist ____________, Item No. ____________________

Affix passport size latest photograph

1. Advertisement No :
2. Item No. :
3. Details of Postal Order (s) No., Date and Amount :
4. Name in full (Shri/Smt/Km) (in block letters)
5. (a) Date of Birth :
   (In Christian era in figures)
   (b) Age as on 21 March 1988 :
6. Nationality :
7. Marital Status :
8. Father's/Husband's Name :
9. (a) Address for Correspondence :
   (b) Permanent Address :
   (in block letters with Pin Code)
10. Nearest Railway Station :
11. Whether belong to SC/ST :
    (If yes, attach Certificate)
12. Educational Qualifications :

Sl. No.	* Course Passed	University/ Institution/ Board	Year of Passing	Subject taken	Percentage of marks

* In Chronological order from X standard (SSLC/HS/HSC) onward.

13. Professional Training :

Organisation	Period From	Period To	Details of Training

14. Employment Record :

Name & address of the employer/ institution	Period of service from to	Designation of the post held	Scale of pay of each post	Detailed description of work	Reason for leaving

15. Present basic pay :
    Other allowances :
    Total emoluments :
16. (a) Are you a Govt. Servant :
    (b) If yes, whether Central/State/UT Govt.
    (c) If not, whether employed in undertaking/autonomous body under Central/State Govt.
17. Minimum joining time required :

18. Resume of research work/experience, if any :
19. Number of papers published (enclose list) :
20. Field of special interest :
21. Are you under any contractual obligation to serve Central/State Govt./Any other public sector undertaking or Autonomous body and if so the details :
22. Details of relatives employed in DRDO :

Name of Relative	Relationship	Lab/Estt in which employed	Post held

23. Have you applied for any post in DRDO during the past two years? If yes, give particulars :

Sl. No.	No. and Date of Advt.	Name of Post/ Discipline	Date of interview	Remarks

24. Any other information you may wish to add :
(use separate sheet if necessary),
25. Declaration :

I declare that the foregoing information is correct and complete to the best of my knowledge and belief and nothing has been concealed/distored. If at any time, I am found to have concealed/distorted any material information, my appointment shall be liable to summary termination without notice/compensation. I will, if and when required, take up duty in the discharge of government assignments anywhere in India.

INSTITUTE FOR PLASMA RESEARCH

(An Autonomous Institute of Dept. of Science & Technology)

Government of India

Near Indira Bridge, Gandhinagar Highway
BHAT, GANDHINAGAR—382 424

ADVT. No. 01/88

The Institute for Plasma Research is an autonomous Institute of the Department of Science and Technology, Government of India. Its primary objective is to conduct research in Plasma Physics and related areas. Plasma Physics has been identified as a thrust area by the Department of Science and Technology, requiring intensification of research. IPR offers the following research programmes for bright and motivated young candidates.

SUMMER PROGRAMME

Students of M. Sc. (Physics) who have completed their first year of study are eligible to apply for this programme. Selected candidates will be provided the opportunity to interact actively with scientists of IPR in the frontier research areas of Plasma Physics for six weeks from May 23—July 1, 1988. The participants will receive a consolidated stipend of Rs. 750/- payable in three fortnightly instalments of Rs. 250/- each for six weeks, to and fro second class rail fare by shortest route and free hostel accommodation. Deadline for applications is **April 10, 1988**.

Ph.D. PROGRAMME

The basic entry requirement for the Ph.D. programme is M.Sc. in Physics and those appearing in the final examination are also eligible to apply. Selection will be on the basis of personal interview at the Institute and the travel expenses for the same by second class to & fro rail fare by shortest route will be provided. The selected candidates will undergo requisite course work, mainly during the first year. The scholarship is Rs. 1400/- p.m. during the first two years. Subject to evaluation it may be increased to Rs. 1500/- p m. in the next two years and Rs. 1600/- p m. for the fifth year. Normally the Ph.D. Programme is for 5 years and on its successful completion a few candidates with exceptional skills and talent may be offered regular positions in the Institute. Deadline for applications is **April 10, 1988**.

Applications for these programmes should include a detailed resume specifying name, date of birth, address (Present and Permanent), academic record (school leaving onward, including rank); and two letters of reference from their teachers. Applications should be sent to the Chief Administrative Officer at the above address superscribing the envelope the Advt. No. and the programme applied for.

Embassy of the Republic of Iraq

VACANCIES IN THE UNIVERSITY OF MOSUL, MOSUL-IRAQ

The Embassy of the Republic of Iraq, Cultural Office, 169 Jor Bagh, New Delhi—3, has the honour to invite applications from prospective candidates for its University of Mosul, Mosul Iraq, for the year 1988-89. The candidates are advised to register themselves with the Ministry of Personnel and Training, Foreign Assignment Section, North Block, New Delhi, if already not done :

Architecture

Qualification Required : M. Arch. with 5 years of exp.

1. Residential Buildings
2. Construction Buildings
3. City Planning
4. Theory & History of Architecture
5. Industrial Buildings
6. Sports Buildings
7. Interior Design
8. Landscape Design
9. Transportation Buildings

Computer Science

Qualification Required : Ph.D. with 5 years of exp.

1. System Software
2. Computer Architecture
3. Operating System
4. Telecommunications & Computer Networks
5. Computer Science (Graphics)
6. Data Structures & Algorithms
7. System Analysis & Design
8. Data Bases
9. Computer Languages

Medical (Dental)

Qualification Required : M.D./M.S. with 5 years of exp.

1. Crown Bridge
2. Prosthodontics-Partial and complete Dentures
3. Fixed and Removable Prosthodontics
4. Periodontology
5. Oral Pathology
6. Oral Surgery
7. Oral Medicine
8. Dental X-Ray
9. Endo-Dontic
10. Maxillo Facial Surgery

TERMS AND CONDITIONS

1. A holder of M.D./M.S./Ph.D. will be granted a montly salary of I.D. 400/- plus I.D. 10/- for each year of experience after the above stated degrees.
2. A holder of M.A./M.Sc. will be given a monthly salary of I.D. 300/- plus I.D. 10/- for each year of experience.

NOTE : 1 I.D.=US$ 3.2

3. Accommodation allowance is I.D. 150/- for married and I.D. 60/- for single.
4. Air tickets will be provided for self, wife and two children below the age of 18 years, at the time of joining and on the expiry of the assignment.
5. Full protection is ensured as per the Iraqi laws.
6. Initially the period of contract is one academic year and likely to be extended on mutual consent.
7. The relevant institution/university undertake to pay the medical fees of the foreigners and their family members in public hospitals.
8. Annual leave is 45 days in general.
9. No income tax is payable on the salary.
10. Remittance allowed is 40%.

Postgraduate Institute of Medical Education & Research

CHANDIGARH-160012

Admission Notice No. 1/88

CLOSING DATE FOR THE RECEIPT OF APPLICATIONS IS 30th MARCH, 1988

Applications on prescribed form are invited for the following postgraduate/post-doctoral courses etc. for the academic session starting from first July, 1988 :

I. First Year Junior Residents (for MD/MS Courses) in the following Subjects

(a) **Clinical Group—40**
Anaesthesia(10), Dermatology(2), ENT(3), Medicine(8), Obst. & Gynae(3), Paediatrics(3), Psychiatry(1), Ophthalmology(2), Radio-diagnosis(2), Surgery(6).

(b) **Para Clinical Group—9**
Microbiology(1), Pathology(4), Pharmacology(4)

(i) Those completing their internship afrer 30.6.88 are not eligible.

(ii) Candidates can apply for a maximum of two subjects in clinical group. They can apply for all the subjects in para clinical group. However, only one application needs to be submitted. The choice of subjects may be indicated in the relevant column of the application. Application fee is Rs. 30/- per subject.

(iii) 22½% of the seats in each of the above mentioned groups are reserved for candidates belonging to Sch. Castes/Tribes. In addition, 5% seats are reserved for candidates who have served or are serving or have carried on private practice in rural areas for a minimum period of two years.

(iv) A limited number of sponsored/deputed candidates may also be accepted for the courses mentioned above and also for Orthopaedic Surgery & Radio-therapy.

II. Senior Residents—15 (for DM/M.Ch. Courses) in the following Subject :

D.M.		M.Ch.	
Cardiology	—2	Cardiovascular Thoracic Surgery	—2
Clinical Pharmacology	—2	Neuro-Surgery	—2
Endocrinology	—1	Paediatric Surgery	—2
Neurology	—3	Urology	—1

(i) One post each in the subjects of Cardiology, Neurology, Cardiovascular & Thoracic Surgery and Paediatric Surgery is reserved for candidates belonging to Sch. Castes/Tribes.

(ii) A limited number (1—2) of sponsored/deputed candidates may also be accepted in all the subjects mentioned above as also for DM course in Gastroenterology and M.Ch. course in Plastic Surgery. No seat for sponsored/deputed candidates will however, be available for D.M. course in Cardiology and M. Ch. courses in Neuro Surgery and Paediatric Surgery.

(iii) Upper age limit on 1.6.1988—Not more than 35 years for general candidates and 40 years for candidates belonging to Sch.Castes/Tribes and for ex-servicemen and commissioned officers including E.C.O./S.S.C.O.'s, who have rendered atleast 5 years military service and have been released on satisfactory completion of assignment (including those whose assignment is due to be completed within 6 months). No upper age limit restriction for deputed/sponsored candidates.

(iv) Candidates due to appear in MD/MS examinations during April-May, 1988 can also apply. If otherwise found eligible they will be admitted to the entrance test only if they supply the result of their examination from the University concerned atleast a day before the entrance test.

III. Ph.D. Programme

Vacancies exist in the following departments :
Anaesthesia, Biochemistry, Biophysics, Expt. Medicine, ENT, Haematology, Immunopathology, Microbiology, Morbid Anatomy, Obst. & Gynae., Psychiatry including Clinical Psychology, Parasitology, Pharmacology and Virology.

IV. Second Year Junior Residents—2 for M.D.S. Part I course in the speciality of Pedodontia and Preventive Dentistry. One post is reserved for candidates belonging to Sch. Castes/Tribes.

V. Diploma in Immunohaematology & Blood Transfusion.

VI. M Sc Medical Technology (Pathology) with Cytology or Haematology or Immunopathology or Morbid Anatomy as a special subject.

VII. MSc. Medical Technology (Microbiology) with Bacteriology or Parasitology or Virology as a special subject.

VIII. M.Sc. Medical Technology (Radiology) with Radio-Diagnosis or Radiotherapy as a special subject.

IX. M.Sc. Medical Technology (Biochemistry).

X. First Year Junior Residents—2 (One reserved for Scheduled Castes/Tribes) for the department of Dentistry for a period of 6 months. Those who have already completed or will complete First Year Junior Residency or House Job for one year by 31.7.88 are not eligible.

General Information

1. Candidates other than those belonging to Sch. Castes/Tribes having more than one failure during MBBS (for category I) and BDS (for categories IV and X) course are not eligible. Sch. Castes/Tribes candidates with upto two failures in their MBBS/BDS career will be eligible.
2. Those applying for the reserved seats must append, with their applications, a certificate from the District Magistrate concerned in support of their claim. No other certificate will be entertained.
3. For courses at categories V to IX above only sponsored/deputed candidates will be considered for admission.
4. The courses at categories IV and V are under the Panjab University.
5. The number of vacancies indidated in categories I, II, IV and X is provisional and is subject to change without prior notice.
6. The application must be accompanied with non refundable fee of Rs. 30/- in the form of postal order drawn in favour of the Director for each of the courses mentioned above. A candidate applying for more than one subject/course is required to submit separate application, complete in all respect for each subject/course, except for category No. 1.
7. Application form and detailed information are available from the office of the undersigned either personally on payment of Rs. 5/- at the counter from 11 A.M. to 12 Noon and 3 P.M. to 4 P.M. on all working days or by post for which the request must be accompanied with a self addressed envelope size (23 x 10 cms.) bearing postage stamps of Rs. 3.40 and crossed postal order for Rs. 5/- drawn in favour of the Director.

REGISTRAR

Council of Scientific & Industrial Research

ADVERTISEMENT No. 2/88

The CSIR is seeking to appoint a Scientist-F for its National Chemical Laboratory, Pune. The NCL is situated on a 479 acres campus on the southern part of Pune. It has excellent laboratory and pilot facilities. The Institute has an annual budget of about Rs. 11 crore, S & T staff of over 1150 of whom around one-third are scientists. The present R & D programmes of NCL are broadly in the areas of Inorganic, Organic and Physical Chemistry, Catalysis & Catalysts, Polymer Chemistry and Engineering Process Development, Biological Sciences, etc.

The Scientist will serve as the Head of one of the Organic Chemistry Groups and would be responsible among other for :

—developing the Group into a national S & T resource,

—providing scientific leadership to the diverse R & D sub-groups in the areas of synthetic, organic, heterocyclic chemistry and in chemistry of pesticides, drugs, etc.

—promoting interlaboratory and interagency R & D programmes,

—negotiating and acquiring R & D grants/contracts,

—man-management.

The candidate must be a doctorate in chemistry/chemical engg., creative, innovative and well established scientist/technologist preferably below 50 years of age. He should have a broad scientific and technical vision, a demonstrated ability to create an environment conducive to nurturing a high-class R & D; a proven record of inter-personal skills and an ability to communicate effectively.

This is a contractual appointment for a period of six years in the scale of pay of Rs. 5100-150-5700-200-6300 plus allowances as admissible. Consultancy is permitted with a ceiling on annual remuneration receivable at Rs. 15000; the ceiling is likely to be revised upwards. Residential accommodation would be provided on payment of prescribed licencce fee.

A duly constituted Screening Committee will decide on the number of Scientists to be invited to meet the full Selection Committee. The decision of the Council in this behalf will be final. Applications from employees working in Govt. Departments, Public Sector Organisations and Govt. funded research agencies will be considered only if forwarded through proper channel and with a clear certificate that the applicant will be relieved within three months of receipt of the appointment orders.

Standard proforma for submitting the curriculum vitae and the literature about the laboratory can be had, on request, from the Joint Secretary (Administration), CSIR, Rafi Marg, New Delhi-1. The last date for receipt of curriculum vitae is **30th April, 1988**. Further information, if required, can be had from the Director, National Chemical Laboratory, Pune-411008.

CLASSIFIED ADVERTISEMENTS

UNIVERSITY OF BOMBAY

DEPARTMENT OF CHEMICAL TECHNOLOGY, MATUNGA ROAD, BOMBAY 400 019, INDIA

Applications are invited in the prescribed form for the following posts in the University Department of Chemical Technology :

Sr. No.	Designation of the Post	No. of Posts	Post reserved for (SC/ST and NT)	Open Category
1.	Professor of Chemical Engineering	1	—	1
2.	Professor of Medicinal Chemistry	1	—	1
3.	Professor of Engineering	1	—	1
4.	Reader in Biochemical Engineering	± 1	—	1
5.	Reader in Microbiology	± 1	—	1
6.	Reader in Pharmacy	1	—	1
7.	Reader in General Engineering	1	—	1
8.	Lecturer in Technology of Paints and Varnishes	1	—	1
9.	Lecturer in Pharmacognosy	1	—	1
10.	Lecturer in Textile Chemistry	1	—	1
11.	Lecturer in (General) Engineering	1	—	1
12.	Reader in Mathematics	1	—	1
13.	Lecturer in Mathematics	1	*1	—
14.	Lecturer in Colour Physics	†1	—	1

The Pay-Scales of the posts are as follows :

Professor : Rs. 1500 60-1800-100-2000-125/2-2500;

Reader : Rs. 1200-50-1300-60-1900;

Lecturer : Rs. 700-40-1100-50-1600.

In addition to pay, Dearness Allowance, House Rent Allowance and Compensatory Local Allowance will be paid according to the University rules. The total emoluments at the minimum of the respective pay-scales at the current rates of allowances are as follows :

Professor : Rs. 3508.35
Reader : Rs. 3158.35
Lecturer : Rs. 2243.00

A higher starting pay may be given to persons appointed to the posts of Professor and Reader in special cases. All posts carry the retirement benefits according to the existing rules of the University. Teachers of the University are permitted to take up outside work according to the University rules. The appointments to the posts, except otherwise stated, will be made on probation for two years but the probationary period may be reduced by the Executive Council in special cases. Candidates belonging to the Scheduled Castes, Scheduled Tribes, Denotified Tribes and Nomadic Tribes so notified for the state of Maharashtra will alone be considered for the reserved posts. If suitable candidates from the Backward Classes are not available, other candidates will be considered for appointment on purely temporary basis. Candidates only from Backward Classes should apply for the posts at serial number 13.

The minimum qualifications prescribed for the posts at serial numbers 1 to 11 are as under :

Professor

An eminent scholar with published work of high quality, actively engaged in research. Ten year's experience of teaching and / or research. Experience of guiding research at doctoral level.

Or

An outstanding Engineer/Technologist with established reputation who has made significant contribution to knowledge.

Reader

Good academic record with a Doctor's degree in a relevant field. About five year's experience of teaching and/or research and development.

Provided further that candidates not possessing a Doctor's degree may be considered if they have to their credit equivalent research published work or design/development work of high order either in the institution or in an Industry.

Or

In the case of persons to be recruited from Industry or professional field candidates should possess good academic record with recognised professional work of about seven years which should include innovation and/or research and development.

Lecturer

(a) Master's degree in appropriate field in Engineering/Technology, (b) Consistently good academic record with a Bachelor's degree in Engineering/Technology. First Class at Bachelor's degree and/or Master's degree level, (c) One year's relevant professional experience outside/academic/research Institutions.

Having regard to the requirements of emerging fields of Engineering and or developing inter disciplinary programmes, the requirements of Engineering/Technology degrees may be waived in the cases of otherwise well qualified candidates.

Provided further that if a candidate does not possess professional experience or a person possessing such experience is not found suitable, the person appointed will be required to obtain desired professional experience within a period of five years of his appointment, failing which, he will not be able to earn future increments until he fulfils this requirement.

The minimum qualifications prescribed for the posts at serial number 12 to 14 are as under :

Reader

Good academic record with a doctoral degree or equivalent published work. Evidence of being actively engaged in (i) research or (ii) innovation in teaching methods or (iii) production of teaching materials.

About five year's experience of teaching and/or research provided that at least three of these years were as Lecturer or in an equivalent position. This condition may be relaxed in the case of candidates with outstanding record or teaching/research.

Lecturer

(a) A Doctor's degree or research work of an equally high standard, and

(b) Good academic record with at least second class (C in the seven-point scale) Master's degree in a relevant subject from an Indian University or an equivalent degree from a foreign University.

Having regard to the need for developing interdisciplinary programmes, the degrees in (a) and (b) above may be in relevant subjects.

Provided that if the Selection Committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may relax any of the qualifications prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's degree or equivalent research work is not available or is not considered suitable, candidate possessing a good academic record (weightage being given to M. Phil. or equivalent degree or research work of quality) may be appointed provided he has done research work for atleast two years or has practical experience in a research laboratory/organisation on the condition that he will have to obtain a Doctor's degree or give evidence of research of high standard within eight years of his appointment, failing which, he will not be able to earn future increments until he fulfils these requirements.

The additional qualifications prescribed for the posts are as under :

1. Professor of Chemical Engineering: Expertise in the area of Separation processes, Reaction Engineering, Non-Newtonian Technology, Computer Aided Design will be considered as additional qualifications. The incumbent should have had live contacts with Industry as would be evident from consultation experience.

2. Professor of Medicinal Chemistry : Research experience in one or more of the following is essential—drug synthesis mechanism of action of drugs. Chemistry of natural products, bio-organic chemistry. Industrial Experience as evident from consultation desirable.

3. Professor of Engineering : should be actively engaged in research in any branch of Engineering with minimum of five years experience of teaching at graduate and post-graduate level in the fields of design of Chemical equipment, Plant design/plant maintenance. Experience in the area of management of workshop and repairs and maintenance of equipment and machine is desirable.

4. Reader in Biochemical Engineering : Basic degree in first class in Chemical Technology / Biochemical Engineering/Chemical Engineering and Doctorate in the respective field, Extensive teaching and research/industrial experience in Fermentation Technology/ Industrial Microbiology desirable. Experience of guiding research students in any of these fields essential. Publications in journals of standing.

5. Reader in Microbiology : Doctorate in Chemical Technology or Microbiology, with extensive teaching and research experience in Food Microbiology/Applied Microbiology with special orientation of Food / Fermentation/ Pharmaceutical Industry. Experience of guiding research students in any of these fields desirable. Publications in journals of standing.

6. Reader in Pharmacy : M.Pharm. or B.Sc. (Tech.) (Pharma.) followed by the Doctor's degree or equivalent research published work or design/ development work or professional work must be in the field of Pharmaceutics or Industrial Pharmacy or Bio-Pharmaceutics.

7. Reader in General Engineering : Desirable : Post-graduate qualification in Electrical Engineering with 7 years experience in Teaching / Research / Professional work.

8. Lecturer in Technology of Paints and Varnishes :

9. Lecturer in Pharmacognosy : M.Pharm. degree with specialisation in Pharmacognosy or Medicinal Natural Products. **Desirable :** Aptitute for research in Natural Products.

10. Lecturer in Textile Chemistry : Research work in the field of Fibre Chemistry, structure or physio-chemical aspect of finishing. Some Industrial experience desirable.

11. Lecturer in (General) Engineering : Master's degree in Mechanical/ Electrical Electronic Engineering. Experience in workshop and Laboratory activities/maintenance areas will be preferred.

Reader in Mathematics : The candidate should possess Ph.D. in Applied Mathematics with specialisation in Mechanics of Solids and Fluids, MHD of a recognised University. He should have research papers published in the journals of repute, experience of guiding research at Doctorate level will be additional qualification. He should also help research activities in solving pure and applied Mahthematical problems of Technology students. He should have 7/8 years experience of teaching Mathematics, statistics, Numerical analysis etc. to Engineering and Technology students.

13. Lecturer in Mathematics : The candidates should possess M.Sc., M.Phil. in Applied Mathematics, Fluid Mechanics and/or similar field of specialisation of a recognised University. He should have 4/5 years experience of teaching pure and applied Mathematics, Statistics Numerical Analysis to Engineering students of degree level.

14. Lecturer in Colour Physics : A least two years post Doctoral experience in one or more of the following areas 1. Electro Microscopy/X-rays; 2. Polymer Physics; 3. Solid State Physics; 4 Spectroscopy/Colour Measurements.

Explanation: (1) For determining "good academic record" the following criteria shall be adopted :

(i) A candidate holding a Ph.D. degree should possess at least a second class Master's Degree or must have passed Semester I and II examinations of M.Chem. Engg. / M.Sc. (Tech.) / M.Pharm. degree and completed at least two terms of attendance after his registration for the Master's Degree and have been permitted to change his registration to the degree of Ph.D. in Technology under the relevant regulation.

(ii) A candidate without a Ph.D. degree should possess a high second class Master's Degree and second class in the Bachelor's degree; or

(iii) A candidate not possessing a Ph.D. degree but possessing a second class Master's Degree should have obtained first class in the Bachelor's Degree.

(2) Candidates having secured marks more than the mid-point of the prescribed minimum marks for passing an examination in the second class and the prescribed minimum marks for passing an examination in the first class by a University shall be deemed to have passed that examination in the high second class.

The qualification regarding experience is relaxable at the discretion of the Executive Council on the recommendation of the Selection Committee in the case of candidates belonging to the Scheduled Castes, Scheduled Tribes, Denotified Tribes and Nomadic Tribes.

Eight copies of the application in the precribed form, together with copies of certificates and the prescribed fee, should be sent in an envelope subscribed with "Application for the post of........." so as to reach the Director, Department of Chemical Technology, Matunga, Bombay-400 019 on or before Monday, the 28th March, 1988. Candidates from abroad, Andaman and Nicobar Island and Lakshadweep may send their applications so as to reach the Director on or before Monday, the 11th April, 1988. Candidates who are already employed shall send their applications through proper channel. Incomplete and applications on plain paper will not be considered. Canvassing, direct or indirect, will be a dis-qualification.

A set of prescribed forms of eight application can be had at the counter of the Department on payment of Rs. 10/- in cash.

Request for supply of a set of eight prescribed forms by post should be made sufficiently in advance with self-addressed stamped (Rs. 3.80) envelope of the size of 27 x 12 cms. and Crossed Indian Postal Order or a Crossed Demand Draft on Scheduled Bank for Rs. 10/- drawn in favour of "the Director, U.D.C.T., Matunga, Bombay - 400 019 payable at Bombay".

Note : *The post is reserved for candidates belonging to backward classes and is being advertised for the second time.

†The posts are permanent. However, appointment are to be made on a temporary basis and are likely to be made permanent.

S.P. Potnis
DIRECTOR

UNIVERSITY OF NORTH BENGAL

F. 22/Advt./Estt./10/R-88

Dated : 19-2-1988

Applications in prescribed forms are invited from Indian Citizens for the following posts :

1. **Reader in History** (Specialisation : Modern Indian History) : Post one

2. **Reader in Commerce** (Specialisation : Personnel Management/Banking —Lien bound but likely to be made permanent) : Post one

3. **Reader at the Centre for Himalayan Studies** (Specialisation in any of the following branches : Sociology & Social Anthropology, Geography & Applied Geography, Political Science, Economics, International Relations, Linguistics, History). The candidates should preferably have experience of inter-disciplinary research and should preferably be conversant with the languages of the Eastern Himalayan Region. (Post one)

4. **Reader in Computer Science :** Post one (Reserved for S.C.)

Essential Qualification : (i) M. Tech. In Computer Science/Radiophysics and Electronics / Applied Physics or an equivalent Degree, or M.Sc. in Physics/ Mathematics or in a relevant/related subject or an equivalent degree of a foreign University with consistently good academic records. (ii) Adequate experience in developing systems software, (iii) Knowledge of Fortran, Assembly language, PASCAL/ALGOL and COBOL/BASIC, (iv) for the post of Reader, ability to guide research workers and to carry out research and development projects.

5. **Lecturer in Economics** (Specialisation : Demography/Statistics/Theoretical Economics or M. Stat. with specialisation in Demography) : Post one

Scales of Pay : Reader : Rs. 1200-1900/- and Lecturer : Rs. 700-1600/- respectively with other allowances and benefits as per University rules.

Qualifications : For Readers and Lecturer as prescribed by the University Grants Commission. Details of qualifications for Readers and Lecturer as may be obtained with application forms.

Choice of selection committee may not necessarily be confined to those who apply formally. No application except in prescribed application forms will be considered.

Prescribed application forms may be obtained from the office of the Registrar personally on payment of Rs. 5/- (Rs. 3/- for S.C./S.T.) in cash at the University Cash Counter or by sending a self-addressed envelope of 25 x 13 cms. affixed with stamps worth Rs. 3/- accompanied by crossed I.P.O./Bank Draft of Rs. 5/- (Rs. 3/- for S.C./S.T.) in favour of the University of North Bengal. Filled-in application forms (7 copies) along with one self addressed unstamped envelope must reach the office of the Registrar, P.O. North Bengal University, Dt. Darjeeling, Pin : 734430 on or before **8-4-1988**.

REGISTRAR

CENTRAL BUILDING RESEARCH INSTITUTE

ROORKEE (U.P.) 247 667

Advertisement No. 1/88

Applications are invited on the prescribed form for the following posts :

1. **Scientist 'B'—1 Post** (Architecture) Rs. 2200-75-2800-EB-100-4000 (Total Emoluments Rs. 2706.00)

Qualifications

Essential : Ist Class B.Arch. Degree or equivalent from a recognised University/Institute.

Desirable : One year experience of architectural designing, preferably with help of Computer graphics, in an organisation of repute.

Job requirement : The candidate will be required to work on research studies in the field of architecture and on the design of buildings of various types.

2. **Scientist 'B'—1 Post** (Chemistry) Rs. 2200-75-2800-EB-100-4000 (Total Emoluments Rs. 2706.00)

Qualifications

Essential : Ph.D. or 1st class degree of Master of Science in Analytical/Inorganic Chemistry from a recognised University/Institution.

Desirable : 3 years experience of research and/or teaching on environmental pollution monitoring techniques. Experience / training in the field of modern analytical instrumentation would be an asset.

Job requirement : The selected candidate will be required to study the pollution emissions from industries and their impact on building materials and suggest remedial measures.

3. **Scientist 'B'—1 Post** (Civil Engineering) Rs. 2200-75-2800-EB-100-4000 (Total Emoluments Rs. 2706.00)

Qualifications

Essential : 1st class B.E./B.Tech. in Civil Engg. from a recognised University.

Desirable : One year experience in design office or construction field with a reputed organisation.

Job requirement : The selected candidate will be required to work on R & D and sponsored projects involving structural designing of buildings and/or construction management.

4. **Scientist 'B'—1 Post** (Chemistry/Material Science) Rs. 2200-75-2800-EB-100-4000 (Total Emoluments Rs. 2706.00)

Qualifications

Essential : 1st class Degree of Master of Science/Technology in Chemistry or in Material Science from a recognised University/Institute etc.

Desirable : Brilliant academic record wito 1-2 years research experience in Organic Building Materials such as Plastics, IPN Polymeric Systems, Coatings and sealants etc.

Job requirement : The selected candidate will be required to carry out R&D work on IPN polymerio systems, coatings, testing and evaluation and durability of plastics and polymer products with special reference to their applications in buildings.

5. **Scientist 'B'—1 Post** (Fire) Rs. 2200-75-2800-EB-100-4000 (Total Emoluments Rs. 2706.00)

Qualifications

Essential : Ph.D. or 1st class M.Sc. in Organic Chemistry or 1st class B.E. in Chemical Engineering from a recognised University/Institution.

Desirable ; One year experience in development of fire retardant materials.

Job requirements : The selected candidate will be required to work on development of fire retardant treatments for building materials, formulation of fire retardant paints, and development of related technology.

6. **Scientist 'B'—1 Post** (Civil Engineering) Rs. 2200-75-2800-EB-100-4000 (Total Emoluments Rs. 2706.00)

Qualifications

Essential : 1st class B.E./B.Tech. in Civil Engineering or equivalent from a recognised University or Institute.

Desirable : One year experience in R&D or testing with a reputed organisation.

Job requirements : The selected candidate will be required to work on R & D aspects of fire resistance of structural elements & post fire investigations of buildings and structures.

7. **Technical Officer 'A' —1 Post** (System Analyst) Rs. 2000-60-2300-EB-75-3200-100-3500 (Total Emoluments Rs. 2480.00).

Qualifications

Essential : Master's Degree in Mathematics/Physics from a recognised University with 2-4 years experience as a

Programmer/System Analyst or Bachelor's Degree in Mathematics with 5-8 years experience as Programmer/System Analyst.

Desirable : 1 year Diploma or Training in Computer Languages such as BASIC, FORTRAN, COBOL, DBMS from a recognised Institute/Training Centre.

Job requirement : The candidate will be required in making Computer Programs and Maintenance of data banks in the field of Project Cost Management and Project Cost Accounting, Pay Roll System and Inventory Control System.

8. Technical Officer 'A'—1 Post (Information) Rs. 2000-60-2300-EB-75-3200-100-3500 (Total Emoluments Rs. 2480 00)

Qualifications

Essential : B.E./B. Tech./B. Arch. in Civil Engineering or Architecture or equivalent with 2-4 years experience of writing and editing technical papers.

Desirable : Journalistic/editorial experience of technical publications and visual presentations. Good command over English language would be an asset.

Job requirement : The selected candidate will be required to take total responsibility of writing and editing and publishing technical papers/reports related to Institute's R & D activities. He may also be required to assist in preparation of audio-visual presentations on Institute's R & D.

9. Technical Asstt. Gr. VIII :—2 Posts (For Computer Centre) Rs. 1400-40-1800-EB-50-2300 (Total Emoluments Rs. 1707.00)

Qualifications

Essential : B.Sc. with Physics & Maths. or Diploma of 3 years duration in Civil Engineering or equivalent from a recognised Institute.

Desirable : Diploma in Computer Programming from a recognised Institution or two years experience in Computer Programming in high level languages at a reputed Computer Centre. Experience in Data Management, DBASE III/III plus and graphics languages would be an added advantage.

Job requirement : The selected candidates will be required to assist in development of Computer Programmes and Management of the Computer Centre at the Institute.

10. Technical Asstt. Gr. VIII—1 Post (Information) Rs. 1400-40-1800-EB-50-2300 (Total Emoluments Rs. 1707.00)

Qualifications

Essential : B.Sc. with Mathematics/Statistics from a recognised University/Institute.

Desirable : 1-2 years experience in Electronic Data Processing.

Job requirement : The selected candidate will be required to assist in creating and operating data base management system.

11. Technical Asstt. Gr. VIII—1 Post (Geotechnical) Rs. 1400-40-1800-EB-50-2300 (Total Emoluments Rs. 1707.00)

Qualifications

Essential : 3 years Diploma in Electronics/Electrical Engineering or equivalent from a recognised Institution.

Experience : Operating and maintaining Electronics / Electrical instruments.

MAULANA AZAD COLLEGE OF TECHNOLOGY

BHOPAL-462 007

(A Regional Engineering College)

Advertisement No. Estt/R/1/

Applications are invited for the following posts in prescribed forms.

(A) Professor :

(a) Computer Science/Engineering

(b) Civil Engineering

(c) Electronics

Scale of Pay : Rs. 1500-60-1800-100-2000-125/2-2500 (To be revised)

Essential Qualifications : 1. An eminent scholar with published work of high quality, actively engaged in research. Experience of guiding research at doctoral level.

2. Ten years experience of teaching and/or research,

OR

An outstanding Engineer/Technologist with established reputation who has made significant contribution to knowledge.

Specialisation for : (a) Computer Science/Engineering

Programming Languages / Operating Systems / Data Processing / Artificial Intelligence / System Analysis/Computer Networks / Computer Architecture/ Computer Graphics.

Experience on management of computer of centre and familiarisation with Fourth Generation Computers.

(b) Civil Engg.

(i) Structural Engineering

(ii) Fluid Mechanics and Hydraulics/ Environmental Engineering/Surveying/Soil Mechanics

(c) Electronics

Microwave/Communication theory/ Digital Electronics & Micro Processors/ Television Engg./Integrated Circuits/ Fibreoptics/Space Communication & Remote Sensing/Radar Engg./Antennae Engg./Control & Instrumentation.

(B) Asstt. Professor Electronics

Scale of Pay : Rs. 1200-50-1300-60-1900 (To be revised)

Age : Not below 30 years.

Essential Qualifications

Good academic record with a Doctor's degree in relevant field. About five years experience of teaching and/or research and development.

Candidates not possessing Ph.D. may be considered if they have to their credit equivalent research published work of design/development work of high order either in the institution or in an industry.

Specialisation

Microwave/Communication Theory/ Digital Electronics and Microprocessors/Television Engg. / Integrated Circuits/Fibreoptics/Space Communication and Remote Sensing/Radar Engg./Antennae Engg./Control & Instrumentation.

(C) Lecturer : (a) Computer Science/ Engg.

(b) Electronics

Scale of Pay : Rs. 700-40-1100-50-1600 (To be revised)

Age : Not below 22 years.

Essential Qualifications

1. Master's degree in appropriate field.

2. Consistently good academic record. First class at B.E. and/or M.E. level.

3. One year's relevant professional experience outside academic/research institutions.

Relaxed Qualifications

First class B.E. degree holders may also apply for the post but the person if appointed will be required to acquire M.E. degree within a period of five years of his/her appointment, failing which he/she will not be able to earn future increments, until he/she fulfils this requirement.

Specialisation

(a) For Computer Science/Engg.

Programming Languages/Operating Systems/Data Processing/Artificial Intelligence / System Analysis/Computer Networks / Microprocessors / Computer Architecture.

(b) For Electronics

Microwave/Communication Theory/ Digital Electronics and Microprocessors/ Television Engg./Integrated Circuits/ Fibre optics/Space Communication and Remote Sensing/Radar Engg./Antennae Engg./Control & Instrumentation.

(D) Foreman (Workshop)

Scale of Pay : Rs. 650-30-740-35-810-EB-35-880-40-1000-EB-40-1200 (To be revised)

Age : Not below 30 years

Qualifications

A First or second class Bachelor's degree in Mechanical Engineering with 3 years experience in a reputed workshop in a responsible supervisory capacity.

OR

A First or Second Class Diploma in Mechanical Engineering with atleast 10 years experience in a reputed workshop in responsible supervisory capacity.

(E) Registrar

Scale of Pay : Rs. 1100-50-1600 (To be revised)

Age : Above 45 years

Qualifications and Experience

Essential : A good Degree in Arts, Science, Engineering, Commerce, Business Administration. Considerable administrative experience in a responsible position either in a high academic institution or business organisation of standing or Government Department. Adequate experience in financial affairs, such as budget, accounts, rules and regulations relating to expenditure, experience in handling agenda and minutes of meetings. Knowledge of Government Rules relating to service and establishment matters; familiarity with academic activities and working procedures and development of educational institutions; ability to handle men and stores, capacity to lead.

Desirable : Wide sympathy for students and colleagues; ability to develop corporate life in residential campus; knowledge of military training; degree in Law.

(F) Deputy Registrar

Scale of Pay : Rs. 700-40-900-EB-40-1100-50-1300 (to be revised)

Age : Not below 35 years.

Qualifications & Experience

Essential : A degree in Arts/Science/ Business Management, Commerce.

Atleast 10 years experience in a responsible supervisory position in an academic institution/Business Organisation of repute/Govt. Deptt. Experience to be in :

- (a) Financial matters such as budgeting, stores, accounting etc; and adequate knowledge of account rules.
- (b) Academic matters concerning students, examinations university rules and regulations.
- (c) Establishment and legal matters, service rules, regulations and meetings.

Note : For (F)

1. Those who had applied earlier in response to Advertisement No. Est/R/3/Dec. '86 need not apply again as their earlier applications will be considered.
2. Qualifications relaxable in cases of outstanding experienced candidates.

General Instructions

1. Age and experience relaxable in case of exceptionally outstanding candidates.
2. Candidates serving in the Government / Semi-government / Autonomous organisations should apply through Proper Channel or they should produce 'No Objection Certificate' from the employer at the time of interview, if called. Those who had applied on prescribed application form and through proper channel in response to previous advertisement may send their application on plain paper mentioning further achievements, if any
3. Higher initial pay may be considered in deserving cases.
4. The benefit of CPF-Cum-Gratuity and allowances are admissible according to college rules.
5. Application form can be had from the REGISTRAR, MAULANA AZAD COLLEGE OF TECHNOLOGY, BHOPAL-462 007 on requisition accompanied by self addressed and Rs. 2.20 Paise stamped envelope, 25 x 10 cm size giving (on the top of the cover also) name of the post and advertisement number Estt. (R)/1/Feby/88 .
6. Completed applications should reach the REGISTRAR at the above address on or before **21st March, 1988.** Incomplete/late applications and those without registration fee of Rs. 7.50 in the form of Crossed Indian Postal Order may not be considered.
7. Adequate number of seats are reserved for SC/ST candidates. Other things being equal preference will be given to candidates belonging to SC/ST.

   Further details will be made available in the Instruction sheet attached with the prescribed application form.

Higher Education in India
The Shifting Perspectives—I

K.K. Balachander*

> *"In education, the most important factor must be the inspiring atmosphere of creative activity. And therefore the primary function of our University should be the constructive work of knowledge. Men should be brought together and full scope given to them for their work of intellectual exploration and creation; and the teaching should be like the overflow water of this spring of culture, spontaneous and inevitable. Education can only become natural and wholesome when it is the direct fruit of a living and growing knowledge. Our education should be in full touch with our complete life, economical, intellectual, aesthetic, social and spiritual; and our educational institutions should be in the very heart of our society, connected with it by the living bonds of varied cooperations. For true education is to realise at every step how our training and knowledge have organic connection with our surroundings."*
>
> **—Rabindranath Tagore**

(**Note** : A historical overview of the development of higher education in India from the ancient times till the end of the British rule may serve as an introduction to a detailed review of the development that took place in the post-Independence period. This will enable one to see whether there is an underlying thread of continuity from the past to the present, or any radical shifts have taken place over the years. It will also mirror the evolving role of the State and the policies, including financial, pursued by it. While attempting a review of the higher educational development during pre-British and British periods in the following sections, attention is paid to only those distinguishing features which in some way are related to the situation in vogue in India).

I

Some Pointers from the Past

India's achievements in the field of higher education, or to be more exact, 'higher learning', go centuries before the coming into existence of medieval universities/colleges in Europe and England. Right from the ancient times, the Vedic-Upanishadic period, education received a pride of place in India, and it made significant contributions to the development of man's knowledge and culture. The country had a well-knit and well-established system for higher learning where the idea of a modern college/university could be seen. World-famous universities like Takshashila and Nalanda flourished at certain periods of history and became synonymous with the higher achievements of education. The period of Takshashila's fame is said to have ended about the fifth century A.D. and Nalanda flourished till the end of the twelfth century. Scholars from all parts of India and from distant countries flocked to these seats of learning with a sense of reverence, humility and hope. Other learning centres flourished at Vallabhi, Vikramasila, Benares, Nadia, Ujjain and Kanchi. They were Temples of Learning in the real sense of term.

**Secretary-Technical Coordinator, Department of Economics, University of Bombay, Bombay.*

Higher learning in India, before the modern age, was mostly individual oriented. *Pure knowledge for its own sake was the object of pursuit, uninfluenced by and without any repercussions upon the utilitarian ideal.* The religious and philosophical systems of that period may be seen as the foundation of higher learning, which had a tendency to play down earthly concerns and to turn away from materialistic life. Both teachers and students strove for 'excellence' which gave them the creative joy of fulfilment, and made them serve the society. The aim was not mere learning, but building up of character, acquisition of wisdom and rendering social service, and this made the students mature, unselfish and committed to higher values of life. Subjects like philosophy, religion, logic, mathematics, madicine, astronomy, astrology, educational science (pedagogy), politics and polity, fine arts, military science, horticulture etc., were studied with great enthusiasm. However, the demand for higher learning came only from a limited section of the community; the bulk of the population lower down had no access to it though they received some vocational training by working at their traditional occupations.

The higher learning institutions that existed then were quite compact in size and simple in organisation. Their requirements were few and could be met easily. No detailed arrangements for financing it were, therefore, needed. The teachers mainly kept them going by their personal earnings, **Guru Dakshina** which was entirely voluntary. Later, in the Buddhist period, in universities like Takshashila and Nalanda, some sort of a tuition fee came to be charged in advance from rich students, besides the **Guru Dakshina**. The kings granted lands and tax-exemptions to institutions, scholarships to deserving students and gifts/prizes/awards and pensions to teachers. It may be mentioned that *no strings were attached to such financial and other patronage. The institutions and teachers enjoyed full freedom without any interference from the rulers. The teachers were regarded with respect and reverence, and the society provided them with motivation, material incentives and status.* They were supposed to be circumspect in their conduct, knowing fully well that students would take them as models. Teachers used to pay individual attention to students, and the latter in turn showed utmost reverence to the former. It was the prerogative of the teachers to choose their pupils and the former decided the whole gamut of activities pertaining to teaching. In short, there was an awareness of the need to build a system of higher learning in terms of values and the imparting of knowledge for its own sake. And the society realised its obligations towards this sacred cause. The objective of the institutions was not to fit men for some special mode of gaining a livelihood, but to cultivate the mind and form the intelligence. On earlier (pre-British) development of higher learning (education), let Thomas have the last word :

> "Education is no exotic in India. There is no country in the world where the love of learning has so early an origin or has exercised so lasting and powerful an influence. From the simple poets of the Vedic age to the Bengali philosophers of the present day there has been an uninterrupted succession of teachers and scholars."
>
> (Thomas, F.W., **History and Prospects of British Education in India**, 1891).

II

The British Period : Introduction of the Modern System of Higher Education

Though the British administration realised the necessity of undertaking some measure of responsibility for education, the officialdom was divided in th initial stages as to whether instruction should be provided in native or on Western lines. In 1935, Lor Thomas Babington Macaulay urged the Governmen to undertake a formal Western type of higher education imparting knowledge of European literature an science (through English), and to utilise the educatio grant towards that end. He also suggested that th institutions of oriental learning then existed should b used for the promotion of such a type of highe education. Later, a system of higher education, a envisaged by Macaulay, influenced future Britis policy on higher educational development. Macaulay's view triumphed ultimately not only due to th able advocacy of it by himself but also due to th support extended to it by many Indian intellectual which influenced the demand for modern higher education. There was a belief among them that the India people must learn something of Western scienc knowledge in which was expanding very fast, in ord to overcome their backwardness. In the past, wh the different civilisations were living almost in isol tion from one another, higher education demanded more than the mastery of the 'classical' languag literature and philosophy of one single civilisatio But with the impact of modern Western civilisation India and the prospect of a scientific age which h out promise of material comforts, many Indians of t day felt that their own ancestral culture was no lon enough if they were to survive in the machine a Naturally, *they started attaching more importance modern (English) higher education which laid g stress on material progress than on the preservation* *alues, and Macaulay only rekindled it.* The new olicy was reaffirmed by Charles Wood's Despatch of 854, and with minor modifications continued throughout the British rule.

Demerits and Merits

The new modern formal system of education, inaugurated under British rule, was divided into three tages—primary, secondary and higher—which was lifferent from the one that existed earlier. The number of colleges and universities was limited, but the xpansion in enrolment was proportionately much nore in higher education than at school levels. *This led to the development of a structure of education vhich was gradually getting heavier at the top.* The Seventh Quinquennial Review of the Bureau of Education, India (1912-1917) had conceded that the most triking feature of the Indian education (then) was its top-heaviness' and that from the point of view of nass elementary education, the country was far behind most others that laid claim to civilisation. In act, only 12.2 per cent of the population of British ndia was literate in 1941.

Higher education during British time made its mpact only upon a limited group belonging to the middle and upper strata of society, living in urban centres of the country, and was mostly confined to males. The British thought that education would percolate from the 'classes' to the 'masses' in due course. (Metaphorically expressed, "drop by drop from the Himalayas of Indian life useful information was to trickle downwards forming in time a broad and stately stream to irrigate the thirsty plain"—Mayhew, 1926 92). The main objective of higher education was in fact to raise a class of educated Indians to man the growing politico-administrative organisaion or who may, in Macaulay's words, "act as interpretators between us and the millions whom we govern—a class of persons Indian in blood and colour, but English in tastes, in opinions, in morals and intellect." The Government was just interested in obtaining a regular supply of personnel for 'white-collar' jobs and persons with just enough technical background and skills to look after services like ailways, roads, means of communications and public works. In the selection of candidates for public serices employment, preference was shown to those who had been educated in the Western system of higher education. The result was the creation of a class of elites who were more concerned with their own material gains and strengthening and perpetuating their privileged positions; very few cared for the masses and thus a wide gulf was created between them and the masses.

Despite the fact that higher education was confined only to the upper and middle income groups, more graduates were being produced than available positions. As Nurullah and Naik point out, "the spectre of educated unemployment had already raised its ugly head in the field of collegiate education by 1921 itself." The Hartog Committee (1929) also had observed that universities/colleges were getting overcrowded with men of whom a large number failed and for whom there was no economic demand. The higher education system had created then a large number of unemployables and unemployed.

The main job of Indian universities was to hold examinations and confer degrees which served as a passport for entrance to positions in Government. They were not meant to be central places where scholars and students could congregate for the pursuit and dissemination of advanced knowledge. The courses provided were of a general, job-oriented, literary type which lacked technically useful knowledge. The curricula in universities/colleges were such that they discouraged the spirit of enquiry, a scientific outlook and creativity; they were tuned to the peculiar colonial requirement. To quote from the Seventh Quinquennial Review again : "Higher education in India runs in a literary grove... The genius of the country is speculative rather than practical. The literary courses lead to government employment and adapt themselves to the traditional method of teaching and to the highly developed memorizing faculty which characterises so many Indian students." There were very few institutions offering professional/technical courses. A large number of Arts graduates, but not enough engineers, doctors, teachers, technicians, scientific research workers and the like were produced each year. This could also be attributed to the expensive character of these types of courses, and the British rulers avoided assuming responsibility for starting them; the private sector too did not venture into them for the very same reason. *The British rulers, in short, did not want to assume themselves the role of training people for activating economic progress.*

When the foundations of the modern system of higher education began to be laid, the traditional system of education (the indigenous system consisting of elementary and higher schools and oriental colleges) received less and less attention and gradually faced extinction. The support that they used to get from the affluent classes etc., also was not forthcoming now. The indigenous system, however, managed to survive, though on a diminishing scale, in States like Kerala mainly with the patronage of feudal chieftains and kings (perhaps this was responsible for the well-entrenched traditions of education and the higher rates of literacy in this State even as early as the beginning of the twentieth century). While many other countries had built a national system of education on the foundations of their traditional system, and carried out reforms within their traditional model to meet the new challenges, in India, however, it was replaced by a new system altogether during the British period. It has to be noted that even the remnants of the traditional higher educational system, as had then survived, compared favourably with many contemporary nations of the world. According to J.P. Naik, though the introduction of Indians to European knowledge had helped the process of modernisation, the thoughtless destruction of the indigenous system was a wrong policy; it had great potentialities of being developed into a national system of education by suitable reforms. If this had been done, India would perhaps have become one of the most educationally advanced countries of the world. In spite of the exhortations of some British administrators and educationalists like Elphinstone, Adam Munro and Thomson, who had seen the importance of encouraging the indigenous system, this system was allowed to die by deliberate competition and by sheer neglect.

The British rule, it has to be admitted, brought in its wake some significant changes in the financing and organisation of higher education. It was realised that it would be difficult for the State to provide higher education single-handed, and that both Government support (through grant-in-aid) and private initiatives were necessary. A beginning was thus made for participation by the private enterprise in the development of modern higher education. The grant-in-aid system, which was the corner stone of British policy before Independence got stimulated and encouraged private agencies and missionaries to start colleges in many cities, and these institutions dominated the higher educational scene in 1947. It was also recognised that such institutions could thrive only if they could confidently rely on the continuance of whatever aid that had been extended to them, and that the grant-in-aid rules should be definite and precise, and not ambiguous. The financing of the higher education system was thus put on a more or less scientific basis during the British period. Apart from the grant-in-aid from the State, universities/colleges were permitted to develop their own resources, including fees, and thus expand and improve their work. It was believed that a far more increase in higher educational facilities would take place by thus drawing private support than would follow by a mere increase of expenditure by the Government. The Government also maintained a limited number of colleges as 'models' for private enterprise where the entire finances were managed by the former. The private institutions maintained themselves mainly from income derived from student fees, donations and endowments.

As far as the universities were concerned, though they were the creation of the Government, and derived a good proportion of their current resources from the Imperial Treasury, the latter did not attempt to keep these institutions tied to its apron-strings. It was clearly understood that a system of full Government control or infringement of university autonomy was not only a loss of dignity to the university itself but a loss of the highest kind of efficiency in its working. The Government did not believe in the dictum "one who pays the piper has a right to call the tune of his choice". **In fact, university autonomy was treated almost on the same footing as the independence of the judiciary.** The financial support from the Government stimulated the development of the universities: assistance was extended to meet their dificits and to promote particular lines of development. The universities, on their part, did not bid for more funds than they strictly needed. They were permitted to prescribe their own courses of study and were free to adopt their own ways of teaching, appoint their own staff, etc.

During British period, the Government had set up several commissions/committees to review the education as well as the higher education system, though their recommendations could not be implemented fully. The Indian Education Commission of 1882 and the Government of India Resolutions on Education Policy in 1904 and 1913 covered almost every aspect of higher education. Some of the reforms suggested by the Calcutta University Commission (1917-1919), the Hartog Committee (1929) and the Sargent Report (1946-47) would be pertinent even today. For example, the GOI Resolution on Educational Policy (1913) stressed the urgency of (a) separating the function of teaching and examining, insisting thereby on the need of having examining as well as teaching universities, the establishment of the former in each State with smaller jurisdiction and the latter at suitable centres, (b) the training of teachers, improvement of their salaries and other benefits, and (c) the importance of research work in universities. The Calcutta University Commission had categorically stated that the universities should not become mere appendages of State Education Departments. It had also suggested that teachers should be entrusted with more powers over academic matters and the regulations governing the working of the universities should be made less rigid. Also the existence of an Indian Education Service (IES) during the British period (1864-1924) helped to bring about a national perspective to education, particularly higher education.

[To be concluded

Democratization of Education in India

Satya Pal Ruhela*

"Education makes people easy to lead, but difficult to drive;
easy to govern but impossible to enslave."

—**Henry Peter**

I

A critical and promising stage in human civilization seems to have now come when India, the largest democracy in the world, with its most recent New Policy of Education (1986), is expected to be in a position to move forward most significantly in its march of fulfilment of the promises of democracy, social progress and quest of the spirit of mankind, and also to provide leadership and help to other developing nations aspiring to do so.

Education for freedom and democracy has been the most passionate concern of our freedom-fighters since Gandhiji gave his stirring ideas on Basic Education in 1937, ten years before India actually won her freedom. During the post-Independence era, all the three major Education Commissions and a host of committees on education appointed by the Government of India have been expressing their great concern as to how education can be a potent instrument of democratization. Many things have been done during the last four decades of India's Independence to make this concern a practical reality, but even then when the Government of India document **Challenge of Education** (1985) appeared with a plethora of educational statistics, the nation was rather shocked to learn from that data that we had till then been far behind other nations and much below our widely professed claims about democratization of education. Soon thereafter, the New Policy of Education-1986 document has been released by the Government of India, and it raises many hopes that it will help us realising our goal quickly and surely.

The purpose of this paper is to review this document and try to assess the veracity or functionality of its claims in the realm of democratization of education.

II

An 'Ideal Type Analysis' Approach

Out of the several sociological approaches—historical, comparative, structural-functional analysis, ideal type analysis, survey etc. we think that it would be most appropriate to use 'Ideal Type Analysis' approach to study the problem of the democratization of education in India in the context of the New Education Policy.

Let us, therefore, first of all develop an ideal picture or profile of the concept of "Democratization of Education" by culling the pertinent views of scholars on this subject, and then try to compare or juxtapose the ideas presented in the New Education Policy document and the realities of the educational world in India with the ideal picture evolved by us.

In this section, we shall therefore attempt to evolve and ideal picture of "Democratization of Education", keeping in view the socio-cultural and, politico-economic contexts of the Indian nation. Democracy, despite being an all-pervasive concept, rests ultimately on two fundamental values: equality and freedom. When Gandhiji advocated his plan of Basic primary education through the medium of village handicrafts, he hoped that "it will check the progressive decay of our villages and lay the foundations of a juster social order in which there is no unnatural division between the haves and have-nots and everyone is assured of a living wage and the right of freedom."[1] According to Ruth Benedict, noted social scientist of USA, "The transmission of our democratic heritage means, primarily, then, preparing children in our schools to act as adults with initiative and independence."[2] Professor S.N. Panda capsules the concerns of education in a democracy in these words : "Education in a democracy emphasizes the freedom and dignity of the individual, responsible citizenship, economic efficiency, self-realization, equality of opportunity for all."[3] Val D. Rust, in his renowned work **Alternative in Education** concludes his survey of 'Politics and Education' in these words : "State-controlled mass schooling whose charge has been to instil in the general public the values which the State has deemed appropriate, is being seriously challenged. The individual, the community, the culture to which people identify are assuming greater importance in the eyes of more and more people than are the state aims."[4]

**Professor & Head Department of Teacher Training & Non-Formal Education,*
Jamia Millia Islamia, New Delhi-110025.

More than any other source, the UNESCO document **Learning To Be** (1972) gives us the most pertinent, crisp and sophisticated ideas on this subject which are highlighted asunder :

> "...equal access to education is only a necessary—not a sufficient condition for justice. Equal access is not equal opportunity. This must comprise equal chance for success.
>
> ...Educational democracy does not reside solely in multiplying schools, extending opportunities for access to the various levels and prolonging the period of study."
>
> In reality, many other questions arise :
>
> How do the various branches of education fit in with each other ? Have the desired relationships been established between education for the young and that of the adults ? Have the conditions for a real horizontal and vertical mobility between institutions of all types and of all levels been created? Are there any dead ends in the system? Does it enable everyone to 'catch up' at any moment by acquiring whatever knowledge he or she may lack? Can people of all ages enter and leave the system at will; enter it, even belatedly, on the basis of whatever personal experience they may have acquired in private or social life ?
>
> Furthermore, an educational system cannot be described as democratic, even when students and pupils are recruited on a democratic basis, if its fundamental approach is not democratic; if it is open, broadly speaking, but run by narrow-minded people; if it endeavours to break down social barriers but restricts and improvises the subject matter taught; if it offers learners many paths but bars them access to truth.
>
> Democratising education will only be possible if we succeed in shaking off the dogmas of conventional pedagogy, if free and permanent dialogue is set up within the educational process, if this enhances individual's awareness of life, if learners are guided towards self-education and, in short, change from objects into subjects. Education is all the more democratic when it takes the form of a free search, a conquest, a creative act ; instead of being, as it so often is, something given or calculated, a present or a constraint.
>
> Equality in education requires personalised pedagogy, an attentive investigation into individual attitudes. Equal opportunity does not mean levelling. It must not at any cost entail the denial of the fundamental freedoms of individual, attacks against the integrity of the human person or technocratic, bureaucratic abuse of power.
>
> ...it (Equal opportunity for all) means making certain that each individual receives a suitable education at a pace and through methods adopted to his particular person.
>
> ...Ensuring that people will be able fully to exercise their democratic rights in education also means guaranteeing their right to participate in the management of their educational establishment and in the definition of its policies.
>
> ...Educational structures must be remodelled, to extend widely the field of choice and enable people to follow life-long education patterns. Subject matter must be individualised; pupils and students must be made aware of their status, their rights and their own wishes; authoritarian forms of teaching must give way to relationships marked by independence, mutual responsibility and dialogue; pedagogical training must be geared to knowing and respecting the multiple aspects of human personality; guidance must replace selection; those making use of educational institutions must participate in their management and policy-making; the bureaucratic aspects of educational activity must be broken down and its administration decentralised."[5]

It is against the baseline of these criteria and ideas that we should now assess the provisions of the New Policy of Education—1986.

III

The New Policy of Education

According to the New Policy of Education 1986, "The concept of a National System of Education implies that, upto a given level, all students, irrespective of caste, creed, location or sex, have access to education of a comparable quality." It further says : "To promote equality, it will be necessary to provide for equal opportunity to all not only in access, but also in conditions for success." Again, "Steps will also be taken to foster among students an understanding of the diverse cultural and social systems of the people living in different parts of the country."

In order to achieve the above mentioned goals, the document prescribes 10+2+3 system of schooling for the whole country, a common core curriculum, promotion of link language, translation of books from one language to another, underscoring the universal-character of universities and other institutions of higher learning, provision of life long education and various sorts of steps to promote and strengthen education of women, scheduled castes, scheduled tribes, minorities, handicapped people and adults, 'Operation Black Board' to improve primary schools all over the country, launching of a large and systematic programme of non-formal education, and lastly and most notably the starting of pace-setting schools "Navodaya Vidyalayas—one in each district of the country, and the national Open University. The document also talks of autonomous colleges, binding teachers to follow norms of accountability in their work, decentralization and creation of a spirit of autonomy for educational institutions and giving pre-eminence to people's involvement, including association of non-governmental agencies and voluntary effort, and assigning local communities a major role in programmes of school improvement. The document finally assures us that "It will be ensured that from the Eighth Five Years Plan onwards it (the outlay on education) will uniformly exceed to 6 per cent of the national income."

This then is the complete gist of the contents of the New Policy of Education concerning democratization of education. The accompanying volume "**Programme of Action**" (1986) gives us details of the practical steps envisaged to be taken in pursuance of the above policy statements. Already many actions have been initiated like the massive re-orientation of teachers, opening of some Navodaya Vidyalayas and the starting of the Indira Gandhi National Open University, etc.

IV

A Critical Assessment

1. The first criticism is that the contents of the policy statement in regard to democratization of education are not as brilliant, comprehensive and imaginatively broad as the ideal picture of democratization of education has been drawn by the UNESCO document **Learning to Be.**

2. While many promises seem to have been made in the Policy document, it is a pity that the constraints of funds are in fact going to pour cold water on most of them. Let us qnote Dr. Amrik Singh in this connection :

> "According to the NPE (National Policy of Education), unqualified priority was given to two aspects of the universalization of elementary education. They were (i) universal enrolment and universal retention of children upto 14 years of age, and (ii) a substantial improvement in the quality of education. The price tag of this particular programme as worked out by the Ministry of Human Resource Development is reported to be Rs. 600 crores for the remaining years of the Seventh Plan in addition to Rs. 2000 crores of capital expenditure to provide the minimum physical facilities in those schools. How are the funds to be found ? The impediments to be overcome are three.
>
> One, before the NPE was adopted, the Prime Minister announed an additional availability of Rs. 1,500 crores over and above what had been provided for education in the seventh plan. The Planning Commission for obvious reasons is reluctant to find an additional Rs. 600 crores. Secondly, as is widely known, the Ministry of Finance is concerned at the inflationary pressures that have been already generated in the economy. The problem before it therefore is how to contain those pressures rather than add to them. Thirdly, even if an additional Rs. 600 crores could be found, what about school buildings and other facilities which are no less important than the provision of an extra teacher in almost half the schools and various other marginal facilities that have to be provided on a running basis.
>
> ...The situation therefore is much more difficult and complex than most people are prepared to admit.
>
> ...Half a year has already gone by since the Programme of Action (POA) was approved by Parliament. But no significant progress has been made in any direction and in consequence misgivings are being expressed over the fact that the momentum has either been already lost or is beginning to be lost."

3. The idea of autonomous colleges, which has been very vigorously stated in the NPE and POA documents, also appears to remain unfulfilled. The POA says that as many as 500 colleges would be raised to the status of autonomous colleges in the next 5 years. Dr. Amrik Singh rightly questions :

"Has any initiative been taken on this front since the POA was approved? To be able to say that a committee of the UGC is studying this question in depth is not to say much. The fact of the matter is with slightly more than half the Plan period left to implement this particular recommendation of the NPE, initiative should have been taken in the limited area for obvious reason that the Central Government does not have to consult anyone or seek concurrence for what it proposes to do. This refers to the colleges of Delhi. With more than 60 of them affiliated to the University of Delhi, the situation was ideal for initiating this move."[6]

4. On the proposal of Navodaya Vidyalyas, the following doubts expressed in **The Hindu** should be seriously considered :

> "A Central Educational Directorate supervising the work of 500 Navodaya Vidyalayas—holding separate entrance examinations in each district, making admissions with due regard to the urban : rural ratios and SC/ST quotas, effecting 20 per cent exchanges between Hindi and non-Hindi areas at the eighth standard stage, providing boarding and lodging to about 500 pupils in each of the projected schools, the whole sequence can prove a ghastly misadventure"[7]. As **The Hindu** wrote editorially on July 4;
>
> > "It would perhaps be unwise to project the Navodaya Vidyalaya scheme as the epicentre of the NPE......The selection mechanics are bound to be battered by political and bureaucratic pressures from the start, if the present practices are allowed to continue."

Those who know about the Navodaya Vidyalaya Cell located in the Department of Teacher Education of the National Council of Educational Research and Training, New Delhi, can testify that political and bureaucratic pressures do work, otherwise how is it that the educationist Professor L.C. Singh, the founding Head of that Cell has recently been replaced by a Professor who is infact a man of statistics and measurement, and not an educationist in the real sense.

5. According to Fr. T.V. Kunnankal, the then Chairman, Central Board of Secondary Education :

> "Modern educational management theory and practices still lie largely outside the knowledge and acceptance of many heads of institutions. Many tend to remain overlords in their own small kingdom, in the case of schools under private management, or the case of Government school heads, languish under the burden of rules and procedures, set and remotely controlled by the Departments. Effective decentralization cannot be done, along with the consequent grant of needed freedom or autonomy, unless the heads of institutions are sufficiently prepared and oriented to accept responsibility. Responsible freedom is quite a hot item to handle."[8]

These lines written by an eminent educational administrator in January 1987 indicate that democratic administration in our schools will continue to remain a far dream for many years, if not decades.

6. Let us now recall the other relevant socio-political facts of the reality of the contemporary educational scene in India. In recent months, many times news items have appeared in the national press that the representatives of All India Federation of University and College Teachers' Organizations and Delhi University Teachers' Association have been pleading and protesting with the Union Education Minister and the Prime Minister to announce the new grades for the university and college teachers on the condition that conditions of any new code of conduct and accountabilty must not be imposed on them. Evidently, the university and college teachers wish to keep on working with the same sanse of irresponsibility they are used to—teaching or not teaching at their sweet will, indulging in campus politics and regaling in anomie (normlessness).

The universities and colleges have time and again been attacked for their tendencies of double standards, gap between their manifest and latent functions, inbreeding, clique-politics, fall in educational standards, dishonesty and mass copying in examinations, growing nexus between politicians and university college authorities, the growing tendencies of ap pointing IAS and IPS officers as Vice-Chancellors, and regularly occuring feature of student strikes for atleast a month in every session.

The schools, especially the so-called Public schools in metropolitan cities like Delhi, have unabashedly increased their tuition fees so much that a nursery child has to pay anything between Rs. 225 to 250 as fee alone per month to the school. And this has happened after the publication of the National Policy of Education. Who cares for the pious sentiments about democratization of education or for the fear of the governmental action in this age of freedom ? Universities and colleges have also started increasing their fees, admission test fees fantastically, as the publishers have been increasing the prices of books and journals, making it difficult for the mojority of students coming from lower and lower middle classes to get the advantages of higher education. So much is the governmental fanfare about provisions of scholarships, freeships and boarding and lodging facilities and incentives being made for SC, ST and women candidates, that any foreigner to this land would be damn impressed by our grand theoretical success on the front of democratization. But who does not know in India that the SC, ST, women candidates located in interior villages and slums still do not know about many of these provisions; that bureaucratic inefficiency and corruption at every level and in almost every institution does not let any one to have his due promptly and honestly; and almost every institution and every officer, politician and agent of chage is impatiently waiting to fleece the prey falling into his hands. In a country where admissions, jobs, promotions, transfers, increments, national awards and even divisions, doctoral degrees and positions in examinations, are openly manipulated through recommendations, bribes, and such extraneous factors, and there are serious university scandals (like the ones in the Rohtak and Bombay universities) filling pages after pages in national dailies for weeks and months, we cannot but admit that democracy in education is a far cry indeed, if not a deception. The autocratic, feudalistic, clique-operating manner in which most of our university vice-chancellors function flouting all norms of freedom, democracy, human dignity, secularism and socialism, cannot be easily curbed by the pious sentiments of the NPE. So widespread is the alienation in all its forms—meaninglessness, powerlessness, anomie, self-estrangement, etc., that our educational order does not seem to emerge as a truly democratic one in near future. Researches have revealed that our education is, instead of leveling class differences, widening them; instead of making our educate people firm belivers in the concept of contest mobility making them run all the more after sponsored mobility; instead of making them nationally integrated and refined, making them all the more disintegrated, self-seeking and hedonistic. The social climate of most of our educational institutions and research laboratories is depressing, stifling, revolting to the spirit of human dignity. Suicides by research students and research workers and in universities and national level research institutions occasionally reported in the national papers are facts which no sociologist of education can ignore, for they testify to the grave degrees of social disorganization and anti-democratization that has come to stay in our educational institutions.

V

Epilogue

In ultimate analysis, it seems that the value crisis is at the root of the malady in our society. I am remineded of the following words of Sri Sathya Sai Baba, a great Spiritual Master of the contemporary world :

> "Chivalry of speech has increased,
> Chivalry of deed has disappeared;
> Life is laden with false vanities;
> Money has become our God;
> Pride has become our creed;
> Selfishness sits supreme in **Buddhi**'s seat
> Egotism has become our fashion;
> Creed has become our beauty;
> Dharma has come to nought;
> Compassion has sunk low;
> Moral ferver is lost;
> Hypocriscy has become the light of our life
> ....".

The challenge before education in India, therefore, is very great and serious. Let us hope that all the reference groups and reference individuals will rise to the occasion and seek, while working to translate the **Programme of Action** into practice, to bring in the long-cherished elements of the ideal picture of democratization of education in this country. ☐

National Humanities Documentation Centre

An Alternate Model

Roma Ray*

The universe of knowledge can be studied under three main heads, namely, the Humanities, the Social Sciences and the Natural Sciences. All the three cater to the progress of society in different ways but at the idea plane, they are tied together. While the Natural Sciences unveil the secrets of nature and universe, and the Social Sciences concentrate on the study of society in all its ramifications, the Humanities constitute a distinct kind of knowledge "that is humanistic, which is concerned with human values and expressions of the spirit of man".

The humanities are based on the common experience of man which is open and available to all. As the Humanities tend to collect its data from ordinary day to day experiences, man's own innate sense provides him the criteria for his surest knowledge. This knowledge sharpens the values and spirit of men contributing to the 'Humanistic Study'. As the study is tradition oriented, the traditions and precepts which had been set by the earlier scholars have a remarkable influence in humanities. These features also explain why the humanities, unlike the sciences continue to cherish and use great works of the past.

E.H. Gombrich has rightly said 'Humanities serve to recover, preserve and interpret the cultural heritage of mankind'. Though the scholars of humanities rely on extensive use of literature, it is not confined to printed material alone. They use the manuscripts, official records, maps, papers of correspondence, seals, ancient scripts, epigraphs, etc. It will be apt to remind here that karl Marx did not do any field research; but he relied upon the factory reports available to all users of the British Museum. Thus the scholars of humanities need to have access to various kinds of materials. Besides, the present century has witnessed tremendous explosion of knowledge and the consequent proliferation of literature in all subjects. This has necessitated development of documentation techniques and establishment of documentation centres.

Though the radical growth in the volume of literature has changed the world of social scince and scientific research, the same has not been true of humanities. The Indian National Scientific Documentation Centre (INSDOC) has been established in the field of sciences, while the Social Sciences have been taken care of by the National Social Science Documentation Centre (NASSDOC) of the Indian Council of Social Science Research (ICSSR). It is however, unfortunate that documentation needs of the scholars in humanities have been completely ignored. Though the level of the study and research in the area of Arts and Humanities in India is quite significant, yet the documentation facilities for it at the national level are simply non-existent. The first step in this direction was taken by the Indian Library Association (ILA) when it set up its oriental section in 1975. It has since then held a number of national conventions on the subject. L.S. Ramaiah and T.V. Prafulla Chandra have done excellent groundwork for the establishment of a National Humanities Documentation Centre (NHDC). In their papers on the subject in *University News* of 2nd February, 1987 and 13 July, 1987 they have chalked out a blueprint for the proposed documentation centre—a very tough job indeed considering the complex nature of the subjects falling under the ambit of Humanities. They have highlighted the role played by the humanities in the multilingual cultural context of India and made out a convincing case for setting up of NHDC. Such a centre at the national level they opine, will help close understanding between various Indian languages and literature and promote national integration. Th blueprint shows the NHDC positioned at New Delhi with a regional centre in each state. At the nationa level, two tier system has been developed. On th one hand it will have a communication flow wit national and international information systems outside India, on the other hand, it will have direct lin with the six national constituents, namely, Lalit Kal Akademi, Sahitya Akademi, Sangeet Natak Akadem National Library, INSDOC and NASSDOC. T regional sub-systems will be grouped into two categories, namely, subject based information centre an participating institutions. Each centre will special in one particular subject and feed the information t NHDC. Thus scholars working in the field of hum-

---

Library and Documentation Centre, Association of Indian Universities, AIU House, 16 Kotla Marg, New Delhi-110002 nities irrespective of their area of residence, will have access to the documents required by them wherever they may be located.

While surveying the nature of humanities we have observed that they make frequent use of past records. Archives, the storehouse of records that facilitate study of history, archaeology, literature, etc should therefore find an important place in the study of humanities. As such archives should be one of the main constituents of NHDC at the national level.

Growth of Archives

Archives were first thrown open to research workers after the French Revolution and ever since these have contributed to broadening the horizons of research itself. An organized society needs to preserve the documents it has produced for its own information. All the government machinery produces documents. But in the course of time, these documents lose their legal and administrative significance and are superseded by newer documents. But, all the same, they constitute useful precedents. They become documentary sources of historical value for the study of a particular society, providing the historian with a solid basis for his work.

The word 'Record' is derived from the latin word 'Recordari' for memory or rather heart, which was supposed to be the seat of memory. Before the art of writing was introduced, it was memorised. In India, the 'Smriti' as well as 'Shruti' traditions were prevalent. The entire Vedas were preserved through memory. With the progress of civilization, alphabets, clay tablets and other writing materials were developed. The Buddhist Sangha records and the Arthashastra of Kautilya provide us ample evidence of record keeping in India. The archives must be regarded as an asset and as such, must not only be safeguarded but also utilised.

National Humanities Documentation Centre—An Alternate Model

The National Archives of India (NAI) along with its state units acquire public and private records of permanent historical importance. NAI has in its custody non-current records including public records, private papers, rich collection of manuscripts, maps, prescribed literature, Indian Language newspapers of early Nineteenth century, etc. All these are important sources of data for historical, archaeological and literary research. Thus it is of foremost importance for proposed National Humanities Documentation Centre (NHDC) to have direct links with NAI.

However, there is an another area where I have some reservations on the NHDC model proposed by Ramaiah and Prafulla Chandra. It is with regard to participation by INSDOC and NASSDOC. These two institutions cannot be considered as actively participating links for NHDC. Certain subjects not identified as humanities may be studied in a humanistic way like science when the object of study is its philosophy and history. Similarly if an agricultural scientist wants to know the crop pattern in medieval India, the most reliable source for his research will be the archival sources of that time only. The dependence of Social Scientists on NHDC will also be of similar nature. So the dependence of INSDOC and NASSDOC will be more on NHDC and not the vice versa. As such the flow of participation will at best be one-way only. Instead, I feel a grid of cooperation should be developed among all the archives/libraries which are a rich repository of materials for study of humanities. It should have active participation of Tanjore Saraswati Mahal Library, Library of Asiatic Society of Bengal, Khuda Baksh Oriental Public Library, Salar Jung Museum, Maharaja Sawai Man Singh II Museum, Orissa State Museum (Bhubaneswar), Indian Museum (Calcutta), Baroda Museum and Picture Gallery, Nehru Memorial Museum an Library, etc. I shall therefore suggest the model as shown in the diagram (on previous page).

The research reports and studies using extensive archival data can later on be developed as data archives in the humanities. A well managed data archive can share the existing resources for multiple use and thereby enrich the NHDC with enhanced resources. ☐

REQUIRES

Scientific Officer in the Supercomputer Education and Research Laboratory (Advt. No. R (IA) 308-6/88)

Essential : M.E. or M. Tech. or Master's Degree in Computer Science or M.E. or M. Tech. Degree with experience in Systems Programming.

Desirable : (a) Ph. D. degree (b) Experience in Systems Programming for a large system such as DEC 10/20, CYBER, UNIVAC etc. (c) Teaching experience.

Emoluments : Rs. 3,036/- p.m. in the Scale Rs. 2200-4000.

This post reserved for SCHEDULED TRIBE was advertised in August, 1987. Since no SC/ST candidates applied, it is dereserved now and re-advertised. Applications are hence invited from general candidates also.

Details and prescribed application forms can be obtained from the Registrar on request accompanied by a crossed IPO for Rs. 5/- (free of cost to SC/ST on production of a Caste/Tribe Certificate from a competent authority) drawn in favour of Registrar, Indian Institute of Science, Bangalore-12, and a self-addressed stamped envelope (Rs. 5.40) of the size 28x18 cms. **on or before 1st April, 1988.**

REGISTRAR

ECONOMIC DEVELOPMENT IN THE THIRD WORLD

Michael P. Todaro **Price Rs. 60/-**

This third, revised and updated edition of the book is published with the assistance of the Joint-Indian American Textbook Programme.

The basic concepts of Third World Economic development have been discussed in this book for the undergraduate level through theoretical and empirical analysis.

New sections on the crucial problems of the 1980s have been included. Especially useful for the student is the comparative thematic bibliography.

Education and Social Change

Laying down an agenda for education, and particularly higher education, Dr. Shanker Dayal Sharma, Vice-President of India observed, "In a period of unprecedented momentum of scientific advance and international interaction, our citizens must be induced to absorb the positive effects of new technology and modernity whilst yet adhering to the elevating elements of our ancient ideals and culture". Dr. Sharma was addressing the Annual Convocation of the Sardar Patel University. We are pleased to publish some excerpts from this inspiring address.

Convocation

Education, particularly higher education, is the obvious but crucially important instrument for nation-building. As Confucius has said :

> "If you are thinking of one year, plant rice,
>
> If you are thinking of a decade, plant trees,
>
> If you are thinking of a century, educate the people."

When we set about the task of higher education, we should be absolutely clear in our perception of the goals of education in the specific context of our nation's development. No doubt, one of the important aims of education would be to create the required range and nature of trained manpower assessed to be needed by different sectors of national growth. The entire educational apparatus must be geared progressively to fulfil the requirements of different phases of our growth in every sector—primary, secondary and tertiary. The aim must be to ensure that our country does not experience either paucity, or a surfeit, of trained manpower in any specific segment of our economy. The requirements of our country, as a free, democratic, secular, socialist, nation, aspiring for rapid development, entail a specific recipe for our educational institutions. Today's educational institutions must therefore be developed accordingly and must regulate themselves to give to the country the precise nature and quantum of trained manpower as projected by the requirements of our planned economy.

But more than in technical or economic terms, our educational institutions must also function to meet the needs of societal development to the extent or degree implicitly demanded by our polity. In our pluralistic society, in keeping with our ancient traditions of tolerance and understanding, citizens of our country must be helped, during their formative years, to understand the true meaning and values of secularism. Amidst wide ranging diversities of topography, climate, ethnicity, language, religion, local traditions, dress, food habits and vocations, our citizens must be helped by educational institutions to appreciate the supreme value of national unity and of the oneness of India that permeates all its diversities. In a polity highly stratified by diversities in income distribution and opportunities for possession of units of wealth, it is important that our citizens must learn to respect the concepts of socialism, democracy and the rule of law. In an increasingly mercenary and materialistic world, our citizens must be helped to realise the importance of the duty of every individual citizen to contribute to the national weal, and of having an unshakeable moral foundation for personal, social and national endeavour. In conditions affected by widespread poverty and want, and misplaced value on personal acquisition of wealth, our citizens must be taught to recognise the true meaning of selfless service and dignity of labour. In a period of unprecedented momentum of scientific advance and international interaction, our citizens must be induced to absorb the positive effects of new technology and modernity whilst yet adhering to the elevating elements of our ancient ideals and culture. In the throes of competitive politics, an understanding of the value of the Gandhian concept of Sarvodaya, of the insistence on purity of means and the effect of moral force, must be instilled in our citizens. Forty years after Independence, and in the generations that will follow, our citizens must, more than ever, be imbued with the flaming spirit of sacrifice, patriotism and nationalism that blazed through our freedom struggle. Our educational system must provide such stimulus as one of its cardinal functions. Failing in this, it would function without perspective or higher

CALENDAR OF EVENTS

Proposed Dates of the Event	Title	Objective	Name of the Organising Department	Name of the Organising Secretary/Officer to be contacted
May 9-June 4, 1988	Summer Course in Analysis and Probability	Topics to be covered are Probability Theory and Stochastic Processes, Fourier Analysis & Functional Analysis.	Indian Statistical Institute, Bangalore Centre.	T.S.S.R.K. Rao, In-charge, Summer School 1988, Stat-Math. Division, Indian Statistical Institute, R.V. College (P.O.) Bangalore 560 059
May 18-20, 1988	Conference on Recent Advances in Mathematical Techniques and Applications	Topics proposed to be discussed include Mathematical Physics, Mathematical Methods, Biofluid Dynamics, Chaos, Stability and Turbulence.	Dr. Y.S. Parmar Institute of Mathematical Sciences, Shimla.	Dr. J.R. Gupta, Organising Secretary, Dr. Y.S. Parmar Institute of Mathematical Sciences, Hainault, Shimla-171002
June 27-July 8, 1988	Short-term Intensive Training Programme on Abstracting & Indexing	To train the participants in the application of abstracting and Indexing methods and construction of an indexing language (Thesaurus).	National Institute of Small Industry Extension Training, Hyderabad.	Mrs. K. Subhashini, Course Director, NISIET, Yousufguda, Hyderabad-500045
July, 12-14 1988	**International Symposium on Recent Advances in Male Reproduction**	**The Symposium will focus on Molecular Biology of Inhibin, Androgen Binding, Protein Regulation of Fertility, Peptides in Testis Function and Steroidogenesis in Testis.**	**University of Hyderabad in collaboration with the Indian Society of Andrology.**	**Prof. P.R.K. Reddy, School of Life Sciences, University of Hyderabad, Hyderabad 500134**
September 26-28 1988	**International Conference on Welding Technology in Developing Countries**	**To provide an opportunity to scientists and technologists from developing and advanced countries to share their experiences in the area of Welding Technology.**	**University of Roorkee, Roorkee.**	**Prof. P.C. Gupta, Organising Secretary, International Conference on Welding Technology in Developing Countries, Department of Mech. & Ind. Engg., University of Roorkee, Roorkee-247667**
October 27-29, 1988	National Seminar on Statistics in Medicine, Health and Nutrition.	To discuss Data-Base and Analysis in Health and Nutrition—Present and Future.	Department of Statistics National Institute of Nutrition, Hyderabad.	Dr. K. Visweswara Rao, Organising Secretary, National Seminar on Statistics in Medicine, Health and Nutrition, Department of Statistics, National Institute of Nutrition, Indian Council of Medical Research, Jamai Osmania, Hyderabad-500 007
Dec. 15-17, 1988	National Conference on Fluid Mechanics and Fluid Power	To provide a forum for exchange of information on topics in flcid mechanics and design, research and development activities in areas like power generation, aerodynamics, fluidics, biomechanics, etc.	Harcourt Butler Technological Institute, Kanpur.	Dr. N.L. Kachhara, Organising Secretary, 16th National Conference on Fluid Mechanics and Fluid Power, Mechanical Engineering Department, Harcourt Butler Technological Institute, Kanpur-208002

NBE & Medical Education

The Governing Body of the National Board of Examinations (NBE) has advised the Union Government to designate the NBE as the National Board of Medical Examinations. This was disclosed by Dr. (Mrs) B.K. Maini, Executive Director of the NBE.

According to her, the prime objective of the NBE is to raise the standard of postgraduate medical education so that these degrees are respected by the public and employers as comparable to international standards of professional excellence.

Set up in 1976, the NBE and the National Academy of Sciences jointly conducted postgraduate examinations, till 1983, when the NBE started conducting its own examinations. The NBE conducts examinations in 39 disciplines at 14 centres in the country. The emphasis is on evaluating the candidate's ability and practical application of theoretical knowledge. The examination process is meant to find out how much a student knows rather than what he does not know.

The NBE had granted recognition to 89 medical institutions and hospitals by March, 1987. For general practitioners, the NBE conducts a postgraduate examination in family medicine. Three hospitals in Nepal have secured recognition from the NBE. Hospitals in Afghanistan, Kuwait and Qatar have also sought recognition.

Indira Gandhi Memorial Lecture

Prof. Yash Pal, Chairman of the University Grants Commission, who delivered the third Indira Gandhi Memorial Lecture at the Cochin University of Science and Technology said, "the only way to break the endless cycle of foreign collaboration and delayed indigenisation that is bogging Indian technology is to telescope the processes of learning and doing."

Prof. Yash Pal, made a strong plea that our scientists cross the most challenging of thresholds—the threshold of self confidence, and "do their own thing", even at the risk of reinventing the wheel. "It is good to reinvent the wheel", he said. "Because even when you reinvent, you create". Today, he said, technological developments are coming too thick and fast. Knowledge doubles every seven years. There is no premium in being merely the first to invent something. It is more important to live with what we can do and to make technology a vehicle of social change.

"The real world outside and the world of learning have to come together", said Prof. Yash Pal, and suggested that this is a concept totally compatible with our very Indian ideas about 'Karma' : being involved in doing something is more important than getting there. Unless we accept this sea change in our priorities and concentrate on indigenous creative activity, our scientists and technologists will merely remain "agents and touts of foreign technology", he felt.

UGC Assistance for Cochin University

The University Grants Commission has sanctioned Rs. 26.55 lakhs to the Cochin University of Science and Technology as part of the Departmental Research Support to the School of Marine Sciences. This was disclosed by Vice-Chancellor Dr. Harsh K. Gupta recently.

An assistance of Rs. 12.50 lakhs has also been extended by the UGC for starting a Post-M.Sc. course in Atmospheric Sciences under the Physical Oceanography and Meteorology division of the School of Marine Sciences. This course will be conducted in collaboration with the Departments of Computer Science and Mathematics & Statistics.

The UGC has sanctioned a special assistance of Rs. 10 lakhs for the purchase of books and journals during the VII Plan period.

Also, the UGC has approved University's proposal for the construction of one more hostel for lady students and has agreed to make available Rs. 17 lakhs.

In addition, The Ministry of Human Resource Development has also sanctioned Rs. 10 lakhs for modernising the laboratories of the Ship Technology Department of the University. This assistance is in addition to a sum of Rs. 10 lakhs sanctioned by the Government of India for the same purpose.

Japanese Language Prizes for JNU Students

Five out of seven prizes in the 9th Japanese Language Speech Contest have been bagged by the students of Jawaharlal Nehru University. The Contest was organised by the Mombusho Scholars Association of India (MOSAI) in collaboration with Japan Foundation on the occasion of Japan Festival in India. According to an announcement by MOSAI, all the three prizes of the Junior Group were won by Deepshikha Bammi, Sunita Batra and Shravan Vashisth and the first prize in Senior Group went to Mr. Samir—all from JNU.

Workshop on Human Development & Family Studies

The Department of Child Development of the M.S. University of Baroda proposes to organise a summer workshop on "Demystifying research in human development and family studies" from May 16th-30th, 1988. The objectives of the workshop are : (1) to enable young research scholars in Human Development and Family Studies to develop competence in preparing sound research proposals; (2) to provide young scholars guidance in selecting research topics of social relevance and to also provide systematic feedback and subject matter experience and consultation/help to young scholars in developing research proposals; and (3) to strengthen the research in specific areas of Human Development and Family Studies in terms of conceptual framework, methodology, and statistical analysis, as these have been repeatedly observed to be weak in our survey of Indian researches in this area of study.

The workshop will be inaugurated by Professor A.K. Jalaludin, Joint Director, NCERT, New Delhi. Dr. Kamaliniben Bhansali, Vice-Chancellor, SNDT Women's University will preside. Over 30 participants from different parts of the country are expected to attend the workshop.

Prof. Viswamitra Presented Birla Award

The R.D. Birla award for medical research has been presented to Prof. M.A. Viswamitra, Chairman, Department of Physics, Indian Institute of Science, Bangalore for his work in Molecular Biology. Dr. Viswamitra has made a major breakthrough in developing sequence specific anti-cancer drugs.

A pioneer in crystallography in India, Prof. Viswamitra was the first to crystalise deoxytetranucleotide, leading to the discovery of a sequence-dependent fine structure in DNA helical fragments. He is also credited with doing X-ray studies on the molecular structures of several key intermediates in metabolic processes of the cell.

Instituted by the Rameshwardas Birla Smarak Kosh the award consists of Rs. one lakh besides a memento and a citation. The Kosh was established in 1979 under the aegis of the Bombay Hospital Trust to aid students and researchers in the medical field.

Khalsa College Seeks Residential Varsity Status

The Khalsa College, Amritsar celebrated its 96th foundation day recently. Speaking on the occasion Mr. Gurbax Singh Shergill, the Principal of the College, sought residential university status for the College. He referred to the need of establishing a permanent fund for the upkeep and maintenance of the College building and said it was obligatory for old students the world over to contribute to the fund.

The College proposes to start an "Institution of Agricultural Studies and Research" besides introducing new post-graduation classes in subjects ranging from food technology to computers.

On the occasion, 17-students, now occupying high positions in society were honoured. They included Maj. Gen. Trilok Singh, Chief of an Army Corps, Secretary, Health, S.S. Boparai, Deputy Commissioner Sarabjit Singh and Mr. G.R. Sethi, a journalist besides others.

Research Scientists Awards 1987

The University Grants Commission has announced the selection of 113 candidates for the award of Research Scientists positions under categories A, B, and C, corresponding to the grade of Lecturer, Reader and Professor in universities, in different disciplines. These positions have been created by the UGC with a view to giving a deliberate impetus to full time research in universities.

News from Agril. Varsities

US Assistance for Agrl Varsities

The U.S, Government has awarded research grants totalling Rs. 26 lakhs to the agricultural universities in Andhra Pradesh, Bihar and Maharashtra for taking up agro-industrial research and development projects.

The Rs. 827,400 grant to the Andhra Pradesh Agricultural University, Hyderabad, for a three-year period would help study food preservation problems.

The Rajendra Agricultural University, Pusa, Samastipur would get a three-year grant of Rs. 601,330 to develop a safe disposal system of urban and industrial organic wastes.

The College of Agricultural Technology, under the Marathwada Agricultural University, Parbhani, has been given a five-year grant of Rs. 11.60 lakhs to devise new sources of low-cost industrial gums which can be used as adhesives in industrial processes and products.

HAU Kisan Mela

A 2-day Annual Farm Fair of Haryana Agricultural University was recently held at the research farm of the University. Thousands of farmers from Haryana and adjoining states participated in the Mela. During this period the visiting farmers were taken on guided visit of the research farm by the scientists where they were shown the bumper standing crops like wheat, barley, gram, rape-seed, mustard, barseem and sugarcane raised with the latest scientific techniques. They were apprised of the latest methods of sowing, hoeing, seed treatment, soil reclamation, judicious use of water and fertilizers, plant protection measures, proper handling of farm machinery and implements etc., of different Kharif crops. They were also apprised of the techniques of inter-cropping, conserving soil moisture, dryland farming, etc. An Agro Industrial Exhibition was also organised on the occasion in which farm machinery and implements, insecticide-pesticides, and other farm use material were displayed.

Product Development from Bivalve Meat

The Indian Council of Agricultural Research (ICAR) has sanctioned a research project entitled 'Product development from bivalve meat—micro-biological and biochemical assessment of their keeping quality' to the Department of Fish Processing Technology of the Kerala Agricultural University with a financial outlay of Rs. 3,26,600. The project to be completed within three years under the leadership of Mr. D.D. Namboodiri, aims at developing edible products from bivalve meat and fixing biochemical and microbiological standards for such products.

Ethopian Scientists Visit HAU

A high level Ethopian delegation led by Dr. Asfoaw Zelleke, Academic Vice-President, Alemeya University of Agriculture, visited the Haryana Agricultural University recently. The Ethopian scientists visited the experimental farm of H.A.U. and also saw researches in Animal Breeding, Horticulture, Farm Forestry and Veterinary Science. The visiting scientists said that they would like their university, established in 1985, to be developed on the pattern of Haryana Agricultural Universty, as it had an excellent system of transfer of technology and remarkable infrastructure for teaching, research and extension. The delegation also held discussions with the Vice-Chancellor, Dr. Har Swarup Singh and senior members of the Faculty of the University.

News from Abroad

Training for Agricultural Development

The Food Production and Rural Development (FPRD) Division of the Commonwealth Secretariat, London has issued a revised edition of *Training for Agricultural Development : A Directory of Commonwealth Resources.* The main purpose of the directory is to help promote collaboration between commonwealth countries through the use of each other's facilities to train the specialist manpower required for the economic and social development in the field of agricultural and rural development. Only the institutions providing training programmes in the field of agriculture, veterinary medicine, horticulture, freshwater fisheries and aquaculture, food science, forestry, biological sciences and relevant ancillary disciplines are listed. The courses include :

- training programmes for extension workers and peasant farmers in the public and private sectors;
- training programmes for post-secondary education leading to certificates and diplomas or other awards which in some countries are

WORDS OF WISDOM

"How we choose to look at the world makes such a big difference, really it does. If we look at it through timid eyes, it's a frightening world. If we look at it darkly, we find nothing but gloom. If we look at it cynically, we're never at a loss for things to criticise. We can be against the world or we can be for it. And when we're for it, it can be a wonderful place. Not every minute, of course, or even every day, but certainly most of the most."

(From Graham Porter's, "A Harem in the House") provided by non-university institutions;

- general education programmes, e.g. first degrees, which embrace many disciplines;
- higher degree programmes (Master's and Ph.D.) in specialized fields which in some countries have research institutions associated with them for the purpose of providing facilities for Ph.D. courses;
- short training / workshop programmes mostly for higher level management and policy makers.

In addition to the institutions in different commonwealth countries and the courses offered by them, the Directory also gives details about international institutions and organisations which provide training programmes and sponsorship to member countries.

Further details may be had from The Director, Food Production & Rural Development, Commonwealth Secretariat Division, Marlborough House, Pall Mall, London SW1Y 5 HX.

Two-Crop Farming

Australian scientists are researching a farming system which allows two crops to be grown simultaneously on the same plot. One has the potential to save the farmer money which is now spent on nitrogen fertilisers, the other provides growers with a conventional source of cash return.

The farming system known as alley cropping, involves the planting of a cereal crop such as maize or sorghum between alleys of a legume crop (called leucaena), which collects nitrogen from the air and transfers it into the soil in large quantities. It involves the timely pruning of the fast-growing legume throughout the growth cycle of the cereal crop with the farmer leaving the cuttings in the paddock to decompose, and to mulch and feed the complimentary crop. The mulch enhances the fertility of the soil by releasing extra nitrogen, improving crop productivity and at the same time reducing soil erosion.

Savings of between 40 kg. and 80 kg. (98.8 lb and 197.6 lb) of nitrogen fertiliser per hectare have been recorded.

The work is being done at Griffith University in Brisbane, Queensland, and also at the Commonwealth Scientific and Industrial Research Organisation's (CSIRO) division of tropical crops and pastures, also based in Brisbane.

One of the scientists involved in the research at Griffith University is Mr. Xu Zhi-Hong, from the Institute of Soil Science at the Academia Sinica in Nanjing, China. Mr. Xu, who is working for a PhD degree while in Queensland, said the alley cropping system of farming was likely to be most effective in tropical and sub-tropical climates.

We Congratulate.......

(1) Dr. K.M. Marimuthu who has been appointed as Vice-Chancellor of the Bharathiar University, Coimbatore.

(2) Dr. S. Muthu Kumaran who has been appointed as Vice-Chancellor of the Bharathidasan University, Tiruchirapalli.

With Best Compliments

Book Review

Very Readable & Instructive

Mital, K.V. History of the Thomason College of Engineering (1847-1949). Roorkee, University of Roorkee 1986. p.285.

Prof. K.V. Mital deserves all the kudos for having attempted to write the history of the Thomason College of Engineering, which flowered into the University of Roorkee on 25 November, 1949, exactly 102 years after its establishment as an institution for the education of civil engineers to meet the requirements of the Government for surveys, roads, bridges, railways, irrigation works, application of water power, navigation etc.,—objectives for which it was "impossible to provide European engineering skill". Although the emphasis in the beginning was on raising a body of civil engineers from amongst the Indians, the shape of the College that emerged became somewhat different and more comprehensive. Three departments were opened. The first Department was to train sub-assistant civil engineers, and was open to both Indians and Europeans. The second was open only to European non-commissioned officers and soldiers and trained them as overseers. The third was exclusively meant for Indians and provided instruction in surveying, levelling and drawing through the medium of Urdu.

The important feature of the college was its totally residential character. The students could thus be kept under the college discipline all the 24 hours, and not only their curricular but also extra-curricular activities could be programmed. This gave the Roorkee College, from its inception and all through the century of its existence, a unique opportunity to build and maintain traditions of discipline and emotional involvement so characteristic of it.

As Lt.Governor of the erstwhile North Western Provinces, James Thomason (1804-1853) was primarily responsible for the establishment of the college and it was but appropriate that the college was named after him after his death in 1853. The L.G. was remarkably ahead of his times and practical in outlook as regards the concept of education fit for the educands of the college. He wrote in one of his despatches: "Education does not consist in mere book learning, which will pass off to advantage in a set examination. It consists also in the habits of industry, method, observation and practical skill, which can be best acquired amongst such works as those exist at Roorkee." Thus an important feature of the methodology of teaching which the Roorkee College developed was involvement in local needs and full use of locally available facilities. In the process, the college developed the practice of holding monthly tests in topic under study according to a strict schedule laid out in the College Almanac which was a datewise schedule of work for the year. Marks in these tests were given 25% weightage in the final results and were added proportionately to the marks obtained in the annual examination. To ensure that within the limits tested by his paper the pupil had gained a fair knowledge, it was required of the unsuccessful examinee that he works out the paper fully and accurately after further instruction and study. In the field of Applied Mechanics particularly, it was sought to ensure that the theoretical instruction of of basic principles was balanced with the practical knowledge of the engineering art.

In addition to academic inputs, due importance was attached to the provision of facilities for intellectual relaxation and outdoor healthy physical recreation to students and

EMBASSY OF THE REPUBLIC OF IRAQ

NEW DELHI

Vacancies in the University of Mosul, Mosul-Iraq.

CORRIGENDUM

Qualification required for ARCHITECTURE vacancies published on page 24 of University News dated March 7, 1988, may kindly be read as Ph. D. instead of M. Arch.

the fostering of games and sports, as an essential ingredient of the students' education and the social life on the campus. Thus while the "native" students were required to undergo physical training with a view to developing "a capacity for personal exertion", the soldier-students were expected to make, by their, own labour, a garden in the area adjoining their barracks, to furnish an agreeable object of interest to the students, to supply the barracks with fresh vegetables and to improve the general appearance of that part of the college ground."

It is pertinent to note here that this very commendable symbiotic relationship with ground reality which the college maintained emanated from its intimate connection with the military. As observed by the learned author, all its principals initially were military engineers; much of its senior and middle level staff used to be drawn from the army; about half its students passing through the upper subordinate class (till 1895) were soldiers and about a third through the engineer class (till 1874) were soldiers. The general thinking, the pattern of social life, the concept of discipline, all these were permeated by the military outlook. While it influenced the growth of a practical, down-to-earth methodology of education, it tended to generate strains and disharmony in the social relationship. To quote the author, "There was an almost impenetrable social barrier between the 3 classes. Students of one class did not mix or fraternize with those of the other. The engineer class students were supposed to maintain an attitude of dignified superiority towards the other 2 classes, while the latter were expected to behave with due respect in the presence of the former."

Though the division of the engineer class into the Indian and English sections was formally abolished in 1895, the distinction between the Indians and the Anglo-Indians on the social plane continued. The Engineer Mess remained exclusively Anglo-Indian. While the Anglo-Indians lived in bungalows, the Indians were accommodated in a barrack. D.D. Jaini (1920 batch) recalls that the rooms (for Indians) used to be unfurnished, and students were required to make their own arrangements... For European and Anglo-Indian students, a separate building consisting of furnished single-seated rooms was provided. As reminisced by K.N. Kathpalia, a little 'satyagraha' was needed to give the policy of segregation a final push over. What form this 'satyagraha' took may best be left for the curious reader to discover from the very readable and instructive text, so painstakingly put together by a devoted and emotionally-involved scholar.

Amongst the eminent practical engineers produced by the Roorkee College, may be mentioned the names of Kunwar Sain, A.C. Mitra, P.L. Verma. G. Pande, L.P. Bhrgava, Karnail Singh, Yadav Mohan, H.P. Sinha, D.C. Baijal, M.R. Chopra, who earned international repute as experts in their various fields and brought glory to their alma mater, which however, "stayed only as an efficient professional training school." As observed by Prof, Mital, it did not become a centre of engineering research and learning. Its ambition of becoming a beacon of engineering knowledge remained unfulfilled.

This came to be fulfilled on 25 November 1949, when curtain fell on the Thomason College and a new era in its history began with the inauguration of the University of Roorkee,

The 40th anniversary of the University is round the corner, and it is an appropriate moment to assess its achievements and failures. Doubly so, when the nation is engaged in the exercise of finding new paths in the field of human resource development.

—**G.B.K. Hooja**

Former Vice-Chancellor, Gurukula Kangri Vishwavidyalaya, 5, Abul Fazal Road, New Delhi-110001

EDUCATION AND SOCIAL CHANGE

(Continued from page 13)

national purpose and, in fact, may cause great harm in place of great good.

Sardar Patel said : "Everyone admits that the educational system is deficient and outmoded...A **revolution is badly wanted in this field**". And Bapu writing in the 'Harijan' said : **"I would revolutionise college education and relate it to national necessities...'The aim of University education should be to turn out true servants of the people who live and die for the country's freedom".**

Sardar Patel University, I believe, is doing very salutary work in this respect. Established on the birth anniversary of Sardar Vallabhbhai Patel, Vallabh Vidyanagar is making a valuable contribution to accelerate the process of rural regeneration by application of modern arts, science and technology to rural requirements. The University is also striving, with success, to nurture the growth of appropriate individual, social and national attitudes amongst all students that pass its portals.

The thoughts in the great spiritual leader Narsi Mehta's ethereal poem should ever be in our minds —as they were in Bapu's :

'वैष्णव जन तो तेने कहिए
जे पीड पराई जाणे रे,
पर दु:ख उपकार करे तोये,
मन अभिमान न आणे रे ।'

It is this philosophy of understanding, humanism, compassion and service that I feel, must inspire the citizens of modern India. I trust, it would light your path in the years and decades to come. □

AIU Library & Documentation Services

One of the important functions of the Association of Indian Universities is to act as a clearing house of information on higher education in the country. Towards this end the AIU Library is engaged in collection building and developing instruments for the dissemination of research information. Over the years a valuable collection of books and documents on different aspects of higher education has been acquired.

The Library has also developed Bibliography of Doctoral Dissertations as an effective tool in the dissemination of research information. Retrospective bibliographies covering the period 1857-1970 and 1970-75 were the first to appear. Effective 1975, however, the bibliography is issued annually in two volumes. One volume deals with Natural and Applied Sciences while the other records doctoral degrees awarded in Social Sciences and the Humanities. In addition to the normal bibliographical details like the name of the Research Scholar, the title of the thesis, years of registration for and award of the degree, and the name of the University accepting the thesis for award of a doctoral degree, the bibliography also gives name and complete address of the supervising teacher and an availability note that seeks to inform whether a copy of the dissertation is available for consultation and use in the University Library/Department or Registrar's Office.

The columns 'Theses of the Month' and 'Research in Progress' are intended to cut out the time lag between the receipt of information and its inclusion in bibliography. Such Universities as are not sending us regular information in respect of Doctoral Theses accepted and research scholars enrolled are welcome to make use of these columns.

The Library is open from 9.00 a.m. to 5.30 p.m. Monday through Friday.

JOINT ADMISSION TO*

Three Semester M.Tech. Programme, July 1988

(with Scholarship)

OF

INDIAN INSTITUTE OF TECHNOLOGY BOMBAY, KHARAGPUR & MADRAS

GENERAL : Applications in prescribed form are invited for admission to the three-semester M.Tech. programme offered by the three institutes and M. Arch. MCP and MRP programmes offered at IIT Kharagpur.

DISCIPLINES : Disciplines and areas of specialisation for the Master's programmes of the three IITs are given in the information brochure which wiil be sent along with the application form.

MINIMUM QUALIFICATION FOR ADMISSION : The candidates for admission to the Master's programmes mentioned in the brochure must have (a) a Bachelor's degree in Engineering/Technology or equivalent or a Master's degree in Science or a Bachelor's degree in Architecture and (b) a valid GATE SCORE.

Candidates who have been successful in the GATE 1988 but whose results in the qualifying degree examination have yet to be declared are also eligible to apply provided they complete all requirements for the degree latest by August 1, 1988.

A candidate admitted once for M. Tech. programme with Scholarship will not be eligible for admission with Scholarship at the same or any other Institute on one valid GATE SCORE.

Seats are reserved for SC/ST candidates as per rules.

INFORMATION BROCHURE, APPLICATION FORM AND BASIC DATA-CUM-CHOICE SHEET can be obtained by sending

- (i) the application-cum-registration fee of Rs. 50/- by a crossed bank Draft in favour of the IIT to which the request is made, drawn on the State Bank of India of the same place ;
- (ii) a letter of request mentioning the details of the Bank Draft, and
- (iii) two slips of size 5 cm x 10 cm indicating the applicant's postal address in capital letters to any of the following :

The Chairman, GATE
Indian Institute of Technology
Bombay 400 076, or Kharagpur 721 302 or Madras 600 032

Issue of Application Forms commences on—April 18, 1988

LAST DATE for :

Issue of Application Forms — by Post — May 2, 1988
at the Counter — May 12, 1988
Receipt of completed applications — May 13, 1988

Sponsored or part-time candidates or self-financing foreign students should not apply in response to this advertisement. They should contact directly Dr. Registrar (Academic/PG students) of the concerned Institute for application form and other details.

*** For admission to IIT Kanpur and IIT Delhi please look for separate advertisement.**

Rohilkhand University, Bareilly (U.P.)

DEPARTMENT OF BUSINESS ADMINISTRATION

ADMISSION NOTICE

MASTER OF BUSINESS ADMINISTRATION (M.B.A.)
TWO-YEAR (FOUR SEMESTER) FULL-TIME PROGRAMME
(Commencing from July 1988)

Applications are invited, on prescribed form, for admission to SECOND BATCH of Master of Business Administration Programme for the academic year 1988-89 commencing from July, 1988.

INTAKE

The maximum number of students to be admitted is 30.

ELIGIBILITY

A bachelor degree or equivalent, in any field of knowledge from a recognised university or institute, shall constitute the minimum educational qualification for admission to the M.B.A. Course.

SELECTION CRITERIA

The students for admission will be selected purely on merit through an admission test, partly written (objective type—Aptitude Test) and partly oral (Group Discussion and Personality Interview). The written test will include English Comprehension, Numerical Ability, General Intelligence and General Awareness. Those candidates who qualify in the written test will be exposed to second phase of test, i.e., group discussion and personality interview.

CENTRES FOR TEST

The written test will be conducted simultaneously at two centres, viz., Bareilly, and Kanpur.

DATE OF WRITTEN TEST

The written test will be held on Sunday, 15th May, 1988.

SPECIAL FEATURES OF THE PROGRAMME

The Programme is highly innovative and placement oriented, dovetailed with most modern inputs and enables specialisation in the areas like Financial Management, Marketing Management. Personnel Management, Production/Operations Management, Public Systems Management including Rural Development.

Top quality Faculty (full time and part time) drawn from top level institutions/organisations in India are in position.

APPLICATIONS

The application form and information about the programme can be obtained on payment of Rs. 30/- from the cash counter of the University on any working day or by registered post on payment of Rs. 30/- through crossed bank draft payable at Bareilly, drawn in favour of the Finance Officer, Rohilkhand University, Bareilly alongwith a self addressed envelope of size 11" x 8" affixed with postal stamps of Rs. 7.50. The application forms by registered post would be sent up to 9th April, 1988. The requests, for application form by post, should be made to the Professor & Head, Department of Business Administration, Rohilkhand University, Bareilly-243001.

The envelope containing request for application form or the completed application form should be marked "Admission to MBA 1988".

Application form complete in all respects, accompanied by required certified copies of credentials and admission test fee Rs 100/- through a crossed Bank Draft payable at Bareilly, and drawn in favour of The Finance Officer, Rohilkhand University, Bareilly, should reach the Professor and Head, Department of Business Administration, Rohilkhand University, Bareilly-243001, not later than **20th April**, 1988.

B.S. GUPTA
REGISTRAR

UNIVERSITY OF CALCUTTA
SENATE HOUSE, CALCUTTA-700 073

Advt. No Est/1/88.
Dated : 8.3.1988

GROUP-A

Applications are invited for the following Whole time posts of Professors of this University in the present scale of pay i.e. Rs. 1500-2500/-, plus allowances as may be admissible from time to time under the rules of the University. Higher initial pay within the grade may be given to an incumbent in consideration of excellence of academic record and experience. The University offers Tripple retirement benefits, i.e. Contributory P.F., Gratuity and Pension as per the University Rules. Appointment will be made on merit without discriminations on grounds of race, religion, language or sex : however, working knowledge of written and spoken Bengali is desirable.

Essential Qualifications and Experience

(a) Uniformly good academic acareer with the Master's and Bachelor's degree with Honours of this University or equivalent.

(b) Evidence of continuing research interest as manifest in published work in reputed research journals or Doctoral degree of a recognised University.

(c) In the case of posts under the Faculties of Medicine and Technology, candidates must possess the essential qualification and/or experience required for the posts as laid down by the respective professional bodies viz. the Medical Council of India and the All India Council for Technical Education, as the case may be, where applicable.

(d) Teaching experience at the Post-Graduate level on relevant Industrial/Professional Experience—for Professors—15 years—(Evidence of successfully guiding Research students for P.G. Degree essential)—experience in guiding research at Doctoral level or an outstanding scholar with established reputation who has made significant contribution to knowledge.

Relaxations

The Syndicate may relax, if so recommended, by the Selection Committee on specific grounds, the stipulations regarding qualifications and the number of years relevant experience in case of candidates possessing exceptionally good academic records and outstanding capabilities. The Selection Committee may also consider suitable qualified persons who may not formally apply.

Posts

(A) Arts, Commerce & Business Management

1. Kumar Guruprasad Singh Professor of Indian Linguistics and Phonetics in the Department of Linguistics.
2. Mahamohopadhyay Gopinath Kaviraj Professor of Sanskrit in the Department of Sanskrit (Specialisation in Vedic literature).
3. Asutosh Professor of Sanskrit in the Dept. of Sanskrit.
4. Sarat Chandra Chattopadhyay Professor of Bengali in the Dept. of Bengali.
5. Rabindranath Tagore Professor of Bengali in the Dept. of Bengali.
6. Pandit Nilkanta Das Professor of Oriya in the Dept. of M.I.L.
7. Asutosh Professor of Medieval and Modern History in the Dept. of History.
8. Munshi Premchand Professor of Hindi in the Dept. of Hindi (subject to formal creation of the post by the Syndicate).
9. Acharyya B.N. Seal Professor of Mental and Moral Philosophy in the Dept. of Philosophy.
10. Professor of Education in the Dept. of Education.
11. Asutosh Professor of Islamic Culture in the Department of Arabic and Persian.
12. Rani Bagiswari Professor of Indian Fine Arts, in the Department of AIHC.
13. Ekbal Professor of Urdu in the Dept. of Urdu.
14. IFCI Professor of Commerce.

(B) Science and Technology

1. Professor of Applied Physics in the Dept. of Applied Physics.
2. Professor of Pure Mathematics in the Department of Pure Mathematics.
3. Professor of Marine Science in the Dept. of Marine Science with specialisation in Physical/Abemical Oceanography.
4. Sir R.B. Ghose Professor of Applied Chemistry in the Dept. of Chemical Technology.
5. Sir R.B. Ghose Professor of Applied Physics in the Dept. of Applied Physics.
6. Sir R.B. Ghose Professor of Applied Mathematics in the Dept. of Applied Mathematics.
7. Professor of Applied Mathematics (in the Centre of Advanced Studies).
8. S.N. Bose Professor of Theoretical Physics in the Dept. of Applied Mathematics.
9. Kumar Guruprasad Singh Professor of Chemistry in the Dept. of Pure Chemistry.
10. Professor of Petroleum Engineering in the Dept. of Chemical Technology.
11. Professor of Chemical Engineering in the Dept. of Chemical Engineering.
12. Two Professors in the Dept. of Electronic Science—with specialisation in
    (1) Communication circuits and General Electronics, and
    (2) Material Science and Optoelectronics.
13. Three Posts of Professors in the New Cells of Biophysics, Molecular Biology and Microbiology and Genetics.
14. Professor of Computer Science.

(C) Medicine

1. Centenary Professor of Anatomy in the Dept. of Anatomy.
2. Professor of Pathology in the Dept. of Pathology.

GROUP—B

Applications are invited for the posts of Professor—1 post, Readers—2 posts, Lecturers—4 posts in the U.G.C. Scales of Pay i.e. Professor—Rs. 1500-2500, Reader—1200-1900 and Lecturer—700-1600) plus allowances as may be admissible from time to time under the rules of the University, under the DEPARTMENT OF LAW.

Essential Qualifications and Experience

Professor : An eminent scholar with published work of high quality and actively engaged in research. 10 years experience of teaching and/or research. Experience of guiding research at Doctoral Level or an outstanding scholar with established reputation who has made significant contribution to knowledge.

Reader : Good academic record with a Doctoral Degree or equivalent published work. Evidence of being actively engaged in (1) Research or (2) Innovation in teaching methods or (3) Production of teaching materials.

About 5 Years experience of teaching and/or research provided that 3—of these years were as lecturer or in an equivalent position.

The candition may be relaxed in the case of candidates with outstanding research work.

Lecturer : (a) A Doctorate's degree or research work of an equally high standard; and

(b) Good academic record with at least second class (in the seven point scale) Master's degree in a relevant subject from an Indian University or an equivalent from a foreign University.

Having regard to the need of developing inter-disciplinary programme, the degrees in (a) and (b) above may be in relevant subjects.

Provided that if the selection committee is of the view that the research work of a candidate as evident either from his thesis or from his published work is of very high standard, it may realex any of qualifications prescribed in (b) above.

Provided further that if a candidate possessing a Doctor's Degree or equivalent research work is not available or is not considered suitable, a person possessing a good academic record (weightage being given to M.Phil or equivalent degree or—research work of quality) may be appointed provided he has done research work for at least two years or has practical experience in a research laboratory/organisation on the condition that he will have to obtain a Doctor's Degree or produce evidence of research of high standard within eight years of his appointment, failing which he will not be able to earn future increment until he fulfils requirements.

The Syndicate may relax, if so recommended by the Selection Committee on specific grounds, the stipulations regarding qualifications and the number of years of relevant experience in the cases of candidates possessing exceptionally good academic records and outstanding capabilities. The Selection Committee may also consider suitable qualified persons who may not formally apply.

FOR GROUPS A AND B

The selected candidates will be placed on probation for one year which may be waived in exceptional cases. The appointment shall be subject to the rules laid down for the teachers from time to time.

Applications (Seven copies) in prescribed form (obtainable from the University Sales Counter on payment of Rs. 10/ or by post on sending a self-addressed Re. 1/- stamped envelope of 28 cm x 12.5 cm. size with a crossed I.P.O. of Rs. 10/- payable in the name of Calcutta University) should reach the undersigned not later than 8th April, 1988.

For persons applying from abroad, submissions of applications in the prescribed form is not necessary. Such candidates may submit seven typed copies of detailed Biodata with an application fee of Rs. 10/- within 8.4.88.

Candidates who had applied in response to previous advertisements of 1984 and 1985 need not apply again in the prescribed form but they are advised to send on plain papers additional information, if any, together with a fresh bio-data in support of their respective candidature indicating therein the exact post(s) for which they had applied and now desire to be considered.

S.N. Ghosh
REGISTRAR

SREE CHITRA TIRUNAL INSTITUTE FOR MEDICAL SCIENCES AND TECHNOLOGY, TRIVANDRUM-11.

Advt. No. 6/Sctimst/88

Dated : 5-3-1988.

(An Institution of National Importance under the Government of India).

Invite applications from Indian Nationals for the following posts :—

1. Professor in Anaesthesia
2. Professor in Cardiology
3. Assistant Professor in Neurology
4. Assistant Professor in Neurosurgery
5. Lecturer in Cardio Vascular Thoracic Surgery (Reserved for SC/ST candidates)
6. Scientific Officer (Polymer).

Scale of Pay : (With approximate total emoluments in the brackets).

Post 1 & 2 : Rs. 2500-100-3200/- (Rs. 5715.30+HRA).

Post 3 & 4 : Rs. 1800-75-2100-100-2400/- (Rs. 4209/-+HRA).

Post 5 : Rs. 1500-60-2040/- (Rs. 3598/- +HRA).

Post 6 : Rs. 700-40-1100-50-1300/- (Rs. 2159.50+HRA).

(The Scales of Pay of the above posts are under upward revision).

Maximum Age limit as on 31-3-1988.

Post 1 & 2 : 50 Yrs.

Post 3 & 4 : 40 Yrs.

Post 5 & 6 : 35 Yrs.

Qualification and Experience

Post 1 : Professor in Anaesthesia

(a) A Medical qualification included in the first or Second Schedule or Part II of the Third Schedule to the Indian Medical Council Act, 1956 (Persons possessing qualifications included in Part II of the Third Schedule should also fulfil the conditions specified in section 13(3) of the Act).

(b) M.D./FFARCS/FRCS(C)/American speciality Board Certification/Diploma of the National Board in the speciality.

(c) **Experience :** Teaching and/or research experience of not less than ten years after the prescribed postgraduate qualification.

Desirable : Experience in administration of Departmental work and research programmes.

Post 2 : Professor in Cardiology

(a) Same as for Post 1

(b) DM/FRCP(C)/American speciality Board Certification/Diploma of the National Board in the speciality.

(c) Same as for post 1

Desirable : Experience in administration of Departmental work and research programmes.

Post 3 : Assistant Professor in Neurology.

(a) Same as for post 1

(b) DM/FRCP(C)/American speciality Board Certification/Diploma of the National Board in the speciality.

(c) Teaching and/or research experience of not less than 2 years in the subject after the prescribed post graduate qualification.

Post 4 : Assistant Professor in Neurosurgery

(a) Same as for post 1

(b) M. Ch/FRCS(C)/American speciality Board Certification/Diploma of the National Board in the speciality.

(c) Same as for post 3.

The applicants who are not suitable for the post of Asst. Professor will be considered for the post of Lecturer, if willing.

Post 5 : Lecturer in Cardio Vascular Thoracic Surgery

(a) Same as for post 1

(b) M Ch/FRCS(C)/American speciality Board Certification/Diploma of the National Board in the speciality.

Post 6 : Scientific Officer (Polymer)

(a) M.Sc/M. Tech. in Organic Chemistry/Physical Chemistry/Polymer Chemistry/Polymer Technology/Biochemistry.

(b) **Experience :** Candidates with M.Sc. should possess a minimum of 2 years and candidates with M. Tech. one year.

(c) **Desirable :** Experience in modification of prosthetic surfaces for biological application.

Age, qualification, experience etc. relaxable in exceptional cases.

Application in plain paper with biodata of the candidate and attested copies of certificates of educational and professional qualifications, date of birth, experience etc. should reach the undersigned on or before 25.4.1988.

DIRECTOR

INDIAN INSTITUTE OF TECHNOLOGY, BOMBAY

POWAI, BOMBAY-400 076

Advertisement No. C-199/87-88

Applications are invited from citizens of India for faculty positions in the following Interdisciplinary Programmes at this Institute, in the prescribed form obtainable free of charge from the Registrar, Indian Institute of Technology, Powai, Bombay-76, on request accompanied by a self-addressed envelope (25 cm x 10 cm). Persons employed in Government/Semi-Government Organisations or Educational Institutions should apply through proper channel. Indians abroad may apply on plain paper in duplicate. Candidates should give an account of their academic and professional record, a list of research publications and names of three referees. The posts carry allowances such as D.A., C.C.A., H.R.A., as per rules of the Institute which at present correspond to those admissible to Central Government employees stationed at Bombay. Depending on qualifications and experience, a higher salary may be offered. If a candidate for the post of Professor does not possess the requisite experience of 10 years, but otherwise has proven ability, he may be considered for the position of Associate Professor. Similarly, a candidate may also be considered for appointment as Visiting Faculty at appropriate level. Completed applications should reach the Registrar, IIT, Powai, Bombay-400 076 on or before **15th April, 1988**.

Some posts of Lecturers are reserved for candidates belonging to the SC/ST communities.

IIT Bombay has twelve academic Departments—seven in Engineering disciplines, four in Sciences and one in Humanities and Social Sciences. In addition, there are few Centres of which —Industrial Design Centre and Centre for Environmental Science & Engineering—offer degree programmes. All the Departments/Centres have well equipped research laboratories.

The Institute has an extensive Library, a Central Workshop and a number of mini and micro computing facilities. A fourth generation main frame computer system (Cyber 180/840) has been recently installed at the Computer Centre which looks after the computing requirements of the Institute and other organizations. Excellent facilities exist for experimental research through Centres such as Advanced Centre for Research in Electronics, Centres of Studies in Resources Engineering, Regional Sophisticated Instrumentation Centre, Computer Aided Design Centre etc.

Scales of Pay (likely to be revised shortly)

(i) **Professor** : Rs. 1500-60-1800-100-2000-125/2-2500.

(ii) **Associate Professor** : Rs. 1500-60-1800-100-2000.

(iii) **Assistant Professor** : Rs. 1200-50-1300-60-1900.

(iv) **Lecturer** : Rs. 700-40-1100-50-1600.

Qualifications & Experience

1. Professor

Excellent academic record with Doctorate degree in the appropriate field from a recognised University/Institute, minimum 10 years experience in teaching/research/industry and specialised knowledge in one or more relevant fields. Professional/Scientific work of outstanding merit and experience of carrying out independent research and of guiding research are desirable.

Candidates not possessing a Ph. D. may also be considered if they have to their credit equivalent published research work or design/development work of high standard either in an institution or in an industry.

2. Assistant Professor

Consistently good academic record with a Doctorate in the relevant field. About 5 years experience in teaching and/or research and development.

Candidates not possessing a Ph. D. may also be considered if they have to their credit equivalent published research work or design/development work of high standard either in an institution or in an industry.

Age : Preferably below 35 years.

3. Lecturer

A Doctorate in Science or a Master's degree in an appropriate field in Engineering/Technology/Management with a very good academic record and a first class at Bachelor's degree and/or Master's degree level.

Minimum one year or relevant experience in teaching/research/industry.

Age : Preferably below 30 years.

Posts & Areas of Specialisation

1. Materials Science

Professor/Associate Professor; Assistant Professor; Lecturer.

(i) Electronic and Magnetic Materials.
(ii) Surface Science
(iii) Materials Synthesis and Processing
(iv) High temperature superconductors.

2. Energy Systems Engineering

Assistant Professor/Lecturer

(i) Bio-mass, Bio-gas and related alternate energy technologies.
(ii) Energy Policy/Planning / Modelling/Management/Conservation.

3. Industrial Engineering & Operations Research

Professor/Associate Professor
Assistant Professor; Lecturer

(i) Industrial Engineering—Methods Engineering and Work Measurement; Facility Planning, Maintenance and Quality Control; Human Factors Engineering.
(ii) Operations Research — Mathematical Programming and Stochastic Processes: Theory and Applications.
(iii) Production and Operations Management—Theory and Applications of Quantitative Methods/Computerised Systems to Production, Project, Materials, Distribution Systems and other Operations Systems; Manpower Planning and Financial Planning.

4. Industrial Management

Professor/Associate Professor
Assistant Professor/Lecturer

(i) Management Accounting, Finance and Business Economics
(ii) Information Technology for Management
(iii) Marketing Management, with emphasis on Industrial Marketing
(iv) General Management, with emphasis on Human Resource Development
(v) Production Management
(vi) Technology Management and Policy Evaluation
(vii) Entrepreneurial Development

5. Systems & Control Engineering

Assistant Professor

(i) Control Engineering / Systems Engineering

6. Corrosion Science & Engineering

Assistant Professor/Lecturer

(i) Corrosion protection system including Marine Corrosion

(ii) Metallic Corrosion, high temperature corrosion and their effect on mechanical properties.

7. Reliability Engineering

Assistant Professor/Lecturer

(i) Design (Mechanical, Electrical, Civil, Chemical Nuclear, Electronics etc.)

(ii) Manufacturing (Quality Assurance, Maintenance)

(iii) Testing

8. Bio-Sciences & Engineering Group

Professor/Assistant Professor

Qualifications

In lieu of the requirements prescribed in general at the beginning of this advertisement—A good Master's degree in Chemistry, Bio-chemistry or Physics with Ph.D. degree and published work in the following area of specializations :

(i) Molecular Biology

(ii) Molecular Biophysics

(iii) Molecular Immunology

Candidates should provide a brief write-up on their future research projects along with the application.

REGISTRAR

SRI VENKATESWARA UNIVERSITY

NEELAM SANJIVA REDDY BHAVAN, TIRUPATI

No. E. II-2/88 (Advt.)(1)

Dated : 10-3-1988

ADVERTISEMENT

Applications are invited in the prescribed form from the teachers holding the position of Professor/Reader or their equivalent cadres in the Universities who are willing to be considered for the post of Director for the proposed Academic Staff College of S.V. University, Tirupati. The post is sanctioned by the U.G.C. for the period ending with the Seventh Plan viz., 31-3-1990. The qualifications and service conditions including age of retirement will be the same as prescribed for a Professor.

The scale of pay prescribed for the post is that of a Professor viz., Rs. 1500-60-1800-100-2000-125/2-2500.

The filled-in application forms should reach the University on or before 5.00 P.M. on **4-4-1988.**

The prescribed application form and other particulars can be had from the Registrar, Sri Venkateswara University, Tirupati-517 502, Andhra Pradesh, from 14-3-1988 onwards on payment of Rs. 10/- (Rupees ten only) by a **Crossed Demand Draft** of the said value drawn in favour of the Registrar, Sri Venkateswara University, Tirupati-517 502, Andhra Pradesh. The University will not be held responsible for any postal delays. **Indian Postal Orders, Bank Challans and Money Orders** will not be accepted.

The requisition for the application form must be accompanied by a self-addressed envelope of the size of 12" x 8" duly affixing stamps worth Rs. 5/-. Requisitions received without self-addressed and stamped envelope, and/or without requisite fee will be rejected.

Application fee once paid will neither be refunded nor adjusted towards any fee payable.

The filled-in applications received after the due date (i.e., at 5.00 P.M. on 4-4-1988) will be rejected.

Candidates called for interview have to attend the interview at their own expense.

Advertisement No. EAS/04/88

Applications, typed in triplicate, giving full particulars as indicated below, are invited for the following posts so as to reach the Director of the Institute by **15.4.88.**

I. **Professor**—one each in the Department of (a) **Economic Co-operation** and (b) **Ethnolinguistics.** the scale of pay : Rs. 1500-60-1800-100-2000-125/2-2500 with allowances as per State Government Rules and pensionary benefits where admissible.

Minimum Qualifications : First Class Masters' Degree with High Second Class Honours or High Second Class Masters' Degree with First Class Honours in the relevant subject and Ph. D. o equivalent research work. **Desirable** : Experience of research supervision in the relevant field knowledge of the history and language of at least one South/Southeast Asian Country other tha India.

II. **Asstt. Professor in International Relations** in the Pay Scale : Rs. 1200-50-1300-60-1900/- plu allowances as per State Government Rules. Appointment initially for 3 years, renewable at th discretion of the authorities. **Qualifications** : Same as for (I)

III. **One Senior Scholarship** of Rs. 1,000/- p.m. (consolidated) in the Department of **Ethnolinguistic** and

One Junior Scholarship of Rs. 700/- p.m. (consolidated) in the Department of **Ecology.**

Subject to satisfactory performance both scholarships are tenable for a maximum period of thre years.

Minimum Qualifications : Masters' Degree in the relevant subject with at least 50% marks in th aggregate on an average for all public examinations.

Desirable for Senior Scholarship : Ph. D. level research experience or publication of sufficie merit.

Age Limit : For (I) & (II) below fifty, for (III) below thirty.

Particulars Required :

(1) Name,
(2) Mailing Address
(3) Date of Birth (to be certified)
(4) Academic Record (to be certified) giving year of passing, division and percentage of marks obtaine award/distinctions, if any, for all public examinations,
(5) Research experience,
(6) Research Guiding Experience (only for Item No. I & II),
(7) Publications,
(8) Present occupation and salary drawn,
(9) A brief scheme of research proposed to be undertaken if appointed.

N.B. : 1. The choice of the Selection Committee may not be confined to those who formally appl Prescribed qualifications and age limit may be waived in case of candidates found otherw outstanding.

2. In-Service candidates should apply through proper channel.

The Shifting Perspectives—II

K. K Balachander*

III

Development Since Independence

Planning Higher Education for Economic Growth

The dominant feature of post-Independence development of higher education has been the enormous growth in student numbers and institutions. Enrolment made rapid strides, particularly in the sixties. This was also the time when economic thought was bringing into focus the **investment** aspect of education. Many less-developed countries which got Independence from colonial rule believed—or were led to believe—that it is the qualitative improvement in human resources that determined the character and pace of economic development, and the principal instrument for it is the formal education system. Much of the economic progress of advanced countries that were among the backward and poorest only a few decades ago, it was pointed out, was the outcome of the development of their human resources through education, particularly higher education. Also, the speedy and spectacular recovery of Japan and Western Europe from the debris of World War II—against the expectation of some economists who overestimated the need for physical capital for recovery—and reaching the most favourable growth rates in the post-war period, was ascribed to their technical and skilled manpower which they had built up over the years. The largest fraction of the rate of growth of the American economy and the USSR economy was attributed to growth of knowledge and skill which facilitated increased efficiency of physical capital. In contrast to the above countries, it was argued, many less-developed countries could not generate higher output, in spite of massive financial investment made by them in physical assets, because they did not realise that a sufficient stock of educated workers and personnel was a necessary condition for economic growth; hence a convergence between education, particularly higher education, and economic growth must be even more important in poorer countries to raise the productivity of labour than in the advanced ones.

**Secretary-Technical Coordinator, Department of Economics, University of Bombay, Bombay.*

And so the economists discovered (or rediscovered, because the classical economists never overlooked the point) the importance of complementary human factors, of investment in human resources. There has been a large body of literature on the economic aspects of education since the beginning of sixties, and the new concepts and methods developed became subject-matters of wide discussion. In India too, similar studies were conducted. 'Economics of Education' thus began to affirm itself as a new domain of economic analysis. Economists ceased to wield axes, and instead became standard-bearers of educational advance. And the education profession, as Dore put it, "just stood by and let them do it." In fact they were happy to have economists on the side of education —there were good precedents for this, notably Adam Smith and J.S. Mill—and popularise the economic value of education (although some among them felt that material affluence was not the stuff of which 'good life' was made; non-material values which, even though hard to measure, were no less important than the GNP). In short, educationists began to think in terms of economics, when economists began to think in terms of economics, when economists began to pay special attention to education. Education came to be discussed in the language and terminology of economists (which was again rather disquieting to some since the concept of **investment** is closely linked with the idea of expenditure in the expectation of **monetary gain**, or profit, and not to the **intrinsic value** of education). It was even talked of as an 'industry', and attempts were made to apply to it the tools of analysis of the industry. Many of those who once got upset by the idea that it should be treated like an industry, appeared to get more upset if people could not see that it was the most important industry !

The then policy-makers in India naturally welcomed the support provided by their new-found allies—economists and educationists. There came into being a wider agreement among them that educational decisions should take into account the economic value of education. The goal of nationwide benefits of an educated populace seemed to justify public expenditure on an increasing scale for the expansion of education, particularly higher education. The First Five Year Plan, launched in 1951, had stated : "No Plan would succeed unless it invested in the improvement of human material, and even from the point of increasing production, social services like education and technical training brought significant results". The subsequent Plans also had emphasised that education is the focal point of development. The following opening sentence of the Report of the Indian Education Commission (1964-66) summed up the assumptions of most writers on education and development in the early sixties thus : "The destiny of India is now being shaped in her classrooms. This, we believe, is no rhetoric......it is education that determines the level of prosperity, welfare and security of the people". Alfred Marshall's observation that 'Education is a national investment' appeared to have lost none of its value. This meant acceptance of educational planning as an essential part of economic planning. Thus education, particularly higher education, got caught up in a society on the move as never before.

Another reason which motivated the Government of India to expand higher education at a rapid pace was its desire to transform the 'elite' character of the system inherited from the British Government and make it more representative of Indian society by drawing within its fold the broad sections of the lower income groups and socially under-privileged sections. This was a pre-Independence promise. The enrolment in higher education was thought to be inadequate considering India's youth population. Besides, as the notion that education, particularly higher education, is the key to productive life (and national prosperity) came to be accepted, discrimination among students had to break down, for who can be denied the chance to become useful and productive ?

Once the aspirations of the people were kindled, the movement of the higher educational sector was only in one direction—upwards. It became a need among larger and larger sections of the population. More and more institutions had to be opened, and the existing ones expanded. The Governments, at Central and State levels, moved to funnel larger funds into the higher education sector.

The Currents of Change

Higher education at one time was a means of acquiring wisdom and satisfying curiosity; it was not an instrument for achieving economic goals—in fact, there was no urgent need then to put scholarship to any practical use. The attachment to the past was predominant. Before the age when specialisation was forced on the society, a classical education was considered a virtue. Higher educational institutions, established with the above end in view, were maintained through the dedication of some individuals. However, the new demand of 'economic life' was such that even the modern higher education adopted during the British period needed complete remodelling—both in its 'extent' and 'content'. Colleges and universities were no longer considered as citadels of **status quo**; these institutions, it was felt, should be liberally irrigated by the currents of change. This implied important structural reforms and the creation of new types of institutions for training in new subjects that were of practical significance in terms of future careers. The Government had to take steps towards diversification/specialisation of higher education in order to widen and upgrade the country's talent pools. The pre-Independence system had adhered mostly to a uniform type of general education meant for a small and privileged fraction of the relevant age group. Professional/Technical Education had earlier been played down though in Britain, Central Europe, etc., the significance of this type of higher education had long been recognized and acted upon. Provision had therefore to be made for more professional and technical education. Out of the total number of students getting university education, only about 20 per cent were receiving professional education in 1947-48.

In the above process, a line has been drawn between higher education pursued for **its own sake** and learning applied **to economic ends** The conception of knowledge as a thing desirable on its own account still linger among a few people, but they are in a minority. It is doubtful if higher education would have proved as attractive as it turned out to be later if pure pursuit of knowledge had been the sole criterion and not the advantages that it provided to building subsequent careers. When the desire for material prosperity, which had remained subterranean so far, was aroused, and with the realisation the it **could** be achieved through higher education, demand for higher education increased at a rapid pace. An increase in the college/university age group population and the status attached to a university degree also have led to further pressure.

Quantity Without Direction

India now operates a higher education system much larger than many developed and developing countries. She had 0.9 per cent of the relevant age group (17-23) participating in higher education in 1950-51, 1.8 per cent in 1960-61, 4 per cent in 1970-71 and about 4.5 per cent in 1980-81. Many other countries, both developed and developing, have more than 10 per cent of pupils in that age group enrolled. Admittedly, the proportion of the relevant age group in higher education in India is one of the lowest in the world. However, compared to many developed and developing countries, India has a **larger number** of students enrolled in higher educational institutions, and this exceeds or is almost equal to the individual population of some countries. In 1947, India had only 19 universities and 650 colleges having a student intake of about 2.5 lakhs; now it has 150 universities and about 5500 colleges with an enrolment of nearly 4 million. About 2 5 lakhs of teachers are employed at present in universities and colleges. In 1950-51, the total expenditure on higher education was a mere Rs. 20 crores; it was estimated to be over Rs. 600 crores in 1983-84—thirty-fold increase—a large part of which being covered by Government funds.

The twin objective of making available sufficient middle and upper level trained manpower to the economy in its programme of economic development and at the same time meeting the rising expectations of the vast sections of the young people who had long been denied higher educational opportunities, has introduced some important new dimensions to the policy of development of higher education in the country. In other words, the Government is keen to pursue the three goals of **quantity**, **quality** and **equality** simultaneously, and that too in a situation of financial scarcity. Fulfilling all these three perhaps not-easily-compatible-objectives is a difficult task. The more the quantity the less it favours quality and **vice versa** : the less the resources, more difficult it becomes to equalise higher educational opportunities. The Indian scene exhibits some special characteristics which may not be exclusive, but nowhere else are they so sharp and glaring in proportions as here. There still exists some confusion on the right to receive higher education. A question that is often posed is; should it be equality of opportunity for all, irrespective of merit, in the sense that higher education is a **right**, or should it be equality of opportunity for **some** in the sense that it shall be available to all on the basis of **merit**, i.e. equality of accessibility, with adequate safeguards for non-discrimination on grounds of income/social origin ?

The development of higher education since 1950

TO OUR READERS

Knowledgeable and perceptive as they are, our contributors must not necessarily be allowed to have the last word. It is for you, the readers, to join issues with them. Our columns are as much open to you as to our contributors. Your communications should, however, be brief and to the point.

Accreditation and Assessment of Institutions of Higher Learning

Programme of Action (POA) of the National Policy of Education (NPE) 1986 inter alia recommended that :

"Excellence of institutions of higher education is a function of many aspects : Self-evaluation and self-improvement are important among them. If a mechanism is set up which will encourage self-assessment in institutions and also assessment and accreditation by a Council of which these institutions are corporate members, the quality of process, participation, achievements, etc. will be constantly monitored and improved.

It is proposed to develop a mechanism for accreditation and assessment for maintaining and raising the quality of institutions of higher education. As a part of its responsibility for the maintenance and promotion of standards of education, the UGC will, to begin with, take the initiative to establish Accreditation and Assessment Council as autonomous body."

In pursuance of this directive, the University Grants Commission (UGC) constituted a Committee under the Chairmanship of Dr. Vasant Gowariker, Secretary, Ministry of Science and Technology "to make recommendations regarding setting up of Accreditation and Assessment Council in order to develop a mechanism for maintenance and raising of quality of institutions of higher education, while keeping in view the objectives, uses and various methods/procedures that are currently being followed by different countries or that can be adopted."

The Report of the Committee is being published for wider readership.

I. Introduction

In brief, what is wrong with Indian universities is that they are not generative. They do not give rise to a vital and self-supporting intellectual life. Though it is true that they do not have realistic funding, their achievement is still not proportionate to the time, effort and intellectual resources expended on them. Perhaps the major cause of their failure is the manner of their governance, which does violence to the operations of mind and the growth of knowledge. Academic institutions must be built around the principle of intellectual autonomy. Most of ours are not.

Historical roots of the mediocrity of Indian higher education can be traced to the exigencies of British rule, in the need to contain the dangerous potential of self-rule in the realm of ideas. The present structures are descended practically unaltered from that time. The governance of universities is part of a larger pattern, the command-and-control style of bureaucracy, which was established in the interests of British supremacy and which still continues to dominate our public life.

II. Management of Higher Education

Command-and-control management entails a hierarchical notion of "accountability" und top-down initiative. Goals and values are formulated from the outside, and the various ways in which their implementation can go wrong are taken into account and sanctions are provided against these. The governing attitude is suspicion. Dignity and authority are vested largely in the supervisory levels, most of all in the remote government bureaucracy, and next to none with working academics. Intellectual and pedagogical initiative are stifled, and experimentation, innovation and the finding of appropriate responses to local circumstances become impossible. The goals of universities get pitched at a very modest level, to achievements peripheral to the real purpose of a university such as the regular holding of examinations and the announcement of results. The management of universities gets reduced to a law-and-order problem, with a limited and crude repertoire of political—bureaucratic actions to bring them to a semblance of control.

The situation of colleges is particularly bad, because of their subordination to affiliating universities. This suffocates the initiative of college faculty and denies them the necessary control over the circumstances of their work. On the other hand, factors like the recent raising of the college entrance age with the addition of two years of secondary education and the raising of lecturer qualification to the doctoral level have made the issue of academic autonomy at the college level both more urgent and more promising.
